Mimics are magically-created creatures with a hard rock-like outer shell that protects their soft inner organs. Mimics can alter their form and their pigmentation; they use this talent to lure victims into close range, where they attempt to feed on them. They usually appear in the form of treasure chests. There are two varieties, the smaller, more intelligent common mimic, and the larger, less intelligent killer mimic. Mimics are large. Common mimics occupy about 150 cubic feet (a 3' x 6' x 8' chest, or a large door frame). Killer mimics occupy about 200 cubic feet. Mimics' natural color is a speckled grey that

resembles granite. Mimics can alter their pigmentation to resemble varieties of stone (such as marble), wood grain, and various metals (gold, silver, copper); it takes one round to make the desired alteration. They cannot lose mass in this transformation (they must remain the same size, though they may radically alter their dimensions).
Common mimics have their own tongue (corruptions of the original language spoken by their wizard creators) and can also be taught to speak in common and other languages. Killer mimics are incapable of speech.

**Combat:** A mimic can surprise its victims easily (-4 penalty to victims' surprise rolls). When a creature touches a mimic, it lashes out with a pseudopod that inflicts 3d4 points of damage. Furthermore, the mimic covers itself with a glue-like substance. Any creature or item that touches a mimic is held fast. Alcohol will weaken the glue in three rounds, enabling the character to break free, or the character may attempt to make an open doors roll to break free. Only one attempt may be made per character, and no other action, offensive or defensive, may be performed during the round that the attempt is being made. A mimic may neutralize its glue at any time that it desires; the glue dissolves five rounds after the mimic dies. The mimic is immune to acid attacks and is unaffected by molds, green slime, and various puddings.

**Habitat/Society:** Mimics live underground, where they can avoid sunlight. They are solitary creatures; this is to ensure that each mimic has a large grazing area. They have no culture; their primary concerns are survival and food. Common mimics are quite intelligent and will gladly offer information in exchange for food. Killer mimics attack regardless of attempts at communication. Mimics have no moral code and no interest in culture or religion. Wizards who use them as guardians have sometimes found them to be less than enthusiastic about obeying their commands.

**Ecology:** Mimics were originally created by wizards to protect themselves from treasure hunters. A good meal (one or two humans) can sustain them for weeks. They reproduce by fission and grow to full size in several years. Mimics pose as stonework, doors, statues, stairs, chests, or other common items made from stone, wood, and metal. Their skin is covered with optical sensors that are sensitive to heat and light in a 90-foot radius, even in pitch darkness. Any powerful light source can easily blind them, including direct sunlight. Along with glue, they can excrete a liquid that smells like rotting meat; this attracts smaller, more common prey (usually rats). Mimic ichor is useful in the creation of *polymorph self* potions, and their glue and solvent sacs can be sold to alchemists. Other internal organs are useful in the manufacture of perfumes. The mimic's internal organs are considered tasty delicacies in some cultures.

# Mind Flayer (Illithid)

| | |
|---|---|
| **Climate/Terrain:** | Any subterranean |
| **Frequency:** | Rare |
| **Organization:** | Community |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore (brains) |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | S, T,x(B) |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 5 |
| **Movement:** | 12 |
| **Hit Dice:** | 8+4 |
| **THAC0:** | 11 |
| **No. of Attacks:** | 4 |
| **Damage/Attack:** | 2; see below |
| **Special Attacks:** | Mind blast, see below |
| **Special Defenses:** | Magical powers |
| **Magic Resistance:** | 90% |
| **Size:** | M (6' tall) |
| **Morale:** | Champion (15)+special |
| **XP Value:** | 9,000 (7,000 for psionic version) |

The illithid, or mind flayer, is an evil and feared creature of the Underdark; its powers are formidable and it feeds on the brains of any creature it encounters. Using arcane powers, it enslaves or destroys its foes, which include such powerful creatures as drow and kuo-toa.

Mind Flayers stand about 6 feet tall and have hideous mauve skin that glistens with slime. The head resembles an octopus, with white eyes (no pupils are evident) and four tentacles around its mouth, a round, many-toothed orifice like that of a lamprey. The creature has three reddish fingers and a thumb on each hand.

Illithids have infravision. They can communicate with any creatures via innate telepathy; they have no spoken language, although they often accompany their thoughts with hissing, and the eager lashing of

their tentacles. Mind flayers dress in flowing robes, often with high, stiff collars, adorned with symbols of death and despair.

**Combat:** A mind flayer's preferred method of attack is the *mind blast*, projected in a cone 60 feet long, 5 feet wide at the mind flayer, and 20 feet wide at the opposite end. All within the cone must make a saving throw vs. wands or be stunned and unable to act for 3d4 rounds. The illithid tries to grab one or two stunned victims (requiring normal attack rolls if others try to prevent this) and escape with them. The illithid keeps some victims as slaves and feeds on the brains of the others. When devouring the brain of a stunned victim, it inserts its tentacles into the victim's skull and draws out its brain, killing the victim in one round. A mind flayer can also use its tentacles in combat; it does so only when surprised or when attacking a single, unarmed victim. A tentacle which hits causes 2 hp damage and holds the victim. A tentacle does no damage while holding, and can be removed with a successful bend bars/lift gates roll. Once all four tentacles have attached to the victim, the mind flayer has found a path to the brain and kills the victim in one round. If preferred, the DM can simply roll 1d4 for the number of rounds required to kill a struggling victim.
A mind flayer can also use the following arcane powers, one per round, as a 7th-level mage: *suggestion, charm person, charm monster, ESP, levitate, astral projection,* and *plane shift.* All saving throws against these powers are made at a -4, due to the creature's mental prowess.
If an encounter is going against a mind flayer, it will immediately flee, seeking to save itself regardless of its treasure or its fellows.

**Habitat/Society:** Mind flayers hate sunlight and avoid it when possible. They live in underground cities of 200 to 2,000 illithids, plus at least two slaves per illithid. All the slaves are under the effects of a *charm person* or *charm monster,* and obey their illithid masters without question.
The center of a community is its elder-brain, a pool of briny fluid that contains the brains of the city's dead mind flayers. Due to the mental powers of illithids, the elder-brain is still sentient, and the telepathic union of its brains rules the community. The elder-brain has a telepathic range of 2 to 5 miles, depending on its age and size. It does not attack, but telepathically warns the mind flayers of the presence of thinking creatures, so a mind flayer within its telepathic radius can be surprised only by non-intelligent creatures. The range of the elder-brain determines the territory claimed and defended by the community, though raiding parties are sent far beyond this limit.
Mind flayers have no family structure. Their social activities include eating, communicating with the elder-brain, and debating on the best tactics to conquer the Underdark. For amusement, they inflict pain on their captives and force slaves to fight in gladiatorial games.
Mind flayers are arrogant, viewing all other species only as cattle to be fed upon. They prefer to eat the brains of thinking creatures.

**Ecology:** Mind flayers live about 125 years. They are warm-blooded amphibians, and spend the first 10 years of life as tadpoles, swimming in the elder-brain pool until they either die (which most do) or grow into adult illithids. On an irregular basis, adult illithids feed brains to the tadpoles, which do not molest the elder-brain. Illithids are hermaphroditic; each can produce one tadpole twice in its life.
Mind flayer ichor is an effective ingredient in a *potion of ESP*.

**Psionic Illithids**
Psionic flayers, considered the only true illithids by some (including themselves), have most of the same statistics and abilities as other mind flayers. Instead of magic-based abilities, however, theirs are purely

psionic. Psionic mind flayers have a beak-like mouth and disdain the stiff-collared robes preferred by their cousins.

### Psionics Summary:

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 10 | 4/5/15 | EW, II/All | = Int | 1d100+250 |

Illithids use psionics for attack, mind control, and travel. All psionic illithids have at least the following powers:
**Psychokinesis - Devotions:** control body, levitation.
**Psychometabolism - Sciences:** body equilibrium (their only psychometabolic power).
**Psychoportation - Sciences:** probability travel, teleport. Devotions: astral projection.
**Telepathy - Sciences:** domination, mindlink. Devotions: awe, contact, ESP, ego whip, id insinuation, post-hypnotic suggestion.

# Minotaur

| | |
|---|---|
| **Climate/Terrain:** | Temperate and subtropical labyrinths |
| **Frequency:** | Rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Night |
| **Diet:** | Carnivore (man-eater) |

| **Damage/Attack:** | 2-8/2-8 or 1-4/by weapon type |
| **Special Attacks:** | Grapple, charge |
| **Special Defenses:** | +2 bonus on surprise roll |
| **Magic Resistance:** | Nil |
| **Size:** | L (7½' tall) |
| **Morale:** | Elite (13) +Special |
| **XP Value:** | 1,400 |
| Elder | 3,000 |

Minotaurs are either cursed humans or the offspring of minotaurs and humans. They usually dwell in underground labyrinths, for they are not confused in these places, which gives them an advantage over their prey.

Minotaurs are huge, well over 7 feet tall, and quite broad and muscular. They have the head of a bull but the body of a human male. Their fur is brown to black while their body coloring varies as would a normal human's. Clothing is minimal, usually a loin cloth or skirt.

**Combat:** Minotaurs are very strong (equivalent human Strength of 18). Against man-sized opponents (minimum 6 feet tall) they may butt for 2-8 points of damage. Against smaller opponents, they bite for 1-4 points of damage. If a minotaur is 30 feet or more from its opponent, it can lower its head and charge against any creature that is at least 6 feet tall. If successful, the charge causes double head-butt damage. In addition to these attacks, most minotaurs also carry weapons -- a huge axe (treat as a halberd) or flail, with which it inflicts normal damage +2.
Minotaurs are not particularly intelligent, but are extremely cunning and have excellent senses. They have a +2 bonus on their surprise rolls, have infravision, and can track prey by scent like a ranger, with 50% accuracy. They always pursue an unfamiliar scent. Minotaurs are immune to *maze* spells. They attack any intruder without fear, and will retreat only if the creature is obviously beyond their ability to defeat (+3 to morale score in combat).

**Habitat/Society:** Minotaurs live in communities of up to eight members. If the community contains more than six minotaurs, one will be an elder minotaur with 18/50 Strength and 8+4 Hit Dice. The minotaur elder is the clan leader; he remains in the center of the labyrinth and raises young minotaurs while others hunt. He is always encountered in the center of a labyrinth.
A minotaur's labyrinth is rarely natural. Often an evil wizard or a tyrant will construct a labyrinth and place the minotaur family there, feeding it prisoners and slaves on a regular basis.
Occasionally this tyrant will be killed and the minotaurs forced to fend for themselves; since creatures rarely enter a labyrinth on their own accord, these minotaurs will usually be ravenously hungry.
Minotaurs speak their own primitive language and are 25% likely to speak a halting form of common. They have little culture; their lives resemble animals more than humans. Their culture venerates physical strength above all else and particularly strong human fighters have been known to earn their respect. They worship crude gods and have weak clerics (maximum 3rd-level shaman). Rumors persist of more intelligent minotaurs with developed societies.

**Ecology:** The curse which creates minotaurs is unknown, but sages suspect it involves "crimes against the natural order." Minotaurs are always male. It is also said that the first minotaur was originally a great and ill-tempered human fighter; he wanted to be as strong as a bull and his wish was granted in the most hideous manner possible. Minotaurs breed with human females to produce offspring, which are male minotaurs. Minotaurs have a lifespan of 200 years. They can live without food for years at a time, but are always hungry unless they are fed regularly. They are meat-eaters, but their curse causes them to prefer a diet of human flesh. Those transformed into minotaurs by curses may be restored to human form by a *wish*, but those who were born as minotaurs cannot be made human. Gnolls are their natural enemies; they will kill each other on sight.
Minotaur components are sometimes used in spells and potions, and might be used in magical items involving strength, location, and misdirection.

# Mist, Crimson Death

| | |
|---|---|
| **Climate/Terrain:** | Bogs, swamps |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Carnivore |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | Z |
| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 (4) |
| **Movement:** | Fl 12, Fl 6 after feeding (B) |
| **Hit Dice:** | 13 |
| **THAC0:** | 7 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 3-30 |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 95% |
| **Size:** | M (6') |
| **Morale:** | Champion (15-16) |
| **XP Value:** | 9,000 |

The crimson death is a malevolent, vaporous creature that feeds on the bodily fluids of its victims. The body of the crimson death is a humanoid-shaped cloud of pale color. It is difficult to distinguish if seen against fog and nearly invisible to infravision. During this time, the creature has an initiative bonus of +4. When the creature is fed, it develops a crimson flush that is easily visible by normal or infravision. The cloud possesses humanoid features. The fingers elongate into tentacles when it is feeding. Because of its behavior, sages believe that a Crimson Death Mist is the result of the actual death of a vampire. The crimson death's language is a barely audible series of whispers. It can communicate with other vaporous beings such as air elementals. It communicates with humanoids only if it is their captive.

**Combat:** The monster attacks only to feed or defend itself. It surrounds its victim with vaporous

tentacles. Whenever it hits, the tentacles drain bodily fluids and cause 3d10 points of damage.
The creature is normally immaterial (AC 0) and can be struck only by magical weapons of +2 or better. After feeding, the creature attains solidity (AC 4) for six turns. At this time the creature turns red, moves more slowly (Fl 6), and can be struck by magical weapons of +1 or better.
When a crimson death dies, it immediately dissipates into the air while its undigested fluids fall to the ground in a grotesque shower.
The crimson death is able to carry loads by levitating anything surrounded by its vaporous mass. Despite its vaporous nature, the crimson death possesses strength equal to a normal human. It is able to carry a passive weight equal to an adult human. If it attempts to pick up a struggling victim, it must make a successful attack roll for each round it carries the person. Failure means the person drops to the ground (suffering damage appropriate to the height of the fall).

**Habitat/Society:** The crimson death dwells in the bogs and marshes where chill and damp prevail. The creature is nearly invisible in its native habitat.
The crimson death is a secretive creature. It prefers to feed on solitary beings, since these are easy to sneak up on and have no allies to lend them support. If several people are present, the crimson death tries to pick off the guard while the others sleep; it then feeds on the others at its leisure. In order to conceal its presence, the crimson death disposes of corpses in its lair or a deep bog.
It maintains a lair in a thicket, undercut bank, or a hollow space under a windfall. There the monster stores the valuables it collects from its victims. These can be used as bribes for humanoid allies or bait for intended victims. The lair may also contain the remains of past victims.
The crimson death prefers to feed on humanoids. It normally requires one victim per week. If more people are available, the monster may feed continuously until destroyed or driven off.
Legends tell of a connection between crimson deaths and vampires. One tale suggests that, when an undead vampire is destroyed, its spirit is transformed into a crimson death. Another tale suggests that, when a vampire is created, the monster's lost soul is reborn elsewhere as a crimson death. This legend also suggests that a vampire may be restored to normal life if it is rejoined by its crimson death counterpart. A third legend says that extremely evil air elementals are condemned and cast out into the Prime Material plane in the forms of crimson deaths.

**Ecology:** The crimson death is a dangerous predator that roams the swamps like a living ghost. A crimson death can be collected and imprisoned in an airtight container. This does not harm it. A crimson death in such a container may be mistaken for, or mislabeled as, a bottled djinn or magical vapor. If someone releases the crimson death, the starving creature immediately attacks its unwitting rescuer.
Crimson deaths are aware of the advantages of alliances. They may agree to cooperate with evil humanoids who can provide them with a steady supply of victims. They make excellent allies for those dwelling in or near their lairs.

# Mist, Vampiric

| | |

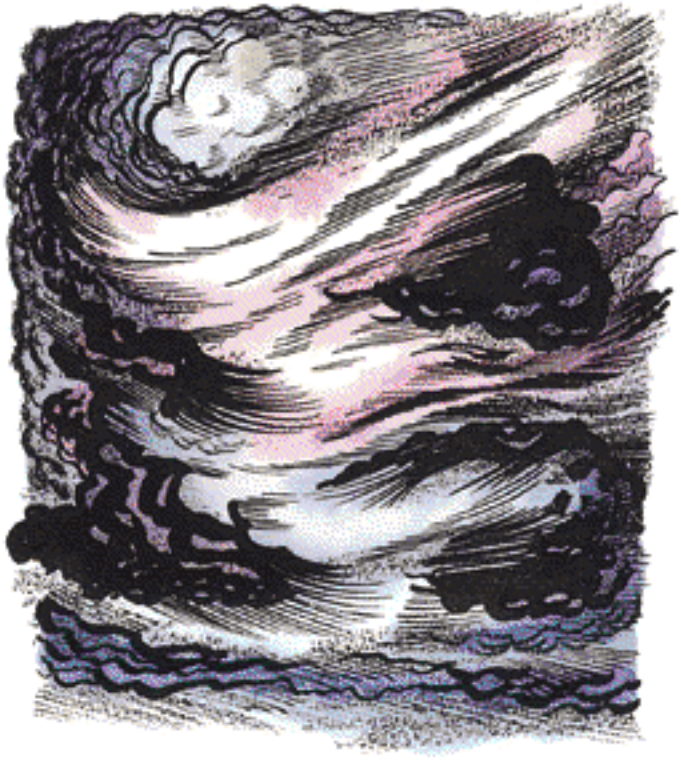
| **Size:** | M (5'-8' tall) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 270 |



These gaseous monsters prey on all living creatures, enveloping them with their gaseous tendrils, then draining their blood for food.
Vampiric mists appear as thick, billowing clouds, 5 to 8 feet in diameter. Color ranges from pale pink when hungry to crimson red when sated. Vampiric mists speak no language, but they communicate through a limited form of telepathy. These creatures reek of old blood and are often smelled before seen.

**Combat:** Vampiric mists automatically sense the presence of any warm-blooded creature within 50 feet. Hungry mists take the shortest route possible to the victim, navigating by touch, flowing easily over water or through narrow cracks. Their path can be blocked by nonporous obstacles, but vampiric mists

are intelligent and if any reasonable path exists they will find it.
All vampiric mists have maximum hit points (8 per die) when full, but they are almost never encountered in this state. For each 12 hours a mist goes unfed, it loses 1 hit point. Vampiric mists whose hit point totals reach 0 due to starvation die. To regain hit points, vampiric mists must drain fresh blood from living victims (hence the mist's name). For each 2 hit points of blood drained, the mist regains 1 hit point.
A vampiric mist may attack one victim per round by reaching out with a gaseous tendril. Targets of a vampiric mist are treated as AC 10. Modify this number by the victim's Dexterity, and by the magical protection worn (+1, +2, etc.) but ignore magical shields. The touch of a vampiric mist drains 1d8 points of blood. A hit 4 above the needed to hit number means the mist has enveloped its victim. Enveloped victims are automatically hit each round until either the mist dies, finishes feeding, or retreats. Attacks by other characters against an enveloping vampiric mist divide their damage evenly -- half against the mist, half against the victim. Only the enveloped victim may attack the mist without harm to himself, However, because of the disorienting effect of rapid blood loss, enveloped victims may not use any spells or magical devices that require concentration.
While blood draining is mainly used to feed, the ability can also be used in defense by sated vampiric mists. Extra blood is simply dumped upon the ground.
Normally, a vampiric mist is damaged only by magical weapons or by spells that effect air. *Lightning bolt* and *magic missile* are also effective. However, immediately after reaching maximum hit points a vampiric mist takes on substance. This substantial stage last 1d6 turns. During this time the mist's movement rate slows to 6, its AC drops to 8, and it may be hit by normal weapons.
Blood draining is not a form of regeneration; a mist that loses hit points in combat must heal those points normally. Keep track of a mist's current hit points and its maximum possible for that combat (this total starts at 24 and goes down with damage caused to the mist). Each time the mist is wounded, reduce both the current hit points and the maximum. If the current hit point total ever reaches 0, the mist dies. Hit points gained by draining blood are added to the current hit points, which cannot exceed the maximum total (24 minus damage to the mist). Hit points lost due to starvation are subtracted from the current hit points only. The current hit points may never exceed the mist's maximum hit point total. (After the current battle is over, the maximum hit point totals for any surviving mists return to 24.)

**Habitat/Society:** These dread monsters inhabit both swamps, where they creep along mixing in with morning and night fog, and subterranean caverns, where they stalk prey in absolute darkness. Vampiric mists attack at night or early morning, flowing over the ground in search of warm-blooded victims. They prefer lone victims, but hungry mists sometimes raid towns at night, slaying livestock and draining victims in their sleep, before slipping out at dawn.

**Ecology:** First thought to be immature forms of crimson death, it is now known that these fiends were deliberately created by a powerful vampire wizard.
Vampiric mists reproduce by division. A mist is 10% likely to divide during its substantial stage immediately after feeding. The two mists created have 3 Hit Dice each, but only 4 hit points per die (thus they are born ravenously hungry).
Vampiric mists prey on all warm-blooded creatures. No animals hunt vampiric mist deliberately, though stirges, leeches, and other bloodsuckers are sometimes drawn (fatally) to their smell. Vampiric mists have no known life span. They live until they starve, are slain, or reproduce.

Molds are a variety of spore-producing fungi that form in decaying food or in warm, moist places. These fungi usually have a woolly or furry texture. While most molds are harmless, there are (at least) three varieties of monstrous molds that pose a deadly threat to adventurers: brown, russet, and yellow mold.

### Brown Mold

Brown mold is found in damp subterranean areas, such as caverns and caves. It is light to golden brown in color. Brown mold feeds by absorbing heat, even body heat; where brown mold grows, the temperature is below average. Direct sunlight or ultraviolet light kills it.

If a warm-blooded creature comes within 5 feet of a brown mold, the mold drains heat equal to 4d8 points of damage from its victim, per round. A *ring of warmth* provides complete protection against this attack. Brown mold grows instantly from heat. If a torch is used in its vicinity, it doubles in size; if flaming oil is used, it quadruples, and fireball-type spells cause it to grow eight-fold.

Brown mold is not fed by cold light sources (e.g., *light, faerie fire*). The only magic that affects it are *disintegrate* (which destroys it), plant-affecting magic, and cold spells. Ice storms or walls of ice cause it to go dormant for 5d6 turns. A *cold wand*, white dragon breath, or a *cone of cold* kills it. Brown mold does not affect cold-using creatures such as white dragons, winter wolves, ice toads, etc.

### Russet Mold

Russet mold is golden-brown to rust red in color. It has a lumpy texture similar to cold porridge; it is covered by short, hair-like growths that stand upright and wave as if they were in a cold breeze. It resembles rust at distances beyond 30 feet (70% chance of error). It is immune to weapons and most spells; it is affected only by alcohol, acid, and salt, which kill it; a *cure disease* or a *continual light* spell also destroys it.

Russet mold continuously emits a cloud of spores in a three-foot radius. All creatures in this cloud suffer 5d4 points of damage (per round in the cloud) and must roll a successful saving throw vs. poison or become infected with spore sickness. Victims of spore sickness are instantly paralyzed and die in 5d4 minutes unless a *cure disease* spell is cast on them.

Anyone who dies from spore sickness undergoes a transformation and begins to sprout russet mold growths; when completely covered in mold (1d4+20 hours), he becomes a mold man or vegepygmy. A *hold plant* spell will halt the growth of the mold for the duration of the spell, while a *cure disease* spell destroys it within an hour after death; after that, a *wish* is necessary to destroy it.

### Yellow Mold

This mold is pale yellow to golden orange in color. If touched roughly, it may (50% chance) emit a cloud of spores in a 10-foot radius. Any creature caught in this cloud must roll a successful saving throw vs.

poison or die. A *cure disease* spell and a *resurrection* spell within 24 hours are necessary to restore life. Fire of any sort destroys yellow mold. A *continual light* spell renders it dormant for 2d6 turns.
Yellow mold colonies of over 300 square feet are sometimes sentient (1 in 6 chance). These molds sense creatures within 60 feet, and may project their spores that distance. Twice per day, they may use a *suggestion* on someone within that radius; in addition to the saving throw, the victim must successfully roll an Intelligence check or lose 1 point of Intelligence permanently (it is devoured by the mold).

**Psionics Summary:**

| Level | Dis/Sci Dev | Attack Defense | Power Score | PSPs |
|---|---|---|---|---|
| 1 | 2/0/2 | II/Nil (special) | 15 | 1d1x05 |

**Telepathy:** mindwipe, id insinuation.
**Metapsionics:** psionic sense (1d100+20' range, no cost).

Only sentient yellow molds (1 in 6 chance) have psionic powers. Such creatures are also immune to psionic attacks unless the creature is being aided by one who can communicate with plants.

Mold men, sometimes derogatorily called vegepygmies or even moldies, are short, bipedal fungus creatures. They have sharp, thorn-like claws, and leaf-like tendrils form a fringe on their shoulders, abdomens, and limbs. A topknot of these tendrils sits at the apex of a vegepygmy's head.
The coloration of mold men matches their surroundings; forest mold men have brown skin and green tendrils, while those found underground might have gray skin and black tendrils. Mold men are 1½ feet tall, plus ½-foot per Hit Die.
Although they do not have a spoken language, vegepygmies are capable of vocalized cries. They normally communicate by tapping on their chests and on trees or stones.

**Combat:** Parties of mold men hunt near their lairs. In their home territory, mold men blend into their surroundings, so opponents receive a -2 penalty to surprise rolls.
Mold men will attack any form of animal life for food. Though capable of using their natural camouflage for ambush, they seldom use other tricks or traps, preferring direct assault.
Half of the mold men in a group have 1 HD, while 25% have 2 HD. The rest are 3 or 4 HD (equal chances). For every 50 mold men, there is a subchief with 5 HD and 1d4+1 bodyguards with 3 HD each. Each tribe of mold men is led by a chief with 6 HD and 2d4 bodyguards with 4 HD each.
Half of the mold men encountered carry spears, while the others use clubs or go without weapons (equal chances).
Chiefs also attack with spores; victims must make a saving throw vs. poison or be paralyzed, dying in 5d4 minutes unless treated by a *cure disease* spell. Victims who die in this manner are reborn 1d4+20 hours later as mold men with 4 HD. These individuals generally become the chief's bodyguards.
Attacks from piercing weapons cause only 1 point of damage to mold men. They are immune to electrical attacks, as well as all charm spells except those which affect plants. Mold men always receive saving throws vs. enchantments, even if one is not normally allowed.
About half of all of their hunting parties are accompanied by a pack of thornies as well. Mold men settlements always hold 1-4 packs of thornies (see thorny, under Plant, Dangerous).

**Habitat/Society:** Mold men form primitive, settled tribes. Their lairs are usually found in warm underground areas, though some tribes have lairs in the underbrush of deep, dark forests and jungles. Tribes are very territorial.
Mold men co-exist well with plant and fungus life. They often use shriekers to guard their lairs, and mold men native to the lair can pass by those shriekers unnoticed. Russet mold is usually found in the vicinity of a mold man lair as well.
New mold men are created by russet mold, by their leaders' spore attacks, or by budding. The latter occurs only if food is plentiful. Russet molds produce 5 HD mold men, while leaders create 4 HD mold men, and normal budding produces 1 HD mold men.
Mold men have been known to associate with myconids, which view them as rustic cousins.

**Ecology:** Mold men live by scavenging and hunting. They will eat meat in any condition, from fresh to carrion. In times of great need, they have been known to eat other mold men, or even myconids, though they seldom attack members of their own or an allied tribe.

Mongrelmen are a mixture of the blood of many species: humans, orcs, gnolls, ogres, dwarves, hobgoblins, elves, bugbears, bullywugs, and many others. Their appearance varies greatly, combining the

worst features of their parent stocks. They are usually clad in dirty rags; they are ashamed of their appearance and try keep their bodies concealed, especially among strangers. They have no distinct tongue of their own, but speak a debased common, mixed with grunts, whistles, growls, and gestures. Their names often mimic animal noises.

**Combat:** Mongrelmen have three special abilities that help them to survive: mimicry, pickpocketing, and camouflage.
Mimicry enables them to imitate the sounds made by any monster or creature they have encountered except for special attack forms (groaning spirits' death wail, for instance), which they cannot imitate.
Pickpocketing enables them to acquire items that they could not otherwise obtain (they have a 70% chance of success).
Camouflage enables them to hide themselves and their items with great skill. The base chance of being unnoticed is 80%, and it requires one turn for camouflage to be performed. Each additional turn spent preparing the camouflage increases the chance by 1%, to a maximum of 95% (after 16 turns).
Successfully camouflaged persons or items are not noticed unless they are moved or touched (or move themselves, in the case of creatures). Camouflaged buildings are usually unnoticeable or unrecognizable at ranges greater than 50 feet (this varies with size and type of structure).
Mongrelmen normally fight with clubs and swords, but 5% of the members of any group encountered are armed with blowguns and poison or paralyzing darts.

**Habitat/Society:** For every 10 mongrelmen encountered, there is at least one with 2 Hit Dice; for every 30, there is one with 3 Hit Dice; and for every 40, there is one with 4 Hit Dice. In a community where they are not held as thralls, there are usually a leader (AC 4, Move 12, HD 5, Dmg 1d12, +1 bonus to attack roll) and five bodyguards (HD 4).
Because of their appearance, mongrelmen are seldom welcome in any lawful or good society, and are usually enslaved or abused by evil or chaotic groups. Thus mongrelmen are found as either slaves or serfs, working long hours for evil humans or humanoids in a dismal community, or as refugees living in abandoned ruins. Enslaved mongrelmen are not willing to rebel, but wait patiently for their masters to be destroyed by outside forces. They prefer to live an orderly day-to-day existence.
A mongrelman prides itself in the ability to survive; they consider the title "The Survivor" to be more esteemed than "The Great." For them, patience is a greater virtue than being good at the arts of war. A mongrelman performs acts of violence only in self-defense or (in the case of slaves) on the orders of their masters; free mongrelmen do not hesitate to kill anyone they believe threatens their community. They prefer to avoid contact with other creatures except in times of great need, when they try to steal what they require (food, tools, etc.).
Free mongrelmen raise domestic game and grow fruits and vegetables. They have a long tradition of art, music, and literature. Their songs are a bizarre cacophony of animal songs mixed with mournful dirges and wails; a few sages consider them to be beautiful, but most disagree.

**Ecology:** Mongrelmen are omnivorous, but their teeth are most efficient at eating meat. The life span of a free mongrelman is between 25 and 35 years; the average slave lives only 15 to 20 years. Their infant mortality rate is very high. Their major enemies are tribes of wandering humanoids that hunt them for sport.

# Morkoth

| | |
|---|---|
| **Climate/Terrain:** | Any aquatic |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Carnivore |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | (G) |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | 3 |
| **Movement:** | Sw 18 |
| **Hit Dice:** | 7 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10 |
| **Special Attacks:** | Hypnosis |
| **Special Defenses:** | Spell reflection |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' long) |
| **Morale:** | Elite (14) |
| **XP Value:** | 1,400 |

Of all the creatures that inhabit the deep, only the kraken exceeds the morkoth in malice and cruelty. Also known as the "wraith of the deep", the morkoth lurks in tunnels hoping to lure its victims into a trap from which they cannot escape.

The descriptions given by those who have encountered morkoths contain considerable variation, so no one is certain what they really look like. They are usually said to resemble an intelligent fish with an octopus's beak. They are most frequently described as being between 5 to 6 feet long, inky black in color, with faint luminescent silver patches. They may have fins for arms and legs that vaguely resemble those of humans, and a number of fins for navigation and propulsion in the depths. Morkoths have infravision with a 90-foot range. They speak their own language.

**Combat:** A morkoth attacks by snapping with its squid-like beak, which inflicts 1d10 points of damage.
A morkoth lives at the center of six spiraling tunnels, each of which leads to a central chamber. These tunnels are narrow (only one size M creature may enter at a time, and no size L). As a victim passes over a tunnel, he is drawn in by a hypnotic pattern, which leads him toward the central chamber. As the victim is drawn into the central chamber, he approaches the morkoth without realizing it and must roll a successful saving throw vs. spell with a -4 penalty or be charmed. A charmed victim is devoured at the morkoth's leisure. If the morkoth doesn't charm the victim before he comes within 60 feet, the hypnotic effect of the tunnels is broken.
A morkoth is highly resistant to magic. It reflects any spell that is cast at it back to the caster, including spells with an area of effect. If a *dispel magic* is simultaneously cast with a spell, there is a 50% chance the morkoth will be unable to reflect it, though it is entitled to a saving throw vs. the dispel.

**Habitat/Society:** Morkoths are normally solitary creatures. They sometimes make alliances with kraken, offering their help in exchange for an occasional slave. If approached by evil sea humanoids for assistance, morkoths may strike a bargain but often betray their "allies" at the most opportune moment.
Morkoths rarely leave their tunnels. The tunnels are originally natural, but are slowly carved over the course of centuries by the morkoths so that the central chamber grows larger. Morkoths sometimes build their tunnels near hot air vents, so the water in morkoth lairs may be warmer than normal.
Morkoths realize that other intelligent creatures like treasure, so they collect belongings from the creatures they kill to use in bargaining with other creatures. They place no value on gold or gems or even magical items. Morkoths enjoy deception above all else. They do not enslave their victims, if only because their appetites are so fierce that slaves would not survive long.

**Ecology:** According to the most popular theories, morkoths are a species of fish with human and squid influences. Sages are unsure if this species occurred by chance or design. Morkoths are carnivorous and will eat nearly any sea creature. Their usual diet is deep-water creatures such as sharks, octopi, kuo-toans, and sahuagin. The life spans of male morkoths are about 80 to 100 years, while females die after egg-laying.
Once every ten years, a morkoth leaves its tunnels and wanders the seas searching for a mate, leaving a distinctive odor trail that is easy for morkoths to identify and follow. After mating, the male morkoth returns to its tunnels and the female lays a clutch of about 25 eggs, which she buries in the ocean floor. She then dies. The eggs hatch in two months, and the immature morkoths struggle to survive, instinctively searching for vacant tunnels. Most hatchlings die on this journey.
After six months, a young morkoth is mature enough to survive (it now has 2 hp/HD, for 14 hit points). It grows into a full-sized, exceptionally intelligent morkoth adult by its fifth year.

# Muckdweller

| | |
|---|---|
| **Climate/Terrain:** | Temperate or tropical/Swamp |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Average |
| **Treasure:** | Q, (J, K, L, M, N) |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 5-20 |
| **Armor Class:** | 6 |
| **Movement:** | 3, Sw 12 |
| **Hit Dice:** | ½ |
| **THAC0:** | 20 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-2 |
| **Special Attacks:** | Water jet |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | T (1' high) |
| **Morale:** | Average (10) |
| **XP Value:** | 15 |

Muckdwellers are a species of small intelligent bipedal amphibians that lurks in swamps, marshes, or still, mud-bottomed waters. They have been known to serve lizard men and kuo-toa.
Muckdwellers are only 1-foot tall and resemble upright gila monsters with large, partially webbed rear feet. Their forepaws are prehensile, but very small and weak. Their backs are colored a mottled gray and brown, and their underbellies are yellow. They have short tails that are used for swimming and keeping their balance on land. They speak their own hissing language and possibly (50% chance) the lizard man tongue.

**Combat:** Muckdwellers use ambush techniques. Packs of muckdwellers wait for a victim; when one

arrives, several squirt water (at up to a ten-yard range) into the victim's eyes, which temporarily blinds it (a successful saving throw vs. wands negates this, but surprised creatures get no saving throw). A blinded victim cannot act in that round, loses all Dexterity bonuses, and all attacks against the victim gain a +2 bonus to the attack roll. Furthermore, if the muckdwellers lure the victim into knee-deep muddy waters, the victim loses all Dexterity bonuses and fights with a -1 penalty to its attack roll, due to unsteady ground. If the water is waist-high, the penalty increases to -2; if the water is chest-high, the penalty is -3. A *ring of free action* or equivalent magic negates these penalties. These disadvantages do not apply to the amphibious muckdwellers. Usually, a muckdweller fights only if it is cornered or if it is certain it can score an easy kill.

**Habitat/Society:** The lair of these creatures is underwater, but they always have a muddy, above-water area for resting, sunning themselves, and eating. There are 5d4 muckdwellers in each lair. They keep shiny-things (gold, gems, etc.) in hoards in their above ground lairs. If 16 or more monsters are encountered in this lair, they have double the given type Q treasure.
Muckdwellers are an intelligent species, but they have very little culture. They have a very primitive nature worship that emphasizes the supremacy of water over land. They like shiny things because they gleam like the sea. Due to the weakness of their hands, they do not use or produce tools and use their back paws for burrowing and their teeth for cutting. They occasionally build tiny rafts of cut reeds and mud to float on the surface of the water, and propel themselves quickly with their hind legs (movement 18). They infrequently build crude shelters of reeds, twigs, and mud. These shelters are designed to protect them from predators, not to shelter them, as weather doesn't bother them very much.
Because of the size difference between muckdwellers and lizard men, muckdwellers consider lizard men to be a superior species and occasionally serve them. Muckdwellers believe in the "survival of the fittest" and have no room for love, mercy, or compassion. Scoring the deathbite on a much larger creature gives the individual elite status in the community, while being killed by a bigger creature is a mark of shame, for it demonstrates poor hunting ability.

**Ecology:** Omnivorous muckdwellers will eat plants, insects, and aquatic animals, but fresh, warm-blooded meat is their preferred diet.
Muckdwellers are amphibians that spend their larval stage in the water but their adult stage on land. Their average life span is 9 to 12 years. It takes three years to grow to full-size. Muckdwellers in temperate climates hibernate during the winter months. Their natural enemies are snakes and certain giant carnivorous fishes. A muckdweller community has a hunting range of about two miles' radius.

| **Diet:** | Dweomer |
| **Intelligence:** | Non- (0) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-12 (2d6) |
| **Armor Class:** | 10 |
| **Movement:** | 3 |
| **Hit Dice:** | 2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | Special |
| **Special Attacks:** | Mud-throwing, suffocation |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | S (4' high) |
| **Morale:** | Special |
| **XP Value:** | 175 |

Mudmen are formed in pools of mud where enchanted rivers (even mildly enchanted ones, such as a stream eroding a magical structure) collect and evaporate and concentrate the dweomer. Because they are creatures of magic, mudmen are sometimes called *dweomerlings*. Mudmen are unintelligent life forces with but one goal -- to protect their pools against intruders.

When aroused into a physical form, mudmen take on the appearance of animated mud in a stocky humanoid shape, about 4 feet tall. Their coloration varies between a dirty brown and tar black. They have four thick fingers on each hand. Their legs stay submerged within the pool, and are not usually visible. Their eyes are pools of jet black shadow.

Mudmen speak no languages and are incapable of communicating with any living creature.

**Combat:** In their dormant state, mudmen wait beneath the surface of the pool, spread on the bottom, feeding on the dweomer. In this state they are immune to all weapons, even magical ones. Spells that normally harm a mudmen will still affect it, although damage is divided evenly among all the mudmen in the pool (the entire group counts as one creature for these effects, and fractions are rounded down).
When a creature enters the pool the mudmen immediately sense its presence and take but a single round to draw their substance together and rise to the surface, ready to attack on the following round. Once fully formed and standing, a mudmen can be harmed by magical weapons.
Mudmen attack by hurling mud at their opponents, who are considered AC 10 (modified by Dexterity) for the purpose of determining hits. Mud hardens on impact and slows the creature's movement rate by 1 if it hits. While hurling mud, a mudman will also advance on its victim at its full movement rate. Once within 10 feet, it will hurl itself (literally) at the victim. A sucessful hit means the death of the mudman, but slows the victim's movement by 4. A miss means the mudman must spend the next round re-forming in order to attack again.
Once a victim's movement is brought to 0, he becomes immobilized and suffocates, suffering 1-8 points of damage per round until the mouth or nose is clear. The victim will die of suffocation in five consecutive rounds unless rescued. Hardened mud can be cleared from a character's nose and mouth in one round. Movement can be restored at a rate of 1 per five rounds.
If the creature flees the pool, the mudmen will not pursue, as their senses do not extend beyond the pool. Instead, they sink into the depths, return to their dormant state, and wait until the next time someone enters the pool.
Mudmen are affected by all spells that cause damage to living creatures (e.g., *cause light wounds, magic missile, fireball, flame strike*). *Dispel magic* and *dig* act as *fireballs* cast at the same level as the mage. *Transmute mud to rock* kills all mudmen within its area of effect, with no saving throw allowed.
Mudmen are immune to all poisons, natural and magical, and are unaffected by spells that affect the mind (e.g., *hold, charm,* and *sleep*).

**Habitat/Society:** Mudmen have two states: rest and activity, the latter of which solely involves killing intruders. A mudman's pool varies in size between 20 and 200 feet in diameter. Such pools are often found near waterfalls.

**Ecology:** Mudmen are not natural creatures and not part of the ecosystem. They try to kill all natural creatures that encounter them and have no natural enemies. Over a long period of time they absorb flesh, wood, and bone, extracting whatever dweomer they can get from it, so they rarely possess any treasure -- only if they were attacked within the last month by someone who was bearing treasure. Though no uses have been recorded for a mudman's mud, it is logical that mages would not ignore its magical properties.

Mummies are corpses native to dry desert areas, where the dead are entombed by a process known as mummification. When their tombs are disturbed, the corpses become animated into a weird unlife state, whose unholy hatred of life causes them to attack living things without mercy.
Mummies are usually (but not always) clothed in rotting strips of linen. They stand between 5 and 7 feet tall and are supernaturally strong.

**Combat:** Mummies are horrific enemies. A single blow from one's arm inflicts 1-12 points of damage, and worse, its scabrous touch infects the victim with a rotting disease which is fatal in 1-6 months. For each month the rot progresses, the victim permanently loses 2 points of Charisma. The disease can be cured only with a *cure disease* spell. *Cure wounds* spells have no effect on a person inflicted with

mummy rot and his wounds heal at 10% of the normal rate. A *regenerate* spell will restore damage but will not otherwise affect the course of the disease.
The mere sight of a mummy causes such terror in any creature that a saving throw versus spell must be made or the victim becomes paralyzed with fright for 1 to 4 rounds. Numbers will bolster courage; for each six creatures present, the saving throw is improved by +1. Humans save against mummies at an additional +2.
Mummies can be harmed only by magical weapons, which inflict only half damage (all fractions round down). *Sleep, charm, hold,* and cold-based spells have no effect. Poison and paralysis do not harm them. A *resurrection* spell will turn the creature into a normal human (a fighter at 7th level ability) with the memories of its former life; or will have no effect if the mummy is older than the maximum age the priest can resurrect. A *wish* will also restore a mummy to human form but a *remove curse* will not.
Mummies are vulnerable to fire, even nonmagical varieties. A blow with a torch inflicts 1-3 points of damage. A flask of burning oil inflicts 1-8 points of damage on the first round it hits and 2-16 on the second round. Magical fires are +1 damage/die. Vials of holy water inflict 2-8 points of damage per direct hit.
Any creature killed by a mummy rots immediately and cannot be raised from death unless both a *cure disease* and a *raise dead* spell are cast within six rounds.

**Habitat/Society:** Mummies are the product of an embalming process used on wealthy and important personages. Most mummies are corpses without magical properties. On occasion, perhaps due to powerful evil magic or perhaps because the individual was so greedy in life that he refuses to give up his treasure, the spirit of the mummified person will not die, but taps into energy from the Positive Material plane and is transformed into an undead horror. Most mummies remain dormant until their treasure is taken, but then they become aroused and kill without mercy.
A mummy lives in its ancient burial chamber, usually in the heart of a crypt or pyramid. The tomb is a complex series of chambers filled with relics (mostly nonmagical). These relics include models of the mummy's possessions, favorite items and treasures, the bodies of dead pets, and foodstuffs to feed the spirit after death. Particularly evil people will have slaves or family members slain when they die so the slaves can be buried with them. Because of their magical properties, mummies exist on both Prime and Positive Material planes.

**Ecology:** To create a mummy, a corpse should be soaked in a preserving solution (typically carbonate of soda) for several weeks and covered with spices and resins. Body organs, such as the heart, brain, and liver, are typically removed and sealed in jars. Sometimes gems are wrapped in the cloth (if the treasure listing for the mummy indicates it possesses gems, a few may be placed in the wrappings). Mummies are not part of the natural ecosystem and have no natural enemies. Mummy dust is a component for rotting and disease magical items.

# Mummy, Greater

| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 8,000 See below |

Also known as *Anhktepot's Children*, greater mummies are a powerful form of undead created when a high-level lawful evil priest of certain religions is mummified and charged with the guarding of a burial place. It can survive for centuries as the steadfast protector of its lair, killing all who would defile its holy resting place.

Greater mummies look just like their more common cousins save that they are almost always adorned with (un)holy symbols and wear the vestments of their religious order. They give off an odor that is said to be reminiscent of a spice cupboard because of the herbs used in the embalming process that created them.

Greater mummies are keenly intelligent and are able to communicate just as they did in life. Further, they have an inherent ability to telepathically command all normal mummies created by them. They have the

ability to control other mummies, provided that they are not under the domination of another mummy, but this is possible only when verbal orders can be given.

**Combat:** Greater mummies radiate an *aura of fear* that causes all creatures who see them to make a fear check. A modifier is applied to this fear check based on the age of the monster, as indicated on the Age & Abilities table at the end of this section. The effects of failure on those who miss their checks are doubled because of the enormous power and presence of this creature. The mummy's aura can be defeated by a *remove fear, cloak of bravery,* or similar spell.

In combat, greater mummies have the option of attacking with their own physical powers or with the great magic granted to them by the gods they served in life. In the former case, they may strike but once per round, inflicting 3d6 points of damage per attack.

Anyone struck by the mummy's attack suffers the required damage and becomes infected with a horrible rotting disease that is even more sinister than that of normal mummies for it manifests itself in a matter of days, not months. The older the mummy, the faster this disease manifests itself (see the Age & Ability table at the end of this entry for exact details). The disease causes the person to die within a short time unless proper medical care can be obtained. Twenty four hours after the infecting blow lands, the character loses 1 point from his Strength and Constitution due to the effects of the virus on his body. Further, they lose 2 points of Charisma as their skin begins to flake and whither like old parchment. No normal healing is possible while the disease is spreading through the body, and the shaking and convulsions that accompany it make spell casting or memorization impossible for the character. Only one form of magical healing has any effect -- a *regenerate* spell will cure the disease and restore lost hit points, but not ability scores. All others healing spells are wasted. A series of *cure disease* spells (one for each day that has passed since the rotting was contracted) will temporarily halt the infection until a complete cure can be affected. Regaining lost ability score points is not possible through any means short of a *wish.*

The body of a person who dies from mummy rot begins to crumble into dust as soon as death occurs. The only way to *resurrect* a character who dies in this way is to cast both a *cure disease* and a *raise dead* spell on the body within 6 turns (1 hour) of death. If this is not done, the body (and the spirit within it) are lost forever.

Greater mummies can be turned by those who have the courage and conviction to attempt this feat; however, the older the mummy, the harder it is to overcome in this fashion. Once again, the details are provided on the Age & Abilities Table. They are immune to damage from holy water, but contact with a holy symbol from a non-evil faith inflicts 1d6 points of damage on them. Contact with a holy symbol of their own faith actually *restores* 1d6 hit points.

Perhaps the most horrible aspect of these creatures, however, is their spell casting ability. All greater mummies were priests in their past lives and now retain the spell casting abilities they had then. They will cast spells as if they were of 16th through 20th level (see below) and will have the same spheres available to them that they did in life. Greater mummies receive the same bonus spells for high Wisdom scores that player characters do. Dungeon Masters are advised to select spells for each greater mummy in an adventure before the adventure starts. For those using *Legends & Lore* in their games, greater mummies are most often priests of Osiris, Set, and Nephythys. For those using *The Complete Priest's Handbook*, they are usually associated with the worship of ancestors, darkness, death, disease, evil, guardianship, and revenge. (If neither of these works is being used in the campaign, simply assign the mummy powers as if it were a standard high-level cleric.)

Greater mummies can be harmed only by magical weapons, with older ones being harder to hit than younger ones. Even if a weapon can affect them, however, it will inflict only half damage because of the

magical nature of the creature's body.
Spells are also less effective against greater mummies than they are against other creatures. Those that rely on cold to inflict damage are useless against the mummy, while those that depend on fire inflict normal damage. Unlike normal mummies, these foul creatures are immune to non-magical fire. The enchanting process that creates them, however, leaves them vulnerable to attacks involving electricity; all spells of that nature inflict half again their normal damage. In addition, older mummies develop a magic resistance that makes even those spells unreliable.
Greater mummies, like vampires, become more powerful with the passing of time in Ravenloft. The following table lists the applicable changes to the listed statistics (which are for a newly created monster) brought on by the passing of time:

**Age & Ability Table**

| Age | To Hit | AC | HD | THAC0 |
|---|---|---|---|---|
| **99 or less** | +1 | 2 | 8+3 | 11 |

| **500 or more** | 20 | 18,000 | -4 | 7d4 |

**Notes:**
**To Hit** indicates the magical plus that must be associated with a weapon before it will inflict damage to the mummy.
**AC** is the Armor Class of the monster.
**HD** are the number of hit dice that the mummy has. Greater mummies are turned as if they had one more Hit Die than they actually do, so a 250 year old (10+3) is turned as if it had 11 Hit Dice. Any mummy 300 years old or older is turned as a "special" undead.
**THAC0** is listed for the various Hit Dice levels of the mummy to allow for easy reference during play.
**Alignment** As the mummy grows older, it becomes darker and more evil. In cases where two alignments are listed, there is a 75% chance that the mummy will be of the first alignment and a 25% chance that it will be of the second. Thus, a 300 year old mummy is 75% likely to be chaotic evil.
**Wisdom** is the creature's Wisdom score. When employing their spells, greater mummies receive all of the bonus spells normally associated with a high Wisdom. Further, as they pass into the higher ratings (19 and beyond) they gain an immunity to certain magical spells as listed in the Player's Handbook .
**Magic** is the creature's natural magic resistance. As can be seen from the table, old mummies can be very deadly indeed.
**Disease** is the length of time it takes for a person infected with the mummy's rotting disease to die.
**Level** indicates the creature's level as a priest. Older mummies have access to far greater magics than younger ones and are thus more dangerous than younger ones.
**XP** lists the number of experience points awarded to a party for battling and defeating a greater mummy of a given age.
**Mummies** indicates the number of normal mummies that the creature will have serving it when encountered.
**Fear** indicates the penalty to those making fear checks due to the evil influence of the greater mummy's foul aura.

**Habitat/Society:** Greater mummies are powerful undead creatures that are usually created from the mummified remains of powerful, evil priests. This being the case, the greater mummy now draws its mystical abilities from evil powers and darkness. In rare cases, however, the mummified priests served non-evil god in life and are still granted the powers they had in life from those gods.
Greater mummies often dwell in large temple complexes or tombs where they guard the bodies of the dead from the disturbances of grave robbers. Unlike normal mummies, however, they have been known to leave their tombs and strike out into the world -- bringing a dreadful shroud of evil down upon every land they touch.
When a greater mummy wishes to create normal mummies as servants, it does so by mummifying persons infected with its rotting disease. This magical process requires 12-18 hours (10+2d4) and cannot be disturbed without ruining the enchantment. Persons to be mummified are normally *held* or *charmed* so that they cannot resist the mummification process. Once the process is completed, victims are helpless to escape the bandages that bind them. If nothing happens to free them, they will die of the mummy rot just as they would have elsewhere. Upon their death, however, a strange transformation takes place. Rather than crumbling away into dust, these poor souls rise again as normal mummies. Obviously, this process is too time consuming to be used in actual combat, but the greater mummy will often attack a potential target in hopes of capturing and transforming it into a mummy. All mummies created by a greater mummy are under its telepathic command.

**Ecology:** The first of these creatures is known to have been produced by Anhktepot, the Lord of Har'akir,

in the years before he became undead himself. It is believed that most, if not all, of the greater mummies he created in his life were either destroyed or drawn into Ravenloft with him when he was granted a domain. A number of these creatures are believed to serve Anhktepot in his domain, acting as his agents in other lands he wishes to learn what is transpiring in other portions of Ravenloft.

The process by which a greater mummy is created remains a mystery to all but Anhktepot. It is rumored that this process involves a great sacrifice to gain the favor of the gods and an oath of eternal loyalty to the Lord of Har'akir. If the latter is true, then it may lend credence to the claim of many sages that Anhktepot can command every greater mummy in existence to do his bidding. If this is indeed the case, it makes the power of this dark fiend far greater than is generally supposed.

Myconids, or fungus men, are a race of intelligent fungi that live in the remote reaches of the Underdark.

They are cautious creatures that deplore violence; myconids have no desire to conquer anybody and would prefer to be left alone.
Myconids resemble walking toadstools in human form. Their flesh is bloated and spongy and varies in color from purple to gray. Their wide feet have vestigial toes and their pudgy hands have two stubby fingers and a thumb on either side. Myconids' Hit Dice determine their social status and abilities. They have no spoken language.

**Combat:** Fungus men fight by clubbing with their clasped hands, causing 1d4 points of damage per Hit Die. Thus a 1-Hit Die myconid inflicts 1d4 points of damage, a 2-Hit Die myconid causes 2d4 points of damage, etc., up to the 6-Hit Dice king that inflicts 6d4 points of damage on a hit.
Myconids also have the ability to spew forth clouds of special spores. The number and kind of spores increase as they grow. As each myconid advances to another size level, it gains the ability to spray another type of spores, and the number of times per day that each spore type can be emitted also increases. A myconid can emit each of its spore types a number of times per day equal to its Hit Dice. For example, a 3-HD myconid (6 feet tall) can spray three types of spores, and it may use each type three times per day. These spore types include the following:
*Distress:* This spore type is used to alert other myconids to danger or a need for aid. The cloud expands at a rate of 40 feet per round, expanding to its maximum of 120 feet in three rounds. This ability is gained at the 1-Hit Die level.
*Reproducer:* These spores are only emitted at the proper time for growing new myconids so the population can be rigidly controlled. They are also automatically ejected by a dying myconid. This ability is gained at the 2-Hit Dice level.
*Rapport:* These spores are primarily used in the melding process. However, they can be used by the myconids to communicate with other species, since the fungus men do not talk. A small cloud of spores is aimed at one person; if the person fails a saving throw vs. poison (it can choose to fail), it can go into telepathic rapport, speaking mind-to-mind with the myconid as if it were normal speech. The range of this effect is 40 feet. The duration is a number of turns equal to the Hit Dice of the myconid. This ability is gained at the 3-Hit Dice level.
*Pacifier:* This type of spore cloud may be spewed at a single creature. If the creature fails its saving throw vs. poison, it becomes totally passive, unable to do anything. The affected creature only observes; it is unable to perform any action even if attacked. The range of this effect is 40 feet. The duration of this effect is a number of rounds equal to the Hit Dice of the myconid. This ability is gained at the 4-Hit Dice level.
*Hallucinator:* This type of spore is usually used in the melding ritual, but a myconid can project them at an attacker. The spore cloud may be shot at one creature, and if that creature fails its saving throw vs. poison, it suffers violent hallucinations for a number of turns equal to the Hit Dice of the myconid. Hallucinating creatures react as follows (roll 1d20):

| D20 Roll | Reaction |
|---|---|
| 1-10 | Cower and whimper |
| 11-15 | Stare into nothingness |
| 16-18 | Flee shrieking in a random direction |
| 19-20 | Try to kill the closest creature |

The range of this effect is 40 feet. This ability is gained at the 5-Hit Dice level.
*Animator:* This ability is gained at the 6-Hit Dice level, the level only the king may achieve. The king uses these spores to infect a dead animal or creature. A purple fungus quickly covers the corpse, taking over the dead body systems and putting it to work, animating the corpse to resemble a zombie (AC 10, Move 9, HD 1, hp 4, #AT 2, Dmg bony claws for 1-3/1-3). It is not undead and cannot be turned by priests. It always strikes last in a round. The body continues to rot and the fungus gradually replaces the missing parts, becoming specialized to take over their functions. Eventually, however, the decay proceeds too far, and the body stops functioning, able to rest at last. Animation takes place 1d4 days after infection, and the corpse is animated for 1d4+1 weeks before it decays. Animated creatures will follow simple orders given by the animator (with rapport spores) to the best of their ability. Orders take priority over self-preservation.
A myconid has a deathly fear of sunlight and will not willingly travel to the surface world. The exact effects of sunlight on a myconid are unknown, but they must be highly detrimental for the fungus men to fear sunlight as they do.

**Habitat/Society:** Myconid society is based on "circles," extremely tight social groups that are linked by group work and melding sessions. Myconid circles usually consist of 20 members: four of each size from 1-5 Hit Dice (i.e., four 1-HD, four 2-HD, etc.). Each community consists of 1d10 circles.
Each circle's day is rigidly structured: eight hours of rest, followed by eight hours of farming the fungus crops, followed by eight hours of melding. For the myconids, melding is entertainment, worship, and social interaction combined. The fungus men gather in a tight circle and the elder myconid release rapport and hallucinatory spores. The entire group then merges into a collective telepathic hallucination for eight hours. Myconids consider this melding to be the reason for their existence. Only distress spores will bring a circle out of its meld before the eight hours have elapsed.
The myconid king is always the largest member of the colony and is the only member at the 6-Hit Dice level. It is also the only myconid that is not the member of a circle. The other myconids regard separation from the circles with horror and pity the lonely king. The leadership role is thought of as an unpleasant duty, almost a condemnation. However, when the old king dies, the strongest 5-Hit Dice myconid always assumes the role of the new king. The king must remain outside of circles to retain objectivity and to pay close attention to the duties of leadership. The king animates guardians for the colony so the myconids need not commit violence. It coordinates the work schedule and pays attention to affairs outside the colony that could affect the fungus men. The king also practices fungal alchemy, brewing special potions that may be useful in times of trouble.
In general, myconids are a peaceful race, desiring only to work and meld in peace. There are no recorded instances of disharmony, or any sort of violence or disagreement between myconids. If forced into combat, they avoid killing if at all possible; violence adversely affects their melding.
Accord has never been reached between fungoid and humanoid. Each views the other as a disgusting threat; humanoids see myconids as ugly monsters. Myconids view humanoids as a violent, insane species out to conquer anything in their path, destroy anything they can't conquer, then go back down the path to make sure there isn't anything they forgot to destroy or conquer. Myconids find it difficult to believe that humanoids are not going to immediately use violence against them, and so they are very reluctant to deal with them. Given population pressures in the underworld in which the myconids live, further conflicts seem inevitable. If the myconids are approached in peace, it is possible that they will communicate, though they will be suspicious.
Myconids live in Underdark regions, which are large cavernous underground areas that range in size

form a large cavern complex to an entire secret continent beneath the ground. Myconids try to find isolated spots away from civilized areas. These communities will usually be near water, for they like dampness. Work details sometimes patrol the Underdark, looking for signs of battles and unburied dead, which they bring to the king to animate; these are the only myconids that will be found outside of their lair. A myconid community is arranged around mounds of moss-covered stones, on which the circle members sit when they meld, and on which they sleep. There will also be a large garden area; the myconids feed on water and small fungi, and the king uses the garden ingredients to make his potions. Dead myconid kings are buried with honor beneath the mounds, while dead myconids are buried near the gardens.

**Ecology:** Myconids are an unusual species of fungi. They grow fungi, which later decay, and the myconids feed from these soil nutrients.
A myconid has a life span of 24 years. It requires four years to grow to each Hit Die, thus a 1-Hit Die myconid is four years old, a 2-Hit Die myconid is eight years old, etc., to a maximum of 5 Hit Dice at 20 years of age. It requires a special regimen for a myconid to reach 6 Hit Dice (king).
A myconid king has the ability to brew magical potions from fungi. In addition to standard magical potions, a myconid king can brew the following:
*Potion of Fungus Growth:* This is used in times of population shortage, when myconid circles need their young members to grow quickly. This potion increases a myconid's Hit Dice by 1. It can only be used on a myconid once in its lifetime; repeated doses have no effect.
*Potion of Fungus Healing:* This potion only works on fungi. It heals 1d6+1 lost hit points.
*Potion of Decay:* This poison affects a humanoid creature as if it were a dead creature infected with purple fungi spores. The victim must roll a successful saving throw vs. poison or die, replaced within 1d4+1 days by a fungal intelligence friendly to the myconids, which lasts for 1d4+1 weeks before permanently decaying. A *cure disease* spell will prevent the victim's death if cast within three minutes of the infection. The combination of a *cure disease* spell and a *raise dead* spell will bring back victims of the fungus disease after 48 hours. This potion is rarely used by the fungus men.
*Powders of Hallucination:* This is used when hallucinatory spores are in short supply due to the death of 4- and 5-Hit Die members of the circles. It is also used as a defensive measure when myconids are certain they are going to be attacked; a powder is bundled and placed on a spider-silk film inside the entrance to their circle. Creatures of size M will break the powder free, affecting all creatures in a 20-foot radius as hallucinatory spores.
*Potion of Anointment*: This is the special regimen that enables a 5-Hit Die fungus to grow to 6 Hit Dice and become king. Growth is immediate and painful. It affects a myconid only once. It is poisonous to humans (successful saving throw vs. poison or die).

There is always one *potion of anointment* in the community. If other potions are indicated, consult the following table:

| | |
|---|---|
| 01-10 | Another *potion of anointment* |
| 11-20 | *Potion of fungi growth* |
| 21-30 | *Potion of fungus healing* |
| 31-40 | *Powder of hallucination* |
| 41-45 | *Potion of decay* |

| | |
|---|---|
| 46-00 | Roll on standard potion table |

Alchemists have found a number of uses for myconid spores, typically in poisons and potions of delusion. Other than their potions, myconids produce little of value to humanoid creatures.

| **XP Value:** | 7,000 | 5,000 | 3,000 |

Possessing high intelligence and magical abilities, naga are snake-like creatures with human heads. They prefer warmer climates and tend not to wander far from their lairs.
The cold-blooded naga have glittering scales and grow to an adult length of 10 to 20 feet. Their lidless eyes are bright and wide, almost luminescent, and their spines are armored with sharp triangular extensions that grow in a line from the napes of their necks to the tips of their tails. Wise and patient, these creatures can stay still for hours but move swiftly when alarmed. They favor resting in a semi-aware state that conserves their energy and makes them very hard to surprise. Occasionally, naga fashion a pouch to carry items under their chins. Both land types have a distinctive smell that pervades their lair and nearby areas.

Naga can usually speak four or more languages.

**Combat:** Naga often set traps to snare trespassers. Magical spells are always attempted first, since naga have few melee skills. Once their magic is expended, naga rely on their poisonous bites -- only the largest of these creatures can actually constrict victims like a giant snake.

**Habitat/Society:** Naga live solitary lives, hunting or foraging over an area usually only a quarter mile square. They favor dwelling in a deep hole, but sometimes are found curled up in ruins or in a darkened room. While the sexes are impossible to tell apart, there is a 10% chance that an encounter includes one or more mates. These matings are temporary, as a pregnant naga quickly leaves the male to hide her eggs in a secluded spot. Young naga resemble giant snakes until they reach adulthood; then their human-like head emerges after a long and painful molting.

**Ecology:** While naga do not produce trade goods, their lives span many human generations and they keep a detailed oral history, so they are good sources of information. They are often protectors of treasures or artifacts for centuries. Their hides can be fashioned into *scale mail +2*, and their eyes and teeth have been sold for use in arcane spells.

### Guardian Naga

Surrounded with a flowery sweet scent, the guardian naga is marked by green-gold scales, silvery spines, and flashing golden eyes. It is so called because its lawful good nature makes it a perfect sentinel over a like-aligned being's treasure or some evil. This naga always warns off trespassers, and often buries those defeated in battle. The guardian naga can spit poison at an individual attacker at up to 30-foot range, and the poison kills all who fail their saving throws vs. poison. In addition to a poisonous bite and constriction, these naga have the ability to use priest spells as 6th-level priests.

### Spirit Naga

These black-and-crimson-banded naga have a most human-like head, with stringy hair and deep brown eyes, and they smell of rotting flesh, which happens to be their preferred food! Hiding in deserted ruins or caverns, these evil and cunning spirit naga seek to cause harm to any creature that passes through their domains. They set traps and frequently attack without warning. While they are not big enough to constrict their prey, they have a poisonous bite, a gaze that charms (as a *charm* spell) all those who look into their eyes and fail a saving throw vs. paralyzation, and can use wizard spells at 5th-level ability and priest spells at 4th-level ability.

### Water Naga

The beautiful water naga are emerald green to turquoise in reticulated patterns with chocolate brown and pale jade green or dark grey and olive, and their spines have red spikes that raise like hackles when they are angry. Their eyes are pale green to amber. These naga are found in clear, fresh water. Curious but neutral in attitude, water naga seldom attack unless threatened. In addition to their poisonous bite that inflicts 1d4 points of damage, these naga have 5th-level wizard spell abilities. They never know spells that deal with fire.

# Naga, Dark

| | |
|---|---|
| **Climate/Terrain:** | Any except arctic/any land |

| **Magic Resistance:** | Nil |
| **Size:** | L (up to 12' long) |
| **Morale:** | Champion (15) |
| **XP Value:** | 4,000 |

Dark naga are fey creatures who have human-like faces (with fanged mouths) on leathery, snake-like bodies. They usually work with other evil beings for mutual gain or survival. Dark naga tend to be black, purplish-black, or very dark blue in hue, and their crested heads and smooth, almost invisible scales make them look like gigantic eels more than snakes.

**Combat:** Dark naga have natural *ESP* powers (80' range), and use this ability constantly.

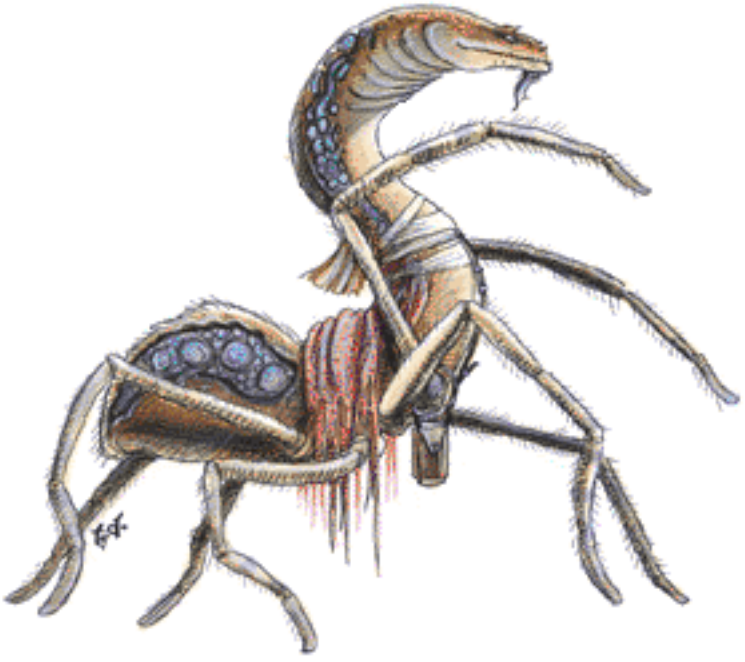
Dark naga have a (non-poisonous) bite and a poisonous tail-sting; the barbed stinger does physical damage, and any struck being must save vs. poison or take 1-2 hp additional damage and fall into a drugged sleep (onset time 1 round, sleep lasts 2d4 rounds).
The most feared ability of dark nagas is their power to wield magic. A dark naga casts spells as a 6th-level wizard (4,2,2), and employs only verbal spells. It may learn these spells from dragons, Phaerimm, or other creatures who can cast spells with but a word or thought (act-of-will spells, as opposed to spell-like natural powers, can easily be altered into verbal-release magics . . . but the devising of a verbal-only version of a spell that normally has somatic and material components is not nearly so simple a matter). It may devise new spells, or verbal-only spell versions, itself by means of experimentation. Either means of acquiring new magics is slow and expensive, and this can often force dark nagas into servitude to a stronger evil creature or anyone who hires them, or into the life of an adventurer.
Dark naga are immune to the effects of all known (normal and magical) acids, venoms, and poisons. Some have been known to swallow poisons and act as a courier, spitting up the dangerous liquid when they deliver it to its destination. They can spit poison that they are so carrying up to 10' distant at any opponent; this requires a successful attack roll, and takes the place of their bite, though a naga can elect to bite and then release the poison as it does so, combining the damage.
In battle, a dark naga may use its sting and either a spell or a bite in the same round. If space permits, the naga can direct its sting and bite against the same foe, but it is quite intelligent enough to direct attacks at multiple opponents, even attacking foes in front of and behind it, simultaneously, if caught between them in a narrow passage.
Dark nagas cannot be mind-read; their *ESP* ability somehow renders them immune to the *ESP*-like probes of others. They are subject but resistant to *charm, sleep, hold* and similar enchantment/charm spells, receiving a +2 bonus to all saving throws against this school of magic.

**Habitat/Society:** Dark nagas lair in rocky places, such as caverns or ruins; they like to have a home where they can hide things (such as treasures and spellbooks), that has more than one entry or exit, and at least one place narrow enough that they can block it with their body, and singlehandedly fight off intruders. Dark nagas are fond of traps, and will devise these (or hire other creatures to install them) whenever possible.
Dark nagas tend to be loners, but can form stable family groups of two or three; they are bisexual, and give birth to a squirming mass of many wormlike young which they promptly abandon to fend for themselves. Intelligent enough to know they can prevail against few creatures in the Realms alone, dark nagas work with other evil creatures, such as orcs, hobgoblins, drow, phaerimm, beholders, and the like. They like to fill a "commander and magical strike force" role, perhaps in a sergeant-like intermediary rank, under a more powerful ruler -- but they are wise enough to adopt the faith, beliefs, and rules of whatever group they join.

**Ecology:** Dark naga do not willingly eat other dark naga, but they will eat just about anything else, both alive and dead. They eat a few lichens and the occasional green plant, but their main diet is meat. They especially prize hot, still-fresh blood.
Dark nagas spend their lives outwardly working with, or serving, others. Whenever possible, however, they also pursue private goals, which may be as whimsical and odd as some human goals ("cover this desert valley with trees," for instance), but always include increasing their personal power by acquiring new spells and magical items. Dark nagas are quick to plunder fallen foe, swallowing items, scrolls, and spellbooks to spit forth later -- for all dark nagas have a bag-like internal organ that they can use to carry

things. This organ has thick, rubbery air-sac walls to protect the naga against sharp points and the like, but it also protects the cargo against digestive juices, and has the unusual side-effect of shielding magic from all detection spells.

# Neogi



| | Neogi | Great Old Master |
|---|---|---|
| **Climate/Terrain:** | Any | Any |

| **Morale:** | Steady (12) | Unsteady (6) |
| **XP Value:** | 650 | 14,000 |

The neogi appear as a cross between a wolf spider and a moray eel. The short, furry, eight-limbed body is topped by a lithe, bare, fleshy neck with a serpentine head, its mouth filled with needle-sharp teeth. The ends of its limbs are tipped with small claws. The fur of the neogi is a light tan, but dyed a variety of colors to signify power, rank, accomplishments, and warnings to other neogi. The older a neogi grows, the more colorful its hide becomes.
The neogi are ruthless slayers and plunderers, and think nothing of eating their enemies, servants, or fallen comrades. They are a hateful, xenophobic race.
Neogi can communicate in their own language and in Common. Many speak 1-4 other languages to help facilitate their slaves taking orders correctly.

**Combat:** The neogi have a number of defenses, the first, and most obvious being their enslavement of umber hulks (see entry). Each neogi has a personal umber hulk slave who is a combination bodyguard, manservant, and useful set of hands. Second, the bite of the neogi is poisonous. Those bitten and failing a saving throw vs. poison are affected as by a *slow* spell for 1d8 rounds. Multiple bites will extend this period by an additional 1d8 rounds per bite. Lastly, 1 in 10 neogi has some magical ability, equal to human spell use of levels 1-8.

**Habitat/Society:** The hated neogi are only found in very remote locations, deep beneath the earth, or among the farthest stars. Their lives revolve around their communities and their slaves.
Neogi are a slaving race with an inborn sense of property: all is either owned or owner, slave or neogi. Even neogi are slaves to other neogi, but slave-neogi may have their own slaves. The neogi tattoo their non-neogi slaves with symbols of ownership, usually on the left shoulder in the front and back.
Captive umber hulks are trained from birth to follow their "small lords," caring for their every need. Any neogi can command another umber hulk (the effect of this command is akin to the effect of the *charm monster* spell).
The neogi world view of "own or be owned" has resulted in a paranoid outlook that borders on xenophobia, and their relentless attacks on other races result in their being universally hated. The only "normal" race with ties to neogi are the mind flayers, who make a profit on the neogi slave trade.

**Ecology:** As a neogi grows older and his mind fades, his orders become confused and his slaves become disobedient. His fellow neogi may choose to poison the older one at once. The different poisons moving through its body overload the old neogi's system, and it begins its change into a Great Old Master.

The neogi making the transformation swells to 20 feet in height and a similar girth. Its legs and arms become useless, and its intelligence fades; it now lives only to eat. Live flesh is preferred, but the dead will sustain it. A Great Old Master inflicts 1d12 points of damage per round to any creature it is fed. After 2 months of eating, the skin of the Great Old Master bursts and a new crop of mature neogi spill forth. These are unmarked and barely sentient at birth, and for the next week the brood area resounds with combat as the young neogi kill each other for food. Of the 20-40 neogi that eat their way out, only about 3-6 survive. These are considered slaves of the community, until such a time as they claim an umber hulk as their personal slave.
If a Great Old Master is attacked and its flesh pierced, it releases 2d4 neogi to defend itself. These are taken from the future brood, and are not replaced. Blunt weapons will not pierce the skin and therefore do not bring forth young. Edged or piercing weapons, or magical spells that pierce or burn, will produce this defensive reaction.

### Reaver

These rogue neogi have rebelled and are seeking to escape the other neogi and their poisons that will transform them into Great Old Masters. Rogue neogi are little better than their fellows, and are, if anything, more desperate, due to being pursued by their former fellows, all eager to start the process of producing more neogi.

# Nightmare

| | |
|---|---|
| **Climate/Terrain:** | Lower planes |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | -4 |
| **Movement:** | 15, Fl 36 (C) |
| **Hit Dice:** | 6+6 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 4-10/4-10/2-8 |
| **Special Attacks:** | Burning hooves |
| **Special Defenses:** | Paralyzing cloud |
| **Magic Resistance:** | Nil |
| **Size:** | L (6' at shoulder) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 2,000 |

Nightmares are the evil steeds of the lower planes, often serving as mounts for baatezu, tanar'ri, night hags, liches, and powerful undead lords.
They look like large, powerful horses with a jet black coat. Nightmares have glowing red eyes, flaming orange nostrils, and hooves that burn like embers. Their flowing manes and great tails are ragged and wild.
Nightmares can understand commands from evil riders. They communicate among themselves by empathy.

**Combat:** Nightmares are hateful of material life. They will often attack any non-lower planar creature they encounter (and will sometimes attack the lower planar creatures, too). They have vicious fangs that

inflict 2-8 points of damage on a successful bite. Their burning hooves each inflict 4-10 (1d6+4) points of damage per attack and will set any combustibles on fire.
During combat, the excitement and fervor of the fight will cause nightmares to emit a smoking, hot cloud of noxious vapors. It blinds and chokes all those within 10 feet of the evil steed. Victims must make a saving throw vs. paralyzation or be at a -2 penalty on their attack and damage dice.
Although they have no wings, nightmares are able to magically propel themselves through the air at an impressive rate. They may fly through the Astral and Ethereal planes at will.

**Habitat/Society:** Nightmares are the servitor steeds of many lower planar creatures. They are intelligent, however, and cannot be treated as casually as a simple horse. They will willingly and gleefully serve as a mount for any mission involving evil. However, for the unwary rider, a nightmare's own ambitions can prove to be insurmountable. These hateful steeds will often do what *they* want rather than follow the wishes of their "master." In many ways, nightmares pose the same problems as magical weapons with large egos.
Anyone on the lower planes who is not a native thereof can attract the attention of a nightmare to secure it as a mount. The process involves several spells, as well as an offering for the creature's service. The summoning requires a mage or specialist wizard of at least 5th level. The following spells must all be cast by the same spell-user. First, the mage must cast a *mount* spell. This conjuration is used to attract the attention of the nightmare. Next, a *monster summoning III* spell must be cast to bind the nightmare into service. When that is complete, a *wall of fog* spell is cast. If all of this is done properly, the nightmare will come galloping through the fog, nostrils flaring and eyes gleaming, ready to perform in the service of evil. Lastly, an offering is required. This may be given by anyone, not just the spell caster. The offering must be oat-like flakes made from platinum that the nightmare will eat. The flakes must be of at least 200 gp value. Whoever feeds the oats to the nightmare will be its master for 72 hours.
Creatures of the lower planes do not perform these steps to summon a nightmare. It is unknown what dark agreement they make for a nightmare's service.
Once per decade, on the plane of Hades, there is a dark and sinister time called *Gloom Meet*. At this time the various lower planar denizens will meet and decide how they will spread their will for the next decade. The nightmares play a special role in *Gloom Meet*, for they spread the word that the meeting is about to begin. As the *Gloom Meet* approaches, there is a higher concentration of nightmares and their frequency changes from very rare to uncommon. This is the first indication that *Gloom Meet* is to occur, and lasts for approximately two weeks. Immediately prior to the meeting, the nightmares ride the planes in a terrifying charge that notifies all that the *Gloom Meet* has started.

**Ecology:** Nightmares are the wild steeds of the planes. It is their place in the lower planes to act as mounts for missions of evil and dread. They have no biological link to true horses. A nightmare is merely a foul minion of evil, without need of food or air, that through some unknown pact has taken the form of a huge, terrible steed. Nightmares are listed as carnivores, based solely on their habit of eating fallen foes whenever possible. However, there is nothing to indicate that the nightmares derive any of their sustenance from the flesh of animals -- they more likely gain all their strength through their service to evil.

# Nymph

| | |
|---|---|
| **Climate/Terrain:** | Any |

| **Morale:** | Unsteady (7) |
| **XP Value:** | 1,400 |

So beautiful that a glimpse can blind or even kill a man, the nymphs are the embodiment of loveliness, a triumph of nature.
A nymph's beauty is beyond words -- an ever-young woman with sleek figure and long, thick hair, radiant skin and perfect teeth, full lips and gentle eyes. A nymph's scent is delightful, and her long robe glows, hemmed with golden threads and embroidered with rainbow hues of unearthly magnificence. A nymph's demeanor is graceful and charming, her mind quick and witty. Nymphs speak their own musical language and the common tongue.

**Combat:** Neutral in their alliances and cares, nymphs do not fight, but flee if confronted by an intruder or danger. Nymphs are able to cast *dimension door* once per day, and can employ druidical priest spells

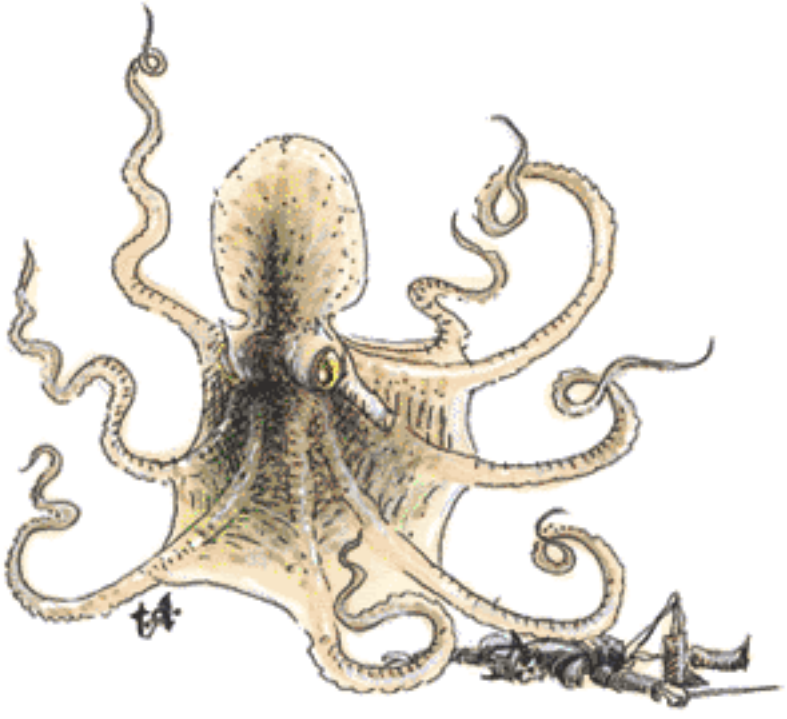
at 7th ability level, giving a nymph four 1st, two 2nd, two 3rd, and one 4th level spell once per day. Looking at a nymph will cause permanent blindness unless the onlookers save versus spell. If the nymph is nude or disrobes, an onlooker will die unless a saving throw versus spell is successful.

**Habitat/Society:** These beautiful females inhabit only the loveliest of wilderness places, clear lakes and streams, glacier palaces, ocean grottoes, and crystalline caverns. Nymphs prefer a solitary existence, but very occasionally a few will gather together in a place of spectacular charm, though these rendezvous seldom last for more than a few months. Animals of all types flock to a nymph to be petted and caressed, forgetting their natural enemies to gather around the lovely creature.
There is a 10% chance that a nymph will be friendly if approached by a good creature without the latter first glimpsing the nymph, by calling or other prior notice. On the other hand, if a nymph sees a human male with 18 Charisma and good alignment before he sees her, it is 90% probable that the nymph will be favorably inclined toward the man. It is still necessary to make saving throws upon sighting the nymph. Nymphs hate ugliness and evil and sometimes will help to defeat it. Any treasure they possess has usually been given to them by some lovesick man.

**Ecology:** Like a druid, a nymph believes in the sanctity of nature and her environment and will try to keep her lair safe and pure. She will heal wounded animals and mend broken trees and plants. Sometimes she will even help a human in distress (5% chance). Since nymphs live for many generations, they can provide a wealth of information on the history of an area and often know secret places, hide-outs, and entrances long forgotten. If a man is kissed by a nymph, all painful and troubling memories are forgotten for the rest of the day -- this may be a boon to some and a curse to others. A lock of nymph's hair can be used to create a powerful sleeping potion or, if enchanted and woven into a cloth and sewn into a garment, will magically add one point to the wearer's Charisma. The tears of a nymph can be used as an ingredient in a *philter of love*. If a woman bathes in a nymph's pool, her Charisma is increased by two points until she bathes again.

# Octopus, Giant

| | |
|---|---|
| **Climate/Terrain:** | Any salt water |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Nocturnal |
| **Diet:** | Carnivore |
| **Intelligence:** | Animal (1) |
| **Treasure:** | (R) |
| **Alignment:** | Neutral (evil) |
| **No. Appearing:** | 1-3 |
| **Armor Class:** | 7 |
| **Movement:** | 3, Sw 12 |
| **Hit Dice:** | 8 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 7 |
| **Damage/Attack:** | 1-4 (x6)/2-12 |
| **Special Attacks:** | Constriction |
| **Special Defenses:** | Ink, color change |
| **Magic Resistance:** | Nil |
| **Size:** | Large (9'-12' across) |
| **Morale:** | Elite (13) |
| **XP Value:** | 2,000 |



The dreaded "cuttlefish" are the scourge of ocean-going sailors and fishermen. Malicious and cunning, giant octopi have been known to attack ships, sinking smaller craft and stealing crew members from the larger ships.
Giant octopi change their color to blend into their surroundings, and the range of colors and patterns available to them is extensive, from green to deep black, blue speckles and red stripes. Tentacles are often disguised as seaweed. Once camouflaged, there is only a 10% chance to detect them, and usually it is their eyes that give them away. Normal coloration is grey to brown, and their vicious beaks are a deep yellow with a bright orange mouth and tongue.

**Combat:** An octopus will readily attack swimmers or small vessels in order to eat the crew. Several have

been known to cooperate in order to overwhelm a larger ship, and any craft seized by these monsters loses way and comes to a full stop in three turns.
A giant octopus generally attacks with six of its eight tentacles, using two to anchor itself. Each striking tentacle causes 1d4 points of damage, but unless the member is loosened or severed, it constricts for 2d4 points of damage every round after striking. If a victim is dragged close enough to the beak, the monster can bite for 2d6 points of damage.
Any victim under 8 feet tall or long can be struck by only one tentacle at a time, and the chance that both upper limbs are pinned on a successful strike is 25%, while the chance that both upper limbs are free is also 25%. When both upper limbs are held, the victim has no attack; if only one limb is held the victim attacks with a -3 penalty to its attack roll; if both limbs are free (i.e., the tentacle is wrapped around the victim's body) then the victim attacks with a -1 penalty to its attack roll. Tentacles grip with a Strength of 18/20. Any creature with a Strength equal to or greater than 18/20 can grasp the tentacle and negate its constriction. This does not free the victim, and the octopus will immediately seek to drag the victim to its mouth to eat it. To break free, a tentacle must be severed; this requires 8 points of damage. (These hit points are in addition to those the octopus gains from its 8 Hit Dice.)
Once three or more tentacles are severed, it is 90% probable that the octopus will retreat, ejecting a cloud of black ink 40 feet high by 60 feet wide by 60 feet long. This ink cloud completely obscures the vision of any creature within it. The wounded octopus then camouflages itself in its lair or a nearby hiding place. It takes the monster two to three months to grow back severed tentacles.

**Habitat/Society:** While octopi cooperate to attack a food source, they live a solitary existence, preferring to shelter in warm water of medial to shallow depth. Lairs are made in wrecked ships and undersea caves; any treasure found there is just an incidental leftover from previous meals. Consummate hunters, these monsters have great patience and cover a very small area, waiting for their food to come to them. Mating season comes every spring. Like most marine animals, octopi leave their eggs in a reef to fend for themselves.

**Ecology:** When prey is scarce, or if it has been wounded, an octopus turns to scavenging, eating everything from small crustaceans to seaweeds. Survival is paramount with this monster. It prefers to hunt at night, and often a man missing during the late night watch has been grabbed by a giant octopus, pulled quickly over the side, and eaten.
Giant octopi's leathery hide is tough and waterproof, and it is worked into fine rain ponchos by sailors lucky enough to catch and kill one. Another byproduct of these monsters is their ink -- they are most often hunted for this commodity. Giant octopus ink can be used to pen magical scrolls.

| **XP Value:** | 270 | 650 | 420 |
| Leader | 650 | -- | 650 |
| Chieftain | 975 | 975 | 975 |

Ogres are big, ugly, greedy humanoids that live by ambushes, raids, and theft. Ill-tempered and nasty, these monsters are often found serving as mercenaries in the ranks of orc tribes, evil clerics, or gnolls. They mingle freely with giants and trolls.
Adult ogres stand 9 to 10 feet tall and weigh 300 to 350 pounds. Their skin colors range from a dead yellow to a dull black-brown, and (rarely) a sickly violet. Their warty bumps are often of a different color -- or at least darker than their hides. Their eyes are purple with white pupils. Teeth and talons are orange or black. Ogres have long, greasy hair of blackish-blue to dull dark green. Their odor is repellent, reminiscent of curdled milk. Dressing in poorly cured furs and animal hides, they care for their weapons and armor only reasonably well. It is common for ogres to speak orc, troll, stone giant, and gnoll, as well as their own guttural language. A typical ogre's life span is 90 years.

**Combat:** In small numbers, ogres fight as unorganized individuals, but groups of 11 or more will have a leader, and groups of 16 or more usually include two leaders and a chieftain. Ogres wielding weapons get a Strength bonus of +2 to hit; leaders have +3, chieftains have +4. Females fight as males but score only 2-8 points of damage and have a maximum of only 6 hit points per die. Young ogres fight as goblins.

**Habitat/Society:** Ogre tribes are found anywhere, from deep caverns to mountaintops. Tribes have 16-20 males, 2-12 females, and 2-8 young. Shamans, if present, will be of 3rd level, and have access to the spheres of combat, divination, healing, protection, and sun (darkness only). Ogres live by raiding and scavenging and they will eat anything. Their fondness for elf, dwarf, and halfling flesh means that there is only a 10% chance that these will be found as slaves or prisoners. There is a 30% chance that an ogre lair will include 2-8 slaves. Captured prisoners are always kept as slaves (25%) or food (75%). Extremely avaricious, ogres squabble over treasure and cannot be trusted, even by their own kind.

**Ogre Leader**
When more than 11 ogres are encountered, a leader will be present. He is a 7 Hit Dice monster with 30-33 hit points and Armor Class 3. He inflicts 5-15 (2d6+3) points of damage per attack, +6 with weapon.

### Ogre Chieftain

If 16 or more ogres are encountered, they will be led by two patrol leaders and a chieftain. The chieftain is a 7 Hit Dice monster with 34-37 hit points and Armor Class 4. He inflicts 8-18 (2d6+6) points of damage per attack, +6 with weapon. Chieftains are usually the biggest and smartest ogres in their tribes.

**Ecology:** Ogres consistently plague mankind, lusting for gold, gems, and jewelry as well as human flesh. They are evil-natured creatures that join with other monsters to prey on the weak and favor overwhelming odds to a fair fight. Ogres make no crafts nor labor.

### Ogre Mage

The oriental ogre has light blue, light green, or pale brown skin with ivory horns. The hair is usually a different color (blue with green, green with blue) and is darker in shade; the main exception to this coloration is found in ogre magi with pale brown skin and yellow hair. They have black nails and dark eyes with white pupils. The teeth and tusks are very white. Ogre magi are taller and more intelligent than their cousins and they dress in oriental clothing and armor.

**Combat:** Ogre magi can perform the following feats of magic: *fly* (for 12 turns), become *invisible*, cause *darkness* in a 10-foot radius, *polymorph* to a human or similar bipedal creature (4 feet to 12 feet tall), and *regenerate* one hit point per round (lost members must be reattached to regenerate). Once per day they can do the following: *charm person, sleep*, assume *gaseous form*, and create a *cone of cold* 60 feet long with a terminal diameter of 20 feet, which inflicts 8-64 (8d8) points of damage (save vs. spell for half damage). Oriental ogres attack with magic first and resort to physical attacks only if necessary. They are +1 on morale. In battle, ogre magi prefer the naganata (75%) or scimitar and whip (25%). Those found in oriental settings might (25%) possess ki power or have mastered a martial arts form. As ogre magi are intelligent, they will not fight if faced with overwhelming odds, but will flee to gather their forces or hide.

**Habitat/Society:** These monsters live in fortified dwellings or caves and foray to capture slaves, treasure, and food. Ogre magi priests of up to 7th level have been reported. Tribes are small, with 2-5 females and 1-3 children that will not fight, but rather seek to escape in *gaseous form.* These monsters are extremely protective of their young and will battle with savage abandon to save one's life. If a young ogre mage is captured, these creatures will pay high ransom for its return, but they will seek revenge and will never forget the insult of the kidnaping.

If encountered in their lair, ogre magi will be led by a chief of great strength (+2 on each Hit Die, attacking and saving as a 9 Hit Dice monster). Treasure is divided by this chief and his trove is always the richest. The tribe will have their own clan symbol typical to the oriental lands, and this symbol will be stitched on its war banners and flags as well as on armor and headdresses. The chief will often have the tribe's symbol tattooed on his forehead or back.

Ogre magi speak the common tongue, their own special language, and the speech of normal ogres.

**Ecology:** Ogre magi magical armor is too large to fit a man. This monster's lair is usually a powerful structure that can be expanded into a mighty fortress if it can be rid of its original owners.

### Merrow (Aquatic Ogre)

Faster and fiercer than their land kin, the freshwater merrow are greenish and scaled with webbed hands and feet. Their necks are long and thick, their shoulders are sloping, and they have huge mouths and undershot jaws. Merrow have black teeth and nails and deep green eyes with white centers, and their hair resembles slimy seaweed. About 10% grow ivory horns, especially the more powerful males.

Aquatic ogres are very fond of tattoos, and females may have their entire bodies inked with scenes of death and destruction as a sign of status. Merrow speak their own dialect and the language of other ogres.

**Combat:** Using their green coloration, aquatic ogres can hide, becoming effectively invisible 10-80% of the time, depending on terrain. They attack from cover, so others are -5 on their surprise roll. Merrow typically attack with a large piercing spear (inflicting 2-12 points of damage) in a swimming charge at +1 to hit, followed by melee with talons and teeth.

**Habitat/Society:** A typical merrow tribe consists of:

1 chief, AC3, 6+6 Hit Dice, +2 on damage
2 patrol leaders, AC3, 5+5 Hit Dice, +1 on damage
2-24 standard merrow
2-24 females, AC5, 3+3 Hit Dice, 1-2/1-2/1-6 damage
1-12 young, AC6, 2+2 Hit Dice, 1-2/1-2/1-4 damage
1 shaman of 3rd level ability

Merrow dwell in caves in shallow, fresh water (50-250 feet deep), often with scrags (see Troll). They can live out of water for about two hours, so they often forage on land. Merrow usually control an area with a radius of 10-15 miles, hunting and foraging throughout this territory. In times of scarcity, or when the lure of treasure becomes too great, a war party will attack the coastal villages of man. Merrow prefer gold and jewels and often overlook dull magical items in search of glittering prizes. The goals of a merrow chieftain rule the tribe, and these power-hungry monsters seek to completely control their "kingdoms," often leading to attacks on intruding ships.

**Ecology:** Merrow are ignorant and superstitious and have no skills but plundering and murder. Areas of the freshwater lakes and seas where they have influence are avoided by sailors and fishermen. These monsters are carnivores, preying on all who enter their regions, often emptying the seas of life with their voracious appetites.

## Half-Ogre

When adventuring companies journey into the wilderness they often run into ogres; big, ugly humanoids. Occasionally, an ogre party will include one or two individuals that are a little shorter, but significantly smarter, wielding a weapon with more skill than might have been expected. They have a better understanding of their opponents, and they grunt commands that anticipate the adventurers' moves. In this way half-breeds, the issue of ogres and humans, earn the respect of their kind.

Half-ogres range from 7 to 8 feet in height and weigh from 315 to 425 pounds. Skin and hair color are

variable, but tend toward brown, gray, black, dull yellow (skin only), or any of the above with a slight gray-green tint. Teeth and nails are always orange. Most half-ogres have human-like eyes, though about one in five have the white pupils common to ogres. Their odor is noticeable, but it is not as overpowering as that of a full-blooded ogre. The half-ogre traditionally wears heavy skins and furs, bringing his Armor Class up to that of his ogre brethren, but rare individuals have the ability to make a shirt of chain-mail, for an AC of 3. Half-ogres speak common (more clearly and unimpeded than ogres), ogrish, orcish, troll, and one other, usually human, language. They live about 110 years.
Half-ogres posses infravision out to 60 feet. Their sense of smell is better than an ogre's, but it falls short of a human's.

**Combat:** Half-ogres of any sort suffer -2 penalties to their attack rolls against dwarves and -4 against gnomes, since those smaller races are so skilled at battling bigger folk.
Half-ogres in combat are often found with full-blooded ogres. If so, the half-ogre will most likely be leading the ogre party. The ogres fight more wisely when led by a half-ogre that concentrates assaults on characters it recognizes as spellcasters, and teaming up against skilled fighters. Ambushes are better-planned and more carefully baited.
To earn command privileges, particularly when ogre leaders are present, a half-ogre must show himself quick to battle and fierce in combat. Half-ogres' usual weapon of choice is a huge sword (use the statistics for a two-handed bastard sword, save that half-ogres can employ it one-handed, with a large shield in the other), or a war spear capable of causing 2d4 points of damage. A half-ogre inflicts an additional 2 points of damage, due to his mass.
Half-ogres sometimes gather together to form their own tribes. In this case, they will be encountered in bands of 2d10 and will expend as much energy choosing and preparing an ambush as on the combat itself.
For every five half-ogres in an encounter, there is an additional veteran with 5+3 Hit Dice. For every 10 half-ogres, there is a kader with 6 Hit Dice. If more than 15 half-ogres are encountered, they will have a shaman, a fighter/priest with 5 + 3 Hit Dice and the spells of a 4th-level priest, and two acolyte shamans, with 4+6 Hit Dice and the spells of a 2nd-level priest.
Half-ogres are inclined to intimidate others. A broad, fang-filled smile and perhaps a slamming fist, often encourages an NPC to suddenly remember appointments, or perhaps faint dead away. Kobolds will clutch their spears and cringe in unison when 7'6" of solid muscle smashes their door to splinters and storms in; even larger monsters have serious reservations about attacking half-ogres. They will also terrify local human populations into leaving a half-ogre and his companions alone.

**Habitat/Society:** Half-ogres have no society of their own. If they live with ogres, they are the quick-thinking members of the tribe, ever on their toes to prove themselves worthy. If a half-ogre is reared in a human community, he learns to live with suspicion and fear, and often turns to a military or solitary occupation.
Occasionally, half-ogres join with half-orcs, orogs, ogrillons, and other humanoids. These communities are small (5-200 residents) and usually isolated, but can appear in virtually any terrain. Half-ogres fill a middle niche -- more powerful than half-orcs or orogs, but smarter than ogrillons, trolls, and other humanoids. As a whole, these communities are chaotic evil, with neutral tendencies stemming from the level of cooperation necessary in a "half-caste" situation. They prefer others of their own kind, and are tolerant of orcs and ogres. Enough of them have human blood that they regard humans with neutrality. Indeed, chaotic evil humans often find their most enthusiastic followers in such a hybrid tribe. They also tolerate monstrous humanoids such as trolls and giants, but all other races are treated with undisguised

hostility.
Hybrid settlements raid civilized territories for prisoners and loot. A settlement may be found holding prisoners. It is also likely for treasure to be found in a hybrid camp. Half-ogres are usually cheated out of most of their rightful treasure shares by the more cunning orogs and half-orcs.

**Ecology:** Sages have expressed much concern over the years, wondering why ogres can interbreed with humans but not with elves or halflings. When the actual answer was discovered, the sages' concerns proved unfounded. The explanation had nothing to do with any supposed common origin of humans and ogres, but rather in a unusual characteristic that ogres share with orcs: rapidly adaptive biology. Just as orcs and ogres can adapt quickly to any terrain, from forests to the highest mountains, their genetic construction allows them breed with any humanoid race.
This ability to breed easily is frequently passed on to their progeny. Half-ogres can also breed successfully with most other humanoid races. If this process continues for many generations, the result is a horrible hybrid known as a *mongrelman.* Many mongrelmen have strong strains of orc and ogre in their bloodlines, which may account for their chaotic evil attitudes.
The half-ogre shares the ogre's place in the ecosystem: that of a plague upon demihumans and humans, lusting for treasure and making neither crafts nor good labor. The beginnings of half-ogre poetry have been around for many years, but it is exceptionally ugly and disturbing.

## Half-Ogres as NPCs or PCs

Half-ogres may be NPCs or even PCs, with DM's consent. If so, they have statistics determined in the following fashion. Strength is ld6 +13, with a roll of 6 being treated as 18(00) strength. Characters with a Strength roll of 5 (18 strength) should roll normally for extraordinary strength. Dexterity is 3d4. Constitution is ld6 +13, with a roll of 6 being treated as an 18. Intelligence is 3d4. Wisdom is 2d6. Charisma is 2d4, doubled for effective Charisma with respect to ogres, half-ogres, orcs, orogs, and other humanoids. Half-ogres reared outside of the tribes do not gain the languages mentioned earlier. Player character half-ogres may not be exclusively priests, but may practice any other class allowed half-ogres. Starting Hit Dice are doubled at 1st level, progressing normally at 2nd level and above.
As NPCs, shaman half-ogres are fighter/priests. Also possible are half-ogres that function solely as priests, rising to 8th level, and rarely seen fighter/thieves (3+9 Hit Dice with the skills of 1st- or 2nd-level thieves). Half-ogre thieves are always self-taught, and accept the following racial adjustments: Pick Pockets -20%, Open Locks +5%, Find/Remove Traps +0%, Move Silently -5%, Hide in Shadows +5%, Detect Noise +0%, Climb Walls -30%, Read Languages -25%.

## Ogrillon

The ogrillon is a fiercer species of the half-ogre, being the fruit of a union between ogres and orcs. The ogrillon displays the general tendencies of its larger cousin with some exceptions. It is even more brutish and violent, and it normally learns to speak only ogrish and a handful of words in common.
The ogrillon is the size of an orc, and closely resembles one. One in every ten is born with features and coloration very similar to those of ogres: purple eyes with white pupils, black teeth, yellowish skin with dull, dark green hair. The skin of an ogrillon of either type is covered with small horn plates, giving it a superior Armor Class and enabling it to fight without weapons. An ogrillon disdains armor and most other material items, retaining only a handful of gold pieces as treasured belongings. It is uncertain why they would keep gold, except perhaps as good luck charms.
They love mayhem. In combat they disdain weapons and plunge in with both fists. Due to their great strength and horn-reinforced fists, each punch delivers ld6+1 points of damage. An ogrillon out of

combat is restless and troubled, but it will be seen chuckling merrily to itself during a good fight. Because of their single-mindedness, ogrillons are often approached by orcs when they need good fighters against some enemy. Ogrillons are happy to join and fight, sometimes for the love of combat and destruction, but often for more lucky gold pieces. In combat, there is only a 10% chance that a typical ogrillon can be distinguished from an orc. Ogrillons that resemble ogres, of course, clearly stand out. Ogrillons are the issue of a female orc mated with a male ogre. Thankfully, it is sterile. The union of a male orc and a female ogre yields an orog, a better class of humanoid monster detailed in the "Orc" entry.

There are many different varieties of ooze, slime, and jelly. More are being discovered all the time, as warped wizards seek to create life or fashion efficient dungeon scavengers. The unifying feature of these creatures is a dissolving touch that consumes flesh as well as weapons and armor.

## Olive Slime

Olive slime is a strain of monstrous plant life, closely related to green slime, that grows while clinging to ceilings. More dangerous than green slime, olive slime favors moist, subterranean regions. It feeds on whatever animal, vegetable, or metallic substances happen to cross its path. The vibrations of a creature beneath it are sufficient to cause it to release its tendrils and drop. Olive slime ignores armor for purposes of determining hit probability. It also negates Dexterity bonuses unless its target is aware of the presence of the slime and takes steps to avoid the stuff. Contact with olive slime causes a numbing poison to ooze from the creature. The slime then spreads itself over the body of its victim, sending out parasitic tendrils to feed upon the body fluids of the host. For humans and demihumans, the point of attachment is usually along the spinal area. The feeding process soon begins to affect the brain of the host as it changes the host's body. An unobservant victim must roll a saving throw vs. poison, failure indicating that the victim has not noticed that the olive slime has dropped upon him. Any group of characters in the vicinity will have a 50% chance of noticing the slime's attachment with a casual glance. This percentage may be adjusted only by magical items. A thorough search by wary individuals reveals the olive slime without difficulty.

Within 2d4 hours, the host's main concern becomes how to feed, protect, and sustain the growth of the olive slime. Naturally, this includes keeping the slime's presence a secret from any companions. If an affected character's companions become suspicious, or if they demonstrate any desire to destroy olive slime, the affected character will escape at the first opportunity. The host's food intake must double or the character wastes away (10% of the character's hit points per day, rounding up, and no natural healing can take place while a character is wasting away. After 1d6+6 days, the host suddenly and painfully metamorphoses into a vegetable creature. The olive slime gradually replaces skin and muscle tissue, and it forms a symbiotic brain link. The new creature has no interest in its former form or fellows. It exists as a new species more akin to plants than any other life form. Feeding then becomes photosynthetic, paralytic, or, most likely, both. When slain, an olive slime creature dissolves into a new patch of olive slime.

Olive slime is harmed only by acid, freezing cold, fire, or by a *cure disease* spell. Spells that affect plants will work on olive slime, although *entangle* will have no practical effect. Green slime and olive slime are

complete opposites -- when they encounter each other, the attack of one neutralizes the other.
If an affected character has been transformed into an olive slime creature, there is very little short of a *limited wish* that can return him to normal.

### Olive Slime Creature

Olive slime creatures, popularly known as "slime zombies," are the end result of the metamorphosis upon the host. The newly formed vegetable creature is linked symbiotically with the olive slime patch that created it. The symbiotic bond is a secure link within 200 miles, but not from one plane of existence to another. The olive slime can call its zombies to defend it from attack, and they will immediately and mindlessly obey.
Regardless of their former existence, and despite their general form, slime creatures are only differentiated by size:

| Size | HD | Damage/Attack |
|---|---|---|
| Tiny | 1+2 | 1-3 |
| Small | 3+2 | 1-4 |
| Man-sized | 5+2 | 2-8 |
| Larger | 8+2 | 3-12 |
| Huge | 12+2 | 4-16 |
| Gargantuan | 16 | 4-24 |

Slime creatures have a telepathic bond, effective at a range of 200 yards, and gather together for mutual assistance while feeding or for defense. Their former identities can be discovered only upon close examination.
Habitat varies from well-populated subterranean places to damp forests, swamps, and fens. Slime creatures are equally at home on land or in warm, shallow water. Slime zombies seek out animal hosts for their slime; they attack man-sized creatures on sight. When they attack, olive slime zombies have a 10% chance, per successful hit, to infect an opponent with slime. If they succeed in doing so, they either change targets or flee combat before killing their target -- they certainly do not want to kill the new host.
Olive slime zombies are harmed by acid, freezing cold, fire and *magic missile* spells. Spells that affect plants will also affect them, although the effects of *entangle* are minimal at best. No other attacks, by weapons, lightning, or spells that affect the mind will kill a slime creature. An olive slime zombie, however, can suffer only as much physical damage as it has hit points, before its skeleton collapses and it becomes nothing more than a puddle of olive slime. When green slime is applied to an olive slime zombie, it neutralizes the olive slime, delivering 2d4 points of damage per round until the body is reduced to a (non-animate) skeleton.
The vegetable intelligence of slime zombies is no greater than that of common animals, but does enable them to learn from experience. This innate intelligence extends to the use of simple traps, and they will lie in wait at the bottom of hidden shafts.

### Mustard Jelly

Mustard jelly originated when a young wizard attempted to *polymorph* herself into an ocher jelly. Her

spell failed, and she became a mustard jelly. The stuff has multiplied rapidly in the years since her accident, and it is now a serious threat in many areas.
The monstrous amoeboid mustard jelly is far more dangerous than the ocher jelly. Mustard jelly is translucent, and very hard to see until it attacks. The only clue to its presence is a faint odor, similar to blooming mustard plants. Once it does attack, it may be seen as yellowish brown in color.
Normally, mustard jelly attacks by forming an acidic pseudopod of its own substance and thrusting. The jelly monster secretes a vapor over a 10-foot radius. Those near the jelly must roll a saving throw vs. poison each round. Those who fail the saving throw become lethargic and move at half-normal speed, due to the effects of the vapor. The toxic effects last for two rounds and they are cumulative.
This large creature can divide itself at will into two smaller, faster halves (movement rate 18). Each is capable of attacking, but has only half the hit points the creature had before dividing. A mustard jelly can, for example, flow into a room, divide itself into independent halves to attack, and then reform into a torus in order to surround a pillar its prey has climbed. Unlike the ocher jelly, mustard jelly cannot move through tiny spaces, nor can it move along ceilings, although it will eat through wooden doors. It cannot climb walls either, and so most of its bulk must remain on the floor, stretching up only 4 or 5 feet.
Although intelligent, mustard jelly is not known to value treasure of any sort, except as a lure for greedy adventurers. Of course, it is possible that some treasure might remain after a victim has been devoured.
Mustard jelly is impervious to normal weapons (and can eat wooden ones) and electrical attacks. A *magic missile* spell will only cause it to grow; mustard jelly gains hit points equal in number to the damage rolled. Cold causes only half damage, and other attacks have normal effects.

### Stunjelly

This relative of the gelatinous cube was designed by some forgotten mage to resemble a section of ordinary stone wall. They are usually about 10 feet square by 2 ½ to 5 feet thick, and somewhat translucent. If a bright light is shone on one side of the stunjelly, it will be seen on the other. Illumination equal to a *continuous light* spell will reveal whatever treasure a stunjelly might be carrying. Stunjellies make no noise when they move, but they do produce a faint odor of vinegar.
The stunjelly has many features in common with the gelatinous cube. Like the cube, the stunjelly paralyzes creatures who venture too close! Adventurers walking near a stunjelly may be attacked by an anaesthetic pseudopod; those struck must roll a saving throw vs. paralyzation. Those who succeed suffer no ill effects. Those who fail are paralyzed for 5d4 rounds, during which time the stunjelly tries to surround the victim and digest him. Like the gelatinous cube, it is immune to electrical attacks, mind-influencing spells, paralyzation, and *polymorph* spells. Unlike the gelatinous cube, stunjelly is affected normally by cold attacks.
Stunjellies reproduce by fission, as one extremely thick jelly splits into two smaller ones. This process is accompanied by a horrible, rending sound, audible throughout the vicinity.
A stunjelly might mindlessly carry undigested metals around with it for days. These would include treasure types J, K, L, M, N, and Q, as well as potions, daggers, or similar objects.
Stunjellies are tolerated in many dungeons as traps for unwary intruders, or as janitorial monsters sweeping the passages of digestible litter. For this duty, they are preferred over other breeds of slime and ooze, since they cannot slither through doors into areas where they would be unwelcome.

The oozes, slimes and jellies of the underworld are hideous, amorphous creatures that are the bane of all that lives, dissolving the weapons, armor, and flesh of their victims.

**Ochre Jelly**
This monster resembles a giant amoeba, seeping through darkened corridors, through cracks and under doors, searching for flesh or cellulose to devour. Their form allows them to travel on walls and ceilings and drop on unsuspecting prey.

**Combat:** The ochre jelly attacks by attempting to envelop its prey. Its secretions dissolve flesh, inflicting 3-12 (d10+2) points of damage per round of exposure. While a *lightning bolt* will divide the creature into one or more smaller jellies, each doing one-half normal damage, fire- and cold-based attacks have normal effects.

**Habitat/Society:** An asexual creature, the ochre jelly is a solitary beast that is occasionally found with its own divided offspring. It lives only to eat and reproduce.

**Ecology:** Voraciously dissolving all types of carrion and trash, this monster is sometimes tolerated in inhabited subterranean areas for its janitorial services, but this activity is difficult to organize and is usually not appreciated by the inhabitants because of its danger.

**Gray Ooze**
A slimy horror that looks like wet stone or a sedimentary rock formation, the gray ooze is rarely thicker than six or eight inches, but sometimes grows to a length of 12 feet. It cannot climb walls or ceilings, so it slides, drips, and oozes along cavern floors.

**Combat:** The gray ooze strikes like a snake, and can corrode metal at an alarming rate (chain mail in one round, plate mail in two, and magical armor in one round per each plus to Armor Class). Spells have no effect on this monster, nor do fire- or cold-based attacks. Lightning and blows from weapons cause full damage. Note that weapons striking a gray ooze may corrode and break.

**Habitat/Society:** After a large meal, a gray ooze reproduces by "budding:" growing a small pod that is left behind in a corridor or cavern. This pod takes two to three days to mature and then the little gray ooze absorbs its leathery shell and begins slithering about, searching for a meal. Sometimes more than one of these monsters are found together, but this is just a random event because they are not intelligent.

**Ecology:** The gray ooze is a dungeon scavenger. It is rumored that metalworkers of extraordinary skill keep very small oozes in stone jars to etch and score their metal work, but this is a delicate and dangerous practice.

**Crystal Ooze**
This creature is a variety of gray ooze which has adapted to living in water. It is 75% invisible when immersed in its natural element. It is translucent, mostly glassy clear, with an occasional milky white swirl in its substance.

**Combat:** Crystal ooze strikes like a snake, then attempts to flow over a victim and exude its paralyzing poison. Unlike its cousin, the gray ooze, this creature does not corrode metal, but its poisons attack wood,

cloth, and flesh. Unless a victim successfully saves vs. poison, he becomes paralyzed and will be consumed by the crystal ooze in a short time. When prey is reduced to -20 hit points, it is totally consumed. Crystal ooze cannot be harmed by acid, cold, heat, or fire attacks, but electricity and *magic missiles* inflict full damage. Blows from weapons inflict only 1 point of damage per hit. A wooden weapon must save vs. acid or it will dissolve and break.

**Habitat/Society:** Crystal oozes live in any dim or dark body of water, though they can exist out of water for several hours. They reproduce by budding, like the gray ooze, but the crystal pods usually take seven to 10 days to hatch. Crystal oozes will eat their offspring, but occasionally, if the body of water is large enough and food is not scarce, a few of them might be found living in the same water.

**Ecology:** Crystal oozes are scavengers that leave metal and stone objects in their wake, so incidental treasure can often be found around and in their lairs.

### Gelatinous Cube

So nearly transparent that they are difficult to see, these cubes travel down dungeon corridors, absorbing carrion and trash along the way. Their sides glisten, tending to leave a slimy trail, but gelatinous cubes cannot climb walls or cling to ceilings. Very large cubes grow tall to garner mosses and the like from ceilings.

**Combat:** A gelatinous cube attacks by touching its victim with its anesthetizing slime. A victim who fails to save vs. paralyzation is paralyzed (anesthetized) for 5-20 (5d4) rounds. The cube then surrounds its prey and secretes digestive fluids to absorb the food. All damage is caused by these digestive acids. Because gelatinous cubes are difficult to see, others are -3 on their surprise roll. Electricity, fear, holds, paralyzation, *polymorph,* and sleep-based attacks have no effect on this monster, but fire and blows from weapons have normal effects. If a cube fails its saving throw against a cold-based attack, the cube will be slowed 50% and inflicts only 1-4 points of damage.

**Habitat/Society:** Possessing no intelligence, gelatinous cubes live only for eating. They prefer well- traveled dungeons where there is always food to scavenge. These creatures reproduce by budding, leaving clear, rubbery cubes in dark corners or on heaps of trash. Young are not protected and are sometimes reabsorbed by the parent. Treasure is sometimes swept up by a gelatinous cube as the creature travels along a cavern floor; any metals, gems, or jewelry are carried in the monster's body until they can be ejected as indigestible. Items found inside a cube include treasure types J, K, L, M, N, Q, as well as an occasional potion, dagger, or similar object.

**Ecology:** The gelatinous cube is sometimes encouraged to stay in a certain area for its scavenging abilities, and is preferred over other jellies and oozes since its square shape does not allow it to slither under doors and into areas in which it is not desired.

### Green Slime

A hideous growth, green slime is bright green, sticky, and wet. It grows in dark subterranean places on walls, ceilings and floors.

**Combat:** This slime cannot attack but is sensitive to vibrations and often drops from the ceiling onto a passing victim. Green slime attaches itself to living flesh and in 1-4 melee rounds turns the creature into green slime (no resurrection possible). Green slime eats through one inch of wood in an hour, but can dissolve metal quickly, going through plate armor in three melee rounds. The horrid growth can be scraped off quickly, cut away, frozen, or burned. A *cure disease* spell kills green slime, but other attacks, including

weapons and spells, have no effect.

**Habitat/Society:** Green slime hates light and feeds on animal, vegetable, and metallic substances in dark caverns. Since it cannot move, this slime grows only when food comes to it. Sunlight dries it out and eventually kills it. Occasional huge slimes or colonies of dozens have been reported.

**Ecology:** Green slime is an infestation that all creatures avoid; it is burned out of caverns or mines if found. Once it has infected an area, it has a tendency to grow back, even after being frozen or burned away, because dormant spores can germinate years later.

# Ooze/Slime/Jelly

| | **Slithering Tracker** |
|---|---|
| **Climate/Terrain:** | Subterranean |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Living plasma |
| **Intelligence:** | Average (8-10) |

| **Special Defenses:** | Transparency |
| **Magic Resistance:** | Nil |
| **Size:** | S (3' long) |
| **Morale:** | Champion 15 |
| **XP Value:** | 975 |

Slithering trackers are transparent, plasma-draining jellies found in many dungeons and other dark places.
They are not invisible per se, but are instead made of a transparent jelly-like material. Thus they are almost impossible to detect normally (only a 5% chance of happening to notice one).

**Combat:** The unique nature of slithering trackers gives them the distinct advantage of being able to slip through cracks and holes as small as a rat hole. They move completely silently across all surfaces, simply oozing slowly over all bumps and turns. They prefer to attack sleeping, solitary, or unconscious creatures, as their main weakness lies in the extended duration of their attack form. They secrete a

paralyzing substance that immobilizes the victim on contact for 12 hours if a saving throw vs. paralyzation fails. The slithering tracker then covers the entire body of its victim and slowly draws all of the plasma from the creature (killing the victim in the process, of course). It can drain a man-sized creature in one hour.

**Habitat/Society:** Slithering trackers are solitary beasts. Since they possess no attack form capable of harming other trackers, territoriality is a question of first-come, first-serve. Being the most intelligent of all slimes and jellies, it would seem natural that slithering trackers would establish themselves as the leaders of the rest. But jellies and slimes lack both the means of communication and the intelligence to band together. They remain on the lower end of the monster food chain, serving as scavengers that kill the weak and stupid, leaving the larger creatures for major predators in the dungeons they inhabit.
In fact, slithering trackers often hide themselves in the lairs of large monsters, which are known to kill far more than they can eat at a sitting. The tracker waits until the beast goes to sleep or departs and then it sucks dry the morsels left over. Many times the victims are merely unconscious instead of dead -- at least until the tracker gets to them. And on more than one occasion, monster-slaying players have left a hoard guarded by a comrade, while they go for help, only to return to find their friend mysteriously dehydrated, with all of the treasure still in the lair.

**Ecology:** There are two theories regarding the origin of slithering trackers. The first and most likely one is that slithering trackers are just advanced forms of the other jellies, fortunate enough to have developed a transparent plasma body and a modicum of intelligence. Like most jellies, they reproduce asexually when the time and quantity of food allow for it.
The second, more dubious theory, is that slithering trackers were created, not born. Their high intelligence seems to lead many knowledgeable sages to believe that the creation of a slithering tracker is a hideous process, involving the transformation of a living human being. Certain legends seem to support this assertion, as there are many accounts of dark wizards removing the bones of their enemies, turning them into hulking masses of jelly-like flesh. While it is certain that no respectable wizard (good or neutrally aligned) would resort to creating such horrors, it is just as certain that there are many practitioners of the darker arts who have performed much worse experiments.
It is possible that somewhere deep in the bowels of some long-deserted wizard's dungeon, there lies an ancient diary, with a detailed account of the terrifying curse of the tracker.
There are tales of abnormally large slithering trackers that live in the deep recesses of the Underdark. Such monsters are often said to lurk around the edges of great underground civilizations, growing to vast size on the abundance of prey.

Orcs are a species of aggressive mammalian carnivores that band together in tribes and survive by hunting and raiding. Orcs believe that in order to survive they must expand their territory, and so they are constantly involved in wars against many enemies: humans, elves, dwarves, goblins, and other orc tribes.
Orcs vary widely in appearance, as they frequently crossbreed with other species. In general, they resemble primitive humans with grey-green skin covered with coarse hair. Orcs have a slightly stooped posture, a low jutting forehead, and a snout instead of a nose, though comparisons between this facial feature and those of pigs are exaggerated and perhaps unfair. Orcs have well-developed canine teeth for eating meat and short pointed ears that resemble those of a wolf. Orcish snouts and ears have a slightly pink tinge. Their eyes are human, with a reddish tint that sometimes makes them appear to glow red when they reflect dim light sources in near darkness. This is actually part of their optical system, a pigment which gives them infravision. Male orcs are about 5½ to 6 feet tall. Females average 6 inches shorter than males. Orcs prefer to wear colors that most humans think unpleasant: blood red, rust red, mustard yellow, yellow green, moss green, greenish purple, and blackish brown. Their armor is unattractive besides -- dirty and often a bit rusty.
Orcs speak Orcish, a language derived from older human and elvish languages. There is no common standard of Orcish, so the language has many dialects which vary from tribe to tribe. Orcs have also learned to speak local common tongues, but are not comfortable with them. Some orcs have a limited vocabulary in goblin, hobgoblin, and ogre dialects.

**Combat:** Orcs are constantly in battle. They use the following weapons.

| | |
|---|---|
| sword and flail | 5% |
| sword and spear | 10% |
| axe and spear | 10% |
| axe and polearm | 10% |
| axe and crossbow | 10% |
| axe and bow | 10% |
| sword and battleaxe | 5% |
| spear | 10% |
| axe | 10% |
| polearm | 20% |

Polearms are typically either halberds, pikes (set to receive charge), or glaives. Leaders typically possess two weapons. If a subchief is present, there is a 40% chance the orcs will be fighting around a standard. The

presence of this standard increases attack rolls and morale by +1 for all orcs within 60 yards. Orcs typically wear studded leather armor and a shield (AC 6).
Orcs hate direct sunlight and fight at -1 penalty to their attack rolls in sunlight. Their morale decreases by 1 under these circumstances as well. Orcs employ sniping and ambush tactics in the wild. They do not obey the "rules of war" unless such is in their best interests; for example, they will shoot at those who attempt to parlay with them under a white flag unless the orc leader feels it is advantageous to hear what the enemy has to say. They abuse human rules of engagement and chivalry to their best advantage. They have a historic enmity against elves and dwarves; many tribes will kill these demihumans on sight.
It is often believed that orcs are so bloodthirsty and cruel that they are ineffective tacticians and that they would rather be vicious than victorious. Like most stereotypes, this is highly misleading; it is true for some orc tribes but not for all. Many orc tribes have waged wars for decades and have developed a frightening efficiency with battle tactics.

**Habitat/Society:** For every three orcs encountered, there will be a leader and three assistants. These orcs will have 8 hit points each, being the meanest and strongest in the group. If 150 orcs or more are encountered there will be the following additional figures with the band: a subchief and 3-18 guards, each with Armor Class 4, 11 hit points, and +1 damage due to Strength on all attacks. They fight as monsters of 2 Hit Dice (THAC0 19). For every 100 orcs encountered, there will be either a shaman (maximum 5th level priest) or a witch doctor (maximum 4th-level mage). Shamans and witch doctors gain an extra 1d4 hit points for each level above 1st and fight as a monster of 1 Hit Die for every two levels (round fractions up) of spell-casting ability (e.g., a 5th-level shaman has d8+4d4 hit points and fights as a 3 Hit Dice monster.)
If the orcs are not in their lair, there is a 20% chance they will be escorting a train of 1-6 carts and 10-60 slave bearers bringing supplies, loot, or ransom and tribute to their orc chief or a stronger orc tribe. The total value of the goods carried by all of the carts will vary between 10 and 1,000 silver pieces, and each slave bearer will bear goods valued between 5 and 30 silver pieces. If the orcs are escorting a treasure train, double the number of leaders and assistants and add 10 orcs for each cart in the train; one subchief with 5-30 guards will always be in charge.
Orc lairs are underground 75% of the time, in a wilderness village 25% of the time. Orc communities range from small forts with 100-400 orcs to mining communities with 500-2,000 orcs to huge cities (partially underground and partially above ground) with 2,000 to 20,000 orcs. There will always be additional orcs when the encounter is in a creature's lair: a chief and 5-30 bodyguards (AC 4, 13-16 hit points, attack as monsters with 3 Hit Dice (THAC0 17) and inflict an extra +2 damage on all attacks due to Strength). If the lair is underground, there is a 50% chance that 2-5 ogres per 200 orcs will be living with them. Most lairs above ground are rude villages of wooden huts protected by a ditch, log rampart and log palisade, or more advanced constructions built by other races. The village will have 1-4 watch towers and a single gate. There will be one ballista and one catapult for every 100 adult male orcs.
Orcs are aggressive. They believe other species are inferior to them and that bullying and slavery is part of the natural order. They will cooperate with other species but are not dependable: as slaves, they will rebel against all but the most powerful masters; as allies they are quick to take offense and break agreements. Orcs believe that battle is the ideal challenge, but some leaders are pragmatic enough to recognize the value of peace, which they exact at a high price. If great patience and care are used, orc tribes can be effective trading partners and military allies.
Orcs value territory above all else; battle experience, wealth, and number of offspring are other major sources of pride. Orcs are patriarchal; women are fit only to bear children and nurse them. Orcs have a reputation for cruelty that is deserved, but humans are just as capable of evil as orcs. Orcs have marriage customs, but orc males are not noted for their faithfulness.
Orcs worship many deities (some who have different names among different tribes); the chief deity is

usually a giant, one-eyed orc. Orcish religion is extremely hateful toward other species and urges violence and warfare. Orc shamans have been noted for their ambition, and many tribes have suffered because of political infighting between warriors and priests.

**Ecology:** Orcs have an average lifespan of 40 years. They have a gestation period of 10 months and produce two to three offspring per birth. Infant mortality is high. Orcs are carnivores, but prefer game meats or livestock to demihumans and humanoids.
It is said that orcs have no natural enemies, but they work hard to make up for this lack. Orc tribes have fearsome names such as Vile Rune, Bloody Head, Broken Bone, Evil Eye, and Dripping Blade.
Orcs are skilled miners who can spot new and unusual constructions 35% of the time and sloping passages 25% of the time. They are also excellent weaponsmiths.

## Orogs

Elite orcs, or orogs, are a race of great orcs, possibly mixed with ogre blood. Orogs range between 6 and 6½ feet tall. They are highly disciplined warriors and have their own standards and banners which they display prominently -- it is usually easy to tell when orogs are present among common orcs. Orogs can be found at the vanguard of large orc armies, but rarely on patrol. There is a 10% chance that an orc tribe will have orogs, whose number equals 10% of the male population. (Thus a community of 3,000 male orcs has a 10% chance of having 300 additional orogs.) Small bands of elites (20-80 orogs) will hire themselves out as mercenaries. Orogs have 3 Hit Dice, plate mail (AC 3), and have a +3 Strength bonus on damage dice. For every 20 orogs, there will also be one leader with 4 Hit Dice (THAC0 17). There is but one orog chief, who has 5 Hit Dice (THAC0 15). Orogs use weaponry common to orcs, but will typically possess two weapons apiece.

## Half-orcs

Orcs will crossbreed with virtually every humanoid and demihuman species except elves, with whom they cannot. The mongrel offspring of orcs and these other species are known as half-orcs. Orc-goblins, orc-hobgoblins, and orc-humans are the most common. Half-orcs tend to favor the orcish strain heavily, and as such are basically orcs, although 10% of these offspring can pass as ugly humans. They are treated as humans with levels instead of Hit Dice. If multi-classed, they have these maximums: priest, 4th level; fighter, 10th level; thief, 8th level.
If half-orcs remain single-classed, these maximums increase to: priest, 7th level (Wisdom 15 required for 5th, Wisdom 16 for 6th, Wisdom 17 for 7th); fighter, 17th level (Strength 18/00 required for 11th, Strength 19 for 12th, Strength 20 for 14th, and Strength 21 for 17th); thief, 11th level (Dexterity 15 required for 9th, Dexterity 16 for 10th, and Dexterity 17 for 11th).
Half-orcs are distrusted by both human and orc cultures because they remind each of the other's racial stock. Half-orcs advance in orc culture by flaunting their superior ability and in human culture by associating with people who don't care about appearance. Most tend toward neutrality with slight lawful and evil tendencies, but lawful good half-orcs are not unknown. Some half-orcs have split from both cultures to form their own societies in remote areas. These half-orcs worship their own gods and (like most hermits) are extremely suspicious of strangers.

Otyughs (Aw-tee-ug), also known as the gulguthra, are terrifying creatures that lurk in heaps of dung and decay, waiting for something to disturb it. There are two varieties, the regular otyugh, and its larger, more intelligent offshoot, the neo-otyugh. They feed on dung and wastes from other dungeon creatures (gulguthra means "dung eaters") but also enjoy an occasional snack of fresh meat.
Otyughs have huge, bloated bodies covered with a rock-like skin that is brownish gray in color, which is in turn covered with dung. They stand on three thick legs that give them slow ground movement but enable them to pivot quickly. They have three eyes on a leaf-like stalk that moves quickly from side to side, enabling them to scan a large area. The eye stalk is also a receiver/transmitter for their telepathic abilities. Otyughs have a huge mouth with very sharp teeth in the center of their mass. They also have two tentacles with leaf-like ridges that they use to smash and grapple their opponents. The tentacles are covered with rough thorn-like projections. Neo-otyughs have smaller mouths than otyughs.
Otyughs and neo-otyughs speak their own language, much of which is non-verbal (movements of eye stalk and tentacles, or emission of certain smells); they also have limited telepathy that enable them to communicate with other creatures. Otyughs reek of dung and decay.

**Combat:** Otyughs lurk under piles of offal with only their eyes exposed. They usually attack if they feel threatened, or if they are hungry and there is fresh meat nearby. They attack with their two ridged tentacles, which either smash an opponent or grapple it. Grappled opponents suffer 2-4 points of damage per round. Otyughs' bite attacks gain a +2 bonus to the attack roll when biting grappled opponents. Otyughs smash grappled opponents to the ground, while the more intelligent neo-otyughs use their victims as shields, bettering their Armor Class by 1. Neo-otyughs may also force attackers to hit the grappled character with a successful attack roll of its own (vs. the grappled character's AC); to do this the neo-otyugh forgoes its squeeze attack. Characters with a Strength of at least 18 can struggle for one

round and automatically break free; others must make a successful open doors roll to escape.
Both types of gulguthra are disease-ridden; their bite is 90% likely to infect the character with a debilitating (80%) or fatal (20%) disease. Otyughs are immune to these diseases.

**Habitat/Society:** All gulguthra have limited telepathic ability. An otyugh can communicate with creatures up to 40 feet away, while a neo-otyugh can communicate with creatures as distant as 60 feet. Communication is usually limited to simple feelings and emotions such as hunger, temperature conditions and associated discomforts, its dislike of bright lights, and imminent death for its prey. Gulguthra also have infravision with a 90-foot range.
Otyughs and neo-otyughs live in ruins and dungeons. They make deals with other dungeon denizens, agreeing not to attack them in exchange for their dung and body wastes, which they then devour. To keep the supply of waste coming (and to get fresh meat) they will agree to help defend their home against intruders, which includes many adventurers. Otyughs may be persuaded not to attack creatures in exchange for promises of friendship and food. Neo-otyughs are less trusting (and more vicious), and usually attack intruders on sight. An otyugh's dungeon allies will sometimes ask it to guard treasure for them. Most gulguthra live alone; 10% of the time, during mating season, two gulguthra can found in its lair.

**Ecology:** Otyughs and neo-otyughs live underground in heaps of offal and refuse. They hate bright sunlight, preferring the comfortable darkness of dungeons. They mate each year for one month, with one offspring produced. It takes the newborn four months to mature (immature gulguthra have 3-5 HD, damage
1-6/1-6/1-2, and a Strength of 16 is required to break free of their grasp). Otyughs are so disgusting that no alchemist or wizard would want to touch their components, so the corpses of the gulguthra have no known use or value.

# Owlbear

| | |
|---|---|
| **Climate/Terrain:** | Temperate forest |
| **Frequency:** | Rare |
| **Organization:** | Pack |
| **Activity Cycle:** | Late afternoon/early evening |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | (C) |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 (2-8) |
| **Armor Class:** | 5 |
| **Movement:** | 12 |
| **Hit Dice:** | 5+2 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-6/1-6/2-12 |
| **Special Attacks:** | Hug |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L (8' tall) |
| **Morale:** | Steady (11-12) +Special |
| **XP Value:** | 420 |

Owlbears are probably the crossbred creation of a demented wizard; given the lethality of this creation, it is quite likely that the wizard who created them is no longer alive. Owlbears are vicious, ravenous, aggressive, and evil tempered at all times.
Owlbears are a cross between a giant owl and a bear. They are covered with a thick coat of feathers and fur, brown-black to yellow-brown in color. The 8-foot-tall males, which weigh between 1,300 and 1,500 pounds, are darker colored. The beaks of these creatures are yellow to ivory and their terrifying eyes are red-rimmed. Owlbears speak their own language, which consists of very loud screeches of varying length and pitch.

**Combat:** The owlbear attacks prey on sight, always fighting to the death (ignore morale rating for

purposes of determining retreat). It attacks with its claws and snapping beak. If an owlbear scores a claw hit with a roll of 18 or better, it drags its victim into a hug, subsequently squeezing its opponent for 2-16 points of damage per round until either the victim or the owlbear is slain. The owlbear can also use its beak attack on victims caught in its grasp, but cannot use its claws. A single attempt at a bend bars/lift gates roll may be made to break from the grasp of an owlbear. Note that if the Armor Class of a victim is high enough that 18 is insufficient to hit, the hug is not effective and no damage is taken.

**Habitat/Society:** Owlbears inhabit the depths of tangled forests in temperate climes, as well as subterranean labyrinths, living in caves or hollow stumps.

Owlbears live in mated pairs; the male is slightly larger and heavier than the female. If encountered in their lair there is a 25% chance that there will be 1-6 eggs (20%) or young (80%) in addition to the adults. The offspring will be 40% to 70% grown and fight as creatures with three or four Hit Dice, depending on their growth. They have hit points based on their adjusted Hit Dice. Immature offspring inflict 1-4/1-4/2-8 points of damage with their attacks and a character has a +20% to his bend bars/lift gates roll to escape the hug of an immature owlbear.

An owlbear pair claims a territory of one or two square miles and will vigorously defend this territory against all intruders.

An owlbear's main weakness is also its greatest strength -- its ferocity. Because owlbears are so bad-tempered, they stop at nothing to kill a target. It is not difficult to trick an owlbear into hurling itself off a cliff or into a trap, provided you can find one.

**Ecology:** Owlbears have a lifespan of 20 years. They are warm-blooded mammals, but lay eggs. They prey on anything, from rabbits to bears, to trolls, to snakes and reptiles. Owlbears prefer temperate climates, but some thrive in subarctic environments. As a hybrid of two animals, one diurnal and the other nocturnal, they have an unusual active time, waking at noon, hunting animals active during the day, then hunting nocturnal creatures before going to sleep at midnight. Owlbears are active in the summer months and hibernate during the cold season. There are rumors of white arctic owlbears, a cross between arctic owls and polar bears, but no specimens have ever been captured.

An owlbear does not actively seek treasure but the remains of victims may be found buried in shallow holes around an owlbear lair. Owlbear eggs are worth 2,000 silver pieces and hatchlings are worth 5,000 silver pieces on the open market. These are typically bought by wizards; while they are impossible to domesticate, they make formidable guardians and wizards sometimes place them in locations of strategic importance (it has been said that an owlbear is a less subtle version of a "keep out" sign). Owlbears in dungeons and ruins almost always have been placed there by someone.

# Pegasus

| | |
|---|---|
| **Climate/Terrain:** | Temperate and subtropical forests |
| **Frequency:** | Very rare |
| **Organization:** | Herd |
| **Activity Cycle:** | Day |
| **Diet:** | Herbivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | Nil |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 6 |
| **Movement:** | 24, Fl 48 (C, D mounted) |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-8/1-8/1-3 |
| **Special Attacks:** | Dive, rear kick |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L (5½' at the shoulder) |
| **Morale:** | Steady (11) |
| **XP Value:** | 175 |
| Greater | 650 |

Pegasi are magnificent winged steeds that often serve the cause of good. These intelligent creatures are very shy and wild, not easily tamed. They serve only good characters, and when they do, they will serve their master with absolute faithfulness for the rest of his life.

A pegasus is a thoroughbred which resembles an Arabian horse (though slightly larger) with two large feathered wings. Pegasi are usually white, but brown pegasi are not unknown, and rumors persist of black pegasi. As should be expected, alignments do not vary according to color (all pegasi are chaotic good). Pegasi are 17 hands tall (5 feet at the shoulder) and weigh over 1,500 pounds. Pegasi must be ridden bareback; they will not accept saddles.

Pegasi speak their own language and can communicate with horses. They can understand common, and will obey their master's commands if they are given in that language.

**Combat:** A pegasus attacks with its hooves and teeth. It can attack an opponent who is behind it with its rear hooves, inflicting 2-12 points of damage, but it cannot use any of its other attacks in that round. A pegasus can also dive at an opponent from heights of 50 feet or higher and use its hoof attacks; each attack roll is +2 and does double damage.
In battle, a pegasus will try to lure larger opponents (such as dragons) into tight spaces. As the opponent struggles to maneuver into attack range, the pegasus climbs and attacks with its hooves from above. Against creatures their own size, such as griffons, pegasi use their superior speed to outrun them. If griffons are close to a pegasus nest (especially if there are young present), one parent will attack aggressively, get the griffon's attention, and then fly away. By doing this, they hope to lure enemies away from the nest and tire them out over a long distance before returning home.

**Habitat/Society:** Pegasi are egg-laying mammals. If encountered in their lair, there will be one nest for every pair of pegasi. There is a 20% chance per nest that there will be 1-2 eggs (30% chance) or young (70%) of 20-50% maturity. Each egg is worth 3,000 silver pieces, while the young are worth 5,000 silver pieces per head on the open market.
A pegasus can be used as a warhorse; a male can carry weight as a medium warhorse (220/330/440), while a female can carry weight as a light warhorse (170/255/340).
Pegasi are intelligent creatures. They can *detect good* and *detect evil* at will (60 yard range). They use these powers on those who would ride them; they try to throw anyone of non-good alignments who would tame them. If provoked, pegasi will not hesitate to attack creatures whom they perceive as evil.
To tame a pegasus, a person of good alignment must locate a pegasus herd. Then, at night, he can try to sneak up on a pegasus and surprise it. The character must have the airborne riding proficiency. There is an initial +10 penalty to the roll; pegasi do not like to be tamed. A magical bridle enchanted for the purpose will remove this penalty. If the character successfully makes his roll, then the pegasus will be tamed.
A tamed pegasus will obey the commands of its master for as long as it lives, if the master remains of good alignment.

**Ecology:** Pegasi feed on grass, fruits, and other plants. Griffons and hippogriffs are the natural enemies of a pegasus. Pegasi have a lifespan of about 40 years.

### Greater Pegasus

Legend has it that if a medusa is slain and beheaded, there is a small (5%) chance that a greater pegasus will be born, springing fully born from the medusa's cloven neck. These pegasi have the same attacks and movement rate of a normal pegasus but are worth 6 Hit Dice and have 20% magic resistance. They also have a +1 bonus to their morale rating. There is a 5% chance that the leader of a herd of pegasi will be a greater pegasus. Greater pegasi can be tamed only by the noblest and greatest of heroes, and have a lifespan of 100 years.

# Peryton

| | |
|---|---|
| **Climate/Terrain:** | Any/Mountains |
| **Frequency:** | Rare |
| **Organization:** | Nest |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (10) |
| **Treasure:** | B |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 2-8 |
| **Armor Class:** | 7 |
| **Movement:** | 12, Fl 21 (C) |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 4-16 |
| **Special Attacks:** | + 2 to attack roll |
| **Special Defenses:** | + 1 or better to hit |
| **Magic Resistance:** | Nil |
| **Size:** | M (5' tall) |
| **Morale:** | Champion (16) |
| **XP Value:** | 270 |

High above the mountains and rocky hills of most lands flies a sharp-eyed monster known as the peryton. Intelligent, patient, and malevolent, it watches and waits for prey -- to pluck their hearts out.

The peryton resembles a giant, dark green eagle, except that its head is that of a blue-black stag, its horns glitter as ebon as obsidian, its eyes glow a dull red-orange. The chest feathers of a male peryton are light blue; those of the female are drab brown. Perytons normally cast the shadow of an adult human being, rather than those of their own form.

Perytons do not adorn themselves with trinkets, nor arm themselves with weapons. Their language is a collection of roars and screeches, and often sounds as if a peryton were either injured or enraged. Some creatures, with a keen sense of smell, claim that a peryton smells like a human, while others are filled with an irrational fear upon catching first scent.

**Combat:** A peryton has only a secondary interest in prey as food. Its main interest in humans and humanoid creatures is the heart of its prey. It is unnaturally accurate in combat. In game terms a peryton receives a+2 bonus to its attack roll.
It attacks with its sharp horns, since its claws are too weak to use in melee. When a peryton chooses a target for combat, it locks itself into a duel that nearly always ends in either the peryton's death or that of its target. A peryton will never switch targets during combat, no matter the tactical situation. On rare occasions, the creature can be driven off, but it will continue to stalk its prey, and return at a later time. Perytons are immune to all weapons but those of at least +1 enchantment.
Some perytons choose to swoop at a target. In this form of attack, the peryton climbs several hundred feet in the air and then plunges at the target, dropping with awesome speed. This attack is made at an additional +2 bonus to its attack roll. If the attack succeeds, the peryton delivers double damage. This is an extreme maneuver that the peryton will only attempt if combat is going poorly, or if it believes it has a chance to achieve total surprise.
Another common tactic is for the peryton to seize a human-sized target and then lift off with the prey in its talons. The peryton climbs so rapidly that most targets do not react until they are at least 100 feet in the air and facing a 10d6 plummet if they manage to escape the peryton's grasp.

**Habitat/Society:** Perytons roost in caves high atop cliffs or on mountain peaks. They settle in nests of 2d4 creatures, each nest independent of any other, and no two nests being within several miles of one another, except for unusual circumstances -- like a dwarven community in the mountains providing them with plentiful prey.
Perytons sometimes take humans and humanoid creatures alive and hold them captive in their nests until they are needed as food (90% likely for nonhumans, 25 % the case for humans) or for reproduction (see below). Because of this, the peryton nests may have treasure scattered about, as well as 1d4 unhatched eggs.

**Ecology:** The peryton is a predator, with no natural enemies (few could pierce its magically resistant skin). Humanoids, and especially humans, are its selected prey. A female peryton requires a fresh, beating heart to reproduce, and human hearts are the preferred variety. Once a peryton has eaten a heart, its shadow changes into that of its normal form and the creature becomes fertile for 3d6 hours. Unhatched peryton eggs can be sold for 10d12 gp apiece.

# Phantom

| | |
|---|---|
| **Climate/Terrain:** | Any/Land |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Nil |
| **Intelligence:** | Nil |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | Nil |
| **Movement:** | 9 |
| **Hit Dice:** | Nil |
| **THAC0:** | Nil |
| **No. of Attacks:** | Nil |

| **Special Defenses:** | Nil |
| **Magic Resistance:** | See below |
| **Size:** | Varies, usually M |
| **Morale:** | Nil |
| **XP Value:** | Nil |

Phantoms are images left behind by particularly strong death traumas. A phantom is like a three-dimensional movie image filmed at the time of death, in the place where it died.
The standard phantom may appear as almost anything. It often appears as the character who experienced the trauma-a transparent image re-enacting the death scene. Alternatively, it could represent whatever was foremost in the victim's mind at the time of death; an attacker, or some goal left unachieved. Phantoms are experienced in faded colors, by all senses.

**Combat:** It is difficult to fight phantoms, since they are merely images and have no power to directly cause harm. They cannot themselves be harmed. Swinging weapons or casting spells into the area of the image does not interfere with the projection, and they cannot be reasoned with. A phantom is not

intelligent and does not exist for any real reason; tracking down its killer or completing its quest will not get rid of a phantom.
Phantoms are often mistaken for ghosts, haunts, or groaning spirits, but they can not be turned as undead. Only a priest spell *remove curse*, cast at 12th level, can dispel a phantom.
Although a phantom cannot directly do any actual harm, it is the very essence of magic and calls up a superstitious awe in anyone who sees one. The enchantment is such that the phantom affects both the mind and the senses of the observer. Creatures without minds (such as undead) are immune to the effects of phantoms, as are those rare beings who are somehow unable to experience them (since the phantom is present to all senses, blindness is not normally protection against one).
Characters witnessing a phantom must roll a successful saving throw vs. death magic, with a -2 penalty, or immediately panic and run away as per the effects of a *fear* spell. Particularly vivid phantoms may require those who fail their saving throw to make a system shock roll, with a +10 bonus to the roll. Failure results in death for the unfortunate victim. Such a character can be raised normally, however. There are other difficulties with the fear effect; the cause of the phantom's death might still be around. Even after centuries, traps and undead monsters can be just as effective and deadly, and running away in panic is usually not the best defense.
Of course, a phantom may provide characters with important information, either forewarning careful characters of an upcoming danger, or finding a lost and treasured object.
There is a slight chance that a character's death may engender a phantom. This chance should be minuscule to nonexistent for 0-level or very low-level characters, or for those who were expecting to die-those dying of natural causes or in war. However, characters of 4th level or above, dying suddenly or by surprise might have a 1-2% chance of becoming phantoms. If those characters were on an important mission or were subject to *geas* or *quest* spells, this chance might rise to 5-6 percent. The percentage chance for generating a phantom should never be higher than the level of the character at the time of death. (Characters killed by energy-draining undead rarely produce phantoms.) It is up to the DM to decide what the precise image presents. A character who is murdered and generates a phantom may also return as a revenant.
There are nonstandard types of phantoms that affect only one of the senses. Often, these are purely visual images, but they can also manifest themselves as sounds (explosions, moaning, or quiet whispering) or smells. Most of these phantoms require saving throws, but the effects of failure may differ. A gloomy whispering of danger might produce despair (as per the *symbol* spells) effects. A foul stench might induce the retching effects of a ghast. Suffocating pressure, temperature extremes, the sounds of a swarm of bats, might all carrydifferent consequences of failing the saving throw.
Of greater concern, however is that there are some phantoms that are actually evil, created when powerful evil creatures from other planes are "slain" (forced to return to their home planes) in the Prime material plane. These phantoms appear at the will of the evil creature 35% of the time, and can seriously misinform or endanger any character it meets. These phantoms can be detected with a *detect evil* spell; *dispel evil* can neutralize the phantom for a number of turns equal to the caster's level.

# Phoenix

| | |
|---|---|
| **Climate/Terrain:** | Elysium |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | O |
| **Alignment:** | Neutral good |
| **No. Appearing:** | 1-3 |
| **Armor Class:** | -3 |
| **Movement:** | 6, Fl 39 (D) |
| **Hit Dice:** | 20 |
| **THAC0:** | 1 |
| **No. of Attacks:** | 1 or 2 |
| **Damage/Attack:** | 2-12 or 1-8/1-8 |
| **Special Attacks:** | Shriek |
| **Special Defenses:** | +3 or better weapons to hit, never surprised |
| **Magic Resistance:** | 50% |
| **Size:** | L (40+' wing span) |
| **Morale:** | Champion (15-16) |
| **XP Value:** | 19,000 |

The phoenix is a great, extra-planar bird thought to represent the spirit of freedom and rebirth. It is a mortal creature that displays the ultimate in godlike detachment.
A phoenix appears as a large bird with a 40' wingspan and bright, multi-colored feathers. The plumage includes bright violet, scarlet, crimson and flaming orange. Its beak and claws are of blue-violet. A phoenix's eyes are a deep, glowing ruby color.
In addition to its own language, a phoenix can speak with all avians. It otherwise communicates with a limited telepathy or by empathy.

**Combat:** The phoenix is a free and benevolent spirit and does not derive pleasure from attacking others.

But if the need for combat arises, a phoenix is a swift and powerful foe. It can attack in the air with two powerful claws inflicting 1-8 points of damage per strike. When on the ground it attacks with its great beak for 2-12 points of damage per hit. The phoenix is an intelligent and magical beast, however, so it usually opts for more effective measures of attack and defense.
A phoenix will always open up each round of combat with a piercing shriek that gives the creature an edge in the combat round. All opponents of 12 hit dice or less within 30 feet of a shrieking phoenix receive a +3 penalty on their initiative dice. The shriek does not affect the phoenix's combat roles in any way.
Every phoenix has the following spell-like powers, at 20th level of magic use, usable once per round, one at a time, at will:

*affect normal fires*
*audible glamer*
*blindness*
*blink*
*blur*
*call woodland beings*, 1 time per day
*color spray*, 3 times per day
*continual light*
*control temperature, 10' radius*
*dancing lights*
*detect charm*, always active
*detect evil*, always active
*detect magic*, always active
*duo-dimension*, 1 time per day
*find traps*
*find the path*, 1 time per day
*fire charm*
*fire seeds*, 1 time per day
*incendiary cloud*, 1 time per week
*invisibility*
*misdirection*
*neutralize poison*, 1 time per day
*polymorph self*, 3 times per day
*produce fire*
*protection from evil, 10' radius*, always active
*pyrotechnics*
*reincarnate*, 1 time per day
*remove fear*, within a 10-foot radius
*remove curse*
*snake charm*
*veil*, 1 time per day
*wall of fire*, 1 time per day

Also, by spreading its wings and performing a ritual dance, the phoenix can perform the following spell-like abilities at 40th level of magic use:

*dismissal*
*dispel evil*
*dispel magic*

Any of these three abilities can be used by a phoenix as many times as desired, but can only be done one at a time and each takes a full round to complete. No other activities -- such as a shriek -- can be done in conjunction with these three powers.
A touch of its wing is equal to a *cure light wounds* spell, with 2 touches possible per individual per day per phoenix. A touch of the comb gives an effect equal to *cure disease*, but only once per day per person. When hard-pressed, the phoenix is able to cause spilled droplets of its own blood to act as *fire seeds* of the holly berry type, one being created for every five points of damage taken by the phoenix.
In extreme situations, the phoenix can create a 40th-level combination of *fire storm* (20' highx5' widex8' deep) and *incendiary cloud*, even if it has already used these powers previously. This destroys the adult phoenix but leaves behind a young phoenix with all the powers and abilities of its predecessor.
The phoenix can travel astrally or ethereally at will. They are hit only by +3 or better magical weapons. The phoenix can never be surprised. It has infravision to 120 feet.

**Habitat/Society:** Phoenixes are strange and enigmatic creatures. They are held in very high regard in the legends of many tribes of barbarians and in other, primitive cultures. It is said that the phoenix is the embodiment of rebirth. This is symbolized in the classic imagery of the self-immolation of the phoenix from which a new bird is formed. This is seen as the ultimate sacrifice for the cause of good and thus the phoenix are considered noble creatures.
Legend states that the phoenix has an extremely long lifespan. Some reports claim they can live to be over 1,000 years old, while others suggest it to be as high as 12,000 years. When it is time for the phoenix to die, it goes far into the mountains away from civilization. At the very top of these peaks, the phoenix builds a great nest made of straw and various herbs. The phoenix will lie in the nest, taking its last look at the world it knows. Satisfied that its work in the world is at an end, it then immolates itself in a flash of great flame and light. When the flames die down, there in the nest, which remains untouched by flames, is a young phoenix arrayed in bright colors like its parent before it. Legend then suggests that the phoenix must fly away to the temple of the sun and there bury the mummified corpse of its parent.
In general, phoenixes are reclusive creatures, tending to make their lairs away from the worlds of humanoid beings. Though they have the ability to travel through the Astral and Ethereal planes (and thus to any inner and outer plane), they will generally tend to stay on Elysium or in a secluded place on the Prime Material plane.
There are as many legends of the phoenix as there are cultures, each with its own slightly differing viewpoint. Some believe the phoenix to be the benevolent symbol of death, only appearing when someone's time is up among the living. Other cultures -- primarily evil -- see the phoenix as the symbol of destruction and rage, bringing fiery devastation in its wake. Still other cultures record their phoenix to be a friend and benefactor of good beings.
Although a wealth of mystery surrounds the phoenix, still there are some things that are known for sure. It is obvious that the phoenix is a champion of good. Although is seems these creatures do not actively seek out evil to destroy, they will rarely pass up such an opportunity when it presents itself. Also, despite the vast differences in ideology, belief, and philosophy in the various cultures that revere the phoenix, one thing remains constant: the phoenix is the symbol of creation by destruction. Some cultures believe that fire is the one great purifier, cleansing all that it touches. Others believe that fires merely destroys.

With the phoenix, both are true. In its own reproduction, fires destroys the old bird, taking with it many centuries of life and wisdom, yet it creates a new phoenix with a new mind, thus purifying the line.

**Ecology:** Of all magical or enchanted creatures, the phoenix is perhaps most sought after by alchemists and sages alike. There is almost no part of a phoenix that cannot be used in a magical potion or for research.
The feathers of the phoenix have a great many uses. They can be used to adorn a *staff of healing*, they can be used to make *potions of extra-healing*, and have many other healing, magic uses. The eyes, beak, and talons of a phoenix are very valuable in the open market, often commanding 5,000 gp and up. Of course it is not always easy to find a buyer on the open market, because many cultures consider it a bad omen or taboo violation to kill a phoenix.
The exact nature of the phoenix can only be guessed at by scholars. All phoenixes are male and the reproduction cycle consists entirely of the self-immolation. Whether this is a natural biological reproduction cycle or a magical birth is unclear.

**Call Phoenix (Conjuration/Summoning)**
6th-level Priest Spell, Animal Sphere

| | |
|---|---|
| Range: | 0 |
| Components: | V, S, M |
| Duration: | 1 round per level of caster |
| Casting Time: | 2 rounds |
| Area of Effect: | Special |
| Saving Throw: | None |

This potent priest spell enables the caster to actually summon a phoenix that will come and aid him. The most stringent restriction to this is that the caster must be of good alignment or a druid. Evil or nondruid neutral priests cannot summon a phoenix.
When cast, a phoenix will *always* come to aid. However, depending on how far away the nearest phoenix is, it may take some time for it to appear. One of these powerful creatures will appear in 1d8-1 rounds. A modified roll of `0' indicates that a phoenix will appear right away in a huge burst of smoke and flame.
Because the caster must be good or be a druid, there is seldom a conflict of interest between the phoenix and the summoner. However, a phoenix will never attack beings of good alignment (unless there is an *extremely* good reason for it). It will, however, risk its own life if the cause mandates such action and will further the aims of good that the summoner has undertaken.
When the spell has expired, the phoenix does not disappear, but it is then free to do what it will. This may in fact be what the caster summoned it for, or it may leave if it feels the reasons for its summoning were insufficient.
The material components for this spell are three diamonds of at least 500 gp value (which are consumed by the energies of the spell) and a red hot coal.

Piercers resemble stalactites found on cave roofs. They are actually a species of gastropods that, without their shells, resemble slugs with long tails. A piercer climbs onto the ceiling of a cavern and waits patiently; when it detects prey beneath it, it drops from the ceiling and impales the victim with the sharp end of its shell.
Piercers look like limestone growths on the ceiling of a cavern, just like ordinary stalactites. They come in the following sizes: one foot long (1 Hit Die), three feet long (2 Hit Dice), four and one-half feet long (3 Hit Dice), and six feet long (4 Hit Dice). Piercers can be identified on very close inspection by a pair of tiny eyestalks that curl along the side of the stalactite.

**Combat:** Piercers have only one chance to hit; if an attack fails to score a kill, the piercer cannot attack again until it slowly scales a wall to resume its position. Piercers can hear noises and detect heat sources in a 120-yard radius; these heat sources include humans. If the noise and light are stationary for many minutes at a time, piercers will slowly edge into attack position over the source of the stimulus. Piercers are virtually indistinguishable from natural phenomena. A group of characters has a -7 modifier on its surprise roll against a piercer (this guarantees that the group will be surprised unless it has some positive modifiers).
A piercer, after it has fallen, is slow and fairly easily slain. Its soft underbelly has one defense mechanism; when exposed to air it covers itself in a corrosive acid which inflicts 1 point of damage on contact with flesh. This is usually enough to dissuade natural predators from disturbing it.

**Habitat/Society:** While piercers are nonintelligent, the piercers in a colony are aware of each other. They often fall simultaneously, to feed on those killed by other piercers (which makes the area suddenly very dangerous).
Piercers dwell in caverns, where they live in groups of about 10 members. They prefer to hang over high traffic areas, so they will usually be found near cave entrances. Aside from mating, the piercers are not social creatures. There are rumored to be great caverns deep underground that contain colonies of hundreds of piercers. Piercers are not attracted to treasure, only to food.

**Ecology:** The piercer is a mollusk, hatched from a hen-sized egg which the parent lays in clutches of six to eight in isolated areas of the cavern. When they hatch, the young appear to be slugs feeding on fungi. After several months, they climb the cavern walls, secrete a chemical that hardens into the familiar stalactite shape, and then wait for prey to come.
A piercer has a lifespan of four years and grows one Hit Die per year. In any group of piercers, the number of creatures with one, two, three, and four Hit Dice will be nearly evenly divided (e.g., in a group of 12 piercers, there will be three one Hit Die piercers, three with two Hit Dice, three with three Hit Dice, and three with four Hit Dice).
A piercer can go without food for months. It stores food in a second stomach that can preserve food for long periods of time; some alchemists seek out piercers to extract a substance from this organ and refine it for human use, as it can keep foodstuffs and precious ingredients fresh for weeks. Piercers also store large supplies of water, extracted from their victims. Piercers can maintain this water supply for months. The taste of a piercer is said to resemble that of a snail, but with a bitter aftertaste. Their eggs and offspring are not traded on the open market.

Of the many hazards in the wilds, these plants are among the most frightening. They feed on animals, perhaps as nature's revenge on animals for their habit of feeding on plants.

## Choke Creeper

The choke creeper, or strangler vine, is a long, thick vine with many branch vines, each capable of attacking. The vine is olive green in color, and the main vine is almost 1-2 feet thick. Branch vines have flexible tendrils, allowing them to creep at 5 yards per round. They are attracted to light and heat.

For each 20 feet of main vine, it has the 1 hp per HD; branch vines have 2 hp per 20 feet of the main vine (branch vine hit points are in addition to those of the main vine, not part of the total). In each 10-foot section of the main vine, there are four branch vines. The smallest choke creeper is 20 feet long, has 1 hp/HD (25 hp total), and has eight branch vines, each with 2 hp. The largest choke creeper is 160 feet long, has 8 hp/HD (200 hp total), and has 64 branch vines, each with 16 hp. The main vine is AC 6, the branches AC 5.

A maximum of four branch vines can attack a single target. They appear to be normal vegetation and can usually grab unsuspecting victims. Victims can break free with a successful bend bars/lift gates roll; if the roll fails, they are held fast until the vine that holds them is severed. Seized victims suffer 1d4 points of damage per round, with a 10% chance per round (non-cumulative) that the choke creeper achieves a

strangling grip. The victim dies after one round of strangulation.
A choke creeper is immune to torch fire, but takes normal damage from hotter fires such as those caused by burning oil; hot fires make the vine move away. The creeper takes only 1 hp damage per die of cold damage, but cold stuns the all plant sections struck for 1d4+1 rounds. Electrical attacks do no damage; instead, they double the creeper's movement rate for 1d4+1 rounds.

### Mantrap

This insidious relative of the much smaller Venus flytrap attracts prey by scent, entrapping and dissolving its victims in acidic secretions. It is a gigantic bush with towering stalks of purple blossoms, and huge green leaves at ground level.
During daylight hours the mantrap releases pollen continuously; all creatures who approach to within 60 feet must make a successful saving throw vs. poison or become attracted to the odor. Those attracted proceed to the body and voluntarily climb into one of the 1d4+1 leaf traps on the plant. Once entered, a leaf trap closes, firmly entrapping the victim (no chance of escape). The victim cannot be pulled free until the plant is destroyed. Its acidic secretions destroy the victim quickly, inflicting damage per round equal to the victim's AC (discounting Dexterity bonuses). Regardless of the adjusted AC, the victim takes at least 1 point of damage per round. Items exposed to the acid must roll a saving throw once per round against the effects; all metal items receive a +2 bonus.
The fascination with the mantrap is so strong that, once a being is enthralled, it takes 24 hours for the effect to wear off. The fumes from burning the plant counteract the effect. Because of its powerful attractive ability, the nectar of mantrap flowers is an ingredient in a *philter of love.*

### Retch Plant

The retch plant, or globe palm, appears to be a typical palm tree, except that each always has 1d4+4 globe-like, coconut-sized fruit growing at its top. Each globe is membranous, taut, and blue, violet, or lilac in color.
Walking under a retch plant makes it 20% likely that one of the globes will fall. If there is solid contact against the tree trunk (banging against it, running into it, or climbing it) 1d4+1 of the noisome fruits plop down. Randomly choose the target attacked; they are AC 10 against this attack. When the globes strike, they burst, and a nauseating fluid is splashed over a 5-foot radius. Those 5-9 feet from the impact have a 25% chance of being splashed. The sticky, foul fluid causes creatures to vomit and retch for the next three rounds. In addition to being nauseated, victims are at half normal Strength for one hour. No saving throw is allowed against either effect of the fluid.
Creatures splashed must be washed in alcohol (including drinkable types) or they are more likely to attract carnivores in the area, doubling the frequency and chance for success of encounter checks. The odor is discernible within a 50-foot radius, and it persists for 1d4 hours unless removed as above.

### Snapper-Saw

This plant, also called foresters' bane, has a central bush with several greenish-white berries that are plump, smell delicious, edible, nutritious, and rich in protein. Several broad, dark green, ribbed leaves radiate out 5-7 feet from the bushy center, which hides 1d4+2 tough, purple, saw-like stalks with thorny projections. A healthy plant has six saw-stalks, while damaged specimens have less.
Creatures stepping into the radius of the low-growing ribbed leaves risk attack. The leaves snap up one or two victims; armor is ignored for this attack, though dexterity and magical bonuses to AC are counted. A victim must make a successful Strength check to pull free.
A creature caught by the snapper leaves is attacked by the saw-stalks, even if the victim breaks free in the

same round in which it was caught. Each saw-stalk attacks once per round for 1d4+1 points of damage, shredding the victim so its flesh and blood feed the snapper-saw. Clutched prey does not receive Dexterity adjustments to AC, though armor and magical protection apply normally.
Saw-stalks are AC 4 and require 1d8+16 points of damage a piece to sever. Each snapper leaf is AC 7 and takes 1d8+8 points of damage to sever. These hit points do not count toward the total of the central bush's Hit Dice. The central bush is AC 9, but it is completely protected from outside attack when the snapper leaves are up. A victim held by the snapper leaves can attack the saw-stalks or the central bush, but only with small piercing weapons. Lost leaves and stalks grow back in 2d4 weeks unless the central plant is slain.

### Thornslinger

Thornslingers are carnivorous, spidery, white plants with dew-covered, pale yellow blossoms. They average about 8 feet in diameter and lie very close to the ground.
Thornslingers attack living creatures by firing thorns. Each thorn has a range of 30 feet and causes 1 point of damage. Since a large number of thorns are shot in a spread pattern at intended targets, being hit by one or more thorns is automatic. Damage from the thorns is 2d4 to any creature within 30 feet, once per round. They have virtually inexhaustible supplies of thorns, and are found in close clusters. Since the shower of thorns is their only defense, thornslingers are often found in out-of-the-way places, such as pits or inaccessible caves, or growing on brick and stone walls.
The leaves and central stem of a thornslinger are covered with a strong adhesive sap. Those who touch it are held fast if they have Strength 13 or less, until they are freed or digested. Characters with Strength 13 or greater can break free in 1d4 rounds. Once a victim is caught by the dew, the thornslinger secretes digestive acids, causing 1-3 hp damage per round.
Thornslingers are not very flammable, but flame causes normal damage. Open flame is extinguished after one round and oil burns for only two rounds.

### Tri-flower Frond

The deep green stalks of this plant are topped by trumpet-shaped flowers of vivid orange, bright yellows, and intense red; other color combinations are possible, but rare.
Each flower has its own function. The orange one shoots 2d4 pollen-covered tendrils, each 3 feet long; any creature struck must make a successful saving throw vs. poison or fall into a coma for 1d4 hours. The plant's sensitive rootlets tell the yellow blossom where to find the slumbering victim; the yellow bloom bends over and shakes down a shower of sticky enzyme that causes 2d4 points of damage per round until washed off (damage is reduced by 1 point per flask of water; complete immersion in water removes the sap in one round). The red blossom extends tendrils into the victim, draining body fluids at a rate of 1d6 points of damage per round.

### Yellow Musk Creeper and Zombie

The yellow musk creeper is a plant that attacks humanoids, draining Intelligence and turning them into yellow musk zombies. Both creeper and zombie are immune to *charm, hold, illusion, sleep,* and other mind-affecting attacks.
The creeper is a large, light green climbing plant with leaves like ivy, 1d4 dark green buds, and 2d6 bright yellow flowers with splashes of purple. It can cover an area up to 20 feet square from its single bulbous root. Damage done to the plant is disregarded unless the root is attacked, for the vine eventually grows back from the main root. The creeper has a sweet, entrancing odor while dormant.
Creepers are dormant until a creature approaches within 10 feet; then the nearest flowers turn toward the

prey and puff musky pollen. A victim hit by the pollen must make a successful saving throw vs. spell or be *entranced* and walk toward the plant, resisting all those who try to prevent it. When the victim reaches the creeper, a green bulb extends its roots into the victim's head, and reach the brain in two rounds. The victim loses 1d4 points of Intelligence per round after that.

A victim reduced to 0 Intelligence or less dies instantly; a victim reduced to Intelligence 1 or 2 becomes a yellow musk zombie under the creeper's control. If the plant dies before reducing its prey to zombie status, 1 point of Intelligence is regained per day, or a *heal* spell will restore lost Intelligence instantly. If the mother plant is destroyed first, a zombie can be cured by a *neutralize poison* followed by a *heal* spell and four weeks of complete rest.

Only man-sized humanoids become yellow musk zombies; the creeper can control one zombie for every two flowers. A zombie acquires yellow skin and a glazed look, but otherwise looks as it did before, wearing the same clothes and armor and wielding any weapon it had held at the time of its conversion. It has the same hit points as before, but attacks as a 2 HD monster. It can cast no spells, nor receive bonuses for high ability scores. The zombie can move up to 100 feet from the creeper. Yellow musk zombies are not true undead and cannot be turned. A zombie serves the creeper for about two months before moving off at least 200 feet and dying; the seedling that has been growing in its head quickly sprouts, flowers, and becomes a new creeper.

Like other breeds of dangerous plants, these are not at all defenseless. Some are the unnatural results of arcane influences, while others may have evolved naturally.

### Hangman Tree

This tree is named for its noose-like vines. Hangman trees are deciduous, resembling thick oaks with few branches and sparse foliage. Knot-like sensory organs are usually located high on the trunk. In the area where the tree's main branches split off, there is an opening which leads to the creature's acid-filled "stomach." The lower trunk has a slash-like opening for the expulsion of indigestibles. Saplings can move at 6 feet an hour, while older trees can move only 2 feet an hour.

Their shallow root systems and small number of leaves require them to supplement their diet by direct ingestion of protein, so each tree traps prey. During freezing weather, a taproot is put down and the tree is dormant.

A hangman tree can release a hallucinatory perfume at will, and it does so when prey is 30-80 feet away. Those who inhale the perfume believe the hangman tree to be a normal tree, or even a treant, depending on the mood of the tree. Mature and older hangman trees can speak halting Common.

The tree attacks by dropping noose-like vines around prey. Although each tree has 1d4+5 appendages, it can control only three of them at any one time. It takes 1d8+12 points of damage to sever a vine; this is in addition to the damage needed to kill the tree. Vines are AC 5, while the main tree is AC 3. When in contact with a victim, the tree inflicts 1-3 points of damage per round as the vine tightens and lifts its prey (1,000-pound limit) to the opening in the upper trunk. This requires four rounds. One attempt at a bend bars/lift gates roll can be made to break free; victims who fail the roll cannot escape. On the fifth round after being picked up, the victim is dropped into the hangman tree's stomach. The victim suffers 3d4 points of acid damage per round until dead, and is then digested. Escape from the stomach is impossible. Many sharp growths surround the top of the opening, they point inward and down. About three man-sized victims can fit in the tree's stomach at one time.

A hangman tree draws power from its environment. It has 5% resistance to magic per decade of age, up to a

maximum of 95%. However, the tree is vulnerable to elemental attacks. *Lightning* that passes its magic resistance inflicts double damage; extreme cold shocks the tree into dormancy until it thaws. Darkness also causes it to slow its activities, so it functions at half efficiency (three attacks per two rounds).
Hangman trees have no interest in treasure and, because they move constantly, it is unlikely that treasure would be found near one, although they do expel undigestible items periodically.
Age guide: 0-4 years, non-combatant sprout, 1 hp/HD, no attacks; 5-20 years, sapling, 2-3 hp/HD; 21-75 years, mature tree, 4-5 hp/HD; 76-150 years, old tree, 6-7 hp/HD; 151+ years, ancient tree, 8 hp/HD.

## Kelpie

The kelpie is a mass of animate seaweed, able to alter its form to resemble a green-clad woman, a hippocampus, or a green horse. It lives to drown the foolish., and can communicate telepathically with those in its embrace.
When a humanoid male approaches, the kelpie reshapes to appear as a woman or a mount; its imitation is a grotesque mockery, 95% detectable in daylight. Once per day, however, the kelpie can cast a *charm* on a humanoid male, who suffers a -2 penalty to his saving throw. If he fails to save, he perceives the kelpie as a desirable woman or mount, leaps into the water, and swims on to possess the kelpie. The kelpie wraps itself around the charmed victim, who happily drowns, taking 2d10 points of damage per round until he surfaces for air, is protected from drowning, or dies. The kelpie takes the body back to her lair to devour.
Victims who can breathe water or who otherwise do not drown, happily entwine themselves in the kelpie's embrace, which confuses her, though she may welcome the victim's continued activity.
A kelpie in the form of a woman or horse can travel onto land for 1-3 hours. She tries to charm a victim to protect her until she returns to the water. He will do anything he can to protect his beloved kelpie, though he may be enraged by his companions' perceived treachery. The effect of this charm ends, only if the kelpie dies, freeing any victims still alive.
Kelpies maintain body temperature equal to that of their surroundings. Due to their water-drenched forms, they take only half damage from fire (none if a saving throw is made).
There are various legends about the creations of kelpies. They are said to have been created by a sea god to punish sailors, in a time before women were sailors; or created by a female elemental princess of water, Olhydra, who made those of her own gender immune to kelpies' powers.
Kelpies reproduce by increasing in size to 7 feet, then breaking into two or four smaller kelpies. They can do this once a month, if victims are plentiful and the local fish do not feed on them too much.

## Obliviax

Obliviax, or memory moss, is an evil black moss with the ability to steal memories, even memorized spells.It grows in small patches and must have sunlight to spur reproduction by spores, though it needs no light for growth. It prefers a balance of wet and dry, and cannot abide cold temperatures.
The moss senses intelligent creatures within 60 feet; it chooses one, preferring wizards, then other spellcasters. This victim must make a saving throw vs. spells or lose all memory of the last 24 hours. The obliviax continues to attack once per round until it succeeds and then makes no more attacks for 24 hours. If an obliviax with stolen memories is attacked, it forms part of itself into a tiny moss imitation of the creature whose memories it stole. This mossling remains attached to the parent moss and defends it by casting stolen spells.
To regain stolen memories, a victim must eat the living obliviax, which takes one round. If a saving throw vs. poison is successful, the eater regains all stolen memories and spells; if the saving throw fails, the eater becomes very ill for 3d6 turns. Extra memories and spells can be gained by eating obliviax which has fed on someone else recently. Spells can be used by the eater, but all such memories fade within a day.
A *potion of forgetfulness* can be distilled from obliviax, and its spores can be used to make an elixir to restore

the memories of the forgetful or senile.

### Quickwood

Also called the spy tree, this plant appears to be an oak, although close examination reveals that it has a visage and sensory organs that resemble a distorted human face. It is 90% unlikely that the "face" is noticed unless the observer is within 10 feet of the quickwood. The creature has excellent senses, with 120-foot infravision and the ability to detect vibrations through its roots, and aerial movements through its leaves.
The quickwood seldom moves, but it sends its roots up to 90 feet, through loose topsoil, to seize and hold immobile any creature weighing under 1,000 pounds. Roots cause no damage. They are too strong to be broken and take no damage from blunt weapons, and only 1 point of damage from piercing weapons. Edged weapons can sever roots, which are treated as large creatures with 10 hp each; damage inflicted to the roots does not count toward the tree's total. The quickwood will allow up to six of its roots to be severed before it withdraws the other 1d6+6 to safety. The roots pull prey to the quickwood's mouth, which can clamp down to cause 3d4 points of damage to anything touching it.
The quickwood can perspire and drench itself, so it is immune to fire; it is immune to lightning, poisons, and gasses. It is also immune to most other spells which do not affect plants specifically, including all mind-affecting spells. If attacked by a spell, the quickwood absorbs some or all of the spell's energy, and uses it to radiate *fear* in a radius of 10 feet per spell level absorbed. The spellcaster must make a saving throw vs. spells; if the save fails, all the spell's energy is siphoned into the *fear* effect. Otherwise, the spell has normal effects, and *fear* is simply a side effect.
The quickwood can control up to 2d4 normal oaks within one mile, using them to gather information. Although it gathers no treasure, it may be *charmed* or otherwise convinced to guard treasure, which may be placed in the quickwood's trunk. If acting as a guardian for some other being, a quickwood can make a hollow drumming sound which can be heard for a mile or more.

### Shambling Mound

Shambling mounds, or shamblers, appear to be heaps of rotting vegetation. They are actually an intelligent form of plant life, with a roughly humanoid shape, and a brain-like control center in its "chest" area. A shambler has a 6-foot girth on its lower half, tapering to about 2 feet at its "head."
Shambling mounds are found only in regions of dense rainfall and vegetation. Dismal swamps, marshes, and rain forests are their favorite living areas, but some wet, subterranean places also serve as shambler lairs. They are solitary beasts, rarely living in the same area with other shamblers -- usually only in areas where the food source is constant, near famous ruins, or abandoned gold mines.
Shamblers are almost totally silent and invisible in their natural surroundings; opponents suffer a -3 penalty to surprise rolls. A shambler often lies in a shallow bog, waiting for some creature to walk onto it, then it attacks. The creatures are excellent swimmers as well, and they have been known to sneak into the camps of unsuspecting travelers at night.
A shambling mound attacks with huge, arm-like appendages; a victim hit by both arms in the same round is entangled in the creature's slimy vines and rotting vegetable matter. Entangled creatures suffocate in the slime in 2d4 rounds unless the shambler is killed, or the victim breaks free with a successful bend bars/lift gates roll.
Because of the vegetation which covers its critical inner body, the shambling mound is immune to blunt weapons, and takes only half damage from piercing and slashing weapons. The creature is immune to fire, and takes half or no damage from cold, depending on whether it makes its saving throw. Lightning actually causes a shambler to grow, adding 1-foot to its height, as well as 1 HD and appropriate hit points, for each lightning-based attack used against it.
Because of the location of its brain, the shambler cannot be killed by lopping off its head or limbs. The

remaining vines along the torso join together to form a new extremity within one round. Only when enough of the shambling mound has been hacked away, will it finally die. A wounded shambler need only rest in a damp clump of foliage to heal; it rises again in 12 hours, fully healed, and probably angry.
Since shamblers gain power from electrical attacks, there are rumors of shambling mounds with 20 or more Hit Dice. Since they often live in the same areas as will-o'-wisps, there may be truth to such rumors, and giant shamblers may inhabit deep, dark swamps and jungles.

### Strangleweed

Strangleweed is an intelligent kelp found in relatively warm sea water. A bed of these carnivorous plants are indistinguishable from normal seaweed. A strangleweed patch will cover an oval area of 3d4 square feet, on the sea's surface; 3d4 fronds of varying lengths (1d6+6 feet) hanging downward from the patch.
Any creature near enough is attacked, a hit indicating that the frond has entwined about its victim. Any victim entwined suffers a -2 penalty to attack rolls. Each frond has 4d4 Strength points, and the other fronds add their Strength to the total. A victim compares Strength with the strangleweed; Strengths of 18/51 to 18/00 are rounded up to 19. If the victim is stronger, each point of difference in Strength gives a 10% chance of escape, which can be attempted each round.
If the frond is stronger than the victim, the victim cannot escape alone, and the fronds crush the victim for 1 point of damage, per point of Strength difference. If the two are of equal Strength, the victim cannot escape, but takes no damage.

### Giant Sundew

A giant sundew appears to be a 3- to 4 foot-mound of grayish green, tarry ropes or rags. The air around one is fly infested and holds a thick odor like sweet syrup. Preferring shaded places in which to grow, the sundew has only hair-like roots that anchor it
lightly in place. It can pull itself slowly along the ground using sticky tendrils. Due to the plant's sticky exterior, missiles and fire-based attacks inflict only half damage.
The sundew detects moving creatures by vibrations. When anything moves within 5 feet of it, it lashes out with its tendrils. Its body is covered with hundreds of tendrils, and a maximum of six can attack each creature in range, each round. The tendrils exude sticky globs of sap. For every three tendrils that attach to a victim, the victim suffers a -1 penalty to attack rolls. The sap contains a mild enzyme that inflicts 1 point of damage per round for each tendril striking the victim, regardless of whether or not the tendril is still attached. A successful open doors roll breaks a tendril; each tendril must be checked separately, up to once per tendril, per round.
If a sundew's attack roll is an unmodified 20, it has struck the victim's mouth and nose, clogging them with sap; suffocation occurs in 1d3+1 rounds unless the sap is removed. The sap may be dissolved by vinegar or alcohol.

### Thorny

Thornies are dog-like plant creatures trained as guards by mold men. They are covered by a spiky bark. A thorny attacks first with its bite; if the bite hits, the creature tries to roll its body against its victim, causing 3d4 points of damage with a successful hit. Thornies reproduce by laying egg-like seeds in the ground. A small tree sprouts from the seed, eventually producing buds which grow into small thornies. Thornies can be trained if raised from buds.

# Poltergeist

| | |
|---|---|
| **Climate/Terrain:** | Subterranean |
| **Frequency:** | Rare |
| **Organization:** | Group |
| **Activity Cycle:** | Night |
| **Diet:** | None |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Nil |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 1-8 |
| **Armor Class:** | 10 |
| **Movement:** | 6 |
| **Hit Dice:** | ½ |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | Nil |
| **Special Attacks:** | Fear |
| **Special Defenses:** | Invisibility, silver or magical weapon to hit |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' tall) |
| **Morale:** | Average (10) |
| **XP Value:** | 65 |

Poltergeists are the spirits of restless dead. They are similar to haunts but are more malevolent. They hate living things and torment them constantly, by breaking furniture, throwing heavy objects, and making haunting noises. They are often, but not always, attached to a particular area.
Poltergeists are always invisible. Those who can see invisible objects describe them as humans whose features have been twisted at the sight of horrors. They wear rags and are covered with chains and other heavy objects that represent a multitude of evil deeds that these creatures have committed against themselves as well as others.

**Combat:** A poltergeist attacks by throwing a heavy object -- any nearby object that a strong human can

throw will suffice. It has the same chance to hit as a 5-HD monster (hence its adjusted THAC0 in the statistics given above). If the victim is struck he suffers no damage (treat the use of deadly weapons such as knives and swords as terrifying near misses), but he must roll a successful saving throw vs. spell or flee in terror in a random direction (choose available exits away from the poltergeist and determine randomly) for 2d12 rounds before recovering. There is a 50% chance that the victim drops whatever he was holding (he drops it at the start of his flight). Once a person rolls a successful saving throw, he is immune to further *fear* attempts by the poltergeist in that area.

Those who try to hit a poltergeist but cannot detect invisible objects suffer a -4 penalty to their attack roll. A poltergeist is harmed only by silver or magical weapons. Sprinkled holy water or a strongly presented holy symbol drives back a poltergeist but cannot harm it. Poltergeists that are bonded to the area of their death are hard to dispel; these are treated as if they were ghouls on the *Turning Undead* table. Wandering poltergeists may be turned or destroyed by a priest as if they were skeletons.

**Habitat/Society:** Some say that poltergeists are the spirits of those who committed heinous crimes that went unpunished in life. Whatever their origins, poltergeists are malevolent spirits whose activities can be anything from annoying to deadly. Their

purpose in existence is to haunt and disrupt the lives of those who still live.

Poltergeists often haunt families and partnerships. In the latter case, they haunt their place of business, striking almost as much terror in death as they did in life.

A poltergeist is often strongly bonded to a particular place, the place where its corporeal existence ended. Bonded poltergeists almost never wander more than 100 feet from this place. A few are wandering spirits, doomed never to find their way home. Bonded spirits are stronger than wandering spirits (wanderers never have more than 3 hit points).

Places where poltergeists are particularly strong have been known to have *phantom shifts*. These extremely rare and terrifying illusions take the character encountering the poltergeist back in time, to the time when the poltergeist was still alive. They often reveal why the being was transformed into a poltergeist. Characters in a *phantom shift* may interact freely with the illusion, but any attempt to harm the illusion shatters it and returns the characters to the present time; likewise, any attempt on the part of the illusion to attack the characters also shatters the illusion without any harm being done. The illusion may continue at different times, or may repeat itself endlessly. No one can predict exactly when a place will experience a *phantom shift*, but they seem to occur on the anniversary of the poltergeist's death.

**Ecology:** These spirits, which are terrifying and pitiable at the same time, do not consume food and do not collect treasure. Poltergeists dissolve when slain or laid to rest.

Puddings are voracious, puddinglike monsters composed of groups of cell colonies that scavenge and hunt for food. They typically inhabit ruins and dungeons. They have the ability to sense heat and analyze material structure from a distance of up to 90 feet to determine if something is edible. Deadly puddings attack any animals (including humans) or vegetable matter on sight.

All deadly puddings are immune to acid, cold, and poison. Lightning bolts and blows from weapons divide them into smaller puddings, each able to attack exactly as the original pudding. Fire causes normal damage, as do *magic missiles*. Puddings can ooze through cracks that are at least 1 inch wide and can travel on ceilings and walls (falling on victims as a nasty surprise) at the same speed as on a level surface.

Puddings reproduce by fission. They are adapted to live in a wide variety of climates.

Puddings starting with 11-30% of maximum possible hit points are 3 feet to 4 feet in diameter; with 31-50% of full hit points, 5 feet wide; with 51-70% of full hit points, 6 feet wide; with 71-90% of full hit points, 7 feet wide; and with 91-100% of full hit points, 8 feet wide. If a pudding is split up so it becomes less than 3 feet wide, it becomes thinner but retains its 3-foot diameter. Because puddings do not use all of their mouth openings (which cover their exposed surfaces), the smallest pudding does the same damage as the largest.

### Black Puddings

Black pudding acid is highly corrosive, inflicting 3-24 points of damage per round to organic matter and dissolving a 2-inch thickness of wood equal to its diameter in one round. Black puddings also dissolve metal. Chain mail dissolves in one round, plate mail in two; each magical "plus" increases the time it takes to dissolve the metal by one round (thus *plate mail +3* takes two rounds to dissolve for being plate mail, plus three rounds for having a +3 magical bonus, for a total of five rounds).

### White Puddings

These cold-loving creatures are 50% likely to be mistaken for ice and snow (guaranteeing surprise) even under the best of conditions. White puddings haunt polar regions or icy places in order to find prey, although they can live by devouring any animal or vegetable matter; even ice provides them with enough nutrition to exist. White puddings cannot affect metals but dissolve animal and vegetable materials in a single round, inflicting damage to flesh at an astonishing rate.

### Dun Puddings

Adapted to dwell in arid regions, these monsters scavenge barrens and deserts and feed on silicates (sand) if animal and vegetable matter is unavailable. They dissolve leather in a single round, regardless of magical pluses. Metals are eaten at a rate half that of black puddings; chain takes two rounds to dissolve, plate four rounds, with an additional two rounds per magical plus.

### Brown Puddings

This type dwells principally in marsh areas. It has a tough skin but its attack is less dangerous than other types of puddings. Brown puddings cannot affect metals but dissolve leather and wood in a single round, regardless of magical pluses.

Other pudding types are possible, at the DM's option.

# Quaggoth

| | |
|---|---|
| **Climate/Terrain:** | Subterranean caves |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Nil (O, R) |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-24 |
| **Armor Class:** | 6 |
| **Movement:** | 12 |
| **Hit Dice:** | 2+2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 2 or 1 |
| **Damage/Attack:** | 1-4/1-4 or by weapon |
| **Special Attacks:** | Berserk rage |
| **Special Defenses:** | Immune to poison |
| **Magic Resistance:** | Nil |
| **Size:** | L (7'+ tall) |
| **Morale:** | Elite (15-16) |
| **XP Value:** | Normal: 175 |
| | Jald: 270 |
| | Thonot: 1,400 |

Quaggoths are humanoids with long, shaggy, white hair covering their entire bodies. They wear no clothing. Warlike and vicious, they roam the Underdark looking for prey. Drow sometimes enslave them as guards and spider handlers.
Quaggoths speak a halting form of Undercommon, and can grasp only simple concepts. More intelligent quaggoths may also speak a few words of Duergar, Drow, or Common.
These aggressive beasts have infravision with a range of 120'. They are immune to all poisons.

**Combat:** Quaggoth tribes claim a certain territory as theirs and patrol it, hunting for food. Any detected

animals or creatures (such as a party of adventurers) invite certain attack.
Most tribes (70%) of quaggoths do not carry weapons, and attack with their claws for 1-4 hit points of damage per hit. The remainder of quaggoth tribes carry stone clubs or axes. Those quaggoths which are or have been drow slaves carry superior weapons, such as steel battle axes or two-handed swords.
If a quaggoth is reduced to 25% or less of its original hit points, it enters a berserk fury and receives a +2 bonus to its attack and damage rolls. This rage lasts until the quaggoth dies or all enemies are dead or out of sight.
For every 12 quaggoths encountered, there will be a leader, or jald. The jald has 3+3 Hit Dice and wears leather or skins, making it AC 5. In addition, it gains a +1 bonus to damage rolls. Jalds direct combat; if no jald is present, the quaggoths will fall upon their prey, whatever it is, in an unorganized manner
Any quaggoth tribe has a 20% chance of having one or two thonots. A thonot is the quaggoth equivalent of a shaman. Instead of magic, however, thonots use psionics. A thonot will use its abilities to aid the tribe in combat, escape, or healing.
If quaggoths win combat, they take all bodies, including those of dead quaggoths, to their lair and devour them.

**Psionics Summary** (Thonots only):

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 3 | 2/2/5 | MT/MBl | 15 | 50 |

Only have:
**Psychokinesis - Sciences:** telekinesis. Devotions: control flames, molecular agitation.
**Psychometabolism - Sciences:** shadow-form. Devotions: cell adjustment, expansion, reduction.

**Habitat/Society:** Quaggoths are nomadic hunters. They change territories periodically. In each new territory, they claim a central cave as a lair, leaving treasure with a few guards. The rest of the tribe hunts, returning periodically to rest and change guards.
Females are equal to males in numbers and abilities in a quaggoth tribe. For every adult quaggoth, there will be one young. Half of these young are unable to attack or defend; the other half have 1+1 HD and the same AC and attacks as adults.
Thonots control what passes for religious life among quaggoths. They oversee what few rituals there are; those rituals which are known include the daily preparation for hunting, coming of age, and death (a brief whistling to send the spirit away before the rest of the quaggoths eat the body).
Quaggoths can mate at any time of the year. They are not known to have any courtship or mating rituals. Young are born about 10 months after mating. Births are usually singular, but twins are not uncommon.
The origin of quaggoths is unknown. Some sages claim that they were once a semi-civilized race which dominated much of the Underdark through conquest and ritual sacrifice, until the drow, duergar, and other races broke their power. Others speculate they had some sort of civilization on the surface and were driven underground; this theory is supported by the quaggoths' hatred for surface-dwelling dwarves and elves.

**Ecology:** Quaggoths produce a few artifacts, mostly crudely carved stone items. A few seem to be talented at making necklaces with wooden, bone, or stone beads
Quaggoths fear no creature. Though they are dangerous hunters, they are just as often prey for other

predators of the Underdark. Quaggoths can be trained as servants and guards if captured early.

# Rakshasa

| | Rakshasa | Rakshasa, Greater |

| **XP Value:** | 3,000 | |
| Ruhk | 7,000 | |
| Rajah | 7,000 | |
| Maharajah | 11,000 | |

Rakshasas are a race of malevolent spirits encased in flesh that hunt and torment humanity. No one knows where these creatures originate; some say they are the embodiment of nightmares.
Rakshasas stand 6 to 7 feet tall and weigh between 250 and 300 pounds. They have no uniform appearance but appear as humanoid creatures with the bodily features of various beasts (most commonly tigers and apes). Hands whose palms curve backward, away from the body, seem to be common. Rakshasas of the highest standing sometimes have several heads. All rakshasas wear human clothing of the highest quality.

**Combat:** Rakshasas savor fresh human meat and use illusions to get it. They have a limited form of *ESP* which allows them to disguise themselves as someone the victim trusts; the rakshasa uses this illusion as a lure and strikes when the victim is most unprepared. The rakshasa must drop the illusion when it attacks. Normally rakshasas can have magical abilities, up to the following limits: four 1st level wizard spells, three 2nd level wizard spells, two 3rd level wizard spells, and three 1st level priest spells. These are cast at 7th level ability. Rakshasas are immune to all spells lower than 8th level. An attacker needs at least a +1 magical weapon to harm a rakshasa; any weapon below +3 inflicts only half damage. However, a hit by any *blessed* crossbow bolt kills a rakshasa instantly.

**Habitat/Society:** Rakshasa society is bound by rigid castes. Each rakshasa is born into a particular role in life and cannot advance. Females (known as rakshasi) are fit to be consorts, honored only by their faithfulness and the fighting ability of their children. There are 1-3 females per male.
Rakshasa society is led by a rajah or maharajah, whose commands are to be obeyed without question. Rakshasas wage war on humanity constantly, not only to feed themselves but because they believe that battle is the only way to gain honor. If confronted by humans who recognize their true appearance, they are insufferably arrogant.
A rakshasa's life varies in cycles of wild self-indulgence in times of prosperity and strict fasting and

sacrifice in times of trouble or before battle. They are honorable creatures but will twist the wording of an agreement to suit their purposes. They prefer to deal with humanity by using their illusion powers to deceive and manipulate them, but are brave and forthright in battle.

**Ecology:** As spirits, rakshasas are virtually immortal. They produce a new generation every century to replace the rakshasas that have been slain in battle. No creatures prey on rakshasas except those who would avenge their victims. Rakshasa essence can be an ingredient in a *potion of delusion.*

### Rakshasa Ruhks

About 15% of all rakshasas are greater rakashasas or ruhks, (*knights)*. These warriors are the guardians of a rakshasa community. They are hit only by magical weapons of +2 or better; any weapon below +4 inflicts only half damage against them. Their spells are cast at 9th level of ability.

### Rakshasa Rajahs

About 15% of all rakshasa ruhks are rakshasa rajahs, or lords. Each rajah is the leader (patriarch) of his local clan. These rulers of rakshasadom have the same abilities as a ruhk, but also have the spell casting abilities of both a 6th level priest and an 8th level wizard, cast at 11th level of ability.

### Rakshasa Maharajahs

About 5% of all rakshasa rajahs are rakshasa maharajahs, or dukes. Maharajahs have the same abilities as a ruhk, but have 13+39 Hit Dice, and the spell casting abilities of a 13th level wizard and 9th level priest. A maharajah is the leader of either several small, related clans, or a single powerful clan. Maharajahs reside on the outer planes, where they rule island communities of hundreds of rakshasas, and serve as minions to even greater powers.

Rats are long-tailed rodents 5-12 inches long. They are aggressive, omnivorous, and adaptable, and they often carry diseases. Statistics in italics above refer to the giant rat. Stats without an italicized entry apply to both varieties.

The black rat is about 8 inches long, with a tail at least that long, a lean body, pointed nose, and long ears. The "black" rat is dark gray with brownish patches, and a gray or white belly. It is a good climber (climb 3) and jumper, but cannot swim.

The brown rat, also known as the sewer rat or the wharf rat, is 5-10 inches long, and its tail is shorter than the black rat's. Its eyes and ears are also smaller, but it has a larger, fatter body. Brown rats may be gray, white, black, or piebald in color. They cannot climb, but are excellent swimmers (swim 3) and burrowers. If rats infest a building, black rats inhabit the upper floors, and brown rats occupy the lower floor and the cellars.

**Combat:** Rats normally flee anything bigger than themselves, but a trapped rat will do anything to survive and a pack of starving rats will attack anything in order to feed. Rats attack with their sharp front teeth and often carry diseases, so that a rat bite has a 5% chance of infecting its victim with a serious disease unless the victim makes a successful saving throw vs. poison. Normal rats fear fire, but brave it when very hungry.

A swarm of rats can be treated as a single monster having an assigned number of Hit Dice and automatically causing damage each round to small creatures in the swarm's area. A typical pack might cover a 10-x10-foot area, have 4 HD, and inflict 4 points of damage per round. Weapons have little effect on a pack, but area effect spells and some other attacks (such as flaming oil) are effective. When the pack has lost its hit points, it is considered dispersed and unable to inflict mass damage.

**Habitat/Society:** The chief purpose of rats is to find food. Packs often burrow into and eat food stores. Rats nest almost anywhere, chewing cloth, paper, or wood to make a nest.

**Ecology:** Rats are very prolific, breeding three to five times a year. Brown rats produce 2d4+6 young per litter, while a black rat litter contains only 5-6 young. Both types of rats are omnivorous. Brown rats are considered to be more aggressive than black rats. Their teeth are extremely powerful; they have been known to gnaw holes in lead pipes. Rats have a lifespan of two to four years.

### Brush Rats

Brush rats (also known as trade rats and pack rats) belong to a much less aggressive family of rats known as wood rats. They are slate gray above and white on their underbellies. They are nearly the size of brown rats. Brush rats build nests or burrows in forested areas. They are attracted to small, shiny objects and sometimes steal them and carry them to their hoard. Pack rats are herbivores and will not attack humans. They do not carry diseases. Brush rats can be trained.

### Giant Rats

These vile beasts plague underground areas such as crypts and dungeons. Their burrows honeycomb many graveyards, where they cheat ghouls of their prizes by tunneling to newly interred corpses. Giant rats are brown/black in color with white underbellies, and are related to the brown rat, with fatter bodies and shorter tails. As with normal rats, any creature bitten by a giant rat has a 5% chance per wound of catching a debilitating disease; a successful saving throw vs. poison prevents catching the disease. Giant

rats avoid attacking strong parties unless driven by hunger or commanded by creatures such as vampires and wererats. Giant rats are fearful of fire and flee from it except if driven by hunger or magic. They are excellent swimmers and can attack in water as well as on land.

### Osquip

The osquip is a multi-legged rodent the size of a small dog. It is hairless, with a huge head and large teeth. Most have six legs, but some (25%) have eight, and a few (5%) have 10. The creatures' leathery hides are pale yellow in color.

Osquips build small, carefully hidden tunnels, and their teeth are sharp enough to dig through stone. If someone enters an area in which there are osquip tunnels, the creatures can emerge quickly, and opponents receive a -5 to surprise rolls. The osquip are territorial and attack fearlessly and ferociously. Osquips are not afraid of fire, but are poor swimmers (50% drown, 50% paddle with a movement rate of 1).

Osquips are difficult to domesticate, but jermlaine and a few wizards have succeeded by giving the creatures gems, for they collect shiny objects. Osquip leather is soft and water-resistant, and their teeth can be used in digging magic.

# Remorhaz

| | |
|---|---|
| **Climate/Terrain:** | Arctic plain |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Animal (1) |
| **Treasure:** | D |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | Overall 0, head 2, underbelly 4 |
| **Movement:** | 12 |
| **Hit Dice:** | 7-14 |
| **THAC0:** | 13 (7-8 HD),<br>11 (9-10 HD),<br>9 (11-12 HD),<br>7 (13-14 HD) |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | Bite:<br>(7-8 HD) 4-24;<br>(9-12 HD) 5-30;<br>(13-14 HD) 6-36 |
| **Special Attacks:** | Swallow whole, heat lash |
| **Special Defenses:** | Melt metal |
| **Magic Resistance:** | 75% |
| **Size:** | G (21'-42' long) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 5,000 (+1000 per Hit Die over 9) |

Remorhaz, sometimes known as *polar worms*, inhabit only chill arctic wastes. They are very aggressive

predators that devour any animal matter, including humans, demihumans, and humanoids; they have even been known to attack frost giants.
A remorhaz has a segmented body with a winged head and neck, standing on dozens of chitinous legs. Remorhaz have an ice blue color everywhere except on their backs, where a streak of white sets off the many protrusions located there. The size of a remorhaz is determined by its Hit Dice: a 7 Hit Dice remorhaz is 21 feet long, an 8 Hit Dice creature is 24 feet long, etc. Their language consists of roaring, bellowing, and howling.

**Combat:** In combat the remorhaz beats its small wings, raising up the front quarter of its body. It then snaps itself forward, striking with blinding speed. They are able to swallow prey whole on an unmodified attack roll of 20; any victim swallowed is killed instantly by the intense heat inside the creature. When aroused, the remorhaz secretes a substance that causes its intestines to become very hot and its back protrusions actually glow cherry red from excess heat. Any nonmagical weapon melts from contact with its back and any creature touched by these surfaces suffers 10-100 points of damage.
To determine where a blow has struck a remorhaz, consider where the attacker is in respect to the remorhaz. While the remorhaz is rearing to attack, a blow from the front hits the relatively soft underbelly. When the remorhaz is attacking a creature, any blow inflicted hits the head unless the underside is specifically stated as the object of the attack. In all other cases, the body is the object of the attack, subject to adjudication by the DM.
Remorhaz are slower than most polar dwellers, so they prefer to burrow into the snow and surface when they hear prey nearby, hoping to achieve surprise. Remorhaz have infravision to 60 feet.

**Habitat/Society:** A remorhaz lair usually consists of a number of large, smoothly rounded tunnels in ice and snow or rock, gradually descending to a large central chamber. Tunnels in ice and snow will be very slippery, as the remorhaz's hot back repeatedly melts the snow, leaving it to refreeze. The central chamber is only about twice the size of a remorhaz, while the central chamber of a nesting pair is about four times their size and may contain icy stalactites.
Remorhaz have a hunting range of 60 miles. Except where the game has been hunted to extinction, these creatures tolerate the presence of other remorhaz in their hunting grounds.

**Ecology:** Remorhaz are carnivores, sustaining themselves with a diet of deer, elk, and even polar bears. They mate in late summer and stay together for two months before departing to live solitary existences. Remorhaz mate every year but can produce offspring only three or four times in a lifetime; the female lays a clutch of one or two grey-blue eggs, remaining with the eggs at all times, coiling around them to keep them warm; if the eggs are left in the freezing cold for only one minute, they will never hatch. Young remorhaz have 1 Hit Die at birth and grow to 7 Hit Dice after four months, when they leave the nest. Immature remorhaz have weaker armor (+2 AC in all locations); 1-3 Hit Dice remorhaz can only bite for 2-12 points of damage, while 4-6 Hit Dice creatures inflict 3-18 points of damage. From birth, the young remorhaz have all the powers of an adult.
Remorhaz have lifespans of 30 years. Their eggs are valued at 500 gold pieces and are eagerly sought because these creatures can be trained to be excellent guards. However, a remorhaz can be trained to obey only one or two masters, and will attack its master if hungry enough. The heat secretion of a rhemorhaz, thrym, is valuable as a component for heat-related magical items and can be sold to alchemists for 5-10 gold pieces per flask. The remorhaz will contain 10 flasks worth of thrym per Hit Die.

# Revenant

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Not applicable |
| **Intelligence:** | See below |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | 10 |
| **Movement:** | 9 |
| **Hit Dice:** | 8 |
| **THAC0:** | 13 (base) |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-16 |
| **Special Attacks:** | Paralyzation |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | M (5'-6') |
| **Morale:** | See below |
| **XP Value:** | 3,000 |

Revenants are vengeful spirits that have risen from the grave to destroy their killers. The revenant appears as a spectral, decayed version of its appearance at the time of its death. Its pallid skin is drawn tightly over its bones. The flesh is cold and clammy. The sunken eyes are dull and heavy-lidded but, when the revenant faces his intended victim, the eyes blaze with unnatural intensity. The revenant bears an aura of sadness, anger, and determination.

**Combat:** A revenant attacks by hooking its claw-like hands around its victim's throat. This strangulation causes 2d8 points of damage each round. It will not release its grip until either the revenant is destroyed or its victim is dead. It never uses weapons.
If the revenant stares into its victim's eyes, that person must roll a successful saving throw vs. spell or be

paralyzed with terror for 2d4 rounds. This power affects only the revenant's killer.
If a revenant is dismembered, the severed parts act independently, as though guided by the revenant's mind. The revenant's willpower causes the parts to reunite. It can also regenerate 3 hit points of damage each round, except for fire damage. It is immune to acid and gas. Although a revenant's body can be cut apart by normal or magical weapons, the damage is temporary and does not destroy the revenant. Only burning destroys a revenant -- the original body must be completely consumed and reduced to ash.
Although it is undead, the revenant is motivated entirely by self-will. Therefore, as it is not inherently evil, it is not affected by holy water, holy/unholy symbols, or other religious paraphernalia. It cannot be turned by priests nor can it be raised or resurrected.

**Habitat/Society:** Under exceptional circumstances, a character who has died a violent death may rise as a revenant from the grave to wreak vengeance on his killer(s). In order to make this transition, two requirements must be met. The dead character's Constitution must be 18 and either his Wisdom or Intelligence must be greater than 16. Also, the total of his six ability scores must be 90 or more. Even if these conditions are met, there is only a 5% chance that the dead character becomes a revenant.
If *both* Intelligence and Wisdom are over 16, the chance increases to 10%. If Intelligence, Wisdom, and Constitution are all 18, the creature can shift at will into any freshly killed humanoid, if the revenant rolls a successful saving throw vs. death.
If the character died a particularly violent death, it may be unable to reoccupy its original body. In this case, the spirit occupies any available, freshly-dead corpse. However, the revenant's killer and associates always see the revenant as the person they killed.
The revenant retains all the abilities it possessed in its previous life and has at least the hit points and saving throws of an 8-Hit Die creature. Its alignment is neutral, regardless of its alignment in life. It can converse fluently in its original language, although the stiffness of its vocal cords deters it from speaking except under extreme circumstances, such as when casting a spell at its killer.
The sole purpose of the revenant's brief existence is to wreak vengeance on its killer, together with anyone who may have aided in the murder. It stops at nothing to achieve its purpose and can locate its intended victim wherever he may be. Accomplices are also tracked down if they are in the company of the killer, but if they are elsewhere they are ignored until the killer is dealt with. If the associates of the killer are with him in a party, they are dealt with after the killer is dead.
The revenant's body does decay, though at a slower rate than normal. Within three to six months, the corpse decomposes rapidly and the revenant's spirit returns to the plane from which it came. When the revenant has completed its mission, the body immediately disintegrates and its spirit finally rests in peace.
A revenant does not attack innocents except in self-defense. If necessary, the revenant can use cunning to get to its prey.

**Ecology:** Revenants give murder victims a chance to avenge their own murders. They pursue their goals alone without desire or need for allies. However, if the revenant faces a powerful foe able to destroy the revenant's new form, the revenant may decide to use adventurers as pawns in its quest.

# Roc

| | |
|---|---|
| **Climate/Terrain:** | Subtropical/Mountains |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Animal (1) |
| **Treasure:** | C |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | 4 |
| **Movement:** | 3, Fl 30 |
| **Hit Dice:** | 18 |
| **THAC0:** | 3 |
| **No. of Attacks:** | 2 or 1 |
| **Damage/Attack:** | 3-18/3-18 or 4-24 |
| **Special Attacks:** | Surprise |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | G (60' long+wingspan) |
| **Morale:** | Steady (11) |
| **XP Value:** | 10,000 |

Looking almost too big to be real, rocs are huge birds of prey that dwell in warm mountainous regions and are known for carrying off large animals (cattle, horses, elephants) for food.
Rocs resemble large eagles, with either dark brown plumage or all golden feathers from head to tail. In a few rare instances, rocs of all red, black or white are sighted, but such sightings are often considered bad omens. These giant birds are 60 feet long from beak to tail feathers, with wingspans as wide as 120 feet.

**Combat:** The roc swoops down upon prey, seizes it in powerful talons, and carries it off to the roc's lair to be devoured at leisure. The resulting damage is 3d6 per claw. Most of the time (95%), a roc carries off its prey only if both claws hit. If the prey was hit by only one claw, the roc usually lets go, then turns around and attempts another grab. Once the prey has been secured, the roc flies back to its nest. If the

creature resists, the roc strikes with its beak, inflicting 4d6 points of damage per hit.
Should a human, humanoid, or demihuman be captured, there is a 65% chance that the victim's arms are both pinned to his sides, making impossible melee weapon attacks or spellcasting that requires hand gestures. A roc will let go of its prey if it suffers damage equal to a quarter of its hit points. A roc can pick up two targets simultaneously if they are within 10 feet of each other.
A roc usually cruises at a height of about 300 feet, seeking out likely prey with its sharp eyes. When a good target is found, it swoops down silently. The stealth of this first attack imposes a -5 penalty to its opponents' surprise rolls.

**Habitat/Society:** Roc lairs are vast nests made of trees, branches, and the like. They inhabit the highest mountains in warm regions. Rocs are not given to nesting close to each other, with a nest rarely being located within 20 miles of another nest. There is a 15% chance of finding 1d4+1 eggs in a roc nest. These eggs sell for 2d6 x 100 gp to merchants specializing in exotic items. As may be expected, rocs fight to the death to protect these nests and their contents, gaining a +1 bonus to their attack roll.
The treasure of a roc is usually strewn about and below the nest, for the creature does not value such. It is the residue from its victims. If the roc has been seizing pack horses and mules, some of that treasure may be merchant's wares such as spices, rugs, tapestries, perfume, rich clothing, or jewels.
The roc ranges for food three times a day; about an hour after sunrise, at noon, and an hour before sunset. If there are young in the nest, a fourth feeding, approximately two hours after noon, is added to keep the young strong and well-fed.

**Ecology:** Rocs are occasionally tamed and used by cloud or storm giants. Good-aligned giants do not allow their rocs to attack civilized areas and the animals therein.
As mentioned before, rocs do not nest too closely together, since such a high concentration of these hungry predators would deprive entire regions of its animal population. Rocs serve to keep down the number of large predators, as they are fond of ankheg, purple worms, and harpies. Thanks to the rocs' prodigious appetites, these creatures are not swarming about with impunity.
It is said that roc feathers can be used in the manufacture of *Quaal's feather tokens*, as well as *wings* and *brooms of flying*.
One race that has little love for rocs is dwarves. Dwarven mines located in remote mountains often have to contend with unruly rocs intent on protecting their territory. Attempts by the dwarves to tame rocs have all met with failure, so the accepted manner of dealing with rocs is to kill them and smash their eggs. Adventurers who happen on a community of mountain dwarves may find employment as roc hunters. Such groups would do well not to allow any druids to find this out.

# Roper

| | |
|---|---|
| **Climate/Terrain:** | Subterranean |
| **Frequency:** | Rare |
| **Organization:** | Solitary |

| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 5-20 |
| **Special Attacks:** | Strands, strength drain |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 80% |
| **Size:** | L (9' long) |
| **Morale:** | Champion (15) |
| **XP Value:** | 10 HD: 10,000 |
| | 11 HD: 11,000 |
| | 12 HD: 12,000 |

A roper resembles a rocky outcropping. The creature's hide is yellowish gray and rough, and its body very malleable. They are usually pillar-like in shape, 9 feet tall, about 3 feet in diameter at the base, and about 1 foot in diameter at the top. The roper has a single yellow eye, and a maw ringed with sharp teeth. Halfway up its body are small bumps which are the sources of the strands it fires at opponents (see below). Ropers have the same body temperature as their surroundings.

**Combat:** A roper can stand upright to resemble a stalagmite, lie on the ground to imitate a boulder, or even flatten itself to look like a lump on a cavern floor. They can change color a little, enough to blend into rocky backgrounds. Opponents suffer a -2 penalty to surprise rolls when faced by a roper.
Ropers attack by shooting strong, sticky strands at opponents. They can shoot a total of six strands, one per round, as far as 50 feet; each strand can extend (1d4+1) x 10 feet and pull up to 750 pounds. Each time a strand hits (requiring a normal attack roll), the victim must make a successful saving throw vs. poison or lose half its Strength (round fractions down). Strength loss occurs 1d3 round after a hit, is cumulative for multiple hits, and lasts for 2d4 turns.
If a roper's prey cannot break free, it is pulled 10 feet closer per round; when it reaches the roper, the creature bites the victim for 5d4 points of damage (automatic hit against a victim held by a strand). A strand can be pulled off or broken by a character who makes a successful open doors roll. A strand can also be cut; it is AC 0, and it must take at least 6 points damage from a single hit of an edged weapon to be severed.
Ropers are unaffected by lightning and take only half damage from cold-based attacks. They have a -4 penalty to saving throws vs. fire.

**Habitat/Society:** Ropers are not social and rarely cooperate with one another, though a group of them may be found in a good hunting spot. A group of ropers has been named a "cluster" by scholars with nothing better to do.
Ropers reproduce asexually by shedding some of their material in the form of a seed. Drawing nutrients from the cavern floor (and perhaps siphoning magical energies from deep within the earth), the infant roper grows to maturity in 2d4 weeks. Until that time has passed, the roper is indistinguishable from a boulder.
Ropers move using large, cilia-like appendages on their undersides, which also allow them to cling to walls and ceilings. They seldom leave the caverns, but may migrate to a new feeding ground when prey population drops too low in its current home. Migration usually occurs through underground tunnels, but when this is not possible, ropers travel late at night, sometimes giving rise to stories of walking stones.

**Ecology:** Ropers eat any meat but prefer demihumans and humans. Gnomes, dwarves, and other mining races often serve as prey for ropers.
A roper has a gizzard-like organ which often holds undigested treasure. Platinum and gems cannot be digested by a roper, so its gizzard holds 3d6 platinum pieces, and has a 35% chance of holding 5d4 gems. The glue from a roper's strands is prized by alchemists, as are its digestive acids, which must be stored in platinum vials.

**Storoper**
A "stone-roper" is a roper with a more stony, less flexible exterior; it resembles a statue of a roper. Its rocky tentacles are always extended at least 20 feet, and can shoot to 50 feet to attack prey. The storoper can attack with all its tentacles at the same time, preferring to attack two victims with three tentacles each. Twice per day, the storoper can inject venom through its tentacles. Victims must make a successful saving throw vs. poison or be paralyzed for one round, then fight to aid the storoper; the venom lasts for 10 turns. Storopers' stony exteriors give them total protection from normal missiles. Storopers have 6 HD, but have all the other abilities and statistics of a 10 HD roper.

# Rust Monster

| | |
|---|---|
| **Climate/Terrain:** | Subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Metalavore |
| **Intelligence:** | Animal (1) |
| **Treasure:** | Q |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | 2 |
| **Movement:** | 18 |
| **Hit Dice:** | 5 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | Nil |
| **Special Attacks:** | See below |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | M (5' long) |
| **Morale:** | Average (9) |
| **XP Value:** | 270 |

Rust monsters are subterranean creatures with an appetite for all sorts of metals. These unique creatures, though generally inoffensive, are the bane of fighters everywhere.
The average rust monster measures 5 feet long and 3 feet high at the shoulder. It has a strange tail that appears armor plated and ends in an odd-looking bony projection that resembles a double-ended paddle. Two prehensile antennae are located under the thing's two eyes. The hide of the rust monster is rough, covered with lumpy projections. Coloration varies from a yellowish tan on the underside and legs, to a rust red upper back. Rust monsters smell like wet, oxidized metal.

**Combat:** Rust monsters are placid by nature, but when they get within scent range of metal, they become excited and immediately dash toward the source. Rust monsters can smell metal up to 90 feet away. If the

rust monster's antennae touch metal (determined by a successful attack roll), the metal rusts. Magical items have a chance of being unaffected equal to 10% for each plus (a +2 weapon or armor has a 20% chance of not being affected). Any affected metal rusts or corrodes and immediately falls to pieces that are easily eaten and digested by the creature. Metal weapons striking a rust monster are affected just as if the creature's antennae had touched them. Should a nonweapon metallic magical item happen to make contact with a rust monster, treat it as a +2 magical weapon for purposes of determining whether or not it breaks up.

Rust monsters, being none too bright, stop pursuing a fleeing party for one round to devour metallic items, such as a handful of iron spikes, a mace or a hammer, if the party throws them behind. Rust monsters go after ferrous metals such as iron, steel, and magical steel alloys, such as mithril and adamantite. They choose such metals over valuable metals such as copper, gold, silver, or platinum. In fact, they would continue to pursue a party that just dropped a fistful of copper coins, for example, in hopes of getting the much-preferred ferrous metal of armor and weapons.

Sometimes (30% chance), a rust monster will even pause for one round during combat in order to eat. Rust monsters are not known for being tacticians, just ravenously hungry metal-eaters. Feeding time always takes one round regardless of the size of the metal meal.

**Habitat/Society:** Rust monsters dwell only in dark, subterranean places such as caverns and underground structures. They are not disposed to groups; often a lair comprises one or two rust monsters, with a 5% chance of encountering a single offspring, which acts as a half-strength rust monster with a full-strength appetite. These creatures have been known to range the length and breadth of an underground complex, searching for supplies of metal. Though it will eat raw ore, a rust monster always prefers the refined, forged metal (just as a human would prefer fresh, filtered water over swamp water). The creature's relatively inoffensive nature makes it an unlikely target. There have been many accounts of mages approaching a rust monster and the only reaction from the beast was a cursory sniff, then a leisurely departure. Dwarves and gnomes, known for metalworking and mining, have no sympathy for rust monsters, and will do anything to get rid of them.

The only treasure to be found in a rust monster lair is gems, usually the sort used for decoration on armor or sword pommels. Rust monsters have no grand designs, only the wish to keep well-fed.

**Ecology:** Rust monsters help in removing metallic junk and clutter from underground fastnesses. In fact, it is not unusual to find a rust monster and a carrion crawler working in a symbiotic relationship, with the latter eating the organic litter and the former consuming the metal castoffs.

# Sahuagin

| | Lieutenant: 270 |
| | Chieftain: 420 |
| | Priestess: 650 |
| | Baron: 975 |
| | Prince: 2,000 |

Sahuagin are a vicious, predatory race of fish-men that live in warm coastal waters. They are highly organized and greatly enjoy raiding shore communities for food and sport.
Typical sahuagins are blackish green on their backs, shading to green on their bellies, with black fins. Their great, staring eyes are deep, shining black. They have scaly skin, with webbed fingers and toes, and their mouths are filled with sharp fangs. About 1 in 216 sahuagin is a mutation with four usable arms. These specimens are usually black shading to gray. Females are indistinguishable from males, except that they are slightly smaller. Hatchlings are a light green color, but they darken and attain full growth approximately one to two months after hatching.
Sahuagin speak their own tongue.

**Combat:** Though they wear no armor, their scales are tough and equal to AC 5. Sahuagin wear a harness to carry their personal gear and weapons. A group of these creatures is typically armed as follows:

| | |
|---|---|
| Heavy crossbow & dagger | 20% |
| Spear & dagger | 30% |
| Trident, net & dagger | 50% |

Spears are used only as thrusting weapons. Nets are set with dozens of hooks that make escape virtually impossible for unarmored victims or creatures not able to grasp and tear with a Strength of 16 or greater. Nets are replaced by three javelins when the band forays onto land. The crossbows fire a maximum of 30 feet underwater and normal ranges on the surface. Tridents have three uses -- to spear small prey, to pin prey trapped in nets, and to hold threatening opponents at bay.
Sahuagin are well-equipped to attack even without weapons, for their webbed hands each end in long, sharp claws that can inflict 1-2 points of damage per attack. Their powerful rear legs are likewise taloned, and if they kick an opponent with them, they inflict 1d4 points of damage with each hit from

either foot. The sharp teeth of the sahuagin cause 1d4 points of damage if a bite is scored on a victim. Thus, it is possible for an unarmed sahuagin to attack three or five times in a melee round causing 1-2/1-2/1-4 and an extra 1-4/1-4 if the legs can rake.
The eyes and ears of these monsters are particularly keen. They can see for 300 feet underwater at depths of up to 100 feet. For each 100 feet of greater depth, their vision is reduced by 10 feet (e.g., when 500 feet deep they can see 260 feet; when 1,000 feet deep they can see 210 feet). Their ears are so sharp as to be able to detect the clinking of metal at one mile, or a boat oar splashing at twice that distance.
A band of sahuagin is always led by a chieftain. He has one lieutenant for every ten members of the group. The chieftain has 4+4 Hit Dice, and his lieutenants have 3+3 Hit Dice. All are in addition to the normal sahuagin in the group.
When raiding villages, sahuagin attack en masse, with leaders in the second rank. As long as there is no truly spirited resistance, they continue in their plunder and violence.
Underwater, in their natural element, the sahuagin are far more confident. Using the three-dimensional aspect of underwater fighting, they sometimes dive down on a group of underwater explorers, coming in from behind, and swooping down and past them, dropping nets on their intended victims.
When sahuagin attack ships, they swarm up from all sides and try to overwhelm with numbers. They often grab their opponents and hurl them into the sea, where at least a fourth of the raiding party lurks, waiting for such an action or as reinforcements. Some leaders carry a conch shell, which when sounded gives the signal for the group of sahuagin in reserve to enter the fray.
Sahuagin have an almost paralyzing fear of spellcasters. They direct their strongest attacks toward anyone who uses spells or spell-like powers, such as the functions of some magical items. Their saving throws vs. fire-based spells suffer a -2 penalty, and they receive an additional point of damage per die of damage from such attacks.

**Habitat/Society:** The sahuagin are sometimes referred to as "sea devils" or "devil men of the deep." They dwell in warm salt waters at depths of 100 to 1,500 feet. Sahuagin are predatory in the extreme, and they pose a threat to all living things because they kill for sport and pleasure as well as for food. They abhor fresh water. They dislike light, and bright light such as that created by a *continual light* spell is harmful to their eyes.
The social structure of the sahuagin is based upon rule by a king who holds court in a vast city deep beneath the waves. This overlord's domain is divided into nine provinces, each ruled by a prince. Each prince has 2d10+10 nobles underneath him. Each noble controls the small groups of sahuagin dwelling in his fief. The sahuagin worship a great devil-shark. Sahuagin priests above 5th level are very rare.
The king is supposed to dwell in a city somewhere at the greatest depth that a sahuagin can exist. This place is supposedly built in an undersea canyon, with palaces and dwellings built along either face. There, fully 5,000 of these monsters live, not counting the king's retinue of queens, concubines, nobles, guards, etc., said to number 1,000 or more. The sahuagin king is reported to be of enormous size (10 Hit Dice+10 hit points), and of greatest evil. The king is always accompanied by nine noble guards (9+9 Hit Dice) and the evil high priestess of all sahuagin (9+9 Hit Dice) with its retinue of nine underpriestesses (7th-level clerics).
If sahuagin are encountered in their lair, there are the following additional sahuagin:

1 baron (6+6 Hit Dice)
Nine guards (3+3 Hit Dice)
3d4 x 10 females (2 Hit Dice)
1d4 x 10 hatchlings (1 Hit Die)

2d4 x 10 eggs

Also, there is a 10% chance per 10 male sahuagin that there is an evil priestess and 1d4 assistant priestesses, for the religious life of these creatures is dominated by the females. If a priestess is with the group in the lair, it is of 1d4+1 level ability, and the lesser clerics are 3rd or 4th level.
There are always 2d4 sharks in a sahuagin lair. Sahuagin are able to make these monsters obey simple one- or two-word commands. Whenever a sahuagin lair is encountered, there is a 5% chance that it is the stronghold of a prince. The prince has 8+8 Hit Dice plus nine guards of chieftain strength. There are also one 8th-level sahuagin evil high priestess and four 4th-level underpriestesses. The numbers of males, females, hatchlings and eggs in a prince's lair are double the numbers given above. There are 4d6 sharks present at all times.
Sahuagin lairs are actual villages or towns, constructed of stone. The buildings are domed, and the seaweed and similar marine plants growing around and on these buildings make them hard to detect. Few persons have survived capture by the sahuagin, for prisoners are usually quickly tortured and eaten. Any creatures taken alive from raids or intercepting unwelcome visitors are brought to the sahuagins' lair and confined in cells. Although sahuagin are able to stay out of water for up to four hours, there is no air in the confinement areas in the typical village, but in the towns of the nobles there are special quarters to maintain air-breathing creatures. The sahuagin set aside a few prisoners to torture and provide sport -- typically a fight to the death between two different creatures in an arena. The bulk of captives are simply killed and eaten. It is seldom that any prisoner escapes, although the sahuagin find sport in allowing captives to think that they have found freedom, only to be encircled by sadistic guards while a school of sharks moves in for the kill.
The sahuagin are cruel and brutal, and the strongest always bully the weaker. Any injured, disabled, or infirm specimen is slain and eaten by these cannibalistic monsters. Even imperfect hatchlings are dealt with in this fashion. This strict law has developed a strong race, however, and any leader is subject to a challenge. Sahuagin never stop growing, although they grow very slowly, and death comes to most before the years allow growth to large size. Leaders are always the largest and strongest. It is reported that the nine sahuagin princes are each of the four-armed sort, as is the king. In any event, the loser of a challenge is always slain, either during combat or afterward. Sometimes the loser winds up as the main course at the victory feast.
Duels are fought without weapons, only fang and claw being permitted.
The sahuagin are chronicled because of their great evil, having time and again raided the land, desolating whole coasts, and destroying passing ships continually. The exact origin of the sahuagin is unknown. It is suggested that they were created from a nation of particularly evil humans by the most powerful lawful evil gods in order to preserve them when the great deluge came upon the earth. Some sages claim that they are degenerate humans who formerly dwelt on the seacoasts, whose evil and depravity was so great that they eventually devolved into fish-folk and sought the darkness of the ocean depths. The tritons however, are purported to have believe that sahuagin are distantly related to sea elves, claiming that the drow spawned the sahuagin.
Sahuagin range as far as 50 miles from their lairs. Most of their lairs are located 2d10+20 miles from coastal shores. Some of these creatures enjoy collecting pearls and coral formations, fashioning them into jewelry. This jewelry is worn as a status symbol. They are fond of wealth, which they use as a measure of influence, and for sacrifice to the deities that they worship in exchange for granted powers and other favors. Most of the treasure found in a sahuagin lair belonged to former victims. There is usually a high concentration of water-related items, such as magical boats, tridents, helms, potions, necklaces, etc.

These were gained from adventurers who explored underwater too close to the sahuagin community. These creatures want nothing less than full control of the sea coasts, collecting as much wealth and power as possible in the process while maintaining the secrecy of their lairs' locations. Those who attempt escape are obsessively hunted down, for fear that the former prisoners may reveal the location of the sahuagins' city.

**Ecology:** Sahuagin venture ashore on dark, moonless nights to raid and plunder human coastal towns. They hate even the evil ixitxachitl, and only sharks are befriended by them.
The feuds and outright warfare between the sahuagin and ixitxachitl have indirectly contributed to preventing the ascendancy of the spellcasting, manta ray-like race. Sahuagin are also fond of eating giant squid and kraken. Their hunting of these monsters of the deep has kept the squid and kraken numbers down to a safe level. Conversely, these beasts enjoy eating sahuagin, which prevents the sahuagin from overrunning coastal areas.
Of all the sea-dwelling races, tritons, sea elves, dolphins, and hippocampi are the most implacable enemies of the sahuagin. In fact, the few air-breathers that have escaped the sahuagin owe their freedom to such beings that bravely aided the captives.

| **XP Value:** | 975 | 1,400 |

Also called fauns, satyrs are a pleasure loving race of half-human, half-goat creatures. They symbolize nature's carefree ways. Satyrs have the torso, head, and arms of a man, and the hind legs of a goat. The human head is surmounted by two sharp horns that poke through the satyr's coarse, curly hair. The skin of the upper body ranges from tan to light brown, with rare individuals (1%) with red skin. A satyr's hair is medium, reddish, or dark brown. The horns and hooves are black.
Satyrs have their own tongue and can speak elven and Common. Satyrs living near centaurs are 80% likely to be friendly with them and speak their language. Rarely (5%), satyrs are found with korred.

**Combat:** Satyrs have keen senses, so they gain a +2 bonus on surprise rolls. They can be almost silent, and can blend with foliage so as to be 90% undetectable; this gives opponents a -2 penalty to surprise rolls. Satyrs have infravision to a distance of 60 feet.
A satyr attacks by butting with its sharp horns. Some (20%) use +1 magical weapons, especially long or short swords, daggers, or short bows. Before resorting to combat, a satyr often plays a tune on its pipes, an instrument only a satyr can use properly. Using these pipes, the satyr can cast *charm*, *sleep*, or *cause fear*, affecting all within 60 feet, unless they make a successful saving throw vs. spell.
Usually, only one satyr per band has pipes. If comely females (Charisma 15+) are in a group met by satyrs, the piping will be to *charm*. Should the intruders be relatively inoffensive, the piping casts *sleep*, and the satyrs steal all of the victims' choice food and drink, as well as weapons, valuables, and magical items. If intruders are hostile, the piping is used to *cause fear*. The effects of the piping lasts 1d6 hours or until dispelled. Any creature that saves vs. piping is not affected by additional music from the same pipes in that encounter. A bard's singing can nullify the pipe's music before it takes effect.

**Habitat/Society:** Satyrs are interested only in sport: frolicking, piping, chasing wood nymphs, and other pleasures. They resent intrusions and drive away any creature that offends them. A lucky wanderer may stumble on a woodland celebration, which will contain an equal number of dryads and fauns plus 3d8 other woodland creatures and a 25% chance of 2d6 centaurs. Strangers are welcomed only if they contribute some good food and drink, especially superior (10+ gp per bottle) wines. Such wine can also be used to lure or bribe satyrs. If a group includes elves, they have a better chance of being welcomed. These celebrations last all night in warm months, with newcomers waking up the next morning with massive headaches, minus a few valuables, and not a woodland creature (nor their tracks) to be found.
Shying away from the trappings of an organized society, a colony of satyrs usually includes young

numbering 50% of the adults. Satyrs live in comfortable caves and hollow trees. There are no female satyrs and sages believe that dryads are the female counterparts of the satyr, and that satyrs mate with dryads to produce more satyrs and dryads. Satyrs share the dryads' affection for humans of the opposite sex, but a female charmed by a satyr might return after 1d4 weeks (10% chance).
Satyrs are an inoffensive, fun-loving race. They rarely venture more than 10 miles from their homes, most often doing so to gather food. They are fond of venison and small game but also eat plants and fruits.

**Ecology:** Satyrs in sylvan woodlands keep game animal populations at normal levels; they never hunt to excess or despoil plants.

## Korred

This small, dance-loving relative of the satyr looks much like its cousins, but lacks horns, and has wildly flowing beard and hair. Korred smell like pine trees and fresh earth. They usually wear leather britches, carry large leather pouches, and wield oaken cudgels. They have loud voices and speak their own language, plus those of satyrs, dryads, centaurs, and elves; a few even speak druidic.
Korred have 18/76 Strength. They hurl boulders up to 100 feet (damage 2d8), or use cudgels (1d6 damage), shears (1d4 damage), or fists (1d2 damage), gaining a +4 to damage because of their Strength. Korred can weave their hair into entangling ropes and snares in 1d4 rounds. Such ropes have AC 1, 5 hp, and a movement rate of 3. Anyone attacked by the ropes must make a saving throw vs. spells or be entangled. The ropes sometimes guard special areas.
A korred may use its magical *laugh* three times per day; unless it is nullified by a bard's singing, all within 60 feet must roll above their Charisma score or be stunned for 1d4 rounds. Korred can also use the following abilities at will, one per round: *stone shape, animate rock, stone door* (teleport 30'), *shatter rock, transmute rock to mud,* and *stone tell.*
Korred do not have structured communities; families in a common clan live within 5 miles of one another. Korred do not tolerate outsiders, except for rare rangers, druids, and elves. Even these must not interrupt the weekly korred dance. Those who interrupt must make a saving throw vs. spells or dance themselves, losing 1d4 hp per round until dead or restrained, or until the korred stop playing and dancing.
Korred pouches contain hair, shears, and other items. These items turn to gold (5d4x10 gp value) if sprinkled with holy water. A korred will not voluntarily give up this pouch.

| **XP Value:** | 175 | 420 | 650 |

Giant scorpions are vicious predators that live almost anywhere, including relatively cold places such as dungeons, though they favor deserts and warm lands. These creatures are giant versions of the normal 4-inch-long scorpion found in desert climes.
The giant scorpion has a green carapace and yellowish green legs and pincers. The segmented tail is black, with a vicious stinger on the end. There is a bitter smell associated with the scorpion, which probably comes from the venom. They make an unnerving scrabbling sound as they travel across dungeon floors.

**Combat:** The giant scorpion is 95% likely to attack any creature that approaches. The creature has a hard, chitinous carapace that gives it Armor Class 3. This monster attacks by grabbing prey with its two huge pincers, inflicting 1-10 points of damage each, while it lashes forward with its tail to sting. Thus, it can fight three opponents at once. If a giant scorpion manages to grab a victim in a pincer, it will automatically inflict 1-10 points of damage each round until it releases the victim. The victim has but one chance to escape. If he can make his *bend bars/lift gates* roll, he will escape the claw. However, this can be the character's only action that round and it can be tried only once per combat. If the sting is employed against an untrapped victim, an attack roll is required for a successful attack, but a trapped character is automatically struck by any sting attack directed at him with no attack roll required.
The sting inflicts 1-4 points of damage and the victim must save versus poison or die the next round (type F). Note that scorpions are not immune to their own poison. If a scorpion is reduced to 1 or 2 hit points, it will go into a stinging frenzy, stinging everything in sight, gaining two attempts to hit per round with only the tail. Slain creatures are dragged to the scorpion's burrow to be eaten.

**Habitat/Society:** Giant scorpions live in underground burrows or dungeons. Each lair may (20%) have 5d4 scorpion eggs. These beasts eat any living creature that is unfortunate enough to stray too close to their lair. Any treasure found comes from the bodies of human or demihuman victims that have been dragged here to be consumed. Armor is rarely found intact, since the scorpion will surely have used its pincers to cut up its prey.

**Ecology:** These bizarre insects contribute to the ecosystem by feeding on other giant versions of insects

such as spiders and ants. They themselves are prey for purple worms and other huge, subterranean creatures. Alchemists and assassins prize the scorpion's venom because of its potency.

### Large and Huge Scorpions

Often found in dungeons and wildernesses, these creatures are merely smaller versions of the giant scorpion. Colors range from tan to brown to black, and rumors persist of rare white scorpions deep underground. All attack with pincers and tail stinger. If struck by the stinger, the victim must save versus poison or die the next round. However, the poison of the large scorpion is weaker than normal (type A, 15/0 points damage), giving the victim a +2 on his saving throw. Huge scorpions have deadly (type F) poison and can pin a victim in a way similar to the giant scorpion, but with the huge scorpion, the victim can still fight back. It is not unusual to see scorpions of various sizes fighting with each other.

# Sea Lion

| | |
|---|---|
| **Climate/Terrain:** | Coastal marine |
| **Frequency:** | Uncommon |

| **Morale:** | Steady (12) |
| **XP Value:** | 420 |

A sea lion is a fearsome creature with the head and forepaws of a lion and the body and tail of a fish.

**Combat:** Sea lions are ferocious and difficult to deal with. They are very territorial and usually attack anything that enters their domains, no matter what the size. Their vicious teeth and huge paws are a match even for most sharks, which they hate above all other creatures. Sea lions must attack the same opponent with paws and teeth and cannot divide attacks. Any creature hit by both paw attacks in the same round is being mauled. Mauled creatures cannot attack if they have not already done so that round and must roll a successful open doors roll to free themselves. When mauling a creature, the lion follows up with a bite attack with a +4 bonus to the attack roll, causing double damage if successful.
The head of a sea lion, with its thick mane, is treated as AC 5, while the rest of its scaly body is AC 3.

Sea lions are very difficult to raise in captivity, but can become the best and most loyal of steeds. In fact, they are arguably the most powerful mountable creature beneath the waves. They are very useful as guarding and hunting beasts, since their tremendous roar can be heard for up to 10 miles underwater, providing ample time to prepare for an attack or to send help. They are not as skillful swimmers as are sea horses -- they are the underwater equivalents of Maneuverability Class B creatures.

**Habitat/Society:** Sea horses and sea lions almost never encounter one another as sea lions prefer to dwell in the shallow coastal regions, while sea horses delve the deeps. This is primarily due to their respective dietary differences. Sea horses eat plankton, while sea lions eat any type of meat, be it a fish, dinosaur, or wandering herd animals caught drinking at the water's edge. Sea lions are not afraid of land and it is not unheard of for sea lions to drag themselves a few dozen yards up the beach in search of meals. While these attacks are rare indeed, the reports of sea lions in the vicinity does tend to foster more fear among the general populace than a simple shark attack does. But in a world of krakens, dinosaurs, and vampires, sea lions are a relatively minor threat.
Sea lions roam the seas in packs, what might be called a pride of lions on land. The strongest one (usually with maximum hit points) is the leader. In a sea lion pack, both sexes hunt and care for young, but the males are superior hunters, something that differentiates them from their land-based cousins. While sea lions rarely travel anywhere with specific goals in mind, they do sometimes team up to aid other packs of lions, usually when they roam close enough to hear the collective bellowing of their comrades. But territoriality comes into play immediately after the kill is made, and rarely does the reigning leader allow the helpful newcomers to share in the spoils of the victory. Often a new battle for power ensues between the two leaders. If the resident leader wins, the newcomers leave without a taste of meat. If the newcomer wins, he and his pack remain just long enough to take first choice of flesh, and then depart for home. The remaining leader, vanquished and weakened before his peers, rarely lives long enough to enjoy the spoils.

**Ecology:** Sea lions hate sharks, often going to great lengths to hunt them down. The taste of sharks is apparently abhorrent to sea lions and they always leave the carcass uneaten, so it is something of a mystery why this rivalry exists. Some sages claim that it is the result of conflicts between the lesser deities of nature, but it is more likely two strong predators vying for supremacy of the seas.
Because of the water-proofing qualities of their thick scales, sea lions can remain out of water for up to 24 hours before their gills dry out and become incapable of removing oxygen from the water. If a sea lion is fed a constant source of water into its mouth, it can survive for an entire week before disease enters the cracking scales and starvation takes its toll. It is theoretically possible to keep a sea lion in captivity but, like most aquatic carnivores, the restriction of space is often psychologically too much for the creature and death slowly takes the once-proud beast.

# Selkie

| | |
|---|---|
| **Climate/Terrain:** | Cold to subarctic waters |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average to exceptional (8-16) |
| **Treasure:** | A (magic only), R |
| **Alignment:** | Neutral (good) |
| **No. Appearing:** | 1 or 12-30 |
| **Armor Class:** | 5 (10 base in human form) |
| **Movement:** | 12, Sw 36 |
| **Hit Dice:** | 3+3 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6 or by weapon type |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Can change into human form |
| **Magic Resistance:** | Nil |
| **Size:** | M (5'-6' in either form) |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 175 |
| Leader | 420 |

Selkies are seal-like beings that have the ability to change into human form for a few days at a time. When in their true, seal-like forms, they are nearly indistinguishable from normal seals. Close inspection of their arms, however, will reveal the presence of slightly webbed hands instead of fore flippers and legs instead of a tapering body and rear flippers. Once a month, each selkie is able to assume human form for about a week. Usually selkies prefer to briefly visit the realm of men (which they call the "overworld") out of curiosity, but sometimes they are ordered to go forth and purchase desperately needed supplies or information. When in human form, selkies are very attractive indeed and their fine looks have broken more than a few overworlders' hearts. Their eyes are particularly noticeable as they are always either a

bright emerald green or startling light blue. Since the selkie transformation is not a spell or magical effect, only spells like *true seeing* will reveal a selkie's true nature, although their peculiar mannerisms and predilection for seafood also might.

**Combat:** Since selkies are unable to swim quickly while carrying weapons, 90% of selkies encountered underwater will be unarmed. They use their sharp teeth whenever they are cornered but prefer to use their impressive speed underwater to escape superior odds. If encountered on land, selkies are wise enough to bear human weapons, most likely swords scavenged from the wrecks of ships (see below).

**Habitat/Society:** Selkie communities are divided between male and female, with females usually outnumbering males, as male selkies are the hunter/gatherers throughout the often dangerous waters nearby. However, both aspects of selkie “community” (domestic and provider) are equally respected within the lair, and no sex is accorded undue privileges.
Selkies inhabit only colder waters and there are both saltwater and freshwater varieties. Selkies almost always build their lairs in huge, underwater caverns and grottos containing both air and water-filled regions -- selkie young must be raised in an air-filled environment for about their first year.
As mentioned earlier, selkies often find and explore wrecks of sunken treasure. Most selkie communities have hoarded at least some booty (especially pearls), keeping those otherwise useless trinkets only for purposes of trade with the overworld. Only selkies who have visited the overworld many times have ever acquired a taste for ornamenting themselves like overworlders, and can be distinguished from more traditional selkies immediately. For obvious reasons, these more experienced selkies are often the best representatives to deal with if one is an overworlder. Selkies can be hired and have a limited knowledge of overworlder customs. All magical treasure recovered by selkies is immediately commandeered for the good of the community and the lair's defense.

**Ecology:** Selkies are omnivorous, preferring to eat fish, shellfish, crustaceans, and various forms of seaweed. Those that have visited the surface are often partial to human fare as well. Selkies are particularly susceptible to fine wine, which is to be expected since these intoxicants are unknown below the seas.
Selkies are sensitive about their environment and harvest only what they need to survive. It is worth noting that selkie representatives lobby heavily whenever local overworlder environmental issues threaten selkie existence. Most selkie communities have learned the value of dropping a few pearls here and there in order to get what they want from men.
While selkies in human form are quite beautiful, they are fortunate indeed that their pelts have little value in overworlder markets. They are, therefore, without any special enemies besides those common to seals and all ocean dwelling beings.

**Selkie, Leader**
Each venerable leader of a selkie community can cast the following spells once per day, one spell per round: *augury*, *cure light wounds*, and *cure disease*. Leaders can also cast *weather summoning* and *control weather* once per week. Selkies fear the wrath of the sea should they ever use their powers for ill.

# Shadow

| | |
|---|---|
| **Climate/Terrain:** | Any ruins or subterranean chambers |
| **Frequency:** | Rare |
| **Organization:** | Roving bands |
| **Activity Cycle:** | Night or darkness |
| **Diet:** | Living beings |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | F |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 2-20 (2d10) |
| **Armor Class:** | 7 |
| **Movement:** | 12 |
| **Hit Dice:** | 3+3 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-5 |
| **Special Attacks:** | Strength drain |
| **Special Defenses:** | +1 or better weapon to hit |
| **Magic Resistance:** | See below |
| **Size:** | M (6' tall) |
| **Morale:** | Special |
| **XP Value:** | 420 |

Shadows are shadowy, undead creatures that drain strength from their victims with their chilling touch. Shadows are 90% undetectable in all but the brightest of surroundings (*continual light* or equivalent), as they normally appear to be nothing more than their name would suggest. In bright light they can be clearly seen.

**Combat:** As shadows exist primarily on the Negative Material Plane, they have the ability to drain the life force of their victims. The chilling touch of a shadow inflicts 2-5 points of damage to its victim as well as draining one point of Strength. Lost Strength points return 2-8 turns after being touched. If a human or demihuman opponent is reduced to zero Strength or zero hit points by a shadow, the shadow

has drained the life force and the opponent becomes a shadow as well. The newly formed shadow is then compelled to join the roving band and pursue a life of evil. Other living creatures simply collapse from fatigue (if taken to zero Strength) or fall unconscious (if taken to zero hit points), where they are left to die or are hounded again upon waking.
Shadows are immune to *sleep*, *charm*, and *hold* spells and are unaffected by cold-based attacks. They can be turned by clerics.

**Habitat/Society:** Shadows travel in loosely organized packs that freely roam ancient ruins, graveyards, and dungeons. They specialize in terrifying their victims.
Shadows have no leaders and thus spend much of their time roaming aimlessly about their chosen surroundings. Contrary to popular belief, shadows do not hoard treasure. In fact, such earthly baubles only help to remind the creatures of their former lives. Instead, the furious undead throw all of the treasure they find away, in the same location (often at the bottom of a well or deep pit), where it is out of sight of the band. It is therefore speculated that the removal of a shadow hoard would be quite easy (even welcomed), were it not for the fact that shadows attack living beings without hesitation, regardless of their intent or threat.

**Ecology:** According to most knowledgeable sages, shadows appear to have been magically created, perhaps as part of some ancient curse laid upon some long-dead enemy. The curse affects only humans and demihumans, so it would seem that it affects the soul or spirit. When victims no longer can resist, either through loss of consciousness (hit points) or physical prowess (Strength points), the curse is activated and the majority of the character's essence is shifted to the Negative Material Plane. Only a shadow of their former self remains on the Prime Material Plane, and the transformation always renders the victim both terribly insane and undeniably evil.
Attempts to remove the curse from captured shadows have all failed, thus providing more clues into the nature of the disorder. A *limited wish* spell proves only partially successful as the victim returns for an hour but remains insane for the duration. It has been recently speculated that a full *wish*, followed by a *heal* spell, might be capable of restoring a shadow to his former state, but again it must be emphasized that this is only a theory.
Fortunately, shadows rarely leave their lairs, and a bold party wishing to rescue a lost fighter or wizard should have plenty of time to venture forth and recover their friend, provided that no one else explores the lair and slays the unfortunate character while the shadows are absent.
The original body of a victim is destroyed when changed to a shadow whether by the curse itself or by unprotected exposure to the Negative Material Plane. In any case, killing a shadow is merely a case of severing the bond between the Prime Material and Negative Material forms.

# Shedu

| | Lesser | Greater |
|---|---|---|
| **Climate/Terrain:** | Any (prefer hot) | Any open region |
| **Frequency:** | Rare | Very rare |
| **Organization:** | Herd | Herd Leader |
| **Activity Cycle:** | Hottest part of the day | |

| **Intelligence:** | Exceptional (15-16) | Genius (17-18) |
| **Treasure:** | G | Nil |
| **Alignment:** | Lawful good | Lawful good |
| **No. Appearing:** | 2d4 | 1-2 |
| **Armor Class:** | 4 | 2 |
| **Movement:** | 12, Fl 24 (C) | 15, Fl 30 (B) |
| **Hit Dice:** | 9+9 | 14+14 |

| | | |
|---|---|---|
| **THAC0:** | 11 | 5 |
| **No. of Attacks:** | 2 | 2 |
| **Damage/Attack:** | 1d6/1d6 | 3d6/3d6 |
| **Special Attacks:** | Psionics | Psionics |
| **Special Defenses:** | Psionics | Psionics, invisibility |
| **Magic Resistance:** | 25% | 50% |
| **Size:** | L (as a mule) | L (as a draft horse, |
| **Morale:** | Champion (15-16) | Fearless (19-20) |
| **XP Value:** | 8,000 | 15,000 |

Shedu are native to hot, arid climates. They have powerful, stocky equine bodies with short, powerful feathered wings. Their heads are large and humanoid, and rather dwarven in appearance. They always have beard sand mustache.s Shedu hair is very bristly, and curls into tight waves or bands.
All shedu wear a simple headband made of braided cloth or rope, with a single button for adornment. The button is centered on the forehead, and its material represents the bearer's status. From the lowest rank to the highest, a button may be made of silver, gold, platinum, sapphire, ruby, or diamond. Lesser shedu almost never have a button above the platinum level, greater shedu almost never wear one below sapphire status.
Shedu wander the Prime material, astral, and ethereal planes. They further the cause of law and goodness, help allied creatures in need, and combat evil. Greater shedu typically lead herds of six or more lesser shedu.

**Combat:** All shedu attack with powerful front hooves. However, both forms of shedu prefer to use their psionic powers whenever possible.

### Lesser Shedu

**Languages:** Lesser shedu speak shedu, lamia, lammasu, and most human tongues (although not common). Of course, they can always use empathy (a limited form of telepathy, see below).

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 9 | 4/4/13 | All/All | = Int | 100 |

Lesser shedu always have the five powers listed below (within three disciplines), and they can use them without expending PSPs. In addition to these powers, a lesser shedu knows any three sciences and five devotions desired (from these disciplines, or others). Each creature tends to specialize in a particular discipline to complement the herd (each takes a different discipline).

**Psychometabolism - Devotions:** ectoplasmic form.
**Telepathy - Devotions:** contact, empathy, mindlink.

**Psychoportation - Devotions:** astral projection.

### Greater Shedu

Greater shedu radiate *protection from evil, 10' radius.*

**Languages:** Greater shedu speak shedu, lamia, lammasu, common, and root languages (i.e. most human tongues). However, they can always rely upon telepathy, which they have mastered so well that they can even make rudimentary contact can be made even with plants.

### Psionics Summary

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 14 | 5/12/15 | All/All | = Int | 200 |

**Common powers** (* denotes powers they always have, † denotes innate abilities that are like the psionic powers, but require no point expenditures):
**Defense** - mind bar*†
**Clairvoyance - Sciences:** aura sight, clairaudience, clairvoyance, object reading, precognition Devotions: danger sense, sensitivity to psychic impressions
**Psychometabolism - Sciences:** energy containment, metamorphosis Devotions: body control, ectoplasmic form*†
**Psychokinesis - Sciences:** telekinesis Devotions: molecular agitation, molecular manipulation
**Telepathy - Sciences:** domination, mass domination, mindlink*+ Devotions: contact*, invisibility*†, post-hypnotic suggestion
**Psychoportation - Sciences:** probability travel*†, teleport*† Devotions: dimensional door, dimension walk*†

| **XP Value:** | 4 HD: 2,000 (+1,000 for each additional Hit Die) |

Sirines are beautiful, human-like females, at home in any aquatic environment. They have human skin tones ranging to a light yellow-green, and their hair can be almost any color, though silver and dark green are the most common. Sirines have beautiful figures and wear scanty clothing at best.

Most sirines are antisocial, so they try to drive intruders away, with evil sirines taking stronger measures. Other sirines are hungry for social interaction, and try to lure male humans or demihumans to join them for a time.
Sirines speak their own language and the language of the nearest intelligent races. They can breathe water and air, and they have infravision to a range of 120 feet.

**Combat:** A lone sirine will always have 6 or 7 HD; each member of a group has an equal chance for 4, 5, or 6 HD. All members of a group have the same basic alignment (all evil, all good, or all neutral in regards to good and evil). All sirines can defend their solitude with some skill.
Sirines have a Dexterity of 18; combined with their innate magic, this grants them an exceptional Armor Class. Most (90%) sirines carry a short sword or a dagger, and 30% carry missile weapons, javelins or slings, as well. Each weapon has a 10% chance of being magical, and *javelins of lightning* are common.
Sirines also have several spell-like abilities, each usable once per day as an 11th-level wizard: *charm person, fog cloud, polymorph self,* and *improved invisibility.* The charm ability is used through the sirine's song, and all people within 30 feet are subject to it, even if they are hostile or attacking.
If the sirine touches an opponent, the victim must make a saving throw vs. poison; those failing to save are reduced to an Intelligence of 2. The touch is automatic for charmed individuals, but requires a normal attack roll for others. A successful *dispel magic* (against 11th-level casting) will restore the victim's intelligence, as will a sirine's touch, if she so wills it. Any sirine can restore intelligence taken by another sirine.
Sirines make saving throws as 11th-level wizards, with a +2 bonus vs. poison. They are immune to all gas attacks.

**Habitat/Society:** Sirines are encountered only in lonely places that are otherwise uninhabited. Most live near rocky outcroppings or small islands in the sea. Some choose to live in fresh water, but tend to avoid these areas because they are usually populated and sometimes difficult to reach.
Young sirines often live with their sisters; these sirines are the more social type. As a sirine grows older, she becomes more reclusive and contemplative, however, and eventually looks for a home of her own where she can think and sing in solitude. Even then, they have a rare desire for companionship.
Sirines usually mate with male humans. Some sirines choose elves, tritons, or merfolk as mates, producing children with some of their parents' traits (pointed ears from elves, green skin from aquatic elves, scales and webbed fingers and toes from merfolk and tritons). Sirines never form lasting relationships, for the call of the sea is too great to bind them.
After a gestation period of nine months, they give birth to 1d4 baby sirines, which are cared for by their mother until they are five years old. After that, they fend for themselves, living on the bounty of the sea. Reaching adulthood at 10 years, they live for about 50 years, and yet their beauty never leaves them.
Sirines live to sing, and to think about the sea. If deprived of their voices, or confined away from water, they will slowly wither away until they die. Sirines often have great knowledge regarding the history of their area and any current events. They sometimes trade this knowledge for companionship.

**Ecology:** Sirines are not harmful to their environment in any manner. They kill only enough to eat, and never take too much from the sea. They have few natural enemies, and they are more than able of taking care of themselves. Though they make beautiful garments from sea shells, fish skin, and seaweed, they gain other belongings and treasure by scavenging shipwrecks.

| **Morale:** | Special | Special | Special |
| **XP Value:** | 65 | 65 | 650 |

All skeletons are magically animated undead monsters, created as guardians or warriors by powerful evil wizards and priests.
Skeletons appear to have no ligaments or musculature which would allow movement. Instead, the bones are magically joined together during the casting of an *animate dead* spell. Skeletons have no eyes or internal organs.
Skeletons can be made from the bones of humans and demihumans, animals of human size or smaller, or giant humanoids like bugbears and giants.

**Combat:** Man-sized humanoid skeletons always fight with weapons, usually a rusty sword or spear. Because of their magical nature, they do not fight as well as living beings and inflict only 1-6 points of damage when they hit. Animal skeletons almost always bite for 1-4 points of damage, unless they would obviously inflict less (i.e., skeletal rats should inflict only 1-2 points, etc.). Monster skeletons, always constructed from humanoid creatures, use giant-sized weapons which inflict the same damage as their living counterparts but without any Strength bonuses.
Skeletons are immune to all *sleep*, *charm*, and *hold* spells. Because they are assembled from bones, cold-based attacks also do skeletons no harm. The fact that they are mostly empty means that edged or piercing weapons (like swords, daggers, and spears) inflict only half damage when employed against skeletons. Blunt weapons, with larger heads designed to break and crush bones, cause normal damage against skeletons. Fire also does normal damage against skeletons. Holy water inflicts 2-8 points of damage per vial striking the skeleton.
Skeletons are immune to *fear* spells and need never check morale, usually being magically commanded to fight to the death. When a skeleton dies, it falls to pieces with loud clunks and rattles.

**Habitat/Society:** Skeletons have no social life or interesting habits. They can be found anywhere there is a wizard or priest powerful enough to make them. Note that some neutral priests of deities of the dead or dying often raise whole armies of animated followers in times of trouble. Good clerics can make skeletons only if the dead being has granted permission (either before or after death) and if the cleric's deity has given express permission to do so. Otherwise, violating the eternal rest of any being or animal is something most good deities disapprove of highly.
Skeletons have almost no minds whatsoever, and can obey only the simplest one- or two-phrase orders from their creators. Skeletons fight in unorganized masses and tend to botch complex orders disastrously. It is not unheard of to find more than one type of skeleton (monsters with animals, animals with humans)

working together to protect their master's dungeon or tower.

**Ecology:** Unless the skeleton's remains are destroyed or scattered far apart, the skeleton can be created anew with the application of another *animate dead* spell. Rumors of high-level *animate dead* spells which create skeletons capable of reforming themselves to continue fighting after being destroyed have not been reliably comfirmed.

# Skeleton, Giant

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Nil |
| **Intelligence:** | Non-(0) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-8 (2d4) |
| **Armor Class:** | 4 |
| **Movement:** | 12 |
| **Hit Dice:** | 4+4 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1d12 |
| **Special Attacks:** | Nil |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | L (12' tall) |
| **Morale:** | Fearless (20) |
| **XP Value:** | 975 |

Giant skeletons are similar to the more common undead skeleton, but they have been created with a combination of spells and are, thus, far more deadly than their lesser counterparts.

Giant skeletons stand roughly 12 feet tall and look to be made from the bones of giants. In actuality, they are simply human skeletons that have been magically *enlarged*. They are normally armed with long spears or scythes that end in keen bone blades. Rare individuals will be found carrying shields (and thus have an Armor Class of 3), but these are far from common. A small, magical fire burns in the chest of each giant skeleton, a by-product of the magics that are used to make them. These flames begin just above the pelvis and reach upward to lick at the collar bones. Mysteriously, no burning or scorching occurs where the flames touch the bone.

Giant skeletons do not communicate in any way. They can obey simple, verbal commands given to them

by their creator, but will ignore all others. In order for a command to be understood by these animated skeletons, it must contain no more than three distinct concepts. For example, "stay in this room, make sure that nobody comes in, and don't allow the prince to leave,". would be the type of command these creatures could obey.

**Combat:** In melee combat, giant skeletons most frequently attack with bone-bladed scythes or spears. Each blow that lands inflicts 1d12 points of damage.
Once per hour (6 turns), a skeleton may reach into its chest and draw forth a sphere of fire from the flames that burn within its rib cage. This flaming sphere can be hurled as if it were a *fireball* that delivers 8d6 points of damage. Because these creatures are immune to harm from both magical and normal fires, they will freely use this attack in close quarters.
Giant skeletons are immune to *sleep, charm, hold,* or similar mind-affecting spells. Cold-based spells inflict half damage to them, lightning inflicts full damage, while fire (as has already been mentioned) cannot harm them. They suffer half damage from edged or piercing weapons and but 1 point of damage per die from all manner of arrows, quarrels, or missiles. Blunt melee weapons inflict full damage on them.
Being undead, giant skeletons can be turned by priests and paladins. They are more difficult to turn than mundane skeletons, however, being treated as if they were mummies. Holy water that is splashed upon them inflicts 2d4 points of damage per vial.

**Habitat/Society:** The first giant skeletons to appear in Ravenloft were created by the undead priestess Radaga in her lair within the domain of Kartakass. Others have since mastered the spells and techniques required to create these monsters; thus, giant skeletons are gradually beginning to appear in other realms where the dead and undead lurk.
Giant skeletons are employed as guards and sentinels by those with the power to create them. It is said that the Dark Powers can see everything that transpires before the eyes of these foul automatons, but there is no proof supporting this rumor.

**Ecology:** Like lesser animated skeletons, these undead things have no true claim to any place in nature. They are created from the bones of those who have died and are abominations in the eyes of all who belief in the sanctity of life and goodness.
The process by which giant skeletons are created is dark and evil. Attempts to manufacture them outside of Ravenloft have failed, so it is clear that they are in some way linked to the Dark Powers themselves. In order to create a giant skeleton, a spell caster must have the intact skeleton of a normal human or demihuman. On a night when the land is draped in fog, they must cast an *animate dead, produce fire, enlarge,* and a *resist fire* spell over the bones. When the last spell is cast, the bones lengthen and thicken and the creatures rises up. The the creator must make a Ravenloft Powers check for his part in this evil undertaking.

| **Size:** | M (6'-7' tall) |
| **Morale:** | Champion (15) |
| **XP Value:** | 4,000 |

Formerly powerful fighters, skeleton warriors are undead lords forced into their nightmarish states by powerful wizards or evil demigods who trapped their souls in golden circlets. The sole reason that skeleton warriors remain on the Prime Material plane is to search for and recover the circlets that contain their souls.
A skeletal warrior appears as a cracked and yellowing skeleton covered with shards of decaying flesh. Its eyes are black holes containing pinpoints of reddish light. It is clad in the blackened armor and rotted trappings it wore in its former life.

**Combat:** Anyone possessing a skeleton warrior's circlet can control its actions, so long as the controller

remains within 240 feet of the warrior. The controller is either in active control of the warrior or in a passive mode. When in active control, the controller can see whatever the skeleton sees, and he can mentally command it to fight, search for treasure, or take any other actions; however, the controller himself is unable to cast spells, move, or take any other actions while in active control. When in the passive mode, the controller can take any normal actions, but he is unable to see through the warrior's eyes; the skeleton warrior remains inert while the controller is in passive mode. The controller can change between the passive mode and active control at will.

The controller must have the warrior's circlet on his head in order to control the warrior. If the circlet is removed from the controller's head, he can no longer control the warrior; likewise, if the controller and the warrior are separated by more than 240 feet, the controller can no longer control the warrior. If the circlet remains in the controller's possession, he can resume control at a later time. But if the controller loses the circlet, either by accident or by a deliberate act, the warrior immediately proceeds toward the controller at twice its normal movement rate (12) to attack and destroy him. The warrior does not rest until it destroys its former controller or until control is re-established. If the warrior holds the circlet to its head, both the warrior and the circlet turn to dust, never to reappear.

When a character first comes into possession of a circlet, he is unlikely to be aware that the skeleton warrior is tracking him, unless he recognizes the circlet's significance. To establish control for the first time, the character not only must hold the circlet to his head, he must be able to see the warrior and concentrate on the establishment of control for one round and then roll a successful Wisdom check; if he fails the Wisdom check, he can try again in subsequent rounds. Meanwhile, the skeleton warrior continues to approach, attempting to destroy the character and gain possession of the circlet. If his concentration is broken before control is established -- for instance, if he has to defend himself against an attack -- he must concentrate again for three rounds. Once control has been established for the first time, it can only be broken as indicated above. To be effective, the circlet cannot be worn with any other headgear; placing it in a helm, for instance, nullifies its powers, though the skeleton warrior is still aware of the circlet's presence.

Skeleton warriors usually fight with two-handed swords, but they can use other weapons as well. Skeleton warriors make all weapon attacks with a +3 bonus to their attack roll; this is an innate ability, the weapon itself is not magical.

Only magical weapons affect skeleton warriors. They have a 90% magical resistance. The mere sight of a skeleton warrior causes any creature with fewer than 5 Hit Dice to flee in panic. Skeleton warriors cannot be turned by priests.

**Habitat/Society:** Skeleton warriors are usually found near the areas where they died in their former lives, or where they were buried. A skeleton warrior usually has a sizeable collection of treasure, the remnants of a lifetime of adventure. Since a skeleton warrior is preoccupied with recovering its circlet, protecting its treasure is not a priority.

**Ecology:** Skeleton warriors are used by their controllers as bodyguards, servants, or workers. Since skeleton warriors are obsessed with their circlets and are therefore undependable, evil creatures and other undead seldom associate with them. Skeleton warriors do not eat, sleep, or perform any other physiological functions.

The slaadi are great frog-like beings, who dwell on the outer plane of Limbo. Their form is that of a large bipedal frog, though some of the more powerful slaadi have *polymorph self* or shape change abilities and sometimes appear as men. In frog form their heads are huge and their claws are extremely sharp. There

are powerful symbols embedded into their foreheads signifying rank. They speak their own language and, occasionally, some additional evil languages. Telepathy allows them to understand and converse with all things.

### Red Slaad

Slaadi are vicious combatants and quick to attack all other creatures. They can be ruthless when encountered in numbers, often surrounding smaller groups of beings and bullying and tormenting them before finally slaying the lot.

**Combat:** Red slaadi attack with two claws for 1-4 points of damage per hit and bite for 2-16 points. They are not terribly intelligent, so they choose predictable, uninspired tactics.
Red slaadi have a special gland under the skin of each claw. When one hits with a claw attack, there is a 25 % chance that an egg pellet is planted in its opponent's body. The egg pellet begins to move through the victim's body, often without the victim even knowing he has been infected until it reaches the chest cavity. There it gestates for three months, forming a baby red slaad that will eats it way out of the victim's body, killing him. The victim falls very ill 24 hours before the baby slaad eats its way out. An egg pellet can only be detected by a *detect evil* spell, and destroyed by a *remove curse* or similar spell.
Red slaadi regenerate at a rate of 3 hit points per melee round. They can attempt to *gate* in 1-2 additional red slaadi twice per day with a 35% chance of success. Once per day, red slaadi may stun by emitting a loud croak that affects all opponents within 20 feet of the slaad. Victims must make a saving throw vs. petrification or be disabled for two rounds.

### Blue Slaad

Blue slaad are ruthless warriors that specialize in mass combat.

**Combat:** Blue slaadi have two razor-sharp bone rakes sticking out from the back of each hand. These potent weapons inflict 2-12 points of damage on a successful hit. They have perfected their fighting style with these rakes, which give them two attacks per hand. Their bite does 2-16 points of damage per hit and has a 10% chance of infecting the slaad's opponent with a rotting disease. Blue slaadi have the following magical abilities:
*hold person*, one person only, *passwall*, and *telekinesis*.
They may attempt to *gate* in either 1-4 red slaadi or 1-2 blue slaadi, four times per day, with a 40% chance of success.

### Green Slaad

Very rarely seen, they are the highest form of lesser slaadi. They attack with claws for 3 to 8 (1d6+2) points of damage.

### Gray Slaad

Known as *executioners*, and very rare, gray slaadi are great slaadi. They use a claw/claw/bite routine for 4 to 10 points of damage from their wicked claws, and 2 to 16 points of damage from the vicious bite they inflict upon opponents.

### Death Slaad

The greatest of all the slaadi, and the absolute masters of their race. Their claws strike for 3 to 18 points of damage and their bite inflicts 2 to 20 points of damage.

**Habitat/Society:** Slaadi have a hierarchial society. Their caste system is rigid because the strong will simply destroy the weak for disobedience; lesser slaadi are forced to be their servants. Reds and blues aid each other only in extreme emergencies.

**Ecology:** Although slaadi are inhabitants of the outer planes, and are frequently found travelling the lower planes, they have little or nothing to do with the Blood War between the baatezu and the tanar'ri.

# Slug, Giant

| | |
|---|---|
| **Climate/Terrain:** | Subterranean and wet |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Non- (0) |

| **No. Appearing:** | 1 |
| **Armor Class:** | 8 |
| **Movement:** | 6 |
| **Hit Dice:** | 12 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-12 |
| **Special Attacks:** | Spits acid |
| **Special Defenses:** | Immune to blunt weapons |
| **Magic Resistance:** | Nil |
| **Size:** | H-G (25'-50' long) |
| **Morale:** | Steady (12) |
| **XP Value:** | 5,000 |

Giant slugs are huge, omnivorous mutations of the small and benign garden slugs. Their highly developed mouths are capable of chewing flesh and well as plants, and they spit a highly corrosive acid on their food. Most giant slugs are pale gray, with dead white underbellies.

**Combat:** Giant slugs can bite for 1d12 points of damage, but their main attack form is their corrosive acid saliva. The acid is spat at a single target and corrodes any organic tissue (plants or animals). It will also destroy equipment (saving throw vs. acid). The acid inflicts 4d8 points of damage (successful saving throw vs. breath weapon for one-half damage). Giant slugs can use this breath weapon every round (its acid stores are never used up). Slugs are not very accurate with this attack; the first shot has only a 10% chance of hitting. The success of subsequent shots depends on the distance to the target -- the base

chance of hitting is 90% at a distance of ten yards, with a -10% penalty per additional ten yards. If the slug misses, the acid hits 10 feet from the desired target (determine randomly which direction). Note that giant slugs are impervious to this acid spittle.
Giant slugs are immensely strong and can batter down doors and wooden buildings in seconds. They have no bones and can squeeze through holes and crevasses normally impassible to much smaller predators. For example, a party of adventurers might seek cover in a large stone building, while taunting the slowly approaching slug behind them. To their astonishment, the huge creature enters through the same doorway the party did and begins to send acid everywhere.
The rasping tongue of a giant slug enables it to burrow through 1 foot of earth or 6 inches of wood per round, making most standard barricades useless against it.
Because of their lack of bones and their thick, rubbery hides, giant slugs are not harmed by blunt weapons or spells that cause crushing or impact damage. Only edged and pointed weapons and magical attacks, can harm a giant slug.

**Habitat/Society:** Giant slugs can be found in any wet and dark environment, including deserted dungeons, swamps, and rain forests. Giant slugs are solitary creatures and speak no language. They are barely sentient, exhibiting only rudimentary instinctive reactions when confronted.

**Ecology:** No one has ever found a good use for giant slugs, except maybe as huge garbage disposals. They have no known predators. They will eat anything -- plants, carrion, garbage -- but prefer warm, living flesh when they can catch it. Since giant slugs have such huge appetites, they rarely attack smaller creatures, such as squirrels and monkeys, which they have a hard time seeing anyway. Even on a good day, they must usually supplement their feedings with some vegetation.
Normal slugs have a nasty reaction to salt when it is sprinkled on them. They dry up and die in 1d4+1 rounds. It is unlikely that this technique is adaptable to the giant variety, but some fabrication and summoning spells might be adaptable if there ever seemed to be a need for it.
For now, giant slugs remain a very real danger in jungles, forests, and dungeons everywhere.

Snakes are long, slender reptiles that can be found anywhere in the entire world, even in the coldest arctic regions.

There are basically two types of snakes, in all manner of sizes. The poisonous snakes make up for their relatively smaller size with deadly venoms, while the larger constrictors squeeze their victims to death. Both types sleep for days after eating. All snakes shed their skin several times each year. All snakes in this entry share the following characteristics:

| | |
|---|---|
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **Magic Resistance:** | Nil |

Snakes fear fire and will retreat from open flames, suffering a -6 morale modifier when flames are used against them.

### Amphisbaena

These monsters have heads at both ends, and both heads are armed with poisonous fangs. The creature travels by grasping one of its necks and rolling like a hoop. It can attack with both heads, each head attacking a separate target. Victims failing to make a saving throw vs. poison when bitten die instantly. Amphisbaena are immune to cold-based attacks.

### Boalisk

The boalisk is a tropical constrictor snake with a *gaze* attack. Any creature meeting its *gaze* (failing a saving throw vs. petrification) is infected with a magical rotting disease, identical to that inflicted by a mummy. Characters refusing to look at the boalisk automatically avoid its *gaze* but suffer a -4 penalty to their AC. Surprised victims always meet its *gaze* and gain no saving throw. The boalisk can use its *gaze* on a single victim each round in addition to normal biting and constriction attacks.

### Constrictor Snake

Constrictors of all sizes hide in the branches of trees, waiting patiently until they can slowly lower themselves or suddenly drop onto their unsuspecting victims. Once they strike, the victim is constricted automatically, suffering damage every round. Constricted humanoid creatures can escape the coils of normal constrictors with a successful open doors roll (at a -1 penalty). Anyone who attempts to free a captive by hacking at the constrictor has a 20% chance of striking the victim instead (roll normal damage and apply it to the victim). Area spells like *fireball* will likewise affect both combatants, but target-specific spells like *charm monster* and *magic missile* are more precise.

Common constrictor species include anacondas, boas, and reticulate pythons, all of which can reach lengths of 30 feet. Their skin is valuable, with an unblemished skin selling for as much as 100 gp.

Some constrictor snakes are known as birdcharmers; these innately magical snakes can mesmerize their prey by swaying slowly and steadily while staring down their victims. Creatures of animal intelligence or less must make a saving throw against paralyzation or be effectively paralyzed for as long as the snake continues to sway, and for 2d6 rounds thereafter.

### Giant Constrictor Snake

Giant constrictor snakes are larger and much stronger than their smaller cousins. It requires the combined efforts of 60 total points of Strength (the coiled victim plus outside help) to extricate someone from a giant constrictor's steel grasp.

The skin of a giant constrictor snake is too thick and stiff to be workable, and is valuable only as armor,

not for decoration. An uncured hide can fetch 20 gp.
Snow serpents are a particularly large and dangerous form of giant constrictor snake, one adapted to life in a sub-arctic climate. These furred white snakes hide their 100-foot bodies in the snow bodies and wait for prey to pass by. When it does, they spring up and coil their loops around the victims. After that, snow serpents automatically bite for 2d10 points of damage each round. Those in its coils are helpless. Snow serpents are very rare and have the following statistics: AC 6, MV 9, HD 10, THAC0 11, SZ G (100' long), ML average (8-10), XP 2,000. Their pelt is worth 2,000 gp. In all other respects they are similar to other giant constrictor snakes.

### Heway

These intelligent snakes have slimy, poisonous skins that they use to foul wells and oases. After swimming in a body of water for several hours and releasing its poison, it slinks off to wait for its prey to arrive. A creature drinking water poisoned by a heway must make a successful saving throw vs. poison at +2 or suffer 30 points damage within 3d6 minutes and be paralyzed for 1d6 hours. Creatures that make their saving throws suffer 15 points of damage. Even animals that survive the initial effects are often doomed to die of dehydration.
Many humans and animals attack heways on sight, but it can defend itself with its hypnotic stare, which has a powerful effect; any creature failing a saving throw vs. paralyzation will follow the heway to its lair and allow itself to be devoured. The heway sometimes uses this stare simply to immobilize a menacing creature. It then leaves the area while the hypnotized creature remains stationary for 1d6 turns.
Heway are innate cowards and avoid contact with other animals. It is a weak fighter, its bite is not venomous, and its jaws are weak. Its preferred food is small animal carrion. Simply touching heway skin has no effect; the poison must be ingested.

### Poisonous Snake

All poisonous snakes deliver toxins automatically through their bite. Roll on the table below (or choose) to determine what type of poison is present.

| Die Roll | Modifier to Save | Onset Time | Result of Failed Saving Throw* |
|---|---|---|---|
| 1-4 | +3 | 1-4 turns | Incapacitated for 2-8 days |
| 5-6 | +2 | 2-5 rounds | Death |
| 7-11 | +1 | 2-12 rounds | 2-8 points of damage |
| 12-14 | None | 1-6 rounds | 3-12 points of damage |
| 15-17 | -1 | 2-8 rounds | Incapacitated for 1-4 days |
| 18-19 | -2 | 1-4 rounds | Incapacitated for 1-12 days |
| 20 | -3 | 1 round | Death |

* A successful saving throw means no damage.

Typical varieties of poisonous snakes include the asp, cobra, copperhead, coral snake, death adder, krait,

mamba, puff adder, rattlesnake, sidewinder, and water moccasin.
Some cobras and sidewinders hunt by night and can track warmblooded prey by body heat as well as by sight. They have the equivalent of 30-foot infravision. Black mambas are the fastest known snakes and can reach 30 across open ground.

### Giant Poisonous Snake

Giant poisonous snakes cause death in one round if their victims fail a saving throw vs. poison. Some varieties inflict 3-18 points of damage even if the saving throw is made.
The giant cobra is an example of a variant, giant poisonous snake. Its venom results in death 2-8 rounds after a successful strike; if the victim makes a saving throw at -2 he suffers only 10 points of damage. Giant cobras mesmerize prey as birdcharmer snakes do (see above). They can kill and eat an entire goat or a demihuman up to halfling or gnome size. Some varieties of giant weasel can hunt them successfully, and jungle giants consider giant cobras a delicacy, as do some elven tribesmen.

### Giant Sea Snake

Found only in tropical waters, the giant sea snake is the only type of snake that is both constricting and poisonous. Its constricting grasp on small ships can crush them in 10 rounds. Sea snakes attack ships only when they are hungry (20% chance). Their poisonous bite is deadly in 1-4 rounds. Sea snakes are fully capable of diving to great depths, and their nostrils (on the top of their snouts) have membranes that automatically seal them underwater.
From time to time giant sea snakes gather in huge floating masses of hundreds or thousands of snakes, often 100 yards wide and 30 miles long. These may be mating rituals or they may be seasonal migrations; the actual reason is unknown.

### Spitting Snake

Spitting varieties of snakes bite their victims and can shoot poisonous spittle at a single target within 30 feet. Their poison is identical to normal poisonous snakes (see above). Typical species include the African spitting cobra, which can spit up to 15 feet. Its spittle can blind victims that fail a saving throw vs. poison. The blindness wears off after 2-12 hours.

### Jaculi (Tree Snakes)

Many of the above land snakes can be encountered as tree snakes, also known as jaculi. These subspecies are simply arboreal varieties of other types of snakes that have adapted to life in a forest canopy. They have chameleon-like camouflage abilities and can leap onto their prey from 50 feet above ground; opponents suffer a -4 penalty to surprise rolls.
Some tree snakes have broad, flat heads with razor spines or barbs that make their initial impact particularly potent (double normal bite damage). After their initial flying attack, they must depend on biting or constriction attacks or climb back into the trees to leap again.
Jaculi snakes include the poisonous boomslang and the emerald tree boa. Many jaculi species prey on other snakes.

### Elder Serpents

Ancient snakes are said to gain wisdom with age, giving them Semi- to Low intelligence (2-7). They gain an additional Hit Die and the ability to speak (with a lisp). Elder serpent venom is more concentrated than that of its younger cousins (death in 1-4 rounds maximum, saving throws at -4). They suffer no modifier to morale when faced with open flames. Elder serpents have a measure of cunning and value

glittering objects; they have treasure, type W.

Elder serpents can paralyze prey as birdcatchers do (see constrictors above). In the case of elder boalisks, their *gaze* has two simultaneous effects and victims are entitled to two saving throws. All elder serpents can hypnotize people as well as animals with their paralyzing stare.

The largest elder serpent is called the Grand Snakemaster, and is said to be immortal. When it sheds its skin, the discarded skin is rumored to possess healing powers. Those who eat it are said to gain wisdom, but since the Grand Snakemaster has never been seen, the truth of these rumors is questionable.

# Snake, Winged

| | |
|---|---|
| **Climate/Terrain:** | Tropical/Forests |
| **Frequency:** | Rare |
| **Organization:** | Flocks |
| **Activity Cycle:** | Any |
| **Diet:** | Herbivore |

| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-4 |
| **Special Attacks:** | Poison, spark shower |
| **Special Defenses:** | Immune to electricity |
| **Magic Resistance:** | Nil |
| **Size:** | L (8-10' long) |
| **Morale:** | Average (9) |
| **XP Value:** | 1,400 |

Winged serpents, sometimes called spark snakes, are colorful reptiles that dwell in Zakhara's forests and jungles. Winged serpents come in many colors, ranging from sky blue and emerald green to raspberry red. They are supported by invisibly swift, gossamer wings, making them resemble reptilian hummingbirds. When their delicate wings are folded back, winged serpents can *spider climb* at will.

**Combat:** Winged serpents move with liquid grace and devastating speed. They always receive a -3 bonus to initiative.
The bite of a winged serpent inflicts 1d4 points of damage and injects the victim with a corrosive, acidic fluid. This poison has an onset time of 1 round and inflicts an additional 2d8 points of damage for the following 2 rounds (half damage if a save vs. poison is made).

By far the most dangerous attack of these reptiles is their sparking breath weapon. Their wings beat so quickly that they build up a static charge from the ambient air (especially in the humid forest). A winged serpent can discharge this static electricity from its mouth in a spark shower, a cloud of dancing sparks and electrical energy 10 feet in diameter. Those caught in the area of effect take 2d8 (2-16) points of damage (half if a save vs. breath weapon is made). The spark shower will also ignite any exposed flammable objects, like clothes, hair, dry wood, or lamp oil. Once it has been discharged, it takes one turn for a winged serpent to build its static charge back up. All winged serpents are immune to electricity. Winged serpents are vulnerable to fire-based attacks (especially their delicate wings), against which they save at penalty of -2. If a winged serpent fails its saving throw against a fire attack, assume that its wings are incinerated. Although this won't affect its ability to bite a victim, the serpent cannot use its breath weapon until the wings grow back.

**Habitat/Society:** Winged serpents must eat constantly in order to survive. They flit about the jungle in small flocks, searching for tropical fruits, from which they draw their nourishment. A winged serpent will fly up to one and inject it with corrosive venom. The venom breaks down the fruit into a soft, juicy mixture, partially digesting the fruit while it still remains in its skin. The serpent will then suck out the fruity pulp through the incisions made by its fangs. A typical winged serpent will eat roughly 10 times its weight in fruit each day, just to stay alive.

Winged serpents mate as often as they eat (i.e., incessantly), although they do not care for their young, which are born live and wingless. They are born with their spider climbing ability, which helps them climb fruit trees and search for food. The young are dark green in color to help them blend in better with the foliage, gaining their chromatic hues only after their wings mature. During the first few months of life, winged serpents are extremely vulnerable to an entire host of predators that roam the jungle heights (including mundane snakes, monkeys, and giant insects). Vestigial wings appear after a month of life, and become fully functional after three months.

Winged serpents have no permanent lair and hoard no treasure.

**Ecology:** Winged serpents play an important role in the jungle ecology. Like giant bees, they transport pollen from fruit tree to fruit tree and help with the distribution of seeds throughout the jungle. As adults, they have no natural enemies.

If captured during their first month of life before their wings have matured, they make excellent (if expensive) pets. They must consume a great quantity of fruit to survive, eating on average 100 gp worth of fruit each month (this cost might be reduced if a large orchard is available). A skilled animal trainer can teach a winged serpent up to three tasks or tricks per point of intelligence, which the creature will gladly perform (provided a supply of fresh fruit is constantly at hand). They can even be trained as guardians, although rogues have quickly discovered that unless they are extremely well-trained, they can be easily distracted by a decoy of aromatic, fresh fruit.

Few useful by-products can be obtained from a winged serpent. Their poison decomposes almost immediately after exposure to air, and their hide is too thin and fragile to serve as good leather. Their wings, however, if powdered and mixed with ink, can be used to inscribe a *protection from lightning* scroll.

# Spectre

| | |
|---|---|
| **Climate/Terrain:** | Desolate dungeons and ruins |
| **Frequency:** | Rare |

Spectres are powerful undead that haunt the most desolate and deserted of places. They hate all life and light.
Spectres appear as semitransparent beings and are often mistaken for haunts or ghosts. Unlike most undead, spectres retain the semblance and manner of dress of their former life and can be recognized by old friends or through paintings of the persons they used to be.

**Combat:** Spectres exist primarily on the Negative Material Plane and can therefore be attacked by beings on the Prime Material Plane only with magical weapons. Daylight makes spectres powerless by weakening their ties to the Negative Material Plane.
The chilling touch of a spectre drains energy from living creatures. A successful attack inflicts 1-8 points

of damage and drains two life energy levels from the victim. Any being totally drained of life energy by a spectre becomes a full-strength spectre under the control of the spectre which drained him. The victim loses all control of his personality and may become more or less powerful than before, depending on his level and class before becoming a spectre.
Spectres are immune to all *sleep*, *charm*, *hold*, and cold-based spells, as well as poisons and paralyzation attacks. Holy water inflicts 2-8 points of damage when it strikes a spectre. The water can be splashed on a spectre successfully. A *raise dead* spell apparently reverses the undead status, destroying the spectre immediately if a saving throw versus spell is failed.

**Habitat/Society:** Most spectres are solitary, but some enclaves exist where a particularly powerful or lucky spectre has managed to drain mortals of life. This lead spectre is known as the master spectre (always with maximum hit points per die), while the others are known collectively as the followers. In this arrangement, the master spectre almost never engages enemies personally, but instead sends his minions in for the kill. Mortals drained of life by follower spectres are subservient to the master spectre, not the followers. Note that if the master spectre is slain, all followers become independent and can travel anywhere they wish in hopes of becoming master spectres themselves. Once a character becomes a spectre, recovery is nearly impossible, requiring a special quest.
Spectres hate light and all life, as both remind them of their undead existence. They are therefore encountered only in places of extreme darkness and desolation, like long-abandoned ruins, dungeons, and subterranean sewers.
Contrary to popular mythology, spectres remain highly intelligent and generally rational after the transformation to undeath. Life makes them lament their unlife, and they bear a strong hatred for all those lucky enough to live and truly die.
Spectres have enough cunning to plan their attacks, and rival vampires in their skill at remaining hidden from the general populace.

**Ecology:** No one knows who the first spectre was or how it came to be; the few facts detailed above are all that is known with any degree of certainty.

## Androsphinx

Androsphinxes are huge, winged mythological creatures with the bodies of male lions and man-like facial features. They can speak the languages of common and all sphinxes.

**Combat:** The male, or andro-, sphinx is the most powerful of the sphinxes. Its huge paws can kill a normal man with just one swipe. If brute force is not successful, an androsphinx can cast spells as if a 6th-level priest. Note that most androsphinxes use these spells for healing and defense rather than damage and attack.

The androsphinx has another special weapon as well -- his bellowing roar. It can roar three times per day, but must be very angry to do so. The first time an angry androsphinx roars, all creatures within 360 yards must roll successful saving throws vs. wands or flee in panic for three turns. When an already angry androsphinx is continually molested, even after bellowing once, it can roar even louder, causing all creatures within 200 yards to roll successful saving throws vs. petrification or be paralyzed with fright for 1d4 rounds. In addition, any creatures within 30 yards of this second roar are automatically deafened for 2d6 rounds (unless they are deaf already or have protected hearing organs). Any creature foolish enough to anger an androsphinx further will unleash his third and final roar with devastating effects. All creatures within 240 yards must successfully roll saving throws vs. spell or lose 2d4 points of Strength for 2d4 rounds (use -1 point equals -10% for characters with exceptional Strength). In addition to the weakness effects, any creature within 30 yards of the androsphinx is knocked over unless it is 8 feet tall or larger. Creatures knocked over suffer 2d8 points of damage and must roll a successful saving throw vs. breath weapon to avoid being stunned for 2d6 rounds. The force of this third roar is so powerful that stone within 30 yards cracks under the strain, unless it successfully saves vs. crushing blow.

**Habitat/Society:** Androsphinxes are the most solitary of the sphinxes. They shun gynosphinxes because they are jealous of the higher intelligence of their female counterparts, and find their neutral disposition a bit hard to deal with. However, most androsphinxes eventually succumb to the advances of a gynosphinx at least once in their lives.

**Ecology:** What is strangest about androsphinxes is not their combination lion/human appearance (as there are many such cross-mutations found in the world), but their apparent lack of purpose. They are by far the strongest of the sphinxes, but unlike their counterparts, have no true pattern of behavior universal to all androsphinxes. They despise communicating with humans and hate riddles (mostly because gynosphinxes love them so much). It is therefore suggested by those knowledgeable in mythological beasts and desert lore that androsphinxes are the guardians of the sphinxes, evil (hieraco-), neutral (gyno- and crio-), and good (andro-).

Certainly, androsphinxes are the lifelong adversaries of the hieracosphinxes, but they almost always let the defeated enemy go free instead of finishing the kill (often with a roar or two at the fleeing sphinxes'

behinds).
In short, androsphinxes are free-roaming sphinxes sworn to defend other sphinxes against other races, namely men and their ilk. They have been known to bargain with men on occasion, but are the least greedy of the sphinxes, and are the only sphinxes likely to take offense at such offerings if made by characters with low Charismas or evil alignments.

### Criosphinxes

Criosphinxes have the bodies of winged lions, but they have the heads of rams. They are always male. They can speak their own dialect of sphinx, as well as that spoken by andro/gynosphinxes and the languages of animals.

**Combat:** Criosphinxes attack with their two paws or with a head butt with their ram's horns. Because they cast no spells and are not the brightest of sphinxes, their bargains with other beings are limited to "safe passage or die." They love treasure and lust after gynosphinxes constantly. Plenty of wealth, or knowledge of the location of a gynosphinx's lair, is always enough for adventurers to avoid confrontation with criosphinxes.

**Habitat/Society:** Criosphinxes prize wealth and usually seek to extort passers-by for safe passage in exchange for a hefty bribe. They are sometimes found in packs of two or more, but only because all of these sphinxes are looking for the same gynosphinx. They often follow other criosphinxes, even if they have no idea whether or not the leader really knows where he's going. When a number of criosphinxes find a gynosphinx, the first order of business is to restrain their prey. Usually pushing boulders in front of the lair with their huge horns is sufficient. Then the criosphinxes butt horns like rams, except these creatures do their fighting in the air. The winner gets the prize.
More often than not, however, criosphinxes begin their combat immediately upon finding their quarry, and inevitably the victor strides forth to find the gynosphinx gone. While the criosphinxes often find themselves richer for their trouble, as the gynosphinx rarely sees the need for material wealth while it is fleeing, it is only a poor reward indeed for their often decades-long quest.

**Ecology:** Criosphinxes are obviously just further mutations of the already mysterious sphinx form. Their ability to speak with animals seems to be an evolutionary necessity, as criosphinxes are particularly fond of warm wooded areas, often bordering on the desert lands preferred by gynosphinxes.

### Gynosphinxes

The gynosphinx is the female counterpart of the androsphinx, having a winged lion's body and human-like facial features. Gynosphinxes are not nearly as powerful as androsphinxes, but they are much more knowledgeable, clever, and wise. Gynosphinxes speak all sphinx languages as well as common.

**Combat:** Gynosphinxes can attack with two paws, but prefer to bargain with their opponents. They help strangers only if they are paid. They accept payment for services rendered or knowledge and advice given, in the form of gems (preferred), jewelry, magic, or knowledge. Knowledge that would be of special interest to a gynosphinx is the location of an androsphinx, but they accept fine prose, poetry, lore, or a good riddle.
If anyone breaks a bargain with a gynosphinx, he is subject to attack and the gynosphinx won't hesitate to devour the victim if it wins the fight. The gynosphinx can cast the following spells once per day: *detect magic, read magic, read languages, detect invisibility, locate object, dispel magic, clairaudience,*

*clairvoyance*, *remove curse*, and *legend lore*. It can also use each *symbol* once per week. Note that a gynosphinx is very intelligent and can use these spells in many ways. If a bargaining group of adventurers steps back to discuss their plans among themselves, the gynosphinx will growl a little and cast *clairaudience* to listen in.

**Habitat/Society:** Gynosphinxes are solitary by nature, but not by choice. They spend most of their lives avoiding the advances of criosphinxes (which they detest) and hieracosphinxes (which they fear), and searching high and low for an androsphinx.
Gynosphinxes are intelligent enough to actively seek out ruins and mystical places, like forgotten temples and such, which they immediately occupy. Using their many spells to learn as much as possible about the setting, they then wait for the next group of travelers, pilgrims, or adventurers to come by and hope that they've encountered an androsphinx in their travels or have spells or magical items that might be usable for just such a purpose.

**Ecology:** Gynosphinxes own the dubious distinction of being the only female sphinx. A gynosphinx mated with an androsphinx will produce another androsphinx or gynosphinx (even chances for both). A gynosphinx mated with a criosphinx only produces another male criosphinx, while mating with a hieracosphinx produces similarly displeasing results.
Fortunately, gynosphinxes are much smarter than all of their counterparts and can avoid otherwise compromising situations through trickery and outright deceit. Unfortunately, they are among the slowest of the sphinxes when flying or running, and the lustful criosphinx and vicious hieracosphinx rarely give up the chase once a gynosphinx has been located.

### Hieracosphinxes

Hieracosphinxes are the only evil members of their breed. They have the bodies of lions, but the wings and head of hawks. They are always males. They speak the languages of the other sphinxes, and some (20%) also speak common.

**Combat:** Hieracosphinxes do not cast spells, much like the criosphinxes, but make up for their weaknesses with tenacious evil and viciousness. Their paws and sharp beaks are deadly in combat, and they have been known to swoop down on victims.

**Habitat/Society:** Hieracosphinxes live in hilly regions exclusively, dwelling in caves overlooking the nearby deserts. They delight in evil and sometimes gather in bands of as many as six to do their vile business. Most often when a band of hieracosphinxes is encountered, it is hot in pursuit of an androsphinx, which they hate with all of their beings. Only in numbers can they hope to defeat so powerful an adversary, and these sphinxes never believe in honor or playing fair. While it is true that a victorious androsphinx sometimes lets the defeated flee (in the vain hope that the battle may change the losers' dispositions), a defeated androsphinx is always ripped to pieces when the hieracosphinxes are numerous enough and lucky enough to win the fight.
Hieracosphinxes also spend much of their time searching for a gynosphinx to mate with, but prefer to kill an androsphinx and inhabit his lair until a gynosphinx eventually arrives (usually by following old rumors and legends). It is worthwhile to note that there are more hieracosphinxes than criosphinxes.

**Ecology:** Hieracosphinxes are belligerent mutations of unknown origin. It is believed that they were created by elder gods of evil merely to wreak havoc on the other, more pleasant sphinxes described

above.

Spiders are aggressive predators, dwelling both above and below ground. Most listed here are poisonous and bite prey first, because unconscious victims are easier to carry to a lair.
Spiders have eight legs and eight eyes. They usually fit into two categories: web-spinners, which have bulbous abdomens and thin, sleek legs; and hunting spiders, which have smaller bodies, larger heads and fangs, and hairy bodies and legs.

### Hairy Spider

These are the vicious, black, hunting spiders that are found in jungles, tombs, caverns, and throughout the Underdark. Though spin no webs, they can move readily in the webs of other spiders, and they are immune to all known spider venoms.
Hairy spiders hunt in groups, swarming over victims to bite. Up to 40 hairy spiders can swarm a human-sized victim, and bite with a +5 bonus to attack rolls once they are attached. Hairy spiders are remarkably resistant to crushing damage; rolling or crashing into walls is ineffective at removing or destroying hairy spiders. They must be individually struck or torn away.
Hairy spiders are sometimes used as familiars, especially by drow wizards. They can carry small items and walk on walls and ceilings; they have 60-foot infravision and are not afraid of fire. Some (40%) of these spiders can *detect invisibility*; they have a 4 in 6 chance, once per round. These familiars are sometimes given treasure by their masters.
Victims receive a +2 bonus to saving throws vs. the hairy spiders' weak poison. If the saving throw fails, the victim's AC and attack rolls are penalized by 1, and Dexterity is penalized by -3 with respect to Dexterity checks. These effects begin one round after the bite and last for 1d4+1 rounds.

### Large Spider

Large spiders are web-spinners that build strong, sticky webs, and often lurk nearby waiting for victims to get stuck while examining the beautiful constructions of their own spinning. A being with Strength 19 or more is unaffected by the webs. For each point of Strength less than 19, it takes one round to break free of the webs (for example, a PC with Strength 15 can break free in four rounds). As many spiders as possible will attack the defenseless victim during its struggle to free itself. Entangled characters can be attacked with a +4 bonus to hit, and lose all Armor Class adjustments due to Dexterity.
The large spider's poison is Type A, the onset time is 15 minutes. Victims take 15 points of damage, or no damage if a saving throw vs. poison (with a +2 to the roll) is successful.

### Huge Spider

Huge spiders are hunting spiders that prefer to hide in camouflaged tunnels and holes and wait to leap as much as 30 feet through the air at unsuspecting victims. Their opponents suffer a -6 to surprise rolls when attacked in this manner.
Huge spiders also posses Type A poison, with the same effects as that of a large spider. Victims receive a +1 to saving throws vs. the poison of the huge spider.
The **watch spider** is a specially bred, huge spider used as a guard animal in cellars, warehouses, and some drow homes. It has Low Intelligence (5-7) and can be trained to obey a master, not attack beings designated by the master, and to disable spellcasters. Their venom has an onset time of 1-2 rounds and causes paralysis for 2d4 turns, unless the victim makes a successful saving throw vs. poison (with a +1 on the roll). If starved for long periods, they often eat paralyzed prey.

## Giant Spider

Most giant spiders are simply much bigger versions of the web-spinning large spiders. Their poison is Type F, which causes immediate death if the victim fails the saving throw.

The **giant water spider** is a small version (8-foot diameter, 3+3 HD) of the giant spider. It lives in a burrow in a body of fresh water, and fills its burrow with bubbles of air. These spiders drag prey underwater to their lairs, where they can safely wrap it in cocoons for later repasts. It is faster than a normal giant spider (movement rate 15), but cannot travel through webs. It is only semi-intelligent (2-4) and has treasure as a huge spider; its bite causes only 1d4 damage plus poison.

The **flying spider,** sometimes just called a hunting spider, is a giant, winged, hunting spider. They are sometimes trained as guard animals, especially by the drow. They are 10 feet in diameter and have 3+3 Hit Dice. Its normal movement rate is 9, and its great gossamer wings allow it to fly at the same rate (MC: D). These spiders can also leap up to 70 feet, and fall any distance without harm upon landing, as long as they use their wings. Hunting spiders have Type A poison, just as a large spider, with the same damage and saving throw adjustment.

The **giant trapdoor spider** is a hunting spider which builds tunnels and surprises prey like a huge spider; it is brown or golden, with red strips around its legs. On a successful attack roll, the spider can grab a victim and attempt to drag it into its lair. A victim can get free by making a successful Strength check, with a -2 penalty, or be freed by companions, if their Strength totals 20 or more. The victim can make no attacks.

A giant trapdoor spider has 4+4 Hit Dice and causes 2d4 damage per bite. Its poison causes an additional 1d6 points of damage if the victim fails a saving throw vs. poison. Though it does not build webs, it can travel through webs of other spiders, and it can shoot web strands up to 3 feet. The web strands require normal attack rolls to hit; they cause no damage, but entangle a victim for 1d4 rounds.

The **steeder** is a giant hunting spider with tarantula markings, 4+4 Hit Dice, and a movement rate of 12. It does not spin webs and cannot move in them, but its feet exude a sticky substance which allows it to cling to precarious surfaces, even if only one foot is touching the surface. The steeder also uses the secretions (50% of the time) to cling to prey; this requires an attack roll from the steeder, against AC 10 for the victim, adjusted only for magic and Dexterity. A victim can escape by making a successful Strength or Dexterity roll with a -10 penalty. While held, the victim suffers a -2 penalty to attack and damage rolls and is automatically bitten once per round.

Duergar dwarves use steeders as mounts, fitting the spiders with complex saddles and control straps. A steeder can leap 240 feet, even with a rider. Leaps are considered charging attacks. A steeder moves on walls and ceilings at half its normal rate; duergar saddles are built for this kind of motion.

## Phase Spider

Phase spiders are web-spinners with a raised thorax and a human-like head; they are often confused with neogi or driders. They have a unique ability to phase in and out of the Prime material plane. They phase in, attack, and phase out, all in a single round. This gives them a -3 modifier on initiative rolls; if a phase spider wins initiative by more than 4, it attacks and phases out before its opponent has a chance to strike back. Then too, a phase spider usually phases into existence behind its chosen victim, so they get a +4 modifier for attacking from behind. Phase spiders flee to the Ethereal plane when outmatched; there, they gain only a -1 modifier to initiative and can be attacked every round, regardless of the initiative result. Phase spiders have Type F poison, and victims receive a -2 penalty on saving throws against it.

## Sword Spider

This giant hunting spider is native to jungles, but has been introduced into the Underdark by drow traders. It has a sleek, hairy, black body with brown stripes. Its legs have bony plates with sharp, raised ridges that cut like sword blades.
Against formidable prey, a sword spider leaps horizontally as far as 30 feet, and lands legs forward, impaling its prey. Only one attack roll is made for the creature. If the attack is successful, the victim is struck by a number of legs based on its size: size S, three legs; size M, four legs; size L, five legs; size H, six legs; size G, all eight legs. If the spider's leap is greater than 20 feet, each leg receives a +1 bonus to damage. Any upward attack against the leaping spider receives a -4 to the attack roll, due to the impaling blades which protect the spider.

### Gargantuan Spider

The gargantuan spider, also called a whisper spider, is a hunting spider with red eyes, a black body, and two gray stripes along its abdomen. They usually live in huge webs in a forest or a cave, keeping treasure from prey in a small hole, or in the bole of a tree. The whisper spider has 8+8 Hit Dice. It can flatten itself to become 80% undetectable; it is so silent that opponents suffer a -5 penalty to surprise rolls. Using its webbing, it can make a false spider, a flapping banner, a filmy veil, or any shape it has ever seen; it uses these to mislead prey. The spider can make a web net to trap prey, or it can shoot web strands up to 2 feet to bind a foe. Either attack treats the spider's opponent as AC 10 and prevents the spider from making a melee attack that round. A victim caught by webbing is treated as if caught in a *web* spell. When bitten, a victim must make a successful saving throw vs. poison, with a penalty of -2, or fall into a coma for 2d4 turns.
**Giant marine spiders** are gargantuan spiders with 7+7 Hit Dice, which live in burrows near bodies of saltwater. Like their freshwater cousins, they carry prey to their lairs; though they collect no treasure, their lairs may contain incidental items from victims. They have type F poison, and do not share the whisper spider's special abilities.

Sprites are shy and reclusive faerie people, related to other faerie-folk, like brownies and leprechauns. There are several varieties, including pixies and nixies. Most have small, semitransparent wings, and elven features. Normal sprites have distinctly elven features and live in meadows and wooded glens. The wingless sea sprites make their homes on colorful coral reefs, living in harmony with the sea creatures, protecting the reefs' delicate environment, and frolicking in the waves. The naturally invisible pixies are perhaps the most intelligent and mischievous of the faeries; they dwell in idyllic woodlands and delight in harassing travelers with their pranks. Nixies are water sprites that live in freshwater lakes, and, while they harbor no grudges against humankind, they delight in enslaving men as their beasts of burden. Other sylvan creatures related to sprites include the swift atomies and the mischievous grigs, both forest-dwellers.

**Combat:** Sprites hate evil and ugliness, and are capable of stout militancy, should their secluded homes be invaded by orcs or worse. They fight with long, slim swords which do damage as a human-sized dagger, or their own special bows. Bows have a range half that of a human short bow and do only half as much damage (1-3 points). The tips of their arrows are coated with a special ointment concocted by the sprites. Any creature struck by the drugged arrows, regardless of level, race, or magic resistance, must make a saving throw vs. poison or fall into a deep sleep lasting 1d6 hours. Normally sprites do nothing more than take their victims to safe a place very far away (often confiscating their weapons in the process), though evil creatures may be slain.

**Habitat/Society:** Sprites prefer to avoid other intelligent beings and live in places where they can have many celebrations, parties, and gatherings. They gather on most moonlit nights for singing and dancing, land sprites in the glens, and water sprites in the surf. Land sprites live in sylvan woodlands, they monitor and protect forests and secluded glens. Water sprites protect their watery territories equally well.
Most land-dwelling species of sprite are immortal, and never die unless killed. The sprites' diminutive size and their dangerous environments keep sprite populations low.

### Sprite (standard)

Sprites usually speak only their own language, common, and elven, but seem to get along with woodland mammals and other creatures anyway. Humans often mistake sprites for butterflies at a distance, and it is guessed that the majority of forest creatures also think of the fair sprites in this way.

**Combat:** Sprites can become *invisible at will* and *detect good/evil* within 50 yards, so they are hard to deceive, evade, or capture. When invisible, sprites get +2 to attack rolls against opponents, who suffer a -4 penalty to hit the sprites.

**Habitat/Society:** Sprites are very flighty, and find even elves much too serious about most woodland affairs. Only druids deal with sprites regularly. Some druids even receive a little of their training in the company of a few sprites. Most sprites love druids, for their neutral alignment and love for nature make them see the forest in much the same way. On rare occasions, sprites associate with rangers as well.
Sprites are loosely tribal, electing the best warrior among the group (male or female) as the group spokesperson. This leader is recognized as the one who makes major decisions and bargains with druids and elves. Sprites rarely wait for their leader's decision, often attacking an evil creature before the leader can issue any command.

**Ecology:** Sprite sleep ointment is concocted from forest mushrooms. The ointment must be left to cure in the sun for seven days. Sprites hollow out tree stumps to serve as containers for this rare substance.
Sprites keep watch on their fellow sprites, so they know who to invite to their frequent gatherings. A deserted meadow or glen is never empty for more than a decade before a new clan of sprites moves in.

### Sea Sprites

Sea sprites have fine, cheerful faces, with rounded cheeks and wide, fish-like eyes. Their hair is the color and texture of seaweed, and reaches down to the gills on their necks, which enable sea sprites to breathe water as well as air. Their skin is light blue, smooth, and slick. Sea sprites have no wings, but webbing grows between their toes and fingers. Sea sprites wear bright, eelskin jerkins, and often adorn themselves with ornaments crafted from treasures found in the ocean.

**Combat:** About half of the sea sprites encountered carry special crossbows. In the hands of sea sprites, these

crossbows function like light crossbows above and below water. Sea sprites coat their crossbow bolts in *sprite sleep ointment*.
Sea sprites hate and fear sahuagin, and kill those they put to sleep. Air breathers are left on a nearby beach provided they have neither harmed nor attempted to harm the coral reef.
Sea sprites can turn *invisible at will* and *detect good/evil* within 50 yards. Three times per day, a sea sprite may cast *slow,* by touch, at the 5th level of ability. Once per day, a sea sprite can cast *airy water* as a 10th-level spellcaster.
Sea sprites are 45% likely to be accompanied by ld6 large carnivorous fish, such as barracudas. These fish act as guards and pets, attacking any creature that threatens the sprites.

**Habitat/Society:** Sea sprites live in natural caves in coral reefs, or amid large wrecks. Though sea sprites can breathe air, they rarely set foot on land. Their homes are cheerfully decorated with a mishmash of seashells, bones, pearls, free-swimming and colorful pet fish, and artifacts taken from sunken ships. Sea sprites live in small communities of four or five families.While each community is led by the eldest male, the true power often rests in the hands of his mate.

**Ecology:** Sea sprites eat seaweeds, small crustaceans, and fish. They raise fish and never deplete the reefs where they live. The only natural enemies of sea sprites are sahuagin. Sea sprites usually live for several centuries. They sometimes trade with sea elves but never mix socially with them.

**Pixie**
Pixies stand about 2 ½ feet tall. When visible, they resemble small elves, but with longer ears. Pixies have two silver wings, like those of moths. They wear bright clothing, often with a cap and a pair of shoes with curled and pointed toes. Pixies speak their own language, Common, and the language of sprites.

**Combat:** Pixies carry sprite-sized swords and bows. They use three types of arrows, and shoot them with a +4 bonus to the attack roll. Besides standard sprite sleep-arrows, pixies use a war arrow, which inflicts ld4+1 points of damage, and an arrow which does no physical harm to the target. Those hit by this arrow must make a successful saving throw vs. spell, or suffer complete loss of memory which can be restored only by a *heal* or a *limited wish.*
Pixies can, once per day, use each of the following magical powers, as if they were 8th-level mages: *polymorph self, know alignment, dispel magic, dancing lights,* and *ESP.* They can also do the following once per day: become visible for as long as they desire; create illusions with both audial and visual components; and cause *confusion* by touch. Their illusions require no concentration and last until magically dispelled. A creature attacked with *confusion* must make a successful saving throw vs. spell, or suffer its effects until a *remove curse* is applied. One pixie in 10 can use *Otto's irresistible dance,* also once per day.
Because pixies are normally invisible, opponents suffer a -4 penalty to attack rolls. A successful *dispel magic* against 8th-level magic makes any pixies, in its area of effect, visible for one round, then they automatically become invisible again. They attack while invisible without penalty.

**Habitat/Society:** Pixies live in deep forest caves, dancing in moonlit glades to the music of crickets and frogs. They are pranksters and they love to lead travelers astray. They use their illusion powers to accomplish this, hence the expression ``pixie-led'' for one who has lost his way. They like to frighten maidens, rap on walls, blow out candles, and play in water.
Pixies love to trick misers into giving away their treasure, especially by convincing them that something horrible will happen to them if they do not. Pixies carry no treasure, but sometimes have a hoard in their lair to impress visitors. Pixies use treasure to taunt greedy people, and then play merciless pranks on them until

they abandon their search for the pixies' fortune. If the victim shows no greed and exhibits a good sense of humor about their pranks, the pixies may allow that individual to choose one item from their hoard.
Pixies dwell together in a community of clans or families that seem to mimic human customs. Each family has a last name, and family and community loyalty is very important to pixies. Their life span is about 300 years.

**Ecology:** Pixies eat fruits and nectar. The most famous by-product of pixies is pixie dust, also known as *dust of disappearance.* Crushing 50 pixie wings into a fine powder creates one dose of *dust of disappearance.* Naturally, pixies frown on this use of their wings.

### Nixie

Nixies have webbed fingers and toes, pointed ears, and wide silver eyes. Most are slim and comely, and they have lightly scaled, pale green skin and dark green hair. Females are attractive, often twining shells and pearl strings in their thick hair, and they modestly dress in tight-fitting wraps woven from colorful seaweeds. Males wear loincloths of the same materials. Nixies can breathe both water and air; travel on land is possible, but they prefer not to leave their lakes. Nixies speak their own language and the Common tongue.

**Combat:** If one or more humans approach within 30 feet of a group of nixies, the nixies pool their magic to create a powerful *charm* spell, one such spell per every 10 nixies. The victim must make a saving throw vs. spell at -2 on the die roll. Before a charmed humans enters the water, there is a 75 % chance that a *dispel magic* will break the charm. Once the victim is in the water, the chance of dispelling the magic drops to 10%. Nixies keep each charmed slave for one full year, forcing him to do all their heavy labor, but thereafter the charm wears off and the victim is set free. During this enslavement, the nixies keep a *water breathing* spell on the human captive. Nixies can cast this spell on any creature, or dispel it, once per day; the spell's duration is one day.
Male nixies carry daggers and javelins. The javelins are used to spear things in the water, or can be thrown. A group of 10 nixies can use a large fishing net against adversaries who are in the water with them. Nixies make one net attack against AC 10 to ensnare a single man-sized creature, -2 AC for each additional victim, up to five total victims (and AC 0). Nixies sometimes employ guardian fish in battle.
Even with 25% magic resistance, nixies fear fire and very bright lights, so a *flaming sword* or a *light* spell keeps them at bay. Nixies try to negate a *continual light* spell by summoning small fish to crowd around the light and dim it.

**Habitat/Society:** Nixie dwellings are woven from living seaweed and difficult to detect (5% chance within 20 feet, impossible from farther away). Nixies keep giant fish as guards, either 1-2 gar (20%) or 2-5 pike (80%); these are taught to obey simple commands. Small bright, ornamental fish are kept as pets and trained to perform elaborate tricks. Trout, bass, and catfish are herded as food. Nixies can also summon 10-100 small fish, which takes 1-3 rounds.
Nixie tribes have 20-80 members, about one third are youth. Families have 4-8 members, and the tribe usually includes 10-15 families, all related through common ancestors. A nixie tribe controls an area with a radius of 3-5 miles; when a tribe gets too large, 2-3 families split off to form a new tribe. Nixies live for several centuries.
Nixie tribes are ruled by the Acquar (water mother), a hereditary position held by a direct descendant of the original founding ancestor. She decides major disputes and chooses the most apt warrior to be the S'oquar, the warlord responsible for hunting and defense. The Acquar is advised by a council of elders, whose spokesperson is called the L'uquar, the keeper of the tribe's oral history. Treasures, whether the spoils of war or the results of work or luck, are divided equally by the Acquar. Intertribal rivalries are often fierce, and

females are sometimes kidnapped as brides, for nixies are polygamists, keeping 2-3 wives. Nixies worship water and nature powers.

**Ecology:** Lakes with nixie tribes are kept clean and well stocked; often, human slaves work to improve the environment through the removal of trash and obstructions. Nixie artifacts include jewelry of shells, pearls and opals, silk from water spiders, and *potions of water breathing.*

## Atomie

Atomies avoid most serious-minded creatures, but mix freely with grigs, and are 20% likely to be found in their company. The lightest and quickest of all the sprites, atomies are less than 1-foot tall. Atomies have four dragonfly-like wings. Their features are elven, their skin is pale with a hint of woodland green. Atomie clothing is innately magical, bright and festive while at the same time blending with woodland surroundings. Atomies have twice the hearing range of humans, and they have infravision to 90 feet. Their voices are high-pitched, almost a bee-like buzz. Atomies speak their own language and often the languages of sprites, pixies, and some broken Common. They can also speak with plants and animals.

**Combat:** Atomies attack as 3rd-level fighters. About 20% of atomies carry tiny crossbows and spears. Atomie crossbows have a 3-foot range and inflict 1d3 points of damage. Atomie spears cause 1d4 points of damage. The remaining atomies are armed with either spears (40%) or sprite swords (40%). Atomies have the following magical abilities, usable once per round at 5th-level ability: *blink, invisibility, pass plant, speak with animals,* and *summon insects.*

Atomies are surprised only on a 1; opponents suffer a -6 penalty to surprise rolls. Upon hearing an intruder, atomies hide and try to make the intruder go away, using false lights, clattering voices, and pesky, summoned insects. Repeat intruders are warned with crossbow bolts. If combat is inevitable, or the intruders are orcs, the atomies regroup and attack. Atomies with spears fly in and dive on surprised opponents (usually aiming at their posteriors). Diving attacks inflict double damage (2d4).

**Habitat/Society:** Atomies live in the upper branches of old hardwood trees (usually oaks), one family per tree. Each family hollows out a series of tiny rooms, decorating with walnut chairs, woven pine needle rugs, acorn dishes, and the like. A network of balconies, landings, and rope bridges connects the dwellings, forming a village high above the forest floor. A typical atomie village houses 3d4x10 adults and 4d6 children.

Atomies seldom bother with outsiders, even standard sprites (whom they view as tedious and too serious), but they will sometimes help a lost child. A rescued child is well cared for and entertained before being returned to the outside world.

The concept of pets is unknown, but atomies often grow mushroom ``friends'' in their living rooms.

Atomies have loose leadership, choosing a chieftain based on storytelling and singing ability.

**Ecology:** Atomies are herbivores and find the eating habits of their cousins repulsive. They favor nuts above fruit, and prefer honey when they can trick bees into giving them some.

Atomies make a perfect, bite-sized morsels for most creatures, and sometimes fall prey to evil animals, such as worgs.

Atomies view magic as a force connected with life and are fascinated by inanimate magical items. Atomies collect magical items and display them in their homes or communities. Non-magical treasures are considered clutter and are either thrown away or given to forest creatures who value such things.

## Grigs

Grigs are mischievous and lighthearted. They have no fear of big people and take great joy in playing tricks upon them.
A grig has the head, torso, and arms of a sprite, with the wings, antennae, and legs of a cricket. They can leap great distances. Grigs have light blue skin, forest green hair, and brown hairy legs. They usually wear tunics or brightly colored vests with buttons made from tiny gems. Grigs speak atomie, brownie, pixie, sprite, and Common. They have double normal hearing range and 180-foot infravision. The origin of the grigs remains a mystery.

**Combat:** Fierce (by sprite standards), each grig carries six small darts and a sprite sword. Grigs gain a +2 bonus to attack rolls with darts. Darts and swords do normal damage when used by grigs, but only 1 point of damage when used by non-grigs.
Grigs have the following spell-like abilities, usable once per round at 6th-level ability: *change self, entangle, invisibility, pyrotechnics, trip,* and *ventriloquism.* Grigs move silently in woodlands; they are surprised only on a 1, while opponents suffer a -6 penalty to surprise rolls. Some grigs throw darts, while others leap to attack, and one grig fiddler (grigs never go anywhere without a fiddle), plays a song with the same effect as *Otto's irresistible dance.* All non-sprites within 30 feet of the fiddler must make a successful saving throw vs. spell or dance until the grig ceases playing. Grigs can play for hours.

**Habitat/Society:** Grigs roam the forests in small bands. They have no permanent homes but often sleep in the limbs of treants, or near unicorns (who protect grigs even unto death).
Grigs are cautious but trusting. They delight in playing pranks on big people. Common ploys include stealing food, collapsing a tent, and using *ventriloquism* to make objects talk. Once a prank is set, the grigs sit back and watch, laughing at the unfortunate person. People who make fools of themselves are apt to be plagued by harmless jokes until they reach the forest edge. At that point, one of the grigs comes out of hiding and makes amends with a gift, either a harmless bauble such as a 1d6x100 gp gem (25%) or a precious jar of really fresh honey (75%).

# Squid, Giant

| | Squid, giant | Kraken |

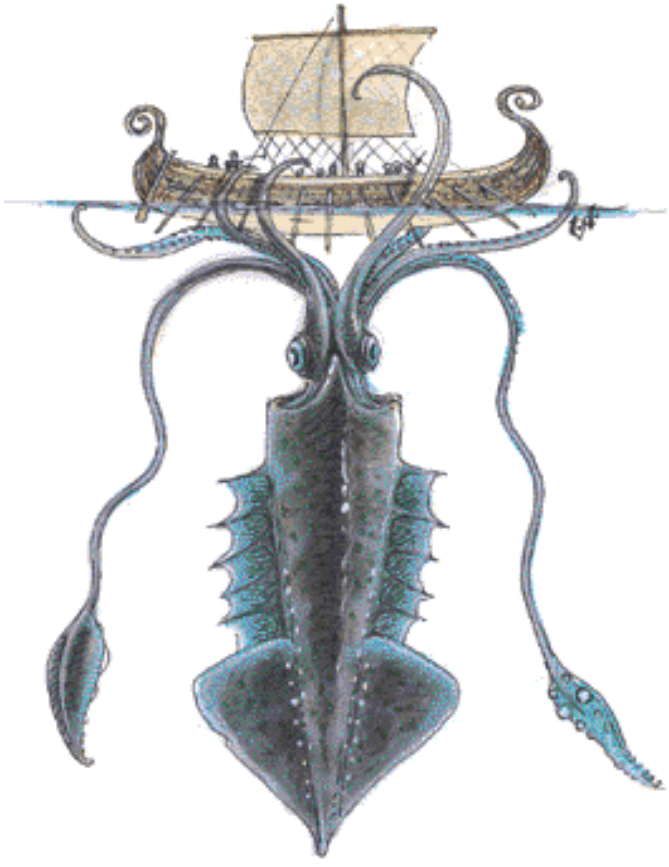
| **Magic Resistance:** | Nil | Nil |
| **Size:** | G (60'+ long) | G (90'+ long) |
| **Morale:** | Elite (13) | Fanatic (18) |
| **XP Value:** | 5,000 | 14,000 |



Giant squids are huge varieties of the normal, peaceful, tentacled cephalopods (unshelled invertebrates). They have ten long tentacles, two of which are always used to maintain stability when attacking or defending, and long, protected heads with two eyes. Their beak-like mouths are located where the tentacles meet the lower portion of their bodies.

**Combat:** Giant squids prefer to grab their opponents in their tentacles and constrict them, while they bring the

thrashing victims into their huge jaws. As many as eight tentacles can attack one opponent, but only one at a time can constrict a man-sized opponent (the rest are free to attack anything else within reach). The rubbery tentacles are so strong they cannot be broken by force and must be severed. A giant squid's tentacles hit for 1d6 points of damage and constrict for 2d6 points of damage every round after the initial strike. The beak of a giant squid inflicts 5d4 points of damage.
Any character who is constricted may have one arm (01-25% left, or 26-50% right), no arms (51-75%), or both arms (76-100%) pinned. A constricted character cannot cast any spells, but he can grab a weapon and attack the tentacle (if only one arm is free, he attacks with a -3 penalty to the attack roll; if both arms are free, the penalty is -1). A giant squid's tentacle requires 12 points of damage from sharp or edged weapons to sever (these hit points are in addition to the hit points from Hit Dice).
If a giant squid has four or more tentacles severed, the monster is 80% likely to squirt out a cloud of jet-black ink 60 feet high by 60 feet wide and 80 feet long. The squid then jets away and retreats to its lair. The ink completely obscures the vision of all within the cloud.
A giant squid can drag ships of small size to the bottom and can halt the movement of larger ones in one turn of dragging. After six or more tentacles have squeezed the hull of the ship for three consecutive rounds, the vessel suffers damage as if it had been rammed and it begins to take on water and sink.

### Kraken

A kraken is a rare form of gargantuan squid. It is one of the most deadly monsters in existence.

**Combat:** Krakens attack as huge varieties of giant squid. Two of their tentacles are barbed and cause 3d6 points of damage when they hit. They then try to drag prey toward their gaping maws for a bite of 7d4 points of damage. The other six free tentacles inflict 2d6 points of damage when they hit and constrict for 3d6 points each round thereafter. A kraken's tentacle must suffer 18 points of damage from sharp or edged weapons to be severed (these hit points are in addition to those the kraken gets from its Hit Dice).
If three of more of its tentacles have been severed, the monster is 80% likely to retreat, leaving behind a cloud of ink to discourage pursuit. The kraken is 50% likely to retreat to its den if four or more of its tentacles have victims. It leaves behind an ink cloud in this case also. The ink cloud of a kraken is 80 feet high by 80 feet wide by 120 feet long and is poisonous (it dissipates in 2-5 rounds). Those within the cloud receive 2d4 points of damage every round they remain. Krakens jet away to their lairs at a movement rate 21.
Krakens can drag ships of 60 feet long down in the same way as normal giant squids attack. They have the innate power to cause airy water in a sphere 120 yards across or in a hemisphere 240 yards across (they can do this continuously). They can employ the following spell-like powers, one at a time, at will: *faerie fire* for up to eight hours, *control temperature* in a 40-yard radius continuously, *control winds* once per day, *weather summoning* once per day, and *animal summoning III* (fish only) three times per day (note that this spell does not grant control of the fish once summoned).
Krakens are not affected by the conch horns of tritons.

**Habitat/Society:** Krakens have Intelligences of genius or higher and often control entire regions of the underwater world. Their lairs lie thousands of feet below the surface and they maintain huge complexes of caverns where they keep and breed human slaves to serve and feed them.

**Ecology:** Krakens can breathe either air or water and are aggressive hunters. Many tropical islands have been completely stripped of all inhabitants (animal and human) by krakens.
It is said that krakens retreated to the depths when the forces of good thwarted their attempt to rule the seas, but it is also said that in the future krakens will rise again.

# Stirge

| | |
|---|---|
| **Climate/Terrain:** | Forests or subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Clusters |
| **Activity Cycle:** | Night |
| **Diet:** | Blood |
| **Intelligence:** | Animal (1) |
| **Treasure:** | D |
| **Alignment:** | Nil |
| **No. Appearing:** | 3-30 |
| **Armor Class:** | 8 |
| **Movement:** | 3, Fl 18 (C) |
| **Hit Dice:** | 1+1 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-3 |
| **Special Attacks:** | Blood drain |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | S (2' wingspan) |
| **Morale:** | Average (8) |
| **XP Value:** | 175 |

Stirges are bird-like creatures that drink the blood of their victims for sustenance. They have four small, pincer-like legs that they use to clamp onto the necks of their victims. They are rusty-red to reddish brown in color, and their eyes and feet are yellowish. The dangling proboscises of stirges are pink at the tip, fading to gray at the base (near their heads).

**Combat:** Due to an instinctive ability to find and attack weak points, stirges attack as 4-Hit Die creatures, rather than 1+1. Their long proboscis inflicts 1-3 points of damage when it hits, and drains 1d4 points of blood every round thereafter. When a stirge drains a total of 12 points of blood from a victim, it becomes bloated and flies off to digest its protein-rich meal.
Stirges must be killed to be removed, due to their strong grip. If an attack against an attached stirge

misses, make another attack roll against the victim's Armor Class to see if the attack hits the victim instead. Caution is advisable when attempting to remove an attached stirge.

**Habitat/Society:** Stirges form nest-like colonies in attics, dungeons, and copses of trees. Although they resemble birds, they hang upside down when sleeping, indicating that stirges may be closely related to vampire bats.
Stirges can breed in captivity, but a constant supply of blood is needed. Stirges mostly kill low-level humans, animals and children, so the arrival of these predators in any civilized territory is always a cause for alarm. Fortunately, even a low-level group of adventurers or town militia is usually capable of ending the menace with little or no loss of life.

**Ecology:** Stirges have an acute sense of smell, can see in the dark, and can sense heat sources within 200 feet. These senses keep stirges informed when living creatures enter their habitat. Creatures with a natural AC of 3 or better are usually immune to a stirge's blood draining attack, since their hides are too thick to penetrate. As a consequence, huge nests of stirges live symbiotically with some evil dragons. Characters who protect their entire bodies with special leather or better armor (this special armor costs two to three times more than normal armor) can safely approach a stirge. Even the slightest gap in the protection is seen and smelled by the creature, and a successful attack roll means the creature has broken through the weakness and locked on.
After a stirge has gorged itself by draining blood, it sleeps for one day, plus one day for every 2 points of blood it drank (the maximum sleep period is after drinking 12 points of blood -- seven days). During this period of rest, silent attackers can impose a -2 penalty to the stirges' surprise roll, as the beasts wake slowly and remain drowsy for a few moments. They are most vulnerable at this time. While certain species of stirges prefer to dine on human blood, most are content with any large mammal, like cows, moose, and deer. Experienced druids and rangers usually recognize the traces of a stirge colony by the occurrences of mysteriously drained and dead animals in the vicinity.
A stirge colony's territory extends for only a mile in diameter, so stirges move around a lot after they've drained a region of the available blood. Often, the presence of stirges is only discovered long after the colony has departed, making it very difficult to track them.

### Jungle Stirges

There are rumored to be exceptionally large varieties of stirges deep in the densest tropical jungles. Though they are only 2+2 Hit Die creatures, they attack as 8 Hit Die monsters. Purportedly, they have a paralyzing poison in the tips of their sharp snouts that is highly prized by local tribesmen. Jungle stirges have been known to mingle with giant vampire bats. None of these larger versions have ever been captured or examined by sages, so nothing else is known about their strengths or weaknesses. What little of them is known came from the cannibals and head hunters of the jungle regions.

# Su-Monster

| | |
|---|---|
| **Climate/Terrain:** | Dark areas/Wilderness and subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Family/clan |
| **Activity Cycle:** | Dawn and Sunset |
| **Diet:** | Omnivorous |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | C, Y |
| **Alignment:** | Chaotic (evil) |
| **No. Appearing:** | 1d12 |
| **Armor Class:** | 6 |
| **Movement:** | 9 |
| **Hit Dice:** | 5+5 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 5 |
| **Damage/Attack:** | 1d4/1d4/1d4/1d4/2d4 |
| **Special Attacks:** | Psionic, ambush |
| **Special Defenses:** | Psionic |
| **Magic Resistance:** | Nil |
| **Size:** | M (large ape) |
| **Morale:** | Average (8-10) |
| **XP Value:** | 650 |

Su-monsters look like big gray monkeys, 4 to 5 feet tall. They have large bones and muscular limbs, but they always appear a bit underfed, because their ribs and vertebrae show prominently. Their long, prehensile tails can easily support their weight. Their hands and feet are virtually alike, each having three long, thick fingers and an opposable thumb, all equipped with claws. Like the tail, their hands and feet are very strong, allowing them to hang by one limb for several hours. Short, dirty gray fur covers most of their body. Their face and tail are black, while their paws are always bloody red (making them look like they just finished killing something, which is the case more often than not). They frequently grin, but this is usually a sharp-toothed threat rather than a gesture of friendliness.

**Combat:** Su-monsters attack with all four legs when possible, raking their extremely sharp nails across their victim. They can also deliver a powerful bite with their canine-like mouth. These creatures like to hunt in small packs (1d12 members). Their favorite hunting grounds are well-traveled trails through the jungle/forest. They search for a sturdy branch overhanging a trail, and perch in the trees, waiting patiently. When a victim passes beneath them, they an swing down, using their tails as anchors. This way they can attack with all four claws plus the bite. Victims of this kind of ambush suffer a -4 penalty to their surprise rolls.
What really makes these beasts ferocious is their tribal protectiveness. Half the time (50% chance), the entire family takes part in the hunt: male, female, and two young. If the young are attacked or threatened, the females fight as if under a *haste* spell (i.e., double movement and number of attacks). Likewise, if the they females are attacked, the males appear to fight with *haste*. A surge of adrenaline accounts for this ferocity. Females can maintain the effect for up to 6 turns (an hour), and males can maintain it for up to 4 turns. Psionically these creatures can be deadly. They know three attack modes. They are also impervious to telepathic attacks. When su-monsters are using enhancement, they can attack both psionically and physically if they choose (instead of a double attack rate).

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 2 | 3/1/3(2/5) | PsC,MT,PB/Nil | = Int | 120 |

Su-monsters always know the following powers, and there is a 10% chance that they will have one more science and two more devotions in the psychometabolic discipline.
**Psychometabolism - Devotions:** enhancement (no cost, see above).
**Metapsionics - Devotions:** psionic sense (always on, no cost) .
**Telepathy - Sciences:** psychic crush. Devotions: mind thrust, psionic blast.

**Habitat/Society** A su-monster family is composed of two parents (adult male and female) and two young. When two or more families live together, they form a clan. Su-monsters are very territorial and have a particular hatred for the psionically empowered.
According to legend, su-monsters were created by a powerful evil cleric or mage, who wished to guard his forest from intruders (especially psionic ones). The creatures do make a formidable attack force, which tends to support this theory. According to some sages the creatures are magical hybrid of humanoids and apes. In any event, many evil wizards and priests employ su-monsters as forest guards today.

**Ecology:** Su-monsters keep their valuables well hidden in the high boles of the trees in their territory. They have no food value, since their meat is mildly poisonous. Characters who eat su-monster meat must save vs. poison or become ill, and no natural healing is possible for 1 week.

Swanmays are human females who can assume swan form. In human form, swanmays are indistinguishable from other people. They normally wear light armor and carry rangers' gear, as well as a sword, dagger, bow, and arrows. These items are unaffected by a swanmay's shapeshifting, so they must be hidden. Swanmays may be recognized by a feather token, feathered garment, or signet ring. Such items are transformed into part of the swans' plumage or worn on a leg.

**Combat:** In human form, the swanmay functions as a ranger. To determine the level and Hit Dice of a swanmay, 2d6 are rolled. She attacks with whatever weapons she possesses.
In swan form, a swanmay is harmed only by +1 or better weapons. She attacks with buffeting wings, a flying leap, and a bite.

**Habitat/Society:** Swanmays are members of a special sorority of lycanthrope rangers. Unlike other lycanthropes, their shapeshifting ability is gained voluntarily from a special token: a feather token, a feather garment, or a signet ring. Such items reveal their magical auras when exposed to a *detect magic* spell. Without the item, she is forced to remain in her current form. Tokens only function for swanmays.
Swanmays are extremely secretive about their sorority. Only human women are admitted; the other requirements are unknown. It is suspected that women are invited to join when they unknowingly perform a great service for another swanmay. If a PC is invited to join, it is 50% likely that she will retire from casual adventuring to devote herself full time to her new responsibilities.
Swanmays are guided by their swan personalities. They dislike noisy, brash creatures, ferocious beasts, and anything of an evil alignment. They are friendly with forest folk, such as sylvan elves and dryads. They tend to avoid normal humanoids. Only nature priests are known to regularly associate with swanmays; such alliances are generally initiated by swanmays when they need help against a common evil.
Swanmays build communal lodgings near bodies of water, deep in the forest. Such lodgings are lightly fortified against land attack. They usually contain two means of escape -- a secret tunnel to the lake and a ceiling hatch. Swanmays in swan form can use either route. Swanmay lodgings may be recognized by the number of waterfowl living nearby. The remains of poachers may also be left here as a warning to others.

**Ecology:** Swanmays are independent protectors of the forests and wildlife. They actively oppose evil races or monsters that might otherwise decimate wildlife and the countryside. They protect swans more out of sympathy for their similarity than out of any kinship.

## Bird Maidens

In the mountains and cool valleys of the lands of Zakhara lives a race of bird maidens, related to the swanmays. Just like their sisters, they depend on a token to change forms: a colorful shawl or veil of feathers. They can assume many bird shapes, including falcons, swallows, parrots, and even (at 8th level) giant eagles.

Though they have no sorority, bird maidens are loosely united by their faith. All bird maidens are kahina, idol priestesses who believe in the divinity of all things. They live as wandering teachers, protecting the land from those who despoil it. They get along best with those who respect the land: desert riders, mystics, and fisherfolk. In the fertile river valleys, they preach the faith and maintain the fertility of the land and livestock. Some tribesmen believe bird maidens are *hama*, spirits of the departed, who return to help the living. Bird maidens deny this and may cut themselves to prove that they are flesh and blood.

Bird maidens' Hit Dice are equal to their priestly level, from 2-8. They have major access to the All, Animal, Divination, Elemental, Healing, Plant and Weather spheres and minor access to the Creation, Protection, and Sun spheres. They carry spears, darts, and slings, but may not wear armor or shields (even magical) heavier than hide. If they do, they cannot use spells. Bird maidens cannot turn undead.

In bird form, bird maidens can peck and claw, but most don't fight as birds. Only a bird maiden's shawl or veil changes with her when she shifts form. All other equipment is unchanged and must be hidden or cared for by others until the bird maiden again changes her form.

Bird maidens are sometimes forced to marry men who steal their shawls; if they ever recover them, they leave their husbands, killing their sons and taking the daughters with them to become bird maidens. If the feathered garment is destroyed, the bird maiden dies as well.

Rumors tell of a great wooden fortress among the clouds of the high hills, called the Crown of All Feathers, where young bird maidens are taught the rituals and duties of kahinas by the Aarakocra.

| **Morale:** | Steady (11-12) | Average (8-10) |
| **XP Value:** | 420<br>Clan leader: 975<br>Shaman, 3rd: 975<br>Shaman, 5th: 3,000 | 5,000 |

Tabaxi have spotted coats ranging in color from light yellow to brownish red. These graceful feline humanoids are tall and slender, with retractable claws, and eyes of green or yellow.
Some tabaxi have solid spots and are also called leopard men; they pronounce their name ta-BAX-ee. Tabaxi in other regions have roseate spots, are called jaguar men, and pronounce their race's name tah-BAHSH-ee.

**Combat:** Tabaxi are great hunters, combining quick, stealthy movements with natural camouflage to surprise prey. Enemies suffer a -2 penalty to surprise rolls. Tabaxi are clever and organized, often driving prey into an ambush (though some play with prey before killing it). Tabaxi climb and swim, and can use those abilities in combat. Because of their cleverness and acute sense of smell, tabaxis are almost impossible to trap.
Tabaxi often use weapons of wood, bone, and stone, including bolas, slings, obsidian studded clubs (treat as battle axes), and javelins with atlatl. They are as likely to use claws and teeth as any other weapon. If both forepaws hit, a tabaxi rakes with its rear claws. A group encountered in the wild will include a Hunt Leader with maximum hit points, and may (50% chance) include a 3rd-level priest with appropriate Hit Dice and spells.

**Habitat/Society:** Tabaxi clans contain equal numbers of males and females, and a full clan has 1d6+1 Hunts of 2d4 tabaxi. The Hunts work the area around the clan lair. Some lairs are temporary, but most are small villages of ramadas (huts with grass roofs supported by tall poles, and no walls). In a lair, 3d4 young with 1 HD each will be found. An elder with 4 HD leads the clan, and 50% of the leaders are aided by a 5th-level shaman. A clan has a 10% chance of owing allegiance to a tabaxi lord; these clans tend toward evil, warlike ways, and their shamans worship evil powers. Shamans of other clans worship powers related to sunlight, rain, or animals.
Tabaxi are reclusive and avoid other intelligent beings, even other tabaxi clans. They do not engage in trade, which they consider demeaning, but some few have agents who trade for them. Tabaxi speak their own ancient language. Legends tell of a great tabaxi civilization that was supplanted by other races.

**Ecology:** Tabaxi have few natural enemies. For food, they prefer the boar-like peccaries and huge rodents called capybaras; only a very degenerate clan attacks members of another intelligent species for food. Tabaxi are sometimes hunted for their pelts, worth up to 250 gp each. Their skins and claws are also useful in some types of natural magic.

### Tabaxi Lord

A tabaxi lord appears as a huge jaguar or leopard, depending on where it is found. They are intelligent, malicious, and cunning. They speak tabaxi and languages commonly used by nearby societies. The antithesis of couatls, tabaxi lords hate them (the feeling is mutual) and attack couatl on sight.

Tabaxi lords use trickery, ambush, allies, and spells to weaken foes before closing for combat. Some 55% are 7th-level wizards, while 40% are 7th-level priests of a dark power known as Zaltec. Five percent are both wizard and priest. Wizard spells are chosen from the schools of illusion, enchantment/charm, or necromancy; spells from the schools of alteration and invocation/evocation are never used. In addition to spells that require only verbal components, they can use the following powers at will: *detect good/evil*, *detect invisibility*, *bind*, and *hypnotism*. The bravest and cruelest tabaxi lords can use *dimension door* three times per day.

Tabaxi lords are closely related to tabaxi, perhaps a cursed version. All tabaxi lords are male and must take a tabaxi mate to produce offspring (always a male tabaxi lord). Although usually solitary, a tabaxi lord sometimes takes leadership of a tabaxi clan for the purpose of mating and insuring offspring. Some choose to stay with the clan even after the offspring is born and sent off to make its way in the jungle.

The tako are a race of intelligent octopi who can move onto land and use weapons and other tools. Tako have no bones; their plump bodies are protected by tough mantles of leathery skin. They have eight supple tentacles, similar to those of octopi, lined with circular muscles that act as suction cups. They have a single golden eye centered in their heads, and sharp, protruding jaws that resemble the bill of a parrot. Although tako can change color with ease, a mature male's normal color is light green, while a mature female's is orange-red. Young tako appear in a variety of colors, including black, brown, white, blue, and golden.

Tako have their own language based on tentacle movements and skin-color changes. Characters with an Intelligence of at least 17 (or with the reading/writing proficiency) have a 25% chance of understanding the tako's language.

**Combat:** Though normally docile, tako attack any creature who invades their territory. In addition, they have a strong sense of honor, and will avenge attacks and ally with members of other races who assist them. They are crafty opponents. Tako can change their color and pattern to match any natural terrain in a single round. This camouflage makes them 90% undetectable, and modifies the surprise rolls of opponents by -3.

Most tako war parties are exclusively male. The tako attack with their beaks. They also can anchor themselves with a single tentacle, leaving the remaining seven tentacles free to make attacks. Usually, the tako carry seven weapons -- one spear or hand axe in each free tentacle.

Tako can make constriction attacks similar to octopi. Any victim under 7 feet tall (or 7 feet long) can be grappled by one tentacle at a time. Male tako have a 10% chance of pinning both of the victim's arms with a single strike; females have a 15% chance. The chance of pinning only one upper limb is the same. If both limbs are pinned, the victim has no attack. If only one limb is pinned, the victim attacks with a -3 penalty to his attack roll. If no limbs are pinned, the victim attacks with a -1 penalty.

Tako tentacles grip with a Strength of 18/00; a victim with a Strength equal to or greater than 18/00 can grasp the tentacle and loosen it, negating the constriction. To break completely free, a tentacle must be severed; males have 4 hit points per tentacle, females have 6 hit points per tentacle. Unless loosened or severed, tentacle constriction automatically inflicts 1-4 hit points of damage per round from males, or 2-8 (2d4) points from females.

Young tako cannot perform constriction attacks. Their AC is 7, and they have 1 HD. Their THAC0 is 20. They inflict 0-1 hp of damage per tentacle attack, and 1-3 hp with their beak. Otherwise, they're just

small, feisty versions of their parents, with an MR of 1 (Sw3) and XP value of 35.

**Habitat/Society:** A tako tribe comprises 3-12 (3d4) males, half as many young, and 1-2 females. Females make all decisions for the tribe, while the males act as defenders and hunters. The creatures establish their lairs in coastal underwater caves, making occasional raids on land for food, weapons, and treasure items. In some areas, tako coexist with humans, cooperating to attack sea monsters and to help fishermen, but such cases are extremely rare.

**Ecology:** Tako eat oysters, crabs, lobsters, and other shell fish, which they crack open with their powerful jaws. They can eject small clouds of rich blue ink, but the clouds are too limited to serve as a defense. Humans greatly prize the ink, however, and use it to create calligraphy.

# Tanar'ri

| **Morale:** | Fanatic (17-18) | Fanatic (17-18) |
| **XP Value:** | 46,000 | 45,000 |

Tanar'ri are, in the broadest terms, chaos and evil defined. The less intelligent often attack without question and fight until slain. True and greater tanar'ri often roam the Astral and Ethereal Planes -- their attention is attracted by those in an ethereal state.

**Combat:** In addition to the separate abilities of each sort of tanar'ri, they all share the following magical powers:

| Attack | Damage | Attack | Damage |
|---|---|---|---|
| acid | full | gas (poisonous, etc.) | half |
| cold | half | iron weapon | full |
| electricity (lightning) | none | magic missile | full |
| fire (magical) | half | poison | none |
| fire (nonmagical) | none | silver weapon | full* |

* greater tanar'ri suffer half damage from silver weapons.

All tanar'ri with average or above average intelligence have a form of telepathy that enables them to communicate with any intelligent life form, regardless of any language barriers.
Frequently, the Abyss-forged, magical weapons of the tanar'ri dissolve upon the death of the creature. When one doesn't, it is likely that the weapon in question originated somewhere else.

**Habitat/Society:** There are five classifications of tanar'ri, listed in ascending order of power, and with species, below:

**Least:** dretch, manes, rutterkin
**Lesser:** alu-fiend, bar-lgura, cambion, succubus
**Greater:** babau, chasme, nabassu
**True:** balor, glabrezu, hezrou, marilith, nalfeshnee, vrock
**Guardian:** molydeus

**Balor (True Tanar'ri):** The greatest and most terrible of the true tanar'ri, the balors are the undisputed terrors of the Abyss. They are the very motivation behind the tanar'ri involvement in the *Blood War*. In every sense of the word, balors are the quintessential tanar'ri. They derive great pleasure from the suffering of others and go out of their way to torment lesser beings and cause them pain.
Balors are repulsive and loathsome to behold. They are towering humanoids with deep, dark red skin. They have huge wings that propel them with unnatural speed and agility. They have long, wicked claws and grotesque fangs that drip with venom. Balors are commonly surrounded by searing flames.

**Combat:** Balors attack with their great fists for 2-12 points of damage. Anyone struck by a balor's fists must roll a saving throw vs. spells with a -6 penalty or flee in terror for 1-6 turns.
Balors much prefer weapons to fists in combat. Each carries a great sword that looks like a bolt of lightning. In the hands of a balor, these swords are vorpal and can *detect evil/good* in a 30 foot radius. Any creature that picks up a balor's sword, regardless of whether its skin actually touches it, immediately suffers 10-60 points of damage and must roll a saving throw vs. spells, or die immediately.
Balors also use a great whip with many tails. These whips will inflict but 1-4 points of damage per hit. However, they magically wrap the victim, allowing the balor to draw the victim into his ever-present bodily flames. Once dragged into the flames, the victim suffers 4-24 points of damage per round. Escaping the whip requires a successful one-half strength check. When the whip holds a victim, it cannot be used in other attacks.
Balors may use one of the following additional magical powers at the 20th level of spell use per round at will: *detect invisibility* (always active), *detect magic* (always active), *dispel magic, fear, pyrotechnics, read magic, suggestion, symbol* (any type), *telekinesis,* and *tongues.*
They may also gate 1-8 least, 1-6 lesser, 1-4 greater, or 1 true tanar'ri to their location. The gate is always successful but may only be used once per hour.
Balors are completely immune to gas. If a balor is slain in the Abyss, it explodes in a blinding flash of light, inflicting 50 points of damage to everything in a 100-foot radius around the creature (saving throw vs. spell for half damage).

**Habitat/Society:** Balors exist for one purpose only: to wage the *Blood War*. They are driven by the strongest primal desire to fight and will command whole legions of beings into battle.
Balors also recognize a subtle but important aspect of the War: the prime material plane. They will often make pacts with mortals to perform services for the purpose of gaining power in the prime material plane. Balors know that the more followers or allies they can gain in the prime material, the more power they will have there.
There are at least 24 balors known to exist. The creatures do not inhabit any particular area of the Abyss, but wander about forming armies for battle with the baatezu (q.v.).

**Ecology:** There is nothing more important in the Abyss than the *Blood War*. The balor, in a sense, *are* the Blood War from a tanar'ri perspective, the ecology of the Abyss, driving the creation of new beings and mandating their survival.

**Marilith (True Tanar'ri):** Bold and cunning, marilith are the generals and tacticians for the *Blood War*. Where the balors are the influence and energy behind the war effort, the marilith are the brains and tactics. Terrible to behold, these creatures have the bodies of giant snakes, with huge, green, scaly coils. From the waist up, they are beautiful, comely females. Besides her obvious snake body, the feature that reveals the true nature of this tanar'ri is her six arms. They are commonly adorned with precious jewelry and highly decorated weapons -- marilith most often carry a different weapon in each of their six hands.

**Combat:** Although marilith are strategists and tacticians, they love to join combat and do so whenever the opportunity presents itself. They can attack with each of their six arms and constrict a victim with their snaky tails as well.

Marilith always carry a different weapon in each hand, favoring exotic swords and axes. The DM should assign specific weapons; 90% of them should be enchanted versions of the common variety, and 15% of those should be a special weapon. Marilith favor their weapons highly. If one should ever be lost or stolen, marilith go to great lengths to see that the weapon is recovered.

A marilith can also constrict with her deadly tail. If the tail hits in combat, it wraps around a victim, automatically inflicting 4-24 points of crushing damage each round. Additionally, due to the constriction of air, the victim must roll a successful Constitution check every round or fall unconscious. No opponent with less than a 15 Strength score can even hope to break free of the marilith's coils. There is a 10% chance per round, per point of Strength over 14, that the victim can escape. Marilith have the following additional magical powers that they can use once per round, one at a time, at will: *animate dead*, *cause serious wounds*, *cloudkill*, *comprehend languages*, *curse*, *detect evil*, *detect magic*, *detect invisibility*, *polymorph self* (7 times per day), *project image*, *pyrotechnics*, and *telekinesis*.

They may also attempt to gate in 2-20 least tanar'ri, 1-6 lesser tanar'ri, 1-4 greater tanar'ri, or 1 true tanar'ri once per hour with a 35% chance of success.

Weapons of +1 or less magical enchantment cannot harm a marilith. These creatures are never surprised. They cannot be fooled by illusions and are immune to mind-affecting spells.

**Habitat/Society:** As noted, marilith are the strategists of the *Blood War*. They are in charge of devising all tactics to be used during the battles and coordinate the activities of all true tanar'ri (save the mighty balors, of course). Due to the chaotic nature of the tanar'ri, it is not really possible to coordinate their activities, but the marilith are charged with it, nonetheless.

These stunningly powerful creatures have a hatred for the glabrezu. They feel that the subtle warfare of the glabrezu is a children's game and inferior to proper warfare. A marilith will attempt to discredit the workings of the glabrezu any chance it gets. They would completely destroy the subtle beasts, but the all powerful balors favor the glabrezus' tactics and would have them continue their ways.

**Ecology:** Marilith are true tanar'ri, which makes them a part of the driving force behind the *Blood War*. Moreover, they are the coordinators and generals of the war effort. Marilith feel that they are the true force behind the war. Secretly, they feel that the balors have their place only because of their great power, but are not absolutely necessary. They may be right in their belief, but the power of the balors remains unchallenged.

# Tarrasque

| | |
|---|---|
| **Climate/Terrain:** | Any land |
| **Frequency:** | Unique |
| **Organization:** | Solitary |
| **Activity Cycle:** | See below |
| **Diet:** | Omnivore |
| **Intelligence:** | Animal (1) |
| **Treasure:** | See below |
| **Alignment:** | Nil |
| **No. Appearing:** | 1 |
| **Armor Class:** | -3 |
| **Movement:** | 9, Rush 15 |
| **Hit Dice:** | 300 hp (approx. 70 HD) |
| **THAC0:** | -5 |
| **No. of Attacks:** | 6 |
| **Damage/Attack:** | 1-12/1-12/2-24/5-50/1-10/1-10 |
| **Special Attacks:** | Sharpness bite, terror |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | G (50' long) |
| **Morale:** | Champion (15) |
| **XP Value:** | 107,000 |

The legendary tarrasque, for there is fortunately only one known to exist, is the most dreaded monster native to the Prime Material plane. The creature is a scaly biped with two horns on its head, a lashing tail, and a reflective carapace.

**Combat:** The tarrasque is a killing machine and when active (see below) eats everything for miles around, including all animals and vegetation. Normal attacks are with its two forelimb claws (1d12 points of damage each), a sweeping tail lash (2d12 points of damage), a savage bite (5d10 points of damage plus acts as a *sword of sharpness*, severing a limb on a natural attack roll of 18 or better), and two thrusting horn attacks (1d10 points of damage each).

Once every turn, the normally slow-moving tarrasque can rush forward at a movement rate of 15, making all horn attacks cause double damage and trampling anything underfoot for 4d10 points of crushing damage.
The mere sight of the tarrasque causes creatures with less than 3 levels or Hit Dice to be paralyzed with fright (no saving throw) until it is out of their vision. Creatures of 3 or more levels or Hit Dice flee in panic, although those of 7 or more levels or Hit Dice that manage to succeed with a saving throw vs. paralyzation are not affected (though they often still decide to run away).
The tarrasque's carapace is exceptionally tough and highly reflective. Bolts and rays such as lightning bolts, cones of cold, and even magic missiles are useless against it. The reflection is such that 1 in 6 of these attacks actually bounces directly back at the caster (affecting him normally), while the rest bounce off harmlessly to the sides and into the air.
The tarrasque is also immune to all heat and fire, and it regenerates lost hit points at a rate of 1 hit point per round. Only enchanted weapons (+1 or better) have any hope of harming the tarrasque. The Tarrasque is totally immune to all psionics.

**Habitat/Society:** It is fortunate that the tarrasque is active only for short periods of time. Typically, the monster comes forth to forage for a week or two, ravaging the countryside for miles around. The tarrasque then seeks a hidden lair underground and lies dormant, sleeping for 5d4 months before coming forth again. Once every decade or so, the monster is particularly active, staying awake for several months. Thereafter its period of dormancy is 4d4 years unless disturbed. The ratio of active to dormant states seems to be about 1:30.

**Ecology:** Slaying of the tarrasque is said to be possible only if the monster is reduced to -30 or fewer hit points and a *wish* is then used. Otherwise, even the slightest piece of the tarrasque can regenerate and restore the monster completely. Legend says that a great treasure can be extracted from the tarrasque's carapace. The upper portion, treated with acid and then heated in a furnace, is thought to yield gems (10d10 diamonds of 1,000 gp base value each). The underbelly material, mixed with the creature's blood and adamantite, is said to produce a metal that can be forged by master dwarven blacksmiths into 1d4 shields of +5 enchantment. It takes two years to manufacture each shield, and the dwarves aren't likely to do it for free.
It is hoped that the tarrasque is a solitary creation, some hideous abomination unleashed by the dark arts or by elder, forgotten gods to punish all of nature. The elemental nature of the tarrasque leads the few living tarrasque experts to speculate that the elemental princes of evil have something to do with its existence. In any case, the location of the tarrasque remains a mystery, as it rarely leaves witnesses in its wake, and nature quickly grows over all remnants of its presence. It is rumored that the tarrasque is responsible for the extinction of one ancient civilization, for the records of their last days spoke of a "great reptilian punisher sent by the gods to end the world."

**Note:** Creatures with a minus THAC0 can only be hit on a 1.

| | Chieftain: 270 |
| | Shaman: 420 |

Tasloi are long-legged, flat-headed humanoids. They walk in a crouching posture, touching their knuckles to the ground from time to time. Their skins are a lustrous green and are thinly covered with coarse black hair. Their eyes are similar to a cat's and are gold in color.
Often they can be heard at night, speaking in their high, whispery voices. Tasloi speak their own tongue and can also speak the languages of monkeys and apes. About 5% of their kind have learned a pidgin common that they use when trading.

**Combat:** Tasloi like to hide in tree tops and drop down on the weak and unwary. They are quick and

nimble in the trees, but slow and clumsy on the ground. When they are in jungle, their stealthy movements impose a -4 penalty to opponents' surprise rolls. They also hide in shadows, like a thief, with 75% effectiveness. Their infravision enables them to see up to 90 feet in darkness, but they hate daylight and suffer a -1 penalty to their attack roll when fighting in broad daylight.
Tasloi carry the following weapons: small shield (AC 5) and javelin -- 20%, club and javelin -- 40%, short sword and small shield (AC 5) -- 10%, javelin and net -- 15%, short sword and net -- 10%, or javelin and lasso -- 5%. Tasloi without shields are AC 6. They customarily carry all javelins and shields on their backs when they travel through the trees.
Tasloi eat anything, but they enjoy all kinds of flesh, especially humans and elves. They normally attack from above, trying to capture if possible. If they gain surprise, they use their 10-foot-diameter nets to trap their prey (the nets totally entangle those of less than 15 Strength; those of 15 or greater Strength need a successful open doors roll to rip the net and escape). If a party is too vigilant or prepared, the tasloi attempt to wear down the group through short, sudden attacks followed by retreat. If possible, tasloi try to steal the enemy's dead after an attack.

**Habitat/Society:** The tasloi live in loosely-structured bands of several families. In every band of 70 or more, there is a chief of 5 Hit Dice. There is a 30% chance that any band has a shaman. Tasloi shamans may advance up to 5th level.
When found in their lair, in addition to the males, there are females and young equal to 70% and 50% of the number of males, respectively. Females fight as males, but the young do not fight at all. The lair consists of a series of 1d6 large trees with 4d6 platforms 50-100 feet above the ground. All the trees are connected by vines and ropes. There is a 60% chance that the tasloi have 1d6 trained giant spiders and a 20% chance that they have 2d4 trained giant wasps. Tasloi are able to ride these wasps for great distances, and the spiders aid in the construction, protection, and overall maintenance of the tree-village.

**Ecology:** It is not known where and how tasloi originated. It is likely they have been around for many millennia, interbreeding in deep isolated jungles. Their primitive lifestyle has probably existed in much the same fashion for thousands upon thousands of years.
While certainly among the least fearsome of all jungle creatures, tasloi are perhaps worth worrying about in numbers, or after fleeing encounters with nastier jungle denizens. Tasloi know the location of such lairs and often set up obvious escape routes for any creature that foolishly finds itself confronting the beast. The tasloi then lay their traps along the escape path and wait for the weakened, unsuspecting creatures to run through blindly. This strategy is highly successful, apparently, as the tasloi boast many more trophies than their small size and limited prowess might otherwise indicate.

# Thought-Eater

| | |
|---|---|
| **Climate/Terrain:** | Ethereal Plane |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Mental energy |
| **Intelligence:** | Not ratable |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-3 |
| **Armor Class:** | 9 |
| **Movement:** | 6 (ethereal plane only) |
| **Hit Dice:** | 3 |
| **THAC0:** | Nil |
| **No. of Attacks:** | 0 |
| **Damage/Attack:** | Nil |
| **Special Attacks:** | Psionics, absorb: psionics, spells, and intelligence |
| **Special Defenses:** | Ethereal existence |
| **Magic Resistance:** | absorb (See below) |
| **Size:** | S (3' long) |
| **Morale:** | Unsteady (5-7) |
| **XP Value:** | 1,400 |

Thought eaters are natives of the Border Ethereal, and they only survive in ethereal form. They appear as sickly gray skeletal bodies with oversized platypus heads. They have webbed skeletal paws, suited to swimming through the ether.
A thought eater has only one desire -- to avoid death. For some reason, they die almost instantly on the Prime material plane. Fortunately for them, they have several psionic powers which help to prevent this.

**Combat:** Thought eaters are unique. They have no combat abilities except their innate psionic talents, even on the Border Ethereal, so they can be easily slain if encountered there.
Thought eaters are far from harmless, however. Although they cannot survive outside the Border

Ethereal, their psionic powers extend into the Prime material plane. This is one of the few known examples of transplanar extension.
The thought eaters' psionic sense is always operating. Because of their unique abilities, they can sense psionic activity in the Prime material plane, as well as the Border Ethereal. When they detect psionic activity of any kind, they will shift to the location of the emanations.
Their only "attack" is their innate ability to absorb psionic energy. They can absorb psionic energy within 60 feet of a true psionicist or psionic creature, or within 10 feet of a wild talent. Thought eaters drain 10 psionic points per round and they will also absorb any spell cast in the area as well as memorized spells (5 points per spell level). Finally, they can feed upon Intelligence, with each point converted to 10 PSPs that they absorb. They will feed until all victims die or escape, or until they themselves are sated. This occurs when they reach a number of points equal to their PSPs.
Although they feed on brain power, thought eaters are essentially stupid. Because they lack intelligence, they are immune to all telepathic attacks and controls (psionic or otherwise). Their preferences and the order in which they feed are always the same: 1) psionic points being expended (causes power to fail); 2) magical energy being expended (causes spell to fail; 3) PSPs; 4) memorized spells; 5) Intelligence. Note that if a thought eater consumes all of someone's Intelligence, the victim will become a vegetable (effectively dead). The Intelligence loss is permanent, unless it is relieved by *restore* or psychic surgery. Spells can be re-memorized and drained PSPs can be recovered naturally
The thought eaters' feeding frenzy has the sole purpose of maintaining thought eaters in the ether. Their bodies process PSPs the way humanoids process food, at a rate of 3 PSPs/hour. If they run out of points, they drop out of the ether into the Prime material plane and meet an instant death.
Note that ethereal beings are invisible to creatures on the Prime material plane, it is probable that a thought eater will attack and feed unnoticed and uncontested until sated, or until its victims are out of range. Although it only has a movement rate of 6, this is ethereal movement, allowing passage through walls, trees, etc. as if they didn't exist.
Any defense mode except those with a 0 maintenance cost will prevent the thought eaters from feeding. This includes spells like *mind blank,* and magical devices that thwart psionic attacks

**Psionics Summary:** Thought eaters have 1d100+100 (101-200) PSPs. Their score is 18. They boast a natural, innate form of psionic sense (in a metapsionic power), which operates continuously at no cost to PSPs. They also absorb PSPs-see *Combat*.

**Habitat/Society:** Little is known about thought eaters, except that they exist solely in the ethereal plane and are very solitary beings. Magical research has indicated that they are not malevolent; their attacks are for the sole purpose of staying alive, the same as any humanoid hunter. Some sages believe that though eaters are the final fate of psionisists, once they die.

**Ecology:** Thought eaters carry no treasure. When one dies, it automatically drops out of the ether and materializes on the Prime material plane. Of course, they are usually dismissed as platypi that died from starvation.

# Thri-Kreen

| | |
|---|---|
| **Climate/Terrain:** | Temperate or tropical arid land |
| **Frequency:** | Uncommon |
| **Organization:** | Pack |
| **Activity Cycle:** | Constant |
| **Diet:** | Carnivore |
| **Intelligence:** | Average to high (8-14) |
| **Treasure:** | Varies |
| **Alignment:** | Chaotic neutral |
| **No. Appearing:** | 2d12 |
| **Armor Class:** | 5 |
| **Movement:** | 18 |
| **Hit Dice:** | 6+3 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 5 or 2 |
| **Damage/Attack:** | 1d4(x4)/1d4+1, or 1d4+1 and by weapon |
| **Special Attacks:** | Paralyzation |
| **Special Defenses:** | Missile dodge |
| **Magic Resistance:** | Nil |
| **Size:** | L (11' long) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 1,400 |

The figures given above are for mature adult thri-kreen. Others have the following abilities, based on their age (they age one age category per year until they reach mature adult):

| | Claw/bite | Special ability |
|---|---|---|

| | HD | THAC0 | XP | damage | gained (see below) |
|---|---|---|---|---|---|
| Larva | 1+3 | 19 | 65 | 1/1 | -- |
| Child | 2+3 | 17 | 120 | 1/1 | -- |
| Young | 3+3 | 17 | 175 | 1d3/1d3 | leap |
| Young adult | 4+3 | 15 | 270 | 1d3/1d3 | -- |
| Adult | 5+3 | 15 | 975 | 1d4/1d4+1 | venom, chatkcha |
| Mature adult | 6+3 | 13 | 1,400 | 1d4/1d4+1 | dodge missiles |

Thri-kreen are a race of large, intelligent insects often referred to as "mantis warriors." They roam the deserts and savannahs, where they have marked-out hunting territories. They have no need of sleep and can remain active through the day and night.
Mature adult thri-kreen are roughly 7 feet tall at the shoulder and 11 feet long. Of the six limbs protruding from their midsection, two are used for walking; the other four end in four-fingered hands. The tough, sandy-yellow exoskeleton is extremely hard. A thri-kreen has two compound eyes, usually black with highlighted eyespots, two antennae, and a complicated jaw structure that manipulates food as the thri-kreen chews. The antennae help the individual to maneuver through brush and grasslands in the darkness (they also reduce any melee combat penalty from darkness or blindness by 1; missile combat is not affected). Thri-kreen often wear harnesses and even some forms of clothing, but they never wear armor.
The native thri-kreen language is made up of clicks and the grinding of its jaw appendages. While it is difficult for other creatures to speak this tongue, it is just as difficult for a thri-kreen to imitate more standard speech patterns. Thri-kreen speak their own language, but some understand the Common tongue.
Thri-kreen seldom live more than 35 years.

**Combat:** A thri-kreen's chitinous exoskeleton gives it AC 5 naturally. Unarmed, it can attack with four claws and one bite attack per round. If using a weapon, the thri-kreen can attack with its weapon and bite. The *gythka*, a pole arm with a blade at each end, can slash for 1d6 hp damage against man-sized or smaller targets, or 1d10 hp damage against a larger target. The gythka can be thrown as a spear to inflict 1d6+2 hp damage. Thri-kreen also learn special combat maneuvers as they grow older, learning all by the time they are mature adults.
**Leap:** This ability allows a thri-kreen to leap 20 feet straight up or up to 50 feet forward. They cannot leap backward.
**Chatkcha:** This is a crystalline throwing wedge. A thri-kreen can throw two chatkcha per round, up to 90 yards. A chatkcha causes 1d6+2 damage when it hits, and returns to the thrower when it misses.
**Venom:** This venom is delivered through an older thri-kreen's bite. Anyone bitten must make a successful saving throw vs. paralyzation or be paralyzed. Smaller than man-sized creatures are paralyzed for 2d10 rounds, man-sized for 2d8 rounds, large creatures for 1d8 rounds, and huge and gargantuan creatures for only one round.
**Dodge missiles:** A mature thri-kreen can dodge missiles fired at it on a roll of 9 or better on 1d20; they cannot dodge magical effects, only physical missiles. Magical physical missiles (arrows, thrown axes,

etc.) modify this roll by their magical bonus.
**Psionics:** Some thri-kreen have psionic wild talents. There is a 50% chance that any thri-kreen will have a psionic wild talent, described in the *Complete Psionics Handbook*.
**Magical Items:** Thri-kreen can use most magical items, though those designed for humanoid creatures cannot be worn properly, so will not function for a thri-kreen.

**Habitat/Society:** Thri-kreen organize into hunting packs; there are no permanent thri-kreen communities. Packs range over wide territories that they call their own. Small groups consist only of mature adults. Groups of more than eight thri-kreen are two-thirds mature adults, and one-third other age categories (in about equal numbers).

**Ecology:** Thri-kreen are carnivores. They seldom hunt other intelligent creatures for food, but will do so in times of need. Mantis warriors have a well-known taste for elves, which keeps both races at an uneasy peace at best.

**Related Species**
The **tohr-kreen**, or mantis nobles, are larger, more cultured versions of thri-kreen. Though many of them wander their world to gain knowledge, they sometimes build cities as well. They regard thri-kreen as somewhat barbaric cousins, though there have been incidences of a tohr-kreen creating a permanent settlement of thri-kreen, or teaching a pack more civilized ways.
The **xixchil** are spacefaring mantis. These creatures are skilled surgeons and artificers, who enjoy replacing lost limbs with "more efficient" substitutes.

# Titan

| | |
|---|---|
| **Climate/Terrain:** | Olympus |
| **Frequency:** | Uncommon |
| **Organization:** | Group |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Supra-genius to godlike (19-21+) |
| **Treasure:** | E, Q (x10), R |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 0 |
| **Movement:** | 36 |
| **Hit Dice:** | 20 |
| **THAC0:** | 5 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 7-42 (7d6) weapon +14 (strength bonus) |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 50% |
| **Size:** | G (25+' tall) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 21,000 (see below) |

Titans are gargantuan, almost godlike men and woman. They, quite simply, look like 25' tall people of great physical strength and beauty. They are commonly dressed in traditional Greek garb, favoring togas, loincloths, and such. They wear rare and valuable jewelry and in other ways make themselves seem beautiful and overpowering.

In addition to speaking their own language, titans are able to speak the six main dialects of giants. All titans are also conversant in the common tongue as well as that commonly spoken by forest creatures, as these giants have close ties with nature.

**Combat:** The basic attack of titans is their great maul (*maul of the titans*). These monstrous beings are capable of attacking twice in a melee round and inflicting 7-42 points of damage per hit.
Titans may choose to make a single other attack in a round. This form of special attack is so destructive and deadly, that a titan will use it only if there are no other options left open. The form of each titan's attack will be different (some kick, some punch, others use a breath attack, lightning, etc.), but the effect is the same for each. The special attack inflicts 10-60 points of damage per hit and can be used every other round. These mighty attacks have been known to destroy buildings and sink ships.
Titans can become ethereal twice per day. All titans are able to employ both mage or priest spells (dependent on the individual titan -- only one, not both) as a 20th-level spell caster. In addition, all titans have the following spell-like powers, at 20th level of spell use, usable once per round, one at a time, at will:

*advanced illusion*
*alter self*
*animal summoning II*
*astral spell*
*bless*
*charm person or mammal*
*commune with nature*
*cure light wounds*
*eyebite*
*fire storm*
*hold person*
*hold monster*
*hold undead*
*invisibility*
*levitate*
*light*
*mirror image*
*pass without trace*
*produce fire*
*protection from evil, 10' radius*
*remove fear*
*remove curse*
*shield*
*speak with plants*
*summon insects*
*whispering wind*

Titans are not affected by attacks from nonmagical weapons.

**Habitat/Society:** Titans are livers of life, creators of fate. These benevolent giants are closer to the well springs of life than mere mortals and, as such, revel in their gigantic existences. Titans are wild and chaotic. They are prone to more pronounced emotions that humans and can experience godlike fits of rage. They are, however, basically good and benevolent, so they tend not to take life. They are very

powerful creatures and will fight with ferocity when necessary.
To some, titans seem like gods. With their powers they can cause things to happen that, surely, only a god could. They are fiery and passionate, displaying emotions with greater purity and less reservation than mortal beings. Titans are quick to anger, but quicker still to forgive. In fits of rage they destroy mountains and in moments of passion will create empires. They are in all ways godlike and in all ways larger than life.
And yet is should be noted that titans are not gods. They are beings that make their home in Olympus and walk among the gods. Yet they are not omnipotent, omniscient rulers of the planes. Sometimes their godlike passions and godlike rages make them seem like deities, however, and it is common for whole civilizations to mistake them for deities.
In one society, Jeuron, a titan with dominion over knowledge, was revered as a god for centuries. Those mortals built their whole civilization around him and Jeuron revelled in the worship. He even walked among them occasionally to see their love and admiration. But Odin, of the Norse mythos, discovered his deception and punished Jeuron by shackling him to the bottom of the deepest sea for 100 years.
Titans have a natural affinity for storm giants. Those giants are the closest beings the titans have found to peers and they will readily befriend them. In any group of titans, there is a 35% chance that they will be accompanied by one or more storm giants. Although titans can sometimes be condescending by nature, they never treat the storm giants as subordinates or inferiors.
On Olympus, titans have developed a culture similar to what they found there. They wear similar clothing, eat similar foods, play similar music, etc. It is unclear why this has occurred. Perhaps the titans, in a godlike whim, adopted their favorite mortal lifestyle. Such would not be unusual for these great beings.
Titans primarily dwell in great palaces and mansions in Olympus where they live their lives whimsically. There they will dance, sing, study, debate and engage in all other manner of activities with titanic proportion. If a titan finds something that interests him, it would not be unusual for him to study it in great detail for many weeks, only to leave it when his interest has waned. They may also engage in debates or arguments that last literally for weeks at a time. These debates might end in a jovial laughter and good spirits or in thunder and rage. Such are the whims of titans.

**Ecology:** Titans are basically identical to humans, except much larger. What makes them immortal is not known. Perhaps it is their enchanted existence in the halls of Olympus.
These giants are commonly known to experience the same range of emotions as humans do. They develop idiosyncrasies as humans do, also. In fact, titan mannerisms emulate those of humans very closely. Again, it is difficult to tell if the titans are whimsically copying humans, or vice versa.

Titans, being godlike creatures, tend to be very diverse and unique. Each individual titan (or sometimes group of titans) have a special power is that related to their personality or sphere of influence. These powers are very different, and usually very strong. Some examples of the powers of a titan are explained below:

**Algorn**, a titan that has influence over the seas, has the ability to *create water* whenever he chooses to. This water can be vast as he desires, up to the volume of a medium-sized lake. Algorn can simply cause the water to flow, he can cause it to jet out from his hands (washing away everything in its path away), or he can even cause the water to be frozen.
**Mane**, a titan with dominion over felines, has the ability to change into a giant form of any cat. When he transforms, he is instantly cured of all wounds, poisons, and diseases. Mane may change into a cat and

back again five times per day.
**Porphyl** is a titan with the power of growth. He may cause any immature life to grow to maturity. Thus, he can cause crops to grow, he can make a boy grow to manhood, etc. Porphyl is very wise and would never abuse his ability.
**Malephus**, a titan with influence over law and justice can unerringly detect any spoken lie and any bad intention. He is often used by many greater powers in trials of justice. Malephus is totally honest; he is incapable of lies or deception.
**Syllia**, a titan with power over love, can remove any negative feelings from any being (except deities and powers). She has the ability to remove hatred, unhappiness, depression, etc. Syllia cannot remove the feeling permanently, but for at least a day or so. The deities of the upper planes often employ her power when trying to stop wars.
**Girzon**, a titan with dominion over death, can take the life from any living being. It should be noted that Girzon has never used this ability unless commanded to by a deity. Girzon's restraint and self-control is revered by other titans.

**Greater Titans:** Rumors exist of a race of titans more powerful still than common titans. These *greater* titans are said to be very close to the gods and always accompany one (with some deities and powers being attended by more than one greater titan). Perhaps greater titans were formally common titans who have grown so great in power that the gods brought them closer to themselves. Such matters are not common knowledge.
It is very difficult to provide combat statistics for greater titans. Like the gods themselves, greater titans are simply not subject to aggression from nondivine beings. They are never harmed by such attacks.

# Toad, Giant

| **XP Value:** | 120 | 270 | 270 | 175 |

Giant toads are found in most regions. Although their smaller cousins are beneficial insect eaters, the large toads devour (or at least attempt to devour) any creature which appears edible.
Their exact appearance varies from species to species, but these beasts are all just what their name implies, giant versions of toads. Coloration runs the gamut from weak brown to iron red, but their skin is always dry, rough to the touch, and warty.

**Combat:** All giant toads can jump up to their movement distance. This hop will clear any object up to one- third as high as the length of the leap and requires but a single round to accomplish. A jumping toad can attack in midair or at the end of the leap.
When hunting, giant toads remain motionless until likely prey walks or slithers within range. The toad then leaps to the attack; the victim has a -3 penalty on its surprise roll.

**Habitat/Society:** Giant toads often make their homes underground, where they enjoy both the damp air and the steady supply of food. They prefer temperate zones, near water where they can lay their eggs, but often survive in surprisingly cool or dry regions.
Toads are often attracted to settled areas where they prey upon livestock (goats, chickens, and even sheep). Cities often have problems with sewer toads, giant monstrosities which have grown fat on vermin, house pets, and, occasionally, civil engineers.

**Ecology:** Giant toads keep no treasure, but worthwhile indigestibles are occasionally found in their droppings. Their skin can be fashioned into suitable leather armor, but its odor will be at least as distinctive as its appearance.

## Fire Toad

These large, red toads are about 4 feet long and covered with rough, purple warts. Fire toads shun water, preferring drier surroundings. Fire toads are so named because of their ability to exhale small fireballs. These fireballs are their only form of attack; a single fireball can travel up to 30 feet and has a blast radius of 5 feet. Damage is equal to 2-16 points, half that if a saving throw vs. spell is made. Fire toads rarely attack unless threatened, molested, or defending their lairs. Fire toads subtract 1 point of damage on all dice for fire-based attacks against them, but cold- or water-based attacks inflict an additional point of damage per die. Throwing liquid -- even water -- at a fire toad will cause it to retreat, though it will immediately breathe twice at its assailant in the round of its retreat.

## Ice Toad

Fully intelligent, ice toads dwell in cold climes or far beneath the surface of the ground. In addition to its vicious bite, the creature can radiate cold in a 10-foot radius from its body. Ice toads can generate this special attack once every other round. All noncold-using creatures within this sphere of cold suffer 3-18 points of damage. Characters making a saving throw vs. spell suffer only half damage. Ice toads speak their own weird language and actively collect gems and jewelry, particularly diamonds.

## Poisonous Toad

These toads, indistinguishable from common giant toads, secrete a weak, hemotoxic poison. A creature bitten by a poisonous toad must save vs. poison at +2. Failure means the victim falls comatose and will die within 24 hours unless

treated.

# Treant

| | |
|---|---|
| **Climate/Terrain:** | Any forest |
| **Frequency:** | Rare |
| **Organization:** | Grove |
| **Activity Cycle:** | Any |
| **Diet:** | Photosynthesis |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | Q (x5), X |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-20 |
| **Armor Class:** | 0 |
| **Movement:** | 12 |
| **Hit Dice:** | 7-12 |
| **THAC0:** | 13 (7-8 HD),<br>11 (9-10 HD),<br>9 (11-12 HD) |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | Variable |
| **Special Attacks:** | See below |
| **Special Defenses:** | Never surprised |
| **Magic Resistance:** | Nil |
| **Size:** | H (13'-18') |
| **Morale:** | Champion (15-16) |
| **XP Value:** | |
| 7 HD | 2,000 (+1000 per Hit Die) |

Treants are strangely related to both humans and trees, combining features of both species. Peaceful by nature, treants can cause great damage when roused to anger. They hate evil things and the unrestrained use of fire.

Treants are almost indistinguishable from trees. Their skin is a thick, textured, brown bark. Their arms

are gnarled like branches and their legs fit together when standing like the trunk of a tree. Above the eyes and along the head are dozens of smaller branches from which hang great leaves. In winter the leaves of a treant change color but rarely fall out. Treants are very intelligent and often speak a number of languages including their own, elf, dwarf, common, and a smattering of just about all other humanoid tongues (at least enough to say "Get out of my trees!").

**Combat:** The combat ability of treants varies with their size. Young treants (13 or 14 feet) have 7 or 8 Hit Dice and inflict 2-16 points of damage per attack. Middle-aged treants (15 or 16 feet) have 9 or 10 Hit Dice, respectively, and inflict 3-18 points of damage per attack. Elder treants (17 or 18 feet) have 11 or 12 Hit Dice and inflict 4-24 points of damage per attack.
Due to their tough, barklike skin, treants have a superior Armor Class rating against almost all weapons. Their only weakness is fire. Any fire-based attack against a treant is at +4 to hit and +1 damage. In addition, treants save against all fire-based attacks at -4. This weakness to fire also applies to animated trees controlled by a treant.
Treants have the ability to animate normal trees. One treant can animate up to two trees. It takes one round for a normal tree to uproot itself. Thereafter the animated tree can move at a rate of 3 per turn and fights as a full-grown treant (12 Hit Dice, two attacks, 4-24 points of damage per attack). A treant must be within 60 yards of the tree it is attempting to animate. Animated trees lose their ability to move if the treant who animated them is incapacitated or moves more than 60 yards away.
Treants (regardless of size) and treant-controlled trees can inflict structural damage when attacking a building or fortification.

**Habitat/Society:** Treants live in small communities, usually amidst old hardwood forests (oak, maple, mahogany, etc.). In the forest treants rarely reveal themselves, preferring not to interact with the more transient lifeforms (anything with a lifespan of 500 years or less). Humans and demihumans have only a slight chance of spotting a treant who is trying to blend in with the trees. Rangers have a fair chance of spotting a treant (10% per level).
Treants are intolerant of evil, particularly when fire and the wanton destruction of trees is involved. They hate orcs and goblins with a passion and tend to be suspicious of anyone carrying an ax.
Treants have no use for treasure, and usually place all such items somewhere out of sight, such as under a great rock. Occasionally a treant can be convinced to give up his treasure but only when some great good will be accomplished by this generosity.

**Ecology:** Treants, like all trees, gain sustenance via photosynthesis. Treants often sleep for long periods of time (anywhere from a few days to several years) during which short roots grow into the ground beneath them gathering water and minerals from the soil. Reproduction is via off-shoot stalks which the female treants then protect and care for until the stalks are grown.
The lifespan of a treant is not known, but is several thousand years at least. As they grow older, treants become slower and less agile, sleeping for longer periods and talking less of things that are and more of things that were. Eventually an old treant will not wake up, taking permanent root in the spot where he sleeps and living out the rest of his life as a normal tree.

| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 90% |
| **Size:** | M (7' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | Normal: 270 |
| | Exceptional (4-6 HD): 650 |
| | Exceptional (7-8 HD): 2,000 |
| | Mage: 2,000 +1,000 per level over 7th |
| | Priest: 2,000 +1,000 per level over 7th |
| | Triton leader: 4,000 |

Tritons are rumored to be creatures from the elemental plane of Water that have been placed on the

Prime Material plane for some purpose unknown to man. They are sea dwellers, inhabiting warmer waters principally but equally able to live at shallow or great depths.
The lower half of a triton ends in two finned legs, while its torso, head, and arms are handsomely human. Tritons have a silvery skin that fades into silver-blue scales on the lower half of their bodies. Their hair is deep blue or blue-green. Triton speak their own language as well as those of sea elves and locathah.

**Combat:** Tritons carry either tridents (60%) or long spears (40%). Some 25% are also armed with heavy crossbows. When equipped for battle, tritons wear armor made of scales (AC 4).
Outside their lair, tritons are 90% likely to be mounted, either on hippocampi (65%) or giant sea horses (35%). These mounts fight in defense of their riders.
Exceptional tritons (see below) and triton leaders always carry conch shells with them. Not magical, their sounds are well known to all marine creatures. When blown properly by an exceptional triton, a conch summons 5d4 hippocampi, 1d10 sea lions, or 5d6 giant sea horses. These creatures swim to the aid of the summoning triton, arriving 1d6 rounds after the conch is first sounded. The conchs can also be sounded to frighten aquatic animals as the *fear* spell. This latter noise causes all marine creatures within 60 feet and with animal Intelligence or less to flee in panic. Creatures are allowed a saving throw vs. spell to avoid the fear effect, but even those who succeed with their saving throws have a -5 modifier on their attack rolls against the tritons.
Triton are reclusive and nonviolent. They normally attack to capture. If a triton is killed in a battle, however, the fight immediately becomes one of retribution. Should the fighting go poorly, the tritons withdraw to their lair to either gather reinforcements or make a last stand.
In addition to their other abilities, tritons are nearly impervious to magic with a natural magic resistance of 90%.

**Habitat/Society:** Tritons live either in great undersea castles (80% chance) or in finely sculpted caverns (20%). While tritons lean toward good alignment, they are very suspicious of outsiders and have no love for land dwellers in general.
Tritons rarely kill, unless provoked, but they are quick to apprehend those who intrude upon their seas. Trespassers found guilty of intentionally entering triton waters or treasure seeking are left "to the fate of the seas." This means being stripped of all belongings and set adrift at least 10 miles from any shoreline. Characters ruled innocent by the triton court awaken the next day on some distant shore. Tritons never aid land dwellers unless their own interests are involved in the matter.
For every 10 tritons encountered there is an exceptional triton of 4-6 Hit Dice. For every 20 encountered there is an exceptional triton with 7-8 Hit Dice. Groups of 50 or more are always accompanied by a triton leader (AC 2, 9 Hit Dice). There is a 10% chance for every 10 tritons encountered that they are accompanied by a triton mage of 1d6 levels.
At a triton lair, the following additional tritons are always found:

60 males (with related exceptional tritons)
One mage of 7th- to 10th-level ability
One priest of 8th- to 11th-level ability
Four priests of 2nd- to 5th-level ability
Female tritons equal to 100% of males (2 HD, AC 6)
Young equal to 100% of males (noncombatants)

There is also a 75% chance that the lair contains 2d6 sea lions as pets/guards.

**Ecology:** Tritons are omnivorous and live on fish, shellfish, and sea weed. They have no natural enemies save the giant squid, which is immune to the effects of their conch shells. Normal triton live approximately 300 years while their leaders and spellcasters have life expectancies of 500 years or more.

| **XP Value:** | Normal: 120 |
| | Guard: 175 |
| | Subchieftain: 270 |
| | Chieftain: 650 |

Troglodytes are a warlike race of carnivorous reptilian humanoids that dwell in natural subterranean caverns and in the cracks and crevices of mountains. They hate man above all other creatures and often launch bloody raids on human communities in search of food and steel.

Troglodytes stand about 6 feet tall, are covered in roughened leathery scales, and have a toothy lizard-like head. Males are easily distinguished from females by the fin-like crest that runs across their

heads and down their necks. Coloration for both sexes varies due to the troglodyte's chameleon-like ability to change skin tone, but grayish brown is most common. Most troglodytes wear little more than a leather weapons belt, with perhaps a small bag of semi-fresh meat. Leaders adorn their belts with pieces of steel, a sign of power in troglodyte culture. Troglodytes have excellent infravision (90-foot range). They speak their own language and no other.

**Combat:** Fifty percent of a troglodyte force use their teeth and claws. The remaining 50% use weapons: swords (5%), stone battle axes (10%), stone morning stars (10%), or two troglodyte javelins (25%). Of special note is the troglodyte javelin. These great darts grant a +3 bonus to the attack roll when thrown by a troglodyte; they cause 2d4 points of damage. This bonus reflects the troglodytes' great skill with these darts. About 25% of troglodytes carry two such darts apiece.

Troglodytes prefer ambushes to frontal assaults. Their favorite tactic is to pick a well-trod mountain or subterranean path and then use their chameleon power to blend in with the surrounding rocks. When a likely target walks by, the troglodytes hurl a volley of javelins (this attack gives opponents a -4 penalty to their surprise rolls, but only for the initial round). After a second volley, the troglodytes descend upon their hapless victims.

When angered or engaged in melee, troglodytes secrete an oil that smells extremely disgusting to all humans and demihumans. Those failing their saving throws vs. poison are so revolted as to lose 1d6 points of Strength. This loss remains in effect for 10 rounds.

**Habitat/Society:** Troglodyte society is organized into clans, with each clan led by a chieftain (usually the biggest and most fearsome troglodyte). A number of subchieftains also are present, chosen from those troglodytes that most distinguished themselves in battle. Rank is loose and internal squabbles common. Most chieftains lead only as long as the clan stays fed (and not one meal longer).

For every 10 troglodytes encountered there is one leader with 3 Hit Dice. For every 20 there are two subchieftains each with 4 Hit Dice. Groups of 60 or more always include the clan chieftain. The chieftain stands 7 feet tall, has 6 Hit Dice, and is accompanied by 2d4 guards with 3 Hit Dice each.

Troglodytes usually set their lair near a human or demihuman settlement. This enables them to prey on both the settlers and their livestock. The lair itself is typically a large cave or cavern with a number of smaller chambers adjoining it for the females and hatchlings. Troglodyte lairs contain a number of females equal to 100% of the males. Females have 1+1 Hit Dice each and fight to the death in defense of the hatchlings. Hatchlings number about 50% of the male population and are noncombatants.

Troglodytes value steel above all else, using it to make javelins and as a form of wealth. Individual troglodytes carry nothing of real worth, but their lair may contain considerable treasure amassed from their raids on the outside world. Often this wealth is carelessly strewn about, mixed in with half-eaten food, or just shoved into some out-of-the-way corner.

On moonless nights, raiding parties of 50 or more troglodytes venture forth in search of steel and food. These attacks usually target human settlements, where the troglodytes can use their infravision and their chameleon power to maximum advantage.

**Ecology:** Strict carnivores, troglodytes prefer human flesh over all others, but they won't hesitate to devour practically anything they can catch, including members of other troglodyte clans. Few creatures hunt troglodytes, for their taste is said to be even more vile than their odor.

Trolls are horrid carnivores found in all climes, from arctic wastelands to tropical jungles. Most creatures avoid these beasts, since trolls know no fear and attack unceasingly when hungry. Their frame appears thin and frail, but trolls possess surprising strength. Their arms and legs are long and ungainly. The legs end in great three-toed feet, the arms in wide, powerful hands with sharpened claws. The trolls' rubbery hide is colored a moss green, mottled green and gray, or putrid gray. A writhing hairlike mass grows out of their skulls and is usually greenish black or iron gray in color. Their dull, sunken black eyes possess 90-foot infravision. Females are easily distinguished from males; they are both larger and more powerful than their male counterparts.

Trolls walk upright but hunched forward with sagging shoulders. The trolls' gait is uneven and, when running, the arms dangle free and drag along the ground. For all this seeming awkwardness, trolls are very agile. They are masterful climbers and can scale even sheer cliffs with an 80% chance of success. Trolls have a poor hearing, but their sense of smell is superior.

Trolls have no language of their own, using "trollspeak", a guttural mishmash of common, giant, goblin, orc,

and hobgoblin. Trollspeak is highly transient and trolls from one area are only 25% likely to be able to communicate with trolls from another.

**Combat:** Trolls attack with two clawed hands and their bite, and they can attack at multiple opponents. In the rare case that a troll wields a weapon, it attacks with a +8 damage bonus. Trolls regenerate at an amazing rate. Starting three rounds after first blood, the creatures recovers 3 hit points per round until healed. Trolls reduced to 0 or fewer hit points fall to the ground, incapacitated but not slain. Incapacitated trolls continue to regenerate and stand up to fight as soon as they have a positive number of hit points.

When using an edged weapon, it is possible to sever the thin limbs of a troll (a natural 20 with an edged weapon is needed). Severed limbs continue to fight after separation from the body (hands squeeze, heads bite if stepped on, etc.). Attacks by severed limbs are at normal chances to hit. Separated limbs fight for the remainder of the battle, then scuttle back and rebind with the body once the battle is over. Limbs unable to reach the body to die within 24 hours, but this is of little consequence since trolls regenerate lost body parts (including the head) within a week. If a troll is dismembered and scattered, the largest surviving piece regenerates. The others die within one day if they cannot rejoin that piece. Only fire and acid cause permanent damage to trolls. These forms of attack destroy its regenerative ability. A troll reduced to 0 or fewer hit points and immersed in acid or burned with fire is killed.

Trolls have no fear of death, and launch themselves into combat, flailing wildly at their opponents and biting whoever comes closest. They occasionally (25%) throw stones before closing with their victims. Thrown stones have a maximum range of 20 yards, weigh 10 to 20 pounds, and inflict 1d8 points of damage. If confronted by a large natural or magical fire, trolls try to find some way around the flames. Trolls combine a ravenous appetite with limited intelligence, so they are frequently distracted and break off pursuit 50% of the time to pick up food dropped by fleeing prey.

**Habitat/Society:** Trolls can survive in all climes, but prefer dense forests and subterranean locales, since bright sunlight hurts their eyes; trolls suffer no combat penalties because of this. They usually make their lairs in caves, using great boulders to block the entrances. Inside a troll cave are a number of rough nests made of straw and grass, plus scattered bones and treasure from victims. If there are no caves in an area, trolls dig themselves a trollhole and cover its opening with twigs and leaves. Trollholes are usually built near trees and are 90% undetectable. Anyone who steps on a trollhole is 75% likely to fall through the leafy door and tumble into the den below.

Trolls live in small packs of 3 to 12 trolls led by a dominant female who acts as shaman/chieftain. She casts priest spells at 7th level; spheres typically include Charm, Divination, Sun (Darkness only), and Weather. Leadership is only retained by combat, so fights for pack control are frequent. Often trolls rend each other limb from limb, but these battles are never fatal. Still, it is the custom of trolls to toss the loser's head a great distance from the fight scene, and frequently losers must sit and stew for a week until their new head grows in.

The pack chieftain's duties are few. She leads the trolls on nightly forages, loping along, sniffing the air for prey. If a scent is found, the trolls charge, racing to get there first, and letting out a great cry once prey is spotted. In return for being the hunt leader, the shaman gets her choice of mates in the pack. Females give birth to a single troll about once every five years.

Trolls have ravenous appetites, devouring everything from simple grubs to bears and humans. Their lairs are often located near human settlements or along well traveled roads, but not too near, for even trolls respect organized resistance by fire-bearing humans. Wandering trolls, in search of a new lair, travel by night and sleep by day. Ravenous from walking, these packs, on occasion, attack and devour entire humanoid villages.

**Ecology:** Trolls prey on all but the most powerful of creatures. They respect and fear dragons, but they hate

giants of good alignment and wage war with them frequently. The troll's green blood is used to manufacture both poison antidotes and healing potions. The blood from one troll, worth 400 gp, can make three such potions.

### Giant Two Headed Troll

These ferocious troll/ettin crossbreeds posses a mottled greenish brown skin tone, and their dress is usually moth-eaten rags or animal skins. Two-headed trolls use trollspeak as their language. Though part ettin, these monsters retain many of the abilities of trolls. They regenerate like trolls, but only 1 hit point a round, and severed limbs cannot reattach (their thicker limbs are not cleaved on a roll of 20). Two-headed trolls attack with two claws and two bites. Both bite attacks are against one opponent, but the claws may be directed against different foes. The troll can, though rarely, wield a weapon with a +6 damage bonus. Like ettins, two-headed trolls are surprised only on a 1. These creatures live in damp, underground caverns and can be found leading groups of their smaller troll cousins.

### Freshwater Troll (Scrag)

These gilled trolls, also called scrags or river trolls, are the most loathsome of all the trolls. River trolls, as their name implies, travel the waterways in search of victims. Their arms are thin and frail but their mouths are wide and lined with dozens of needle-sharp fangs. Their color ranges from blue-green to olive. Scrags have all of the abilities of normal trolls, but they only regenerate when immersed in fresh water. Scrags can survive out of water for one hour and often come ashore in search of prey. River trolls devour anything they catch, but prefer humanoids and have a fondness for dwarves.

Scrags are devious hunters and often carry a few baubles with them. They lay gems near the water's edge and wait for someone to spot them and reach down. Other traps include burying themselves in the sand, in shallow water, and waiting to be stepped on or tangling the rudders of small boats. River trolls occasionally nest beneath bridges or near ferry boats, demanding a toll in exchange for passage. The toll varies, but averages the equivalent of one cow per week, per troll. Livestock and children frequently disappear when river trolls are near. Scrag shamans also have access to Elemental (water) spells.

### Saltwater Troll (Marine Scrag)

Like freshwater scrags, marine scrags can breathe air for one hour and have all of the abilities of normal trolls, except they regenerate only when immersed in saltwater. Large, green, and pot-bellied, marine scrags are thick-skinned and heavily scaled. Limp hair, the color of seaweed, hangs down to their shoulders. Their feet are wide and webbed to aid them in swimming. While their limbs are shorter and weaker than those of ordinary trolls, their mouths are larger and filled with hundreds of needle-sharp teeth. Marine scrags can subsist on fish and shellfish, but crave human flesh. They create their lairs in shallow ocean caves or beneath city docks. They emerge from their caves at night, climbing over ship railings in search of sailors or hunting the piers for a strolling couple or a lone drunk. Their attacks are quick and stealthy; they usually hunt in packs of four to six, but occasionally, several dozen may attack a large ship. Marine scrag shamans also have access to Elemental (water) spells.

### Desert Trolls

Desert trolls are usually tan, but can modify their color from bleached tan to mottled rock brown, causing a -2 penalty to opponents' surprise rolls. Their keen senses and animal cunning reduce their chances of being surprised to 1-in-10. Like normal trolls, the desert variety usually attacks with two claws and a bite.

Desert trolls are immune to normal fire, heat, and cold. They do not regenerate acid damage, damage from magical fire, or fire breath weapons. In addition, they suffer damage from normal water that cannot be regenerated. Normal water inflicts 1d4 points of damage per vial, 2d4 points per flask, and 4d4 points per

skin. A *decanter of endless water* aimed directly at a desert troll (successful attack roll required) causes 25 points of damage per round. Purified water (including normal and holy water) causes double damage. A *potion of sweet water* causes 6d6 points of damage and the troll must make a saving throw vs. poison or die. These trolls are tougher and more tenacious than their more common counterparts, but they are also more solitary. They skulk at the edges of settled areas, waylaying travelers and polluting sources of pure water.

### Spectral Troll (Troll Wraith)

Spectral trolls, taking material form only in darkness, are tormented by the memory of life. They try to slay all living creatures they encounter. Resembling normal trolls in all respects except color, their jet black skin and hair make them easily distinguishable from other trolls. Spectral
trolls have the same attacks as regular trolls and can divide them among many opponents. A silver or magical weapon is needed to attack them, making the final disposition of a spectral troll an even trickier prospect. Being undead, spectral trolls can be turned by priests as though they were specters. It is noted that a humanoid slain by a spectral troll becomes one itself in three days, unless a proper burial ceremony is performed by a priest of the victim's religion. Spectral trolls vanish in direct sunlight. They do not take damage from sunlight, they merely fade from view and reappear at the same spot at nightfall. Even those captured, unconscious, or trapped in *temporal stasis* have escaped permanent imprisonment in this manner.

### Giant Trolls

Giant Trolls are hideous hill giant/troll crossbreeds. They resemble normal trolls in all respects, except for their unnatural size. Their skin is reddish brown and they have red-rimmed eyes.

Despite their pot-bellied appearance, giant trolls are immensely strong and inflict damage like a hill giant when they are using their favorite weapon of attack -- a large spiked club made from a tree trunk or a house timber. These clubs cause 2d6+7 points of damage. In those rare instances when a giant troll has no weapons, its claws inflict 1d6+1 points of damage; as with all trolls, the claw attacks can be divided among different opponents as necessary.

Instead of using their claws to attack, weaponless giant trolls are more likely to grab medium-sized prey in their large hands and wield the struggling victim like a club, beating a new target with the body. Refer to the rules on hand-to-hand combat in the *Dungeon Masters Guide* for guidelines.

Giant trolls who are overwhelmed by many small- and medium-sized opponents take time to grab and hurl the warriors into nearby trees, leaving more time to deal with the softer, weaker enemies. Note that, like hill giants, giant trolls can catch missiles 25% of the time, if in reach, and can hurl boulders that cause 2d8 points of damage.

Unlike normal trolls and their closer relatives, giant trolls never attack with their bite. This is due to the fact that they are much taller than the meals they like best (humanoids, of course), and they find it difficult to bend forward with the flexibility normal trolls enjoy.Then too, the head of a giant troll, more than any other part of the cross-breed anatomy, is almost identical to that of a hill giant, except that their skin is reddish brown. The giant troll also lacks the razor sharp teeth of normal trolls that strike fear in so many.

Giant trolls regenerate damage as normal trolls, but at the rate of 2 hit points per round. They cannot reattach severed limbs. Before a giant troll can be killed, at least 10 points of damage must be inflicted on it by fire. If this condition is not met, and the giant troll is reduced to a single hit point, further damage has no effect, except to prevent regeneration.

They have a very acute sense of smell and 90-foot infravision. Giant trolls are feared throughout the world, for not only do they possess the horrible ability to regenerate damage inflicted upon them, but they also possess the power and strength of hill giants (fearsome in their own right). The combination is a deadly one, and, even worse, giant trolls travel in loose tribal bands of 1dl2 members. They are rarely encountered alone. Lairs of giant trolls are always served by 2d6 normal trolls who act as simple lackeys (and sometimes food)

for their larger cousins.
Giant trolls are found in nearly every clime. Giant trolls are on good terms with strong hill giant tribes, for which they serve as elite personal guardians for the ruling chief.

### Ice Troll

The ice troll is a smaller, more intelligent relative of the normal troll, and is probably the result of magical experimentation. It closely resembles its more common cousin, but has semitransparent, very cold skin. Ice trolls are famous for being cunning, evil creatures which keep humans and demi-humans as livestock. Because ice trolls need water to regenerate, they never leave their lakes and rivers, and will create elaborate traps to lure their prey to them.
Ice trolls are organized and intelligent enough to know their weaknesses, and rarely start a fight at a disadvantage. Unlike their larger and less intelligent cousins, they do not wade into combat blindly, but will try to pick off weaker opponents one by one, hoping to bring back live prey. Ice trolls generally attack with claws for 1d8 hit points of damage each, but have been known to use weapons on rare occasions (10%), at an additional +4 to each weapon's damage due to Strength. Attacks may be directed against different opponents. The regenerative powers of ice trolls are not as great as normal trolls. An ice troll must be immersed in water to be able to regenerate 2 hit points per melee round. The creatures often make their stand in a shallow pool of water to keep this advantage.
Because of the thin, brittle nature of the ice troll, it is possible to sever one of the creature's limbs with an edged weapon, on a natural attack roll of 20 with an edged weapon. Severed limbs also regenerate 2 hit points per turn, as long as they are immersed in water. If a severed limb is not in contact with water, it will move up to 30 feet in search of water, always moving toward it, if it is in range.
Fire and acid are the only attack forms which negate the ice troll's ability to regenerate.
Because of the ice troll's physiology, fire-based attacks do double damage. Ice trolls are unaffected by cold or cold-based spells, and because of their magical nature, can only be hit by magical weapons or missiles.
Ice trolls live in groups of 7-12 in arctic and sub-arctic regions, near open water. Because they are smaller and less resilient than their larger cousins, they have developed a higher sense of cooperation to stay alive. Each group has a leader, usually the most intelligent. Leaders are responsible for keeping the group safe and well-fed.
Ice trolls live near settled regions, hoping to waylay and capture humans and demi-humans. Ice trolls will frequently bait traps for adventurers, using treasure they have salvaged from previously waylaid groups. Settlements also provide more common livestock, which, although less preferable than human flesh, is considered edible in times of need. Ice trolls establish their lairs near lakes or rivers. Here the ice trolls will have gathered all their treasure, as well as 5-20 human or demi-human captives. These prisoners are kept well-fed on grains and vegetables, so that the ice trolls need never go too long without food.
Ice trolls mate in the spring and give birth to one baby ice troll in the late fall. When an ice troll tribe gets too large, it splits, one group wandering off to find a new lair. Ice trolls that live in arctic regions often hunt remorhaz, and will even pick off a solitary frost giant. Ice troll blood is frequently used in the manufacture of *frost brand swords*, and *rings of cold resistance*.

### Spirit Trolls

The spirit troll is an odious mutation of the spectral troll. Several schools of thought completely separate this creature from the spectral variety, presenting evidence that the spirit troll is a perverted magical interbreeding of trolls and invisible stalkers. The spirit troll is invisible; characters able to see invisible objects observe it to be very similar to a troll, slightly shorter and with diffused features. The spirit troll can only be hit by magical weapons. Fire inflicts full damage, but it is invulnerable to cold-based attacks. It regenerates as does a troll, and at the same rate.

It attacks with its fangs and two sharp claws, against three different opponents if it so desired. The damage inflicted by its fangs (2d4+2) is normal damage, except that the spirit troll adds the damage to its own hit points -- in effect healing itself! The damage inflicted by the spirit troll's claws (1d4+2) is taken not only from the victim's hit points but also from Strength. Strength points lost in this way are recovered in 2d4 turns. If a character's Strength is reduced to 0, the PC dies. If the Strength is reduced to 1 or 2 points, the PC is rendered comatose, only recovering when (and if) sufficient hit points are recovered to raise the Strength to 3 or more. The spirit troll has an acute sense of smell and superior, 120 foot-range, infravision.

| **XP Value:** | 4,000 | 2,000 |

Umber hulks are powerful subterranean predators whose ironlike claws allow them to burrow through solid stone in search of prey.
Umber hulks are tremendously strong, standing nearly 8 feet tall and over 5 feet wide. Muscles bulge beneath their thick, scaly hides and their powerful arms and legs all carry great claws. They have no necks to speak of, but the head features a powerful maw with rows of triangular teeth and 8-inch mandibles capable of biting through any hide or bone. Most peculiar of all are the four round eyes, spaced evenly across each umber hulk's forehead. Umber hulks are black, shading to a lighter shade of yellowish gray on the front. Their eyes are mere blackened dots each the size of a small coin. Umber hulks have their own language.

**Combat:** For all of their monstrous features, umber hulks are intelligent opponents. They usually dig to a point adjacent to a main corridor, then wait, peeking through a crack they've made, until likely prey walks by. The umber hulk then springs out upon its startled victim. When using this technique, opponents have a -5 modifier on their surprise rolls. Other tactics involve planned cave-ins and dead-end tunnels where an umber hulk can wait for victims to come to him. Their burrowing rate varies from 10 feet per turn in solid stone to 60 feet per turn in soft earth.
In melee, umber hulks can deliver a vicious bite but, understandably, their main weapon is their great claws. Worse, looking into an umber hulk's eyes causes *confusion,* as per the spell, unless a saving throw versus spell is made. In addition to this special confusion attack the outer eyes of an umber hulk provide the creature with infravision to a distance of 90 feet.
The one saving grace when fighting an umber hulk is their speed. Their gait is slow and ponderous and their balance is poor in wide spaces.
Umber hulks never fight to the death unless cornered (which is rare, since the creature can dig through stone). If hard pressed, an umber hulk won't hesitate to cause a cave-in (25% chance of success per round) and then dig his way to freedom.

**Habitat/Society:** Umber hulks dwell in the depths of the earth. They raid dungeons for food, much the way anteaters raid ant colonies, eating their fill and then moving on to let the "colony" recover.
Umber hulks are usually solitary hunters. Males and females mate, then go their separate ways. One to three young are born about a year later in a special nursery which has been hollowed out by the female. Two years later, once the hulklings are big enough, the female begins taking them with her when

hunting. It is during this period that unfortunate victims may stumble across more than one umber hulk at a time.
No umber hulk culture is known, but it is rumored that there may be entire cities of these beings underground with tunnels that radiate out, like threads in a spider's web, toward the nearer dungeons and mountain ranges. If true, this would explain much, for umber hulks seem to disappear or spring up in a region at will and always take great care in hiding their tunnels behind them.

**Ecology:** Umber hulks eat young purple worms, ankhegs, and similar creatures. Their favorite prey, however, is humankind.

### Vodyanoi

These aquatic predators are closely related to the umber hulk. Vodyanoi live in deep bodies of fresh water. They are similar in appearance to umber hulks but have only two eyes and thus lack the ability to confuse opponents. Their skin is green and slimy to the touch, but beneath it is a thick, knobby hide. Their claws are webbed. Vodyanoi prey upon all manner of creatures but prefer human flesh. They can rend the hulls of small vessels and frequently sink or overturn small boats. Once per day a vodyanoi can attempt to summon 1-20 electric eels with a 50% chance of success. The existence of a saltwater variety of vodyanoi of twice the size and greater ferocity is rumored but unconfirmed.

# Unicorn

| | |
|---|---|
| **Climate/Terrain:** | Temperate sylvan woodlands |
| **Frequency:** | Rare |
| **Organization:** | Family |
| **Activity Cycle:** | Day |
| **Diet:** | Herbivorous |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | X |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-6 |
| **Armor Class:** | 2 |
| **Movement:** | 24 |
| **Hit Dice:** | 4+4 |
| **THAC0:** | 15 |

| **Damage/Attack:** | 1-6/1-6/1-12 |
| **Special Attacks:** | Charge |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | L |
| **Morale:** | Elite (14) |
| **XP Value:** | 650 |

Unicorns dwell only in temperate woodlands, away from human habitation. These fierce but good creatures shun contact with all but sylvan creatures (dryads, pixies, sprites, and the like); however, they will show themselves to defend their woodland home.

Powerful steeds with gleaming coats of pure white hair, unicorn eyes are usually deep sea blue or fiery pink. Long, silky white strands of hair hang down from the mane and forelock. A single ivory-colored horn, 2 to 3 feet in length, grows from the center of each unicorn's forehead. Males are distinguished by the white beard beneath the chin; females by their more elegant and slimmer musculature. The hooves of a unicorn are cloven and yellow-ivory in color. Unicorns speak their own language as well as those of other sylvan creatures and elves.

**Combat:** Unicorns can sense an enemy from 240 yards away. Likewise, unicorns move very silently, so opponents are penalized -6 on their surprise rolls. Unicorns can kick with their front hooves and thrust with the horn each round. Due to the horn's magical nature, it always has a +2 bonus to hit. Unicorns can charge into battle, using the horn like a lance. To make this charge, there must be at least 30 feet of open space between the unicorn and his opponent. Opponents struck by a charging unicorn suffer 3-36 points of damage from impaling. Unicorns may not attack with their front hooves in the round they charge.
Once per day a unicorn can use a *teleport* spell of limited range. This spell will transport the unicorn (and its rider) to any place that the unicorn desires, up to 360 yards away. Unicorns often use this ability as a last resort to avoid death or capture.
In addition, unicorns can never be *charmed* or *held* by magic. They are immune to death spells and make all saving throws against spells as if they were wizards of 11th level. Unicorns are immune to poison.

**Habitat/Society:** Unicorns mate for life and make their home in an open dell of the forest they have chosen to protect. There, in the boles of the trees, unicorns etch a glyph, recognizable to sylvan creatures, indicating that the forest is under unicorn protection. Rangers have a 10% chance per level of determining correctly whether a forest is guarded by unicorns. Once a woodland has a unicorn protector, no other unicorn will enter that forest unless the forest is very large. Each family of unicorns stakes out a territory approximately 400 square miles (20 miles by 20 miles).
Travelers may pass through a unicorn's forest freely and even hunt there, but anyone killing for sport or damaging the forest maliciously will be attacked if the unicorn is nearby (10% chance). The ferocity of this attack is determined by the evil of the trespasser. Truant youths throwing stones at animals, for example, would be driven off with just a few bruises as a reminder, while pillaging orcs would be hunted down and slain.
Lone unicorns occasionally allow themselves to be tamed and ridden by a human or elf maiden of pure heart and good alignment. A unicorn that submits once and is treated kindly will act as the maiden's steed for life, even carrying her beyond the realm of his forest if she so desires. Unicorns make exceptionally loyal mounts and will protect their riders even unto death.

**Ecology:** Unicorns are herbivores, living on tender leaves and grasses. Their only enemies are griffons and those creatures who destroy forests, in particular red dragons and orcs.
The life span of unicorns has never been recorded but is known to surpass 1,000 years. They are believed to maintain their youth until death is only weeks away. The secret to this longevity is the strong magical nature of the horn. Unicorn horns are highly sought after, since possession of one is a sovereign remedy against all poisons. Alternately, a single horn can be used, by an alchemist, to manufacture 2-12 potions of *healing*. Unicorn horns sell for 1,500 gold pieces or more on the open market.

Urchins are a family of marine creatures that, like oysters, are hunted for the value of the stones found in their bodies. They resemble 3-foot-diameter balls covered with thousands of 3-inch-long, needle-sharp spines. There are several species of urchins, which can be distinguished from each other by their distinctive colors.

**Combat:** Urchins can fire their spines with the distance and accuracy of light crossbows. An urchin can fire multiple spines per round as listed above under "No. of Attacks." Urchins have no eyes with which to see their opponents; instead they possess an innate clairvoyance ability. This ability gives all spines fired by urchins a +2 bonus to the attack roll. Damage from an urchin spine varies from species to species and many spines contain paralytic or even lethal poisons. Since urchins are covered with thousands of spines, they have a virtually unlimited supply of ammunition.

**Habitat/Society:** Urchins are primarily scavengers, scouring the ocean floors for remains of shellfish. Occasionally they hunt fish, but they never attack man-sized beings unless threatened or approached within 10 feet.
Urchins live in the shallows and upon shoals near the coast. They occasionally (10% chance) remain on land during low tide to scavenge for food. While on land, urchins move via rolling. They are capable of surprisingly high speeds when moving this way.

**Ecology:** Inside each urchin is a crystalline organ-gem that seems to have some connection to their innate clairvoyance ability. While this gem has little value as a stone, it is highly prized by alchemists. The exact value of the organ-gem depends on quality and the type of urchin it was taken from. To determine a stone's value, consult the "Treasure" entry above.

**Land Urchin**

These distant cousins of sea urchins live strictly on land. Land urchins move on five spindly legs. They are shy creatures and only attack if approached within ten feet. Their paralytic poison lasts for six turns. Land urchins have no organ-gem but often (80% chance) form pearls inside their bodies. Old urchins contain 2d6 such pearls, each valued at 1d6 x 100 gold pieces.

Of all the chaotic evil undead creatures that stalk the world, none is more dreadful than the vampire. Moving silently through the night, vampires prey upon the living without mercy or compassion. Unless deep underground, they must return to the coffins in which they pass the daylight hours, and even in the former case they must occasionally return to such to rest, for their power is renewed by contact with soil from their graves.

One aspect that makes the vampire far more fearful than many of its undead kindred is its appearance. Unlike other undead creatures, the vampire can easily pass among normal men without drawing attention to itself for, although its facial features are sharp and feral, they do not seem inhuman. In many cases, a vampire's true nature is revealed only when it attacks.

There are ways in which a vampire may be detected by the careful observer, however. Vampires cast no reflection in a glass, cast no shadows, and move in complete silence.

**Combat:** When engaging in combat, vampires are savage and fearsome opponents. They are physically very powerful, with a Strength score of 18/76, receiving a bonus of +2 to hit and +4 to damage. The crushing blows of a vampire's attack are so fierce that they inflict 5-10 points of damage.

The gaze of a vampire is one of its most powerful and dangerous weapons. Any person who allows the vampire to look into his eyes will be affected as if by a *charm person* spell. Due to the power of this enchantment, a -2 is applied to the victim's saving throw vs. spell. In this manner, vampires are often able to pass posted sentries and surprise their chosen victims.

Like all undead creatures, vampires exist in both the Positive Material and Negative Material planes at the same time. Their powerful negative essence allows them to drain two life energy levels from anyone they strike. If the vampire is making use of some form of weapon in the attack, it cannot employ this power.

Weapons of less than +1 enchantment pass through vampires without harming them in any way. Even if attacked with and harmed by magical weapons, vampires regenerate 3 hit points per round. If reduced to zero hit points, a vampire is not destroyed, but is forced to assume *gaseous form*. Once in this state, it will attempt to flee and return to its coffin where, after eight hours of rest, it regains its corporeal form. If the defeated vampire is unable to reach its coffin within 12 turns, however, its essence breaks up and the creature is truly destroyed.

*Sleep, charm,* and *hold* spells do not affect vampires. Similarly, they are unharmed by poisons and immune to paralysis. Spells that are based on cold or electricity cause only half damage.

At will, vampires are able to disperse their bodies into clouds of elemental vapor and assume *gaseous form*. In this state, they are all but immune to attack and can escape from almost any confinement. In addition, vampires can *shape change* so as to take on the form of a large bat (hence the flying movement rate given above).

Vampires can summon lesser creatures for aid. In a subterranean environment, they will typically call forth a swarm of 10-100 rats or bats. In the case of the latter, these do not physically attack but serve to confuse and obscure the vision of the vampire's foes. In the wilderness, a vampire will normally call upon 3-18 wolves for assistance. In all cases, the summoned animals arrive in 2-12 rounds.

At will, a vampire can use a *spider climb* ability and scale sheer surfaces. Often, they will employ this power to gain access to rooms on upper floors without alerting those on watch downstairs. This power also permits the vampire to seek refuge in places which are all but beyond the reach of mortal men.

Despite the great powers which vampires obviously possess, they are not without weaknesses of their own. The odor of strong garlic repels them and they will not approach it. Further, they will recoil from the face of a mirror or lawful good holy symbol if either of these is presented to them with courage and conviction. It is important to understand, however, that this will not actually harm the vampire in any way nor drive it off. Garlic will prevent the creature from attacking or entering the area, while mirrors and holy symbols force the vampire to find some means of removing the offending object before it can be bypassed. In most cases, the vampire will seek to overcome these hazards with the aid of its minions. For example, a *charmed* person might be called upon to attack someone who is holding the vampire at bay with a holy symbol. Another important point to keep in mind is that a lawful good holy symbol will affect the vampire regardless of the vampire's original religious background. Vampires which are splashed with a vial of holy water or struck with lawful good holy symbols are burned by them, suffering 2-7 points of damage.

Just as vampires can be kept at bay, so too can they be slain by those who have the knowledge to do so. Any vampire which is exposed to direct sunlight is instantly rendered powerless and, after one round, utterly annihilated. If the vampire can be immersed in running water, it loses one-third of its hit points each round, until destroyed on the third round. Last, a vampire can be killed by having a wooden stake driven through its heart. In this case, however, the creature can be restored simply by removing the stake if further measures are not taken to ensure the fate of the vampire. In order for it to be completely destroyed, the vampire's head must be cut off and its mouth stuffed with holy wafers (or their equivalent).

In addition to its aversion to items like garlic and holy symbols, the vampire acts under many other limitations. One of the most powerful of these is the creature's inability to enter a home without being first invited to do so by a resident of the dwelling. This does not apply to public buildings and places of business which, by their very nature, extend an “invitation” to all. Once a vampire has been invited to enter a residence, it may come and go freely afterward. A common manner for obtaining permission to enter a home is the use of the vampire's gaze to *charm* a servant or other inhabitant.

Any human or humanoid creature slain by the life energy drain of a vampire is doomed to become a

vampire himself. Thus, those who would hunt these lords of the undead must be very careful lest they find themselves condemned to a fate far worse than death. The transformation takes place one day after the burial of the creature. Those who are not actually buried, however, do not become undead and it is thus traditional that the bodies of a vampire's victims be burned or similarly destroyed. Once they become undead, the new vampire is under the complete control of its killer. If that vampire is destroyed, the controlled undead are freed from its power and become self-willed creatures.
In most cases, vampires do not lose the abilities and knowledge which they had in life when they become undead. Thus, it is possible for a vampire to have the powers of, for example, a wizard, thief, or even priest. In all cases, of course, the new vampire becomes chaotic evil.

**Habitat/Society:** Vampires live in areas of death and desolation where they will not be reminded of the lives they have left behind. Ruined castles or chapels and large cemeteries are popular lairs for them, as are sites of great tragedies or battles. Vampires often feel a strong attachment to specific areas with some morbid significance, like the grave of a suicide or the site of a murder.
When deciding on a course of action or planning a campaign, vampires move very slowly and meticulously. It is not uncommon for a vampire to undertake some scheme which may take decades or even centuries to reach its conclusion. Because of the curse of immortality that has fallen upon them, they feel that time is always on their side and will often defeat foes who might otherwise overcome them; the vampire can simply go into hiding for a few decades until the passing of the years brings down its enemies.
Vampires are normally solitary creatures. When they are found in the company of others of their kind, the group will certainly consist of a single vampire lord and a small group of vampires which it has created to do its bidding. In this way, the vampire can exert its power over a greater range without running the risk of exposing itself to attack by would-be heroes.
In general, vampires feel only contempt for the world and its inhabitants. Denied the pleasures of a true life, they have become dark and twisted creatures bent on revenge and terror. When a vampire creates another of its kind, it considers the new creature a mere tool. The minion will be sent on missions which the vampire feels may be too dangerous or unimportant for its personal attention. If the need arises, these pawns will gladly be sacrificed to protect or further the ends of their master.

**Ecology:** The vampire has no place in the world of living creatures. It is a thing of darkness that exists only to bring about evil and chaos. Almost without exception, the vampire is feared and hated by those who dwell in the regions in which it chooses to make its home. The vampire's unnatural presence is all-pervasive and will cause dogs and similar animals to raise a cry of alarm at the presence of the creature.
Vampires sustain themselves by draining the life force from living creatures. Unless they have a specific need to create additional minions, however, they are careful to avoid killing those they attack. In cases where the death of a victim is desired, the vampire will take care to see that the body is destroyed and thus will not rise as an undead.

**Eastern Vampires:**
This breed of vampire is, if anything, even more frightful than its western cousin. Although they share many of the western vampire's strengths and weaknesses, they have the ability to fade from sight at will. Once they have become *invisible*, they receive all of the normal bonuses which such a state normally bestows, including being attacked at -4. These monsters are unable to *charm* their victims, however, and cannot assume *gaseous form* at will as western vampires can.

# Wemic

| | |
|---|---|
| **Climate/Terrain:** | Temperate plains |
| **Frequency:** | Very Rare |
| **Organization:** | Prides |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | B |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-16 |
| **Armor Class:** | Males 6(5), females 7 |
| **Movement:** | 12 |
| **Hit Dice:** | 5+8 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 2 or 3 |
| **Damage/Attack:** | 1-4/1-4 and weapon |
| **Special Attacks:** | Nil |
| **Special Defenses:** | -2 initiative modifier |
| **Magic Resistance:** | Nil |
| **Size:** | L (7') |
| **Morale:** | Steady (11-12) |
| **XP Value:** | Normal: 270 |
| | Chief/Chieftain: 420 |
| | Witch Doctor/King: 975 |

Wemics are leonine counterparts to centaurs. A wemic's body consists of a leonine body with a humanoid torso extending from what would be a lion's neck. The typical wemic measures ten feet from head to rump. When standing erect in centaurian posture, the wemic stands 6 to 7 feet tall.
Most of the body is covered in dusky golden fur. The tail is tipped by a brush of long, black hair. Adult males also have a mane of long black hair; the mane covers the top and back of the head and extends to the neck and shoulders. Male cubs develop this mane in their third year. The underbelly is covered in short, white fur. The nose may be black or russet. The eyes are gold with vertically slit pupils. The digits

on all limbs end in claws. The claws on the forelegs are retractable.
Wemics speak their own leonine language and a highly accented dialect of the common tongue.

**Combat:** Wemics use forepaws and weapons to attack. A claw delivers a vicious swipe that inflicts 1d4 points of damage. Normally the wemic uses his forelegs to claw and employs his hands to wield a weapon.
Wemic males carry javelins and either a stone club or short sword. They often carry a tough leather shield (AC 5) for protection. Females are AC 7 and do not use weapons; however, they gain a +2 bonus to attack rolls if their cubs are attacked. Cubs under 2 years do not attack.
Wemics possess keen senses. They are masters of ambushes and hunting strategy. If they cannot surprise an intended victim, 1-3 wemics move to outflank prey.
Wemics possess powerful leg muscles. They can leap 10 feet upward or 30 feet forward.

**Habitat/Society:** Wemic society is a blend of leonine and aboriginal human cultures. They live in groups called prides. A typical pride consists of 4d4 adult males, 2d12 adult females, and 1d12 cubs.
Up to 3d10 prides often band together into a tribe that is led by a chief. The chief has an Armor Class of 5, 6+4 Hit Dice, and its claws inflict 1d6 points of damage. It gains a +1 bonus to its attack rolls with any weapon.
Sometimes 2d4 tribes join together into a clan or nation. Such a grand gathering is led by a king and 2d4 chieftains. The king has an Armor Class of 3, 9 Hit Dice, and claws that inflict 1d8 points of damage. It has a +2 bonus to its attack rolls with any weapon.
Some wemics are able to use magic. There is a 70% chance that any tribe includes a witch doctor. Such wemics may attain a maximum level of 7th-level priest and 4th-level wizard.
Mating occurs at any time of year. The female bears a litter of one to three cubs in ten months. The cubs are born with a camouflage pattern of black spots; these fade within two months. Wemic cubs are playful and curious; they possess few instincts and thus must learn everything. Cubs are born with 1 HD and gain 2 HD each year. They reach maturity at age 3.
Wemics have human-level intelligence. They possess a Stone age culture, using fire and possessing modest manufacturing skills with which they can create stone weaponry, pottery, and ornaments. They can be taught more complex skills. They are excellent trackers and guides. They may hire out their services in exchange for treasure and tools, such as weapons and magical items. They may also charge travelers a toll for safe passage through their nation's territory.

Whales are the largest sea mammals. They are highly intelligent creatures that occupy a number of ecological niches. The common whales include plankton eaters like blue or hump-backed whales and carnivores like sperm whales.
Common whales range in size from a 10-foot-long calf to 110-foot-long blue whales. The skin is normally blue-gray. Whales share a common language that is difficult for land creatures to learn since it uses tones below human hearing.

**Combat:** All common whales can attack with their tails. These can deliver a crushing blow that inflicts damage equal to half the whale's Hit Dice.
Plankton-feeding whales can attack with either of their flukes (fins). Whales of 12-17 HD cause 1d8 points of damage, those of 18-24 HD inflict 3d8 points, and those of 24-36 HD cause 5d8 points.
Carnivorous whales can bite. Whales of 12-17 HD inflict 5d4 points of damage, those of 18-24 HD cause 1d4x10 points, and those of 24-36 HD inflict 3d4x5 points.
Whales are vulnerable to surface ships only when the whales are on the surface.

**Habitat/Society:** Whales live in tribal gatherings called pods. They maintain strong personal and family ties. Their culture is based on complex songs that can be heard for miles underwater. Whales are curious about humanoids but if attacked they can become deadly foes. Whales rarely initiate combat. Whales are curious about other intelligent beings. They welcome communication with other beings. They do not lie, but they may not reveal everything they know.
Most whales feed on a variety of plankton, shrimp, and small fish that they suck up as they swim along. Sperm whales feed on larger fish, octopi, and especially giant squids.
Whale cows normally give birth to a single calf. Twins occur in 5% of births. The calf remains with the cow for the next five to ten years, depending on the species. After five years, the cow may give birth again. The calves are protected and taught by all members of the pod.

**Ecology:** Although they are neutral in alignment toward humanoids, their alignment toward sea life is generally lawful good. With their great size, power, and diversity, they are the masters of the sea. They preserve order through their conflicts with evilly inclined sea monsters.
Unfortunately, their relations with seafarers are less certain. Because of the value placed on parts of the whale's body, the creatures are hunted to excess by greedy whalers. Despite the hostility of the humanoids, whales remain curious and basically friendly toward non-whaling seafarers.
The carcass of a common whale is worth 100 gp per Hit Die, both for its meat and blubber. Whales possess a stinking, yellow mass called ambergris that is valuable for making perfumes; they vomit this up when ill. The ambergris is worth 1d20 x 1,000 gp.

### Giant Whale

Giant whales are immense versions of sperm whales, 100' to 400' long. In the cetacean culture, they serve functions similar to knights or barons by protecting common whales against evil sea monsters and whalers. Giant whales are attended by 2d4 common whales.
Giant whales attack by biting or crushing. Whales of 18-25 HD inflict 1d4x10 points of damage, those of 26-35 HD cause 2d4x10 points, and those of 36-54 HD inflict 3d4x10 points. The tail can deliver a crushing blow that inflicts damage equal to half the whale's Hit Dice. Giant whales can ram the sides of surface ships, delivering a crushing blow that, if successful, sinks the ship. They can also leap halfway out of the water and fall onto a target vessel (50% chance of success). If successful, the ship is immediately driven under the surface. If a giant whale is facing an opponent under 20 feet long, it can swallow the target intact on an attack roll that is 4 or more greater than it needs to hit.
Their stomachs contain large air chambers in which a victim might survive until he escapes or is digested. The stomach acid is diluted by seawater; characters or objects trapped in the stomach gain a +1 bonus to saving throws vs. this acid. A swallowed character suffers 2 points of damage per round (1 if the saving throw is successful each round) from the acid. The stomach might contain undigested possessions of previous meals. Each type of treasure has a 1% chance per Hit Die (of the whale) of being present in the giant whale's gullet. There may be 1,000-3,000 coins of each type, 1d20 gems, or 1d4 magical items.
The carcass of a giant whale is worth 100 gp per Hit Die. The ambergris is worth 2d20 x 1,000 gp.

### Leviathan

The leviathan is an almost unimaginably immense whale, 500 to 1,000 feet long. It is the lord of all whales and the intermediary between cetaceans and the gods. Under normal conditions, only one leviathan dwells in each ocean. The leviathan is not always active. It may hibernate for years on the ocean floor. During these long sleeps, the leviathan is attended and protected by its entourage of other whales. The leviathan awakens if summoned by the needs of other whales or in answer to a divine request. Leviathans are awesome foes with a variety of attacks. Their bite damage is determined by their Hit Dice. Leviathans of 24-35 HD inflict 3d4x5 points of damage, those of 36-47 HD cause 3d4x10 points, and those of 48-72 HD inflict 3d4x15 points. The tail can deliver a crushing blow that causes damage equal to half the whale's Hit Dice. On an attack roll that is 4 or more greater than it needs to hit, a leviathan is capable of swallowing a target up to 80 feet long. When attacking a mass of surface vessels, the leviathan creates a powerful wave by swimming deep, rushing to the surface, and leaping halfway out of the water. The resulting wave causes every ship within 500 feet to roll a saving throw vs. crushing blow and every ship within 500 to 2,000 feet to roll a saving throw vs. normal blow. Ships that fail a saving throw immediately sink.
Once each century, leviathans gather in arctic waters to confer and to mate. This gathering lasts six

months. Each leviathan is attended by 2d10 giant whales and 10d10 whales of other species.
The stomach of a leviathan contains air pockets that are capable of sustaining a victim until he escapes or is digested. The stomach may also contain undigested possessions of previous meals or even sea vessels. Each type of treasure has a 1% chance per Hit Die (of the whale) of being present in the giant whale's gullet. There may be 2,000-6,000 coins of each type, 5d20 gems, or 1d8 magical items.
The carcass of a leviathan is worth 100 gp per Hit Die. The ambergris is worth 4d20 x 1,000 gp. However, the killing of a leviathan will result in every whale within that ocean converging on the killer to avenge their lord's death.

### Killer Whale (Orca)

The killer whale is one of the largest predatory sea mammals. It is a deadly killer able to hold its own against all but the most powerful sea monsters. A killer whale is likely to attack humanoids; it is capable of swallowing a man whole, should the need arise.
Killer whales measure 15 to 30 feet long. Their black bodies are marked by a brilliant white belly and markings that vary from individual to individual.
Killer whales are not inherently hostile and do not attack unless hungry or provoked. There is a 20% chance that encountered killer whales are hungry. If they are communicated with rather than attacked, killer whales may prefer to talk rather than feed.
The killer whale's diet consists of both fish and warm-blooded animals. It is a crafty hunter that can recognize the shadows and sounds made by animals atop ice floes. It will break through the ice to visually confirm the presence of prey. Smaller ice floes are rammed and shattered to force the prey into the water. When the killer whale smashes into the ice, every being on the ice must roll a saving throw vs. paralyzation. Failure means the being has slipped into the water and can be attacked the following round.
When a killer whale makes a successful hit, its prey is held in its jaws where it can automatically bite each round. Victims risk drowning in two to four rounds and the loss of 1 point of Strength and Dexterity per round, due to the numbing effect of the icy water. When either Strength or Dexterity reaches 0, the victim dies.
The killer whale's main weapon is its terrible bite. Killer whales of 9-10 HD inflict 4d6 points of damage, while those of 11-12 HD cause 6d4 points.
When hunting larger creatures, the pod acts together to bring down prey of up to 100 feet in length. Most pods consist only of adults, but 25% of encountered pods also have 1d8 calves (2-5 HD, swim 15, bite for 2d4). Adults defend their calves to the death. They also assist each other.
Although killer whales prey on other whales, they also act as their protectors by battling other sea monsters that might decimate the entire cetacean family. Killer whales may enter into alliances with aquatic elves.
The carcass of a killer whale is worth 100 gp per Hit Die. The ambergris is worth 1d10 x 500 gp.

### Narwhal

The narwhal is common to cold, subarctic waters. It is called the "unicorn of the sea" because of the 6- to 12-foot-long spiral horn that the narwhal uses to dig into the sea floor for shellfish. If a narwhal is provoked, the horn can also be used like a lance to attack. When a narwhal attacks with its horn, its Hit Dice determine the damage caused. A narwhal of 4+4 HD inflicts 2d12 points of damage, one of 5+5 HD causes 6d4 points, and one of 6+6 HD inflicts 7d4 points. Only a male can develop this horn. A female attacks by ramming headfirst into its target, inflicting 2d4 points of damage.
Narwhals are basically peaceful creatures. They may serve as companions or guards for dolphins. They may also be trained and used by aquatic elves.

The carcass of a narwhal is worth 100 gp per Hit Die. The ivory is worth 1d4x10 gp. The ambergris is worth 1d10 x 200 gp.

| **Special Defenses:** | Hit only by silver or +1 or better magical weapon |
| **Magic Resistance:** | See below |
| **Size:** | M (4'-7') |
| **Morale:** | Elite (14) |
| **XP Value:** | 1,400 |

In ages long past, the word "wight" meant simply "man." As the centuries have passed, though, it has come to be associated only with those undead that typically inhabit barrow mounds and catacombs. From a distance, wights can easily be mistaken for any number of humanoid races. Upon closer examination, however, their true nature becomes apparent. As undead creatures, wights are nightmarish reflections of their former selves, with cruel, burning eyes set in mummified flesh over a twisted skeleton with hands that end in sharp claws.

**Combat:** Wights are fierce and deadly foes in combat. When attacked, they are unharmed by any

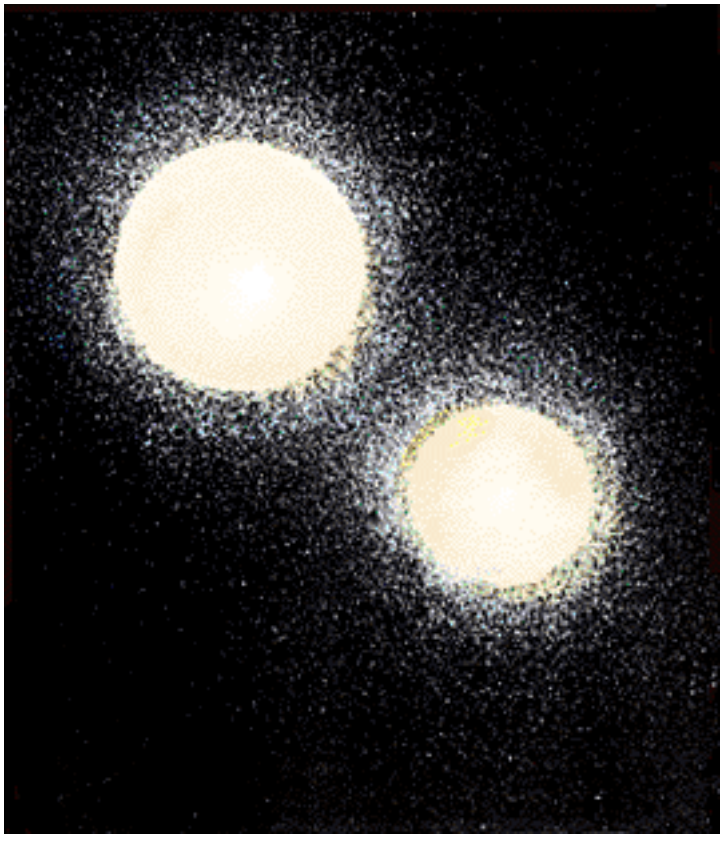
weapons that are not forged from silver or enchanted in some manner.
The wight attacks with its jagged claws and powerful blows, inflicting 1-4 points of damage with each successful strike. In addition to this physical harm, the wight is able to feed on the life essence of its foes. Each blow that the wight lands drains one level from the victim, reducing Hit Dice, class bonuses, spell abilities, and so forth. Thus, a 9th-level wizard struck by a wight loses 1-4 hit points and becomes an 8th-level wizard; he has the spells and hit points of an 8th-level wizard and he fights as an 8th-level wizard.
Persons who are slain by the energy draining powers of a wight are doomed to rise again as wights under the direct control of their slayer. In their new form, they have the powers and abilities of a normal wight but half their experience levels, class abilities, and Hit Dice. If the wight who "created" them is slain, they will instantly be freed of its control and gain a portion of its power, acquiring the normal 4+3 Hit Dice of their kind. Once a character becomes a wight, recovery is nearly impossible, requiring a special quest.
Wights are unaffected by *sleep*, *charm*, *hold* or cold-based spells. In addition, they are not harmed by poisons or paralyzation attacks.
Wights can be engaged and defeated by individuals who are well prepared for battle with them. Physical contact with holy water is deadly to wights and each vial splashed on one burns it for 2-8 points of damage. In addition, a *raise dead* spell becomes a powerful weapon if used against the wight. Such magic is instantly fatal to the creature, utterly annihilating it.
Wights cannot tolerate bright light, including sunlight, and avoid it at all costs. It is important to note, however, that wights are not harmed by exposure to sunlight as vampires are.

**Habitat/Society:** Like the other undead that infest the world, wights live in barrow mounds, catacombs, and other sepulchral places. They despise light and places which are vibrant with living things. As a rule, the wight is hateful and evil, seeking to satisfy its hatred of life by killing all those it encounters. Although wights are often found in small groups, they are actually solitary creatures. Without exception, encounters with multiple wights will be a single leader and a number of lesser creatures which it has created to serve it. In these cases, the leader of the group will be more than willing to sacrifice some or all of its minions to assure its own survival or victory.

**Ecology:** Like all undead, wights exist on both the Prime Material and Negative Material planes simultaneously. It is this powerful link to the negative world that gives them their fearsome level-draining ability. Further, it is this draining which provides them with sustenance.
As they are not living creatures and have no rightful place in our world, many animals can sense the wight's presence. Dogs will growl or howl with alarm, horses will refuse to enter an area which wights inhabit, and birds and insects will grow silent when the creature passes near them. In addition, their presence will gradually cause the plant life around their lairs to wither and die, marking the region as unclean.

# Will o'wisp

| | |
|---|---|
| **Climate/Terrain:** | Any swamp |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | See below |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | Z |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 or 1-3 |
| **Armor Class:** | -8 |
| **Movement:** | Fl 18 (A) |
| **Hit Dice:** | 9 |
| **THAC0:** | 11 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-16 |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | S (2'-4') |
| **Morale:** | Fanatic (17) |
| **XP Value:** | 3,000 |



The will o'wisp is a malevolent entity that makes its home in swamps, bogs, and moors. It subsists by luring unsuspecting creatures to their deaths amid the natural hazards of such places and feeding on the energies which their death struggles release.

When encountered in the wild, will o'wisps normally appear as faintly glowing balls of light. They can alter their own color, shape, and size to some extent and can be easily mistaken for lanterns, *light* spells, and similar sources of artificial illumination.

If they do not attack, will o'wisps are able to utterly blank out their glows, rendering them invisible to all those who cannot spot invisible objects, for 2-8 melee rounds.

The will o'wisp language is a most unusual one, being purely optical in nature. All communication

between will o'wisps is by means of changes in color or brightness, many of which are far too subtle for the average observer to notice. Because this form of exchange is almost impossible to mimic, it is very difficult for travelers to communicate with these creatures. Exceptional examples of this race have mastered a very simple sound-based language. They produce sounds by vibrating very rapidly and thus have a shallow and ghostly-sounding voice when they "speak."

**Combat:** As a rule, will o'wisps seek to avoid physical combat with other creatures, preferring to lead them to their deaths in the swamps around them instead. When pressed, however, they are dangerous adversaries who must be attacked with the greatest care. In combat, they glow blue, violet, or pale green. Will o'wisps are very versatile flyers. They can hover in place without effort, often looking like lanterns or similar beacons to lure others toward them. When they decide to move, they can do so with rapid bursts of speed or slow drifting movements.
A will o'wisp's main weapon in combat is its ability to manifest a powerful electric charge. In melee, it swoops at its foe and attempts to brush against the victim, discharging the stored energy. A successful strike by one of these creatures will cause 2-16 points of damage.
Those attacking a will o'wisp with any form of physical weapon are able to inflict damage normally. Persons making use of magical attacks, however, will find their powers almost ineffective against them. As a rule, the only spells which have any effect on the will o'wisp are *protection from evil*, *magic missile*, and *maze*. A will o'wisp which is reduced to 5 or fewer hit points will attempt to escape. If it is unable to flee, the creature will surrender to its attackers and attempt to buy its safety by offering up any treasure which it may have. It is important to note, however, that the chaotic alignment of the will o'wisp can make any agreement with the creature uncertain.

**Habitat/Society:** For the most part, will o'wisps will be found on their own. On rare occasions (10% of the time) groups of up to three may be found near a particularly fertile hunting ground. In the latter case, they will work together to trick victims into the traps which they have arranged.

**Ecology:** Although difficult to say with certainty, evidence indicates that the will o'wisp feeds on the fury of electrical activity given off by the brains of panic stricken individuals as they realize that death is inescapable. In order to prolong the suffering of their victims and increase the amount of "food" which they give off, will o'wisps will typically lure their victims into areas like quicksand pits which promise a slow and frightening death.
It seems certain that the unusual environment found in bogs and swamps is important to the creature's existence in some way, but the exact nature of this link is uncertain. It seems probable that the ominous and haunting nature of these places increases the fear and dread which their victims feel, and thus the energy which they give off prior to death.

| **XP Value:** | 65 | 120 | 175 | 975 |

The wolf is a very active, cunning carnivore, capable of surviving in nearly every climate. Shrouded in mystery and suspicion, they are viewed as vicious killers that slaughter men and animals alike for the lack of better things to do. The truth is that never in recorded history has a non-rabid or non-*charmed* wolf attacked any creature having an equal or higher intellect than itself. (The chance of encountering a rabid wolf that would attack anything is 1%, if a lone wolf is encountered.)
Northern wolves exhibit colors from pure white, to grey, to black. Southern wolves are reddish and brown in color. Although fur coloration vary with climate, all wolves have various features in common. They are characterized by powerful jaws; wide strong teeth; bushy tails; tall, strong ears; and round pupils. Their eyes, a gold or amber color, seem to have an almost *empathic* ability.

**Combat:** Wolves hunt in packs during winter and late fall when only large herbivores are available. Wolves prefer small prey over the larger variety, because of the amount of energy required to run them down. Even then, they catch only the weak and sickly animals. Wolves usually hunt only one large quarry per week, per pack, going without food for days at a time. During summer months, a single wolf can consume over 30 mice in a single day.
If a wolf or wolf pack is attacked by humans, they run away, looking back momentarily to make sure they are not being followed. If backed into an inescapable location, they will attack by tearing at clothing or legs and arms until they have an opening to escape.

**Habitat/Society:** Wolves, like humans and demi-humans, are social animals. They live, hunt and play in families. There is a very strict social structure in these family groups that is continually followed. Each pack is led by an *alpha male*; his mate is the *alpha female*. Only the alpha male and alpha female breed, but the second ranking female often helps in whelping and nursing duties.
Wolves prefer areas not inhabited by other large predators. Their domain has many terrain features in which they can play. Large rocks, fallen trees, and brooks play an important part in their recreational activities. Wolves will leave an area once humans move in.

**Ecology:** Wolves are valuable hunters in the wild. Fear of the wolf has resulted in their extinction in many areas. This genocide results in a marked increase in rodents and deer population that has nearly demolished the surrounding ecosystems.

### Dire Wolves

The dire wolf is an ancestor of the modern species. Though larger in size, they are otherwise similar to their descendants.

### Worgs

Worgs are an offshoot of dire wolf stock that have attained a degree of intelligence and a tendency toward evil. Worgs have a primitive language and often serve as mounts of goblins.

### Winter Wolves

The most dangerous member of the species, the winter wolf is known for its great size and foul disposition. Living only in chill regions, they can unleash a stream of frost from their lungs once every 10 rounds, causing 6d4 points of damage to everything within 10 feet. A save vs. breath weapon is allowed for half damage. Cold-based attacks to not harm the winter wolf, but fire-based attacks cause an additional point of damage, per die of damage. Winter wolves are more intelligent than their cousins and, in addition to being able to communicate with worgs, have a fairly sophisticated language of their own. The winter wolf is beautiful, with glistening white or silver fur and eyes of pale blue or silver. If in good condition, a pelt is worth 5,000 gold pieces.

# Wolfwere

| | |
|---|---|
| **Climate/Terrain:** | Any forest |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | High to exceptional (13-16) |
| **Treasure:** | B, 50% of S, T |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-3 |
| **Armor Class:** | 3 |
| **Movement:** | 15 |
| **Hit Dice:** | 5+1 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 or 2 |
| **Damage/Attack:** | 2-12 and weapon |
| **Special Attacks:** | Singing brings on lethargy |
| **Special Defenses:** | Iron or +1 or better weapon to hit |
| **Magic Resistance:** | 10% |
| **Size:** | M (4'-7') |
| **Morale:** | Elite (14) |
| **XP Value:** | 1,400 |

The wolfwere is an evil and hateful creature that delights in the brutal slaying of humans and demihumans alike. In many cases, the wolfwere is able to attack its victims with utter surprise because of its ability to assume the shape of a human of exceptional charisma.

The wolfwere is able to assume a wide variety of shapes at will. Transformation from one form to another takes only a single round. Its true shape, and that in which it prefers to spend the vast majority of its time, is that of a large wolf. When in this state, it is almost indistinguishable from a dire wolf.

When a wolfwere is attempting to lure humans or demihumans into an ambush, it will assume the shape of member of their race. Almost without exception, the new persona will not be of the same sex as the

potential victim. Thus, a wolfwere which is stalking a male elf will transform itself into a female elf. In all cases, the newly disguised wolfwere will have exceptional physical beauty.

**Combat:** The wolfwere is a sly and dangerous adversary. In addition to its great fury and fighting prowess, its high intelligence must not be overlooked or underestimated.
When a wolfwere first spots unsuspecting humans or demihumans in its territory, it will change into its fully humanoid form and assume the guise of a pilgrim, minstrel, or similar wanderer. The wolfwere will normally carry some form of stringed instrument which it seems to absent-mindedly play at while it travels. The true nature of its song, however, is terrible and often fatal. Anyone who hears the wolfwere's song and then fails a saving throw vs. spell will be overcome with *lethargy*. The effects of this enchantment are the same as those of the *slow* spell. Once this effect begins, it cannot be countered and lasts for 5-8 rounds.
When a wolfwere is ready to attack, the creature again changes its shape. Now, in a form which is half-wolf and half-human (or demihuman), it strikes. The wolfwere will almost always change into this form when it engages in combat because it has the ability to bite like a wolf and also wield a weapon of some type.
In any form but its fully humanoid one, the creature can deliver a savage bite with its powerful jaws. It is this mode of attack which the monster prefers to employ above all others.
When in its humanoid or half-humanoid state, it is also able to carry and employ weapons. Although the exact type of weapon
used will depend upon the specific tastes of the creature encountered, wolfweres tend toward axes, swords, and similar cutting edges.
If the creature is forced to engage in battle while in its humanoid form, it will be forced to rely wholly on its weapons for defense. In such cases, it normally seeks to escape and transform into its half-humanoid state before returning to battle.
The magical nature of the wolfwere makes it immune to damage inflicted by any weapon which is not made from cold wrought iron or enchanted to +1 or better. All other weapons are simply turned aside by the creature's hide.
It is possible to protect oneself from attacks by wolfweres, however, for they are disgusted by wolfsbane and will avoid it whenever possible.

**Habitat/Society:** The wolfwere is generally fairly solitary in nature. When encountered in the wild, it is rare that more than three of these creatures will be found. In almost all cases, encounters with more than one wolfwere will be with a mated pair or a group which has decided to work together to increase the success of their hunting.

**Ecology:** There is a 75% chance that any encountered wolfwere will be running with a pack of wild wolves. In such cases, the animals will be worgs 70% of the time. If they are not worgs, they will be common wolves. In all cases, the influence of the wolfwere will make the creatures far more vicious and evil than they might normally be.
Despite their fondness for wolves and worgs, wolfweres loathe the company of werewolves. The enmity between these two monsters is so great that they will often attack each other on sight.

Though they vary widely in size, all the worms in this listing have some common characteristics. They are all burrowers with long, cylindrical shapes.

## Purple Worm

A constant threat to subterranean explorers, the purple worm burrows through the earth in search of prey. The worm is sensitive to minute vibrations in the earth, and can sense prey at a range of 60 feet. Adult purple worms as large as 8-9 feet in diameter and 140-150 feet long have been reliably reported.

The worm attacks by biting; an attack roll that exceeds the required score to hit by 4 or more indicates the victim has been swallowed whole. This worm can devour creatures up to 8 feet tall and 6 feet wide. A swallowed creature dies in six rounds, is digested in two hours, and cannot be raised from the dead. Anyone trapped inside a purple worm may attempt to cut their way out. The interior is AC 9, but digestive juices weaken the victim, causing a cumulative -1 penalty to the damage the victim can cause. This worm has a stinger on its tail. Anyone hit by the stinger suffers 2d4 points of damage and must make a successful saving throw vs. poison or be slain instantly.

The purple worm is solitary and seeks a companion only to mate. The moment a new worm hatches, it burrows into the ground, never to be seen by its siblings again. As the worm tunnels, it consumes vast amounts of material that are excreted when it returns to its lair. Among the discharged substances are precious metals and gems.

The **mottled worm** is an aquatic variety of the purple worm. It inhabits shallow bottom muck, but it often surfaces to search for prey. Otherwise, it is the same as a purple worm.

The **thunderherder** is desert variety of the purple worm; they travel in herds of 10-100, several feet under the sands. They feed on small creatures in the sand, their bodies ejecting sand. They are 3-5 feet in diameter and 5-10 feet long, and have 7 Hit Dice. Their mouths are unable to cause damage, but their passage beneath an area causes an earthquake-like effect.

## Giant Bloodworm

These worms are mottled green in color, with a dark, slimy, brown underbelly. A giant bloodworm attacks when hungry or when stepped on, by trying to fasten its mouth to its victim. If it hits, it causes 1d8 damage, and continues to cause 1d8 damage per round from blood drain, until killed or removed (removal requires a successful open doors roll).

These worms are especially vulnerable to fire, taking double normal damage from such attacks, or full damage when they make a successful saving throw despite a -2 penalty to the roll.

## Bookworm

This worm can change its normal gray color to match its surroundings; opponents suffer a -6 to surprise rolls. Bookworms inhabit libraries, eating through the pages and bindings found there. They cannot eat living matter, but they will burrow through dead wood, leather, and other normal book materials at a rate of 3 inches per round. They are very fast and seek to avoid capture and combat when discovered.

### Rot Grub

These maggot-like creatures live in refuse. If they touch exposed skin (they have a percentage chance to do this equal to the victim's AC, not counting shield), they burrow into the flesh and secrete a mild poison that deadens the burrowing area; a victim must make a successful Wisdom check to notice the burrowing; one check is allowed each round. Fire kills 2d10 grubs per application to infested flesh, but after 1d6 rounds they are too deep to be burned. A *cure disease* will kill the rot grubs. If the worms are not stopped, they reach the heart in 1d3 turns, killing the victim.

# Wraith

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Uncommon |

| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6 |
| **Special Attacks:** | Energy drain |
| **Special Defenses:** | Hit only by silver or +1 or better magical weapon |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' tall) |
| **Morale:** | Champion (15) |
| **XP Value:** | 2,000 |

The wraith is an evil undead spirit of a powerful human that seeks to absorb human life energy. These horrible creatures are usually seen as black, vaguely man-shaped clouds. They have no true substance, but tend to shape themselves with two upper limbs, a torso, and a head with two glowing red eyes. This shape is a convenience born from the habit of once having a human body.

**Combat:** The touch of a wraith does damage in two ways. First, the chilling effect of the touch inflicts 1-6 points of damage, even to creatures immune to cold. Second, such a hit drains a level of experience from its victim. This includes hit points and all abilities associated with that level, such as spell casting or

combat ability. The damage from the chill can be healed normally, but the experience points are gone forever and must be earned again or magically *restored*.
Wraiths are immune to normal weapons. An attack with such a weapon merely passes through its body with no effect. Silver weapons cause only half normal damage. Magical weapons inflict their full damage, causing a black vapor to boil away from the body of the wraith. A wraith slowly regains its full hit points if left alone for at least a week (recovering one point every eight hours). Like most undead, wraiths are immune to *sleep, charm, hold, death* and cold-based spells. They are immune to poison and paralyzation. A vial of holy water causes 2-8 points of damage (as acid) upon striking the body of a wraith. A *raise dead* spell will utterly destroy one if a saving throw vs. spell is failed.
Wraiths attack humans or demihumans in preference to other creatures. However, animals will sense their presence within 30 feet and refuse to advance further, panicking if forced. A pack of wraiths will try to get surprise when attacking, and will wait and position themselves for the most advantageous moment to attack. Wraiths are very intelligent and tend to cluster around the weaker members, or stragglers, when attacking. Any human killed by a wraith becomes a half-strength wraith under its control (e.g., a 10th-level fighter will become a 5 Hit Die wraith under the control of the wraith that slew him).
This foul creature has no power in direct sunlight and will flee from it. Sunlight cannot destroy the wraith, but the undead creature cannot attack in sunlight. It shuns bright (e.g., *continual*) light sources in general, but will occasionally attack if the compulsion to do so is strong.

**Habitat/Society:** A wraith is an undead spirit of a powerful, evil human. As such, it is usually found in tombs or places where such men and women would have died. Since such men and women are frequently buried together, in the case of the wealthy, or with their families, wraiths are most commonly encountered in packs. Those that died or were buried alone might still be encountered in packs, because a human who dies from the touch of a wraith becomes a wraith under the sway of its slayer. The treasure of the wraith is usually its possessions in life, now buried with it, or those of its victims. Wraiths exist only to perpetuate evil by absorbing the life force of as many people as possible. A character who becomes a wraith is nearly impossible to recover, requiring a special quest.
The wraith cannot communicate, except through a *speak with dead* spell. They do not even seem to communicate with each other, except as master to slave for combat strategy. Any attempt to speak to a wraith is met with scorn, unless by a very powerful party. In that case, the wraith desires only to flee. Wraiths can be dominated by powerful evil creatures, particularly other undead, priests, and wizards, and made to serve their will.

**Ecology:** The wraith has no proper niche, serving no useful purpose in nature and providing no byproducts that others can use. It requires no nourishment, killing only for the sheer hatred of life. All creatures close to nature will shun the presence of a wraith. It exists more in the Negative Material Plane than in the Prime Material Plane, and thus is not a natural part of this world.

# Wyvern

| | |
|---|---|
| **Climate/Terrain:** | Temperate mountain forests and jungles |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Dusk and dawn |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | E |
| **Alignment:** | Neutral (evil) |
| **No. Appearing:** | 1-6 |
| **Armor Class:** | 3 |
| **Movement:** | 6, Fl 24 (E) |
| **Hit Dice:** | 7+7 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 2-16/1-6 |
| **Special Attacks:** | Poison |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | G (35' long) |
| **Morale:** | Very steady (14) |
| **XP Value:** | 1,400 |

A distant cousin to the dragon, the wyvern is a huge flying lizard with a poisonous stinger in its tail. The 35-foot-long dark brown to gray body of the wyvern is half tail. Its leathery batlike wings are over 50 feet from tip to tip. The head alone is 4 feet long and filled with long, sharp teeth. Unlike the dragon, it has only hind legs, using them the same way a hunting bird would. The tip of the tail is a thick knot of cartilage from which a 2- foot-long stinger protrudes, very much like that of a scorpion. The eyes are red or orange. A wyvern does not have a strong odor, although its lair might smell of a recent kill. These beasts can make two sounds: a loud hiss, which sounds like a hot sword plunged into water, and a low, deep-throated growl, much like that of a bull crocodile.

**Combat:** Rather stupid, but aggressive, wyverns will nearly always attack. In combat, the wyvern always prefers to be flying, and will seize any opportunity to take flight and continue combat. If trapped on the ground it will bite (2-16 points of damage) and use its stinger (1-6 points of damage), attacking the most convenient target or targets. The tail is very mobile, easily striking over the back of the wyvern to hit an opponent to its front. The stinger injects poison (type F) into the wound, against which the victim must make a save vs. poison or die. Even if the saving throw is successful, the victim suffers 1-6 points of physical damage from the sting.

From the air the wyvern is a far more deadly opponent. It dives upon ground targets, attempting to snatch them up in its two taloned claws (1-6 points of damage each) and fly off. Man-sized victims are snatched if at least one talon hits for damage. Large victims require both talons to hit in order to snatch them up. The wyvern cannot fly while carrying anything bigger. After a dive, it takes the wyvern a full round to circle around. On the next round it can dive again. Once airborne with prey in its talons, the wyvern stings and bites each round, both at +4 to hit, until the victim is motionless. In aerial combat, the wyvern will make a pass during which it will either bite or sting. Then it will land and feast, not hunting again until the next day.

As a hunter, the wyvern is cunning. It will avoid letting its shadow fall across its prey as a warning. The final approach of the dive is done in complete silence, imposing a -2 surprise modifier on the target. It trails its prey from downwind whenever possible. A mature wyvern often waits for the right moment to strike, and is willing to let prey go that is too powerful or within easy reach of cover. Such a wyvern understands that men, particularly those armed in bright metal, are stronger than their size would indicate. Given a perfect opportunity, it will attempt to snatch up an unarmored member and fly out of range.

**Habitat/Society:** The wyvern is a solitary creature, nesting only with its mate and young. It tends to lair on mountainsides that overlook forests, jungles, or sometimes plains. A wyvern makes its lair in large caverns that can be found in such places, staking out a territory about 25 miles across. If game is sparse, it will hunt with a small group of its own kind. Only young wyverns attack others of their kind, usually to establish new territory. Older wyverns settle disputes in an unknown manner without actual combat. Some wyverns have been known to work with evil dragons. Usually these dragons completely dominate the weaker and smaller wyverns.

**Ecology:** An adult wyvern consumes the equivalent of a man-sized to large creature once per day. This could translate to a horse, pig, or a handful of sheep. While it eats them whole, the bones are not digested, and neither are metal objects. The wyvern eats carrion only if desperate.

The wyvern has no natural enemies, although it would not be a match for certain powerful creatures. It is noted for the foul taste of its flesh. No one has found a way to cure its hide and the bones are light and brittle to aid in flying. Certain body parts are used by spell casters as spell components, for which they will pay a reasonable price.

# Xorn

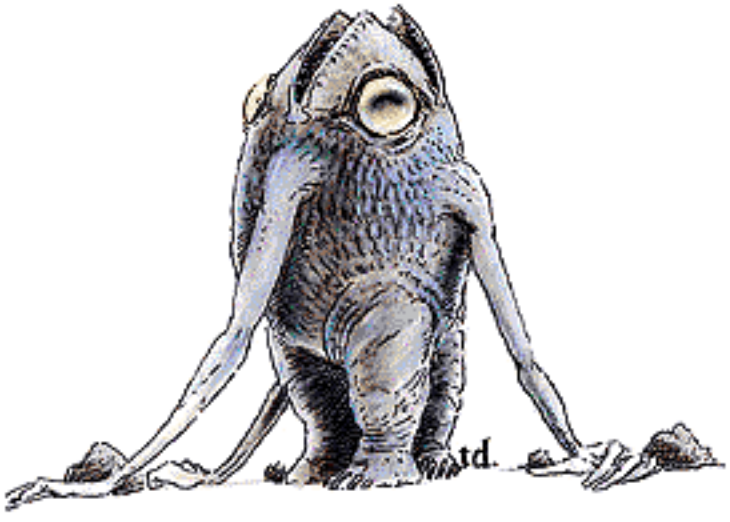
| **XP Value:** | 4,000 | 3,000 |



The xorn (zorn) are natives to the elemental plane of Earth.
The wide body of a xorn is made of a pebbly, stone-like material. It has a large, powerful mouth on top

of its head with three long arms, tipped with sharp talons, symmetrically positioned every 120 degrees around it. Between the arms are large, stone-lidded eyes that see in all directions. At its base are three thick, short legs, each directly beneath an eye. The whole body is designed for burrowing, mouth first.

**Combat:** Xorn do not attack flesh creatures except to defend themselves or their property, since they can not digest flesh. Xorn have no excessive love or hate for creatures of the Prime Material plane. The sole exception to this is anyone carrying a significant amount of precious metals or minerals, which it can smell up to 20 feet away. The normally peaceful xorn can become quite aggressive when after food, especially on the Prime Material plane, where such sustenance is harder to find than it is on its native plane. Xorn expect to be given a reasonable portion in exchange for peaceful passage, or else they attack (90% chance) to get food.
In combat, xorn have two different methods of fighting. Against a single opponent, they bend the two legs nearest the opponent deeply, angling their bodies toward the enemy. In this way all four attacks can be brought to bear. Against several opponents, they attack with arms in all directions, each striking at a different target. One of the targets suffers a second attack, as the xorn angles its body down to bite.
If necessary, a xorn can use its ability to blend into the surrounding stone to impose a -5 penalty to opponents' surprise rolls when it attacks. This incorporates a blending of coloration and its physical ability to pass into and through stone. This does not happen very often, since a xorn is more likely to ignore a party, or openly demand metals. However, once combat begins, it can use a variation on this theme. The xorn may pass through the nearest stone (usually the floor) and vanish for 1-3 rounds. It then lunges out of a stone surface to gain surprise, often at the feet of an opponent, attacking with three arms and its mouth. This guerrilla warfare can continue indefinitely. During any round that it passes through stone, a *phase door* spell kills it instantly. If fight goes against it, the xorn retreats to the nearest stone surface.
A xorn is immune to fire and cold, both magical and normal. Electrical attacks cause half damage if the xorn fails its saving throw, and no damage if the saving throw is successful. Edged weapons cause only half damage to xorn, though blunt and piercing weapons do full damage. A *move earth* spell flings a xorn back 30 feet, and the creature is stunned for one round. A *stone to flesh* or *rock to mud* spell lowers its AC to 8 for one round. During that round the xorn will attack, as it is readjusting its substance back to stone. Lastly, a *passwall* spell inflicts 1d10+10 points of damage on a xorn.

**Habitat/Society:** A xorn is normally found on the elemental plane of Earth. It is only on the Prime Material plane if forcibly summoned or if it was the victim of an interplanar accident.
On their native plane, xorn are as peaceful as Prime Material plane herbivores. While xorn are intelligent, their society is limited to small clans of mineral gatherers. These clans wander from place to place, leaving behind open pockets where they have eaten out a vein of mineral. On the Prime Material plane they always seek wide regions of stone underground. What humans would consider treasures, xorn consider food. They keep their store of food in a nearby air pockets.

**Ecology:** On the Prime Material plane, they are visitors that serve no ecological function. On their own plane, they are gatherers, eating only stone and minerals. The empty pockets in the stone are quickly inhabited by various creatures of the plane. Dao have been known to hunt them for sport. Equally as often, xorn serve dao as slaves.

## Xaren

Xaren are relatives of the xorn, with identical abilities in combat. Xaren resemble xorn closely, though

they are slightly smaller and their hides are shinier, almost metallic. Unlike ordinary xorn, they crave magical metal as food. For each plus of enchantment they eat, they permanently gain 1 hit point, up to their maximum of 45. Even after reaching their maximum growth, they still require magical metal to maintain their health. They can smell magical metal up to 40 feet away.

Like xorn, xaren expect handouts. They demand magical metal from creatures with enchanted weapons or armor, and attack if they are denied. They prefer iron, copper, silver, gold and electrum (in that order), though they will also snack on metallic ore.

If attacked with a magical weapon, xaren can make an attack roll against AC -2 to bite an opponent's weapon. If they hit, the weapon must save vs. crushing blow or be destroyed.

Xaren and xorn are indifferent to one another and rarely cooperate. Dao do not enslave xaren, though they do hunt them.

# Yeti

| | |
|---|---|
| **Climate/Terrain:** | Arctic hills and mountains |
| **Frequency:** | Very rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | D |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-6 |
| **Armor Class:** | 6 |
| **Movement:** | 15 |
| **Hit Dice:** | 4+4 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 1-6/1-6 |
| **Special Attacks:** | Squeeze |
| **Special Defenses:** | Immune to normal cold, invisible in snow and ice |
| **Magic Resistance:** | Nil |
| **Size:** | L (8' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 420 |

Sometimes confused with the abominable snowman, the yeti is a distant cousin to the great carnivorous apes of warmer climates.

An adult yeti stands 8 feet tall and is covered in long, white fur. Their feet and hands are wide and flat, which helps to disperse their great weight (about 300 pounds) on treacherous snow fields. They travel on all fours like the apes, but fight very comfortably standing erect. Unlike most apes and gorillas, the yeti does not have an opposable toe on its feet. They wear no clothing or ornamentation. The spoor, or smell, of a yeti is very subtle in cold climates, but in confined or warm areas, they have a strong, musky odor.

The eyes of a yeti are icy blue or almost colorless. Their claws and flesh are ivory white. Unlike many arctic creatures, the yeti does not have a thick layer of body fat to keep it warm. Instead, it relies upon the special properties of its thick, warm fur. It has a transparent second eyelid, which allows the creature to see in blowing snow, and prevents its eyes from freezing in extreme temperatures.

**Combat:** The yeti is a fierce hunter of the polar regions. It stalks its prey and lays an ambush, attempting to gain surprise. A favorite trick is to get ahead of its prey and lie in a depression in the snow, or dig a shallow pit and cover itself with snow. Such works can be detected only by natives of the arctic regions, and then only 25% of the time. Against the snow, the yeti is invisible due to its coloration until its prey is 10 yards away. Under a thin layer of snow it is completely invisible.
Any opponent surprised by a yeti must save vs. paralyzation or go rigid with fright for three rounds, indicating that he has looked into the icy blue depths of the yeti's eyes. Any opponent that is paralyzed in this way can be automatically hit by both claws and squeezed.
Although the yeti does have fangs (1-4 points of damage), it does not usually attack with them, preferring to use its formidable claws. If any hit with claws is made with a natural 20, the victim is pulled in for a chilling squeeze. The creature's fur actually absorbs heat, making it extraordinarily cold if contacted (2-16 points of damage if squeezed). The heat-absorbing property of the yeti's fur can work against it; damage from heat is 50% greater than normal.

**Habitat/Society:** Although the yeti is of average intelligence, it has no civilization. They can use simple tools, including man-made weapons, but will not make any themselves. Yeti live in ice caves in hills and mountains. Sometimes these are natural, sometimes they are excavated by the yeti or enlarged to accommodate the family. Most yeti treasure consists of items recovered from the bodies of explorers.
Life is harsh in the arctic, and friends and food are hard to find, making survival and reproduction the yeti's only goals. The yeti will associate only with its immediate family, the young leaving to fend for themselves as soon as they mature. A family usually consists of an adult male with one to three females and a 50% chance of 1-6 young if females are present. In an attacking group, the largest yeti is the male, the next largest ones are his mates. Any others are small males or females that are due to leave the family soon.

**Ecology:** Any living creature not of its family is considered potential food, including other yeti. This does not make them foolhardy; only a starving yeti will attack an obviously stronger party. Their typical diet consists of herd creatures, such as caribou, bears, wolves, and other creatures inhabiting the snowy mountains in which they live. The yeti may turn to scavenging in hard times. They range across a wide area in search of food, usually 15 miles in all directions from their lair.
Yeti claws and teeth have value only because of the rarity of the creature. They sell for about a gold piece a tooth or claw on the open market. Yeti fur is another story. It is prized by those living in cold climates for its extraordinary ability to keep its wearer warm. A full grown yeti pelt can fetch up to 300 gold pieces on the open market.

# Yuan-ti

| | |
|---|---|
| **Climate/Terrain:** | Tropical jungles |
| **Frequency:** | Very rare |
| **Organization:** | Tribe or nation |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | C |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 4/0 |
| **Movement:** | 12, slither 9 |
| **Hit Dice:** | 6-9 |
| **THAC0:** | 15 (6 HD),13 (7-8 HD),11 (9 HD) |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | See below |
| **Special Attacks:** | Spells |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | 20% |
| **Size:** | M or L (10' long) |
| **Morale:** | Elite (14) |
| Abominations | Champion (15) |
| **XP Value:** | Variable |

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Power Score | PSPs |
|---|---|---|---|---|
| HD-2 | 3/level | MT, II/M-, IF, TW | = Int | 15xMult |

**Clairsentience -** danger sense, feel sound, poison sense*. **Psycombetabolism -** Animal affinity* (snake),

metamorphosis (snake), chameleon power*, chemical simulation*, flesh armor.
**Telepathy -** attraction (to snakes), aversion* (to snakes), false sensory input, inflict pain, invincible foes, life detection, phobia amplification*, post-hypnotic suggestion, repugnance (to snakes), taste link*.

Descendants of humans whose blood has been fouled, yuan-ti have varying degrees of snakelike body parts. They are highly intelligent and evil, always plotting to advance their causes.
There are three major varieties of yuan-ti: *purebloods*, *halfbreeds*, and *abominations*. A pureblood can pass for human 80% of the time. It has only slight differences from true humans, such as slit eyes, or a forked tongue, maybe even small fangs. Halfbreeds are part human and part snake. Roll a d6 twice on the table below; a duplicate roll produces no result, but is not rerolled. Ignore unworkable combinations. This is a general guide; the DM can invent his own combinations of snake and human.

| Roll | Feature | Effect |
|---|---|---|
| 1 | Snake head | Bites for 1-10 points damage |
| 2 | Flexible torso | +1 to saves using Dexterity |
| 3 | No legs, snake tail | Constricts for 1-4 points of damage |
| 4 | Snakes instead of arms | Each bites for 1-6 points damage |
| 5 | Scales instead of skin | Armor Class 0 |
| 6 | Legs and a snake tail | Constricts for 1-4 points of damage |

Abominations are either all snake (50%) or have only a single human feature, either head or arms, and are of large size (10 feet long). Halfbreeds and abominations disdain wearing human clothing or armor, while purebloods do not. All yuan-ti use weapons and other items. Yuan-ti do not give off an odor that humans can detect. However, animals will detect a dry, musty smell on them. The snake features of these foul creatures vary greatly from simple green and brown scales to wild patterns of stripes, diamonds, and whorls in reds and blues. Yuan-ti speak their own language. They can also speak with any snake or snakelike creature. Those with human heads speak common besides.

**Combat:** Yuan-ti are geniuses, and fight as such. They plan elaborate traps and utilize their surroundings superbly in combat. They prefer ambushes to direct confrontation. In a mixed group, the least valuable and powerful attack the opponent first. This means that the purebloods go before the half-breeds, which go before the abominations. The group leader may order particular members forward before others if it provides for a better strategy. When encountered outside their temple area, only one to four of them are in a group. In the temple area they can be found in much larger groups.
Purebloods have 6 Hit Dice, half-breeds have 7 or 8 Hit Dice, and abominations have 9 Hit Dice. All yuan-ti, if they have hands, always use weapons, preferring those with an edge. They use poison, particularly slow acting types, but in traps, not on weapons.
Any yuan-ti with a human head can cast the following spells once per day; *cause fear, darkness* (15 foot radius), *snake charm, sticks to snakes, neutralize poison, suggestion,* and *polymorph other.*

**Habitat/Society:** Yuan-ti are devout worshippers of evil. They also hold all reptiles in high esteem. The center of yuan-ti life is the temple. They tend toward old ruins far away from man, but have even been known to build underneath human cities. Their own works tend toward circles, with ramps and poles replacing stairs. In all cases they are secretive about the location of their city or temple. The abominations rule over the yuan-ti, and are the leaders of the temple, with the high priest (human-headed) ruling over all. Their rituals often involve bloody sacrifices. The purebloods take care of all outside negotiations, always pretending to be human. Yuan-ti speak their own language and common.

**Ecology:** Ages ago, a cult of humans worshiping a reptilian elder god recieved a "blessing" from their dark lord: their offspring all were part snake. Since then the breeding line has been polluted and mixed, producing purebloods (those least favored), half-breeds, and abominations (the truly blessed). They are strictly carnivorous, eating any warm-blooded creature they can catch. They have a special taste for birds and human flesh. They are clever enough about their ecology not to overhunt any particular region. Larger groups keep captive herds of wingless birds or other warm-blooded creatures.

# Yuan-ti, Histachii

| | |
|---|---|
| **Climate/Terrain:** | Tropical jungles |
| **Frequency:** | Very rare |
| **Organization:** | Tribe |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Nil |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 2-20 |
| **Armor Class:** | 8 |
| **Movement:** | 12 |
| **Hit Dice:** | 2+2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-2/1-2/1-3 |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | M (5'-6' tall) |
| **Morale:** | Average (10) |
| **XP Value:** | 120 |

Once human, yuan-ti histachii are near-mindless abominations who have been transformed into reptilian humanoids to serve their yuan-ti masters. Most often, they are found guarding yuan-ti brood chambers. Histachii are hairless creatures. Their clothing, little more than filthy rags, hangs limply over their emaciated bodies. Their gray or yellow-green skin is tough and scaly, and smells faintly of rotting meat. They have beady, bloodshot eyes, and their forked tongues continually dart in and out of their mouths. Their dull yellow teeth are like tiny hooks, razor-sharp. Their fingernails are black and twisted, resembling the claws of a lizard.

Histachii speak in short, hissing phrases. They know the languages of yuan-ti and all snakes and snakelike creatures, as well as the languages they spoke in their original human lives.

**Combat:** Histachii attack any nonreptilian creature or humanoid on sight, unless their yuan-ti masters give them orders to the contrary. Unsophisticated fighters, most histachii charge directly at their opponents, attacking with their claws and teeth. To protect their yuan-ti masters, histachii will fight to the death.

Regardless of their abilities in their former lives, histachii do not wield weapons or use magic. Once per day, they can become *berserk*. In this state, they are so enraged that they gain a +2 bonus to their attack rolls. The *berserk* condition persists for 2-12 (2d6) rounds.

Unlike yuan-ti, histachii have no natural magic resistance. However, they are immune to all types of *hold* and *charm* spells.

**Habitat/Society:** Yuan-ti create most histachii servitors from human prisoners. They also may transform human worshippers who voluntarily agree to become histachii. Humans become histachii by drinking a distillation of yuan-ti venom mixed with certain herbs and roots. (The yuan-ti prepare this special concoction.) If a human is unwilling to drink, the yuan-ti pin their captive to the ground and pour the mixture down his throat.

Any human who drinks this mixture, whether by choice or by force, must make a saving throw vs. poison with a -4 penalty. If the saving throw fails, the victim becomes a histachii in 7-12 (1d6+6) days. If the save is successful, the victim immediately lapses into a coma; death will follow in one hour. A comatose victim can be revived with a *slow poison* or *neutralize poison* spell, presuming the spell is cast within 1 hour after the mixture has been swallowed. Human-headed yuan-ti have the ability to *neutralize poison*, and they may save a comatose victim themselves. It is not for the victim's benefit. A human who fails his save after drinking the mixture may suddenly find himself alive again, only to face another flask of the mixture when the yuan-ti attempt another transformation.

Only humans can become histachii. Nonhumans who drink the yuan-ti mixture must also make a save vs. poison with a -4 penalty, however. If the save is successful, the nonhuman will be violently ill, unable to take any action for 1-4 turns. If the save throw fails, the nonhuman becomes comatose and dies in 2-5 rounds.

If a human fails his saving throw after consuming the mixture, a few desperate measures may prevent his transformation into a histachii. If *neutralize poison*, *dispel magic*, *remove curse*, and *heal* are cast on the victim, in precisely this order, the transformation process will be reversed. However, the victim will permanently lose 1 point of Intelligence. A *wish* or a *limited wish* will reverse the transformation with no loss of Intelligence. Once the transformation is complete, only a *wish* can restore the victim to his former self. Histachii live 20-80 (2d8 x 10) years after their creation. They cannot breed; histachii only can be created from human beings.

Histachii are completely submissive to their yuan-ti masters, carrying out their every order without hesitation. The servants share the lairs of their yuan-ti masters. Usually, these lairs are in ancient ruins deep in tropical jungles, but sometimes yuan-ti dwell in subterranean caverns beneath human cities. A histachii's duties include hunting, caring for the yuan-ti's reptile menageries, guarding prisoners, and various custodial chores. In rare moments of leisure, the servants enjoy soaking in pools of cool water. Histachii do not collect treasure.

**Ecology:** Like yuan-ti, histachii are strictly carnivorous, feasting on rats, worms, and other vermin. They also eat yuan-ti leftovers.

These yugoloths are summoned by evil wizards or priests to guard something of importance. Yugoloth guardians always defend their charge with great ferocity.
There are three types of yugoloth guardians -- least, lesser, and greater. The least and lesser yugoloth guardians vary in size and form, often being horned and frog-like (least) or ape- or boar-like (lesser). Greater yugoloth guardians always appear as gigantic, winged bears with ram horns protruding from their foreheads, and eagle talons for hands.
yugoloths guardian have the ability to speak all languages.

**Combat:** yugoloth guardians can breath fire three times per day in a cone 30 feet long with a 10-foot base diameter. Damage depends upon the type of daemon breathing. Least and lesser yugoloths cause 3d6 and 5d6 points of damage, respectively, while greater yugoloths inflict 7d6 points per breath attack. A successful saving throw vs. breath weapon reduces damage by half. Yugoloth guardians never use their fire breath if the fire might damage whatever they are assigned to protect.
All yugoloth guardians are immune to *charm, hold, sleep, polymorph*, and *fear* spells. Lesser and greater yugoloths are also impervious to weapons with less than a +2 bonus. Many of these creatures are invulnerable to one or more additional forms of attack (e.g., sword, cold, fire, electricity).

**Habitat/Society:** Yugoloth guardians must remain at all times within 90 yards of the object they have been summoned to protect. Within this 90-yard radius, yugoloth guardians prefer to remain at a distance in battle, using their breath weapon to maximum advantage.

**Ecology:** Summoning a guardian daemon is a dangerous affair. There is a 10% chance for each level the summoner is over 7th level of having his request for a guardian daemon granted (maximum chance of 90%). Conversely, if the summoning fails, there is a 30% chance (-2% per level of the summoner over 10th) that the daemon takes offense and gates in to slay the spellcaster.

### Least Yugoloth
These creatures are often summoned to protect treasures valued at less than 25,000 gold pieces. Least yugoloths have a 50% chance of being immune to one additional type of attack.

### Lesser Yugoloth
Lesser yugoloths are usually found guarding treasures of 25,000 gold pieces or more. They have a 80%

chance of being impervious to one additional attack form.

### Greater Yugoloth

These yugoloths are dispatched only to protect objects of exceedingly great value. Greater yugoloth guardians are resistant to magic (25%) and are always immune to two additional forms of attack. They can make a *suggestion*, as the spell, once per round, even when engaged in combat.

# Zaratan

| | |
|---|---|
| **Climate/Terrain:** | Tropical/Fresh and salt water |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |

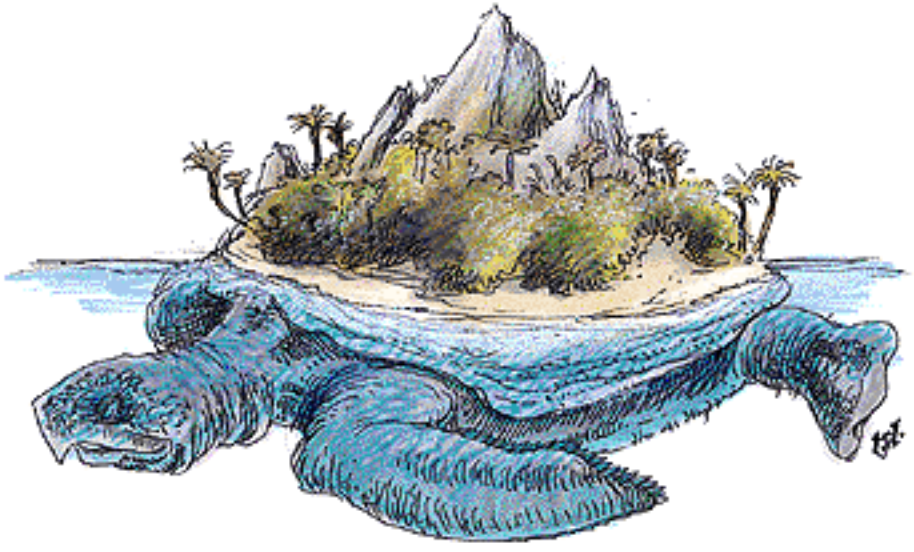
| **Size:** | G (200-350' diameter) |
| **Morale:** | Fearless (19) |
| **XP Value:** | 46,000 + 1,000 per HD over 51 |



The zaratan is an enormous, passive turtle found in the warm currents of Zakhara's seas, in the Al-Qadim campaign setting. Thankfully, the zaratan spends most of its existence in a profoundly deep slumber.

The shell of a zaratan (plural, zaratani) looks like a sloped, rocky mound several hundred feet in diameter. The zaratan's head, over 50 feet across, is often mistaken for a partially-submerged, barnacle-encrusted boulder. The zaratan usually keeps its eyes shut, covered with stony lids that blend with the rest of its head in texture and color. The zaratan's four flippers, each over a hundred feet long, appear to be small reefs, supporting a variety of corals, barnacles, and small fish. The zaratan's rocky shell is considered AC -6, while its head and flippers are only AC 0. In its dormant state, a zaratan appears to be a small, floating island.

**Combat:** More often than not, once wakened from its slumber, a zaratan will react to an enemy by withdrawing into its rocklike shell, against which nonmagical weapons have absolutely no effect. In addition, no known poison will effect a zaratan with its incredibly slow metabolism. A zaratan will remain in its shell for 1-10 years (if not further provoked) before re-emerging.
However, if pestered and wounded for more than 5% of its total hit points, a zaratan becomes a terrible opponent. Although it attacks last in every round, a single bite from its 40' maw delivers 10-100 points of damage and will swallow any beings within a 10' radius of its target (no save), should its attack roll succeed by 4 more than needed.
The stomach of a zaratan is a tough, tube-shaped cave. Usually there is enough stale, trapped air for a creature to survive indefinitely (if they survived the bite attack), but creatures trapped within also suffer 2 points of damage per day unless they can figure out a way to protect themselves from the stomach's corrosive digestive juices. The stomach lining is AC 5. Damage equal to 5% of the zaratan's total hit points (a case of painful indigestion) will result in the victims' regurgitation. A zaratan's stomach might contain just about anything, depending upon the whim of the DM, from pieces of driftwood and chunks of ships, to weapons, armor, and even a small amount of treasure (suggested type Z).
After a battle, a zaratan will immediately fall into a deep slumber, which typically lasts 1-100 years.

**Habitat/Society:** The slow metabolism of the zaratani assure them incredibly long (if uneventful) lives, measured in millennia. The zaratani are said to have been floating in the sea long before the genies first visited the Land of Fate.
At any given time, a zaratan is 99% likely to be sleeping. As it slumbers, it keeps its mouth wide open. Any small to man-sized creatures stupid enough to swim inside (large fish mostly) are reflexively swallowed. The zaratan spends the rest of its time either mating or conversing with others of its own kind.
Every few centuries, by sheer coincidence, a pair of zaratani will drift into each other. Should they awake (and be of the opposite sex), they will mate. The courtship ritual may take decades, and the mating itself lasts as long as a year.
The zaratani communicate with one another in a language similar to that of the whales. Conversations between the zaratani often last decades. On rare occasions, they have been known to communicate with other beings by telepathy.

**Ecology:** The older a zaratan gets, the longer it sleeps. As a result, many actually become indistinguishable from a floating island or reef, supporting their own mini-ecosystems on their broad, rocky carapaces and underbellies. Many sport stunted palm trees and vegetation on their shells.
The older and wiser zaratani are perfectly content to be attended by lesser symbiotic beings, provided the symbiotes are not too bothersome and don't interfere with a zaratan's sleep. A few are known to support small, uncivilized villages, while others have even been used as a mobile base for pirates and corsairs! Visitors will find most inhabitants of a zaratan highly superstitious. Many revere their island home as a

god. They believe (rightly) that were their deity to awaken due to hunger, their island might sink beneath the sea, destroying their village. As a result, these villagers strive at every opportunity to keep the zaratan well-fed and content, sacrificing large quantities of caught fish and even visitors to placate their floating deity.

Zombies are mindless, animated corpses controlled by their creators, usually evil wizards or priests. The condition of the corpse is not changed by the animating spell. If the body was missing a limb, the zombie created from it would be missing the same limb. Since it is difficult to get fresh bodies, most zombies are in sorry shape, usually missing hair and flesh, and sometimes even bones. This affects their movement, making it jerky and uneven. Usually zombies wear the clothing they died (or were buried) in. The rotting stench from a zombie might be noticeable up to 100 feet away, depending upon the condition of the body. Zombies cannot talk, being mindless, but have been known to utter a low moan when unable to complete an assigned task.

**Combat:** Zombies move very slowly, always striking last in a combat round. They are given only simple, single-phrase commands. They always fight until called off or destroyed, and nothing short of a priest can turn them back. They move in a straight line toward their opponents, with arms out-stretched, seeking to claw or pummel their victims to death. Like most undead, zombies are immune to *sleep*, *charm*, *hold*, *death magic*, *poisons*, and cold-based spells. A vial of holy water inflicts 2-8 points of damage to a zombie.

**Habitat/Society:** Zombies are typically found near graveyards, dungeons, and similar charnel places. They follow the spoken commands of their creator, as given on the spot or previously, of limited length and uncomplicated meaning (a dozen simple words or so). The dead body of any humanoid creature can be made into a zombie.

**Ecology:** Zombies are not natural creations and have no role in ecology or nature.

### Ju-Ju Zombie

These creatures are made when a wizard drains the life force from a man-sized humanoid creature with an *energy drain* spell. Their skin is hard, gray, and leathery. Ju-ju zombies have a spark of intelligence. A hateful light burns in their eyes, as they realize their condition and wish to destroy living things. They understand full-sentence instructions with conditions, and use simple tactics and strategies. Since they became zombies at the moment of death, their bodies tend to be in better condition. Ju-ju zombies use

normal initiative rules to determine when they strike. They are dexterous enough to use normal weapons, although they must be specifically commanded to do so. These zombies can hurl weapons like javelins or spears, and can fire bows and crossbows. Their Dexterity allows them to climb walls as a thief (92%) and they strike as a 6 Hit Die monster. Ju-ju zombies are turned as specters.

The animating force of a ju-ju zombie is more strongly tied to the Negative Material plane. The result is that only +1 or better magical weapons can harm them. Regardless of the magic on the weapon, edged and cleaving weapons inflict normal damage, while blunt and piercing weapons cause half damage. In addition to normal zombie spell immunities, ju-ju zombies are immune to mind affecting spells and psionics, illusions, and to electricity and magic missiles. Fire causes only half damage.

### Zombie Lord

The zombie lord is a living creature that has taken on the foul powers and abilities of the undead. They are formed on rare occasions as the result of a *raise dead* spell gone awry. Zombie lords look as they did in life, save that their skin has turned to the pale grey of death, and their flesh is rotting and decaying. The odor of vile corruption and rotting meat hangs about them, and carrion feeding insects often buzz about them to dine on the bits of flesh and ichor that drop from their bodies.

The zombie lords can speak those languages they knew in life and they seem to have a telepathic or mystical ability to converse freely with the living dead. Further, they can *speak with dead* merely by touching a corpse. Zombie lords are turned as vampires.

When forced into combat, it relies on the great strength of its two crushing fists. The odor of death surrounding the zombie lord is so potent it causes horrible effects in those who breathe it. On the first round a character comes within 30 yards, he must save vs. poison or be affected in some way. The following results are possible:

| 1d6 Roll | Effect |
|---|---|
| 1 | *Weakness* (as the spell). |
| 2 | *Cause disease* (as the spell). |
| 3 | -1 point of Constitution. |
| 4 | *Contagion* (as the spell). |
| 5 | Character unable to act for 1d4 rounds due to nausea and vomiting. |
| 6 | Character dies instantly and becomes a zombie under control of the zombie lord. |

All zombies within sight of the zombie lord are subject to its mental instructions. Further, the creature can use the senses of any zombie within a mile of it to learn all that is happening within a very large area. Once per day, the zombie lord can animate dead to transform dead creatures into zombies. This works as described in the *Player's Handbook* except that it can be used on the living. Any living creature with fewer Hit Dice than the zombie lord can be attacked in this manner. A target who fails a saving throw vs. death is slain. In 1d4 rounds, the slain creature rises as a zombie under the zombie lord's command.

Zombie lords seek out places of death as lairs. Often, they live in old graveyards or on the site of a tremendous battle -- any place there may be bodies to animate and feast upon. The mind of the zombie lord tends to focus on death and the creation of more undead. The regions around their lairs are often littered with the decaying bodies, half eaten, of those who have tried to confront the foul beast.
The zombie lord comes into being by chance, and only under certain conditions. First, an evil human must die at the hand of an undead creatures. Second, an attempt to *raise* the character must be made. Third, the corpse must fail its resurrection survival roll. Fourth and last, a deity of evil must show "favor" to the deceased, and curse him or her with the "gift of eternal life." Within one week of the *raise* attempt, the corpse awakens as a zombie lord.

### Sea Zombie

Sea zombies (also known as drowned ones) are the animated corpses of humans who died at sea. Although similar to land-dwelling zombies, they are free-willed and are rumored to be animated by the will of the god Nerull the Reaper (or another similar evil deity).
The appearance of drowned ones matches their name: they look like human corpses that have been underwater for some time; bloated and discolored flesh dripping with foul water, empty eye-sockets, tongue frequently protruding from between blackened lips. Their visage and the stench of decay surrounding them are so disgusting that anyone seeing a drowned one or coming within 20 feet of one must roll a saving throw vs. poison. A failed saving throw indicates that the character is nauseated, suffering a -1 penalty to his attack roll and a +1 penalty to his AC for 2d4 rounds. On land, drowned ones move slowly, with a clumsy, shambling gait. In water, however, they can swim with frightening speed.
Drowned ones have an abiding hatred for the living and attack them at any opportunity. These attacks often show surprising cunning (for example, luring ships onto the rocks and attacking the sailors as they try to save themselves from the wreck). Drowned ones take advantage of their swimming speed by attacking ships as they lie at anchor -- climbing aboard the vessel and trying to drive the sailors overboard, where they can deal with them more easily.
Drowned ones attack with the weapons typical of sailors: short swords, daggers, hooks, clubs, belaying pins, etc. Because of the unnatural strength of the creatures, these weapons all inflict 1d10 points of damage. The putrid water that drips from the drowned ones contains many bacteria, so any successful hit has a 10% chance of causing a severe disease in the victim. The water-logged condition of the creature's flesh means that fire and fire-based magic cause only half damage. Lightning, electrical, and cold-based attacks inflict double damage. Drowned ones are immune to *sleep*, charm spells, illusions, and other mind-altering spells. Because they are created by the direct will of a deity, they cannot be turned.
Many of the humans who become drowned ones were priests while alive, and they retain their powers as undead. There is a 50% chance that each drowned one encountered is a priest of level 1d4. These creatures are granted their spells directly from Nerull (or similar deity), receiving only baneful spells.
Drowned ones congregate in loose packs. Their only motivation is their hatred for the living. They have no need to eat, although they rend and chew the flesh of their prey (this is probably just to strike terror in others). Underwater, drowned ones are active around the clock and are often found in the sunken wrecks of the ships in which they drowned. They are active above the surface during the night. Drowned ones normally stray no more than 100 yards from the water. If the wind drives the fog onto the coast, however, they can roam inland as far as the fog reaches. When the fog retreats, or when the sun is about to rise, they must return to the water.
Drowned ones communicate among themselves by a form of telepathy; they have no need of a spoken language (other than for spellcasting). The verbal components for spells are spoken in unintelligible whispers.

# Appendix I: Instructions for the Blank Monster Form

Blank Monster Form

When designing a monster, avoid extremes. It is a common mistake to make a monster incredibly tough for no reason. Really tough monsters are very rare! If a monster has an extreme ability or combat statistic, there should be a good reason. In the same light, fit the monster's abilities to its description. Players need a fair chance to anticipate what the monster might do. For example, a monster that can fly should have wings, or else usually be encountered aloft. If a monster will have a surprising ability, keep it to just one, and have a good reason for the surprise.
Not all monsters have to be evil. There are many other reasons a monster can be dangerous without arbitrarily making it evil. For example, any creature will fight to protect its family or territory whether it is good or evil.
Characters should be able to negoitate with or intimidate many creatures, but negotiating with a monster does not always mean giving it treasure. Most animals will put off an attack if tossed a free meal they can eat in peace; intelligent creatures have many different motivations. Try not to force characters into having to kill every monster they meet. If a monster is left alive after an enounter, it might be encountered again, and become a regular part of the campaign.

**Climate/Terrain:**Restrict your monsters reasonably. As a rule, only tool-making creatures can be found in every climate or every terrain. Remember that the physical design of a monster should make sense for the climate and the terrain.

**Frequency:**Monsters should not dominate the landscape unless your campaign plot requires them to. Most monsters avoid settled areas because organized groups of humans and demihumans tend to kill them.

**Organization:**Give a lot of thought to this entry; it determines the group tendencies of the monster. A pack can be controlled by controlling its leader. A flock, on the other hand, has no leader, but it does have a pecking order.

**Activity Cycle:**Most monsters need to rest. When are they out and about? When are they sleeping? These habits should make sense with the diet and climate/terrain of the monster.

**Diet:** What does the monster eat? Not every monster is a man-eater. A wild bull is just as dangerous as a tiger, but it does not eat meat. Remember, fangs and claws imply carnivores, tusks and horns imply herbivores.

**Intelligence:** Avoid the tendency to make monsters too intelligent or too stupid. A creature living in the

middle of the jungle with no manipulative organs is not likely to be intelligent. Really high intelligence usually implies civilization, or at least sophisticated tools. On the other hand, monsters that must fight to survive must have enough intelligence or other natural ability to conquer their foes.

**Treasure:** Treasure is usually collected only by intelligent creatures. An animal type may guard a treasure for another creature, but the treasure itself belongs to the intelligence that set it there as a guard. Monsters that care little for riches and magical items might still have some as a result of encounters, but things will be scattered and ill-kept, often rusting away to worthlessness. Intelligent monsters, on the other hand, will use their magical treasures to their best advantage -- which may be no help at all to the characters!

**Alignment:**This is a broad description of the moral and ethical tendencies of the monster. A creature of animal intelligence has no morals or ethics, and hence is of neutral alignment. In general, try to avoid extremes, unless these fit the monster.

**No. Appearing:** The number of monsters typically encountered should correspond to the other facts about the monster. A solitary monster does not travel in a pack of 20! In general, carnivores travel in small groups, herbivores travel in large groups. This number is also a good way to keep things balanced; weak monsters are dangerous in large numbers, while a strong monster all alone is easy prey to a well-organized group of heroes.

**Combat Statistics:** This includes such values as Hit Dice and Armor Class. They should match the physical description of the monster. A well-designed monster fights the way it looks. A small, fuzzy creature with big, soft eyes should not have 25 Hit Dice, an Armor Class of -8, and swoop through the air to attack. The amount of damage done should reflect the weapon being used. Avoid the tendency to give monsters excessive Hit Dice and damage capabilities. The DM is the only person who gets a kick from seeing a PC suffer 40 points of damage in one round; players don't find that amusing at all.
See Chapter 9 of the *DMG* to determine THAC0 for monsters.

**Appearance:** Include in the physical description of the monster its size, weight, color (skin, hair, eyes, etc.), smell, noises, type of movement (graceful walk, shambling gait, etc.), typical clothing, and preferred weapons.

**Combat:**Include any special combat abilities or disabilities. Be sure to cover any basic strategies or tactics the monster might use. Remember, smart monsters use smart tactics. The strategies should reflect their natural advantages and disadvantages.

**Habitat/Society:** How does the monster relate to others of its kind, and to strangers? When do they work together and when do they fight? How do they choose leaders and how do these leaders rule? What are the goals of these monsters? Where do they live and how does this affect their behavior? Do they use or make tools? If so, what types and how are they made? Why does this monster have treasure? How does it get it? What is the nature of the family, and how many live together? Does the monster have special guards or allies and how frequently are they found together?

**Ecology:** This should include the types of food eaten -- as well as what eats them, if anything. Any useful by-products should be listed, such as fur or edible parts. You may list uses for magical items or

spells. On the other hand, don't turn your monster descriptions into shopping lists. The PCs are heroes, not butchers or fur trappers. List other creatures that live in harmony with the monster or compete against it, along with information about the size and nature of its territory.

**Variants:** If there are major subraces, they should be detailed here. This may be a stronger leader type, an inferior servant race, or a DM special, such as skeletons that hurl their finger joints like *magic missiles*.

**XP Value:** Guidelines for awarding experience are found in Chapter 8 of the *DMG*. Hit Dice Value Modifiers for psionic monsters are +1 if the creature has access to only devotions, +2 if the creature has both sciences and devotions.
In addition to the Hit Dice Value Modifiers listed for monsters in the *DMG*, consider the following optional modifiers: +1 for any special movement which gives an advantage, not just flying; +2 for magic resistance over 50%, +1 for magic resistance of 50% or under; +2 for breath weapons which can cause more than 20 points damage per attack, +1 for other breath weapons.

# Appendix II: Monster Summoning Tables

## Monster Summoning I

1 Ant, giant
2 Bat, huge
3 Beetle, fire
4 Bullywug
5 Goblin
6 Hobgoblin
7 Jermlaine (3d4 appear)
8 Kobold (3d4 appear)
9 Leech, giant (1 HD)
10 Muckdweller
11 Orc
12 Rat, giant (3d4 appear)

# Monster Summoning II

1 Beetle, bombardier
2 Centipede, giant
3 Frog, giant or killer
4 Gnoll or flind
5 Lamprey, land
6 Lizard man
7 Mongrelmen (2 HD)
8 Mudmen
9 Spider, large
10 Stirge
11 Toad, giant
12 Troglodyte

# Monster Summoning III

1 Ankheg (3-4 HD)
2 Bat, giant (mobat)
3 Beetle, boring
4 Bugbear
5 Centipede, megalo-
6 Crab, giant
7 Crocodile, wild
8 Dog, death
9 Gelatinous cube
10 Ghoul
11 Lizard, giant
12 Lyc., rat
13 Orc, orog
14 Osquip
15 Sandling
16 Scorpion, large
17 Snake, constrictor
18 Spider, huge
19 Weasel, giant
20 Urchin, land

# Monster Summoning IV

1 Ankheg (5-6 HD)
2 Ape, carnivorous
3 Banderlog
4 Ettercap
5 Gargoyle
6 Ghast
7 Hell hound
8 Huecuva
9 Hydra, 5 heads
10 Lyc., wolf
11 Ogre
12 Ooze, gray
13 Owlbear
14 Scorpion, huge
15 Snake, giant const.
16 Toad, poisonous
17 Toad, fire
18 Wasp, giant
19 Wolf, worg
20 Yeti

# Monster Summoning V

1 Ankheg (7-8 HD)
2 Cockatrice
3 Displacer beast
4 Doppleganger
5 Hornet, giant
6 Hydra, 7 heads
7 Hydra, 5 heads, cryo- or pyro-
8 Leucrotta
9 Lizard, subterranean
10 Lyc., boar
11 Margoyle
12 Minotaur
13 Ochre jelly
14 Rust monster
15 Slithering tracker
16 Snake, giant, pois. or spitting
17 Spider, giant
18 Giantkin, verbeeg
19 Wolf, winter
20 Zombie, ju-ju

# Monster Summoning VI

1 Basilisk
2 Beetle, stag
3 Carrion crawler
4 Dracolisk
5 Drider
6 Griffon
7 Hydra, 8 heads
8 Lizard, minotaur
9 Lyc., tiger
10 Manticore
11 Ogre mage
12 Otyugh
13 Pyrolisk
14 Salamander
15 Spider, phase
16 Troll
17 Wolfwere
18 Wraith
19 Wyvern
20 Yuan-ti, halfbreed

# Monster Summoning VII

1 Basilisk, greater
2 Behiror tunnel worm
3 Bulette
4 Chimera
5 Ettinor hill giant
6 Golem, flesh
7 Gorgon
8 Hydra, 10 heads
9 Hydra, 8 heads (pyro- or cryo-)
10 Lizard, fire
11 Mummy
12 Neo-otyugh
13 Pudding, black
14 Roper
15 Shambling mound
16 Slug, giant
17 Sphinx, hieraco-
18 Troll, 2-headed
19 Umber hulk
20 Xorn

# Monster Summoning VIII

1 Beetle, rhinoceros
2 Giant, fireor frost
3 Giant, fomorian
4 Golem, stone
5 Gorgimera
6 Hydra, 12 heads
7 Hydra, lernaean, 8 heads
8 Pudding, brown
9 Remorhaz
10 Rust monster
11 Will o'wisp
12 Worm, purple

# Conjured Animals

| HD | Roll | Animal | Value |
|---|---|---|---|
| 1 | 01-10 | Baboon | 1¼ |
| | 11-25 | Dog, wild | 1¼ |
| | 26-35 | Hawk, large | 1 |
| | 36-40 | Hawk, blood | 1¼ |
| | 41-50 | Jackal | ½ |
| | 51-55 | Mammal, small | varies |
| | 56-60 | Mammal | varies |
| | 61-65 | Otter | ¾ |
| | 66-70 | Otter, sea | 1¼ |
| | 71-80 | Owl, common | 1 |
| | 81-90 | Rat, giant | ½ |
| | 91-00 | Skunk | ¼ |
| 2 | 01-70 | Animal, herd | 2 |
| | 71-80 | Badger | 1½ |
| | 81-00 | Horse, wild | 2 |
| 3 | 01-05 | Badger, giant | 3 |
| | 06-10 | Boar, warthog | 3 |
| | 11-15 | Cattle, wild | 2½ |
| | 16-20 | Cheetah | 3 |
| | 21-30 | Dog, war | 2½ |
| | 31-35 | Hyena, wild | 3 |
| | 36-45 | Lion, mountain | 3¼ |
| | 46-50 | Lynx, giant | 2½ |
| | 51-60 | Mule | 3 |
| | 61-70 | Camel | 3 |
| | 71-80 | Stag* | 3 |

| | | | |
|---|---|---|---|
| | 81-90 | Wolf | 2½ |

| 4 | 01-10 | Bear, black | 3¾ |
| | 11-25 | Boar, wild | 3¾ |
| | 26-40 | Eagle, giant | 4 |
| | 41-50 | Jaguar | 4¼ |
| | 51-60 | Leopard | 3½ |
| | 61-75 | Owl, giant | 4 |
| | 76-90 | Weasel, giant | 3¾ |
| | 91-00 | Wolf, dire | 3¾ |
| 5 | 01-15 | Ape, carnivorous | 5 |
| | 16-25 | Buffalo | 5 |
| | 26-40 | Hyena, giant | 5 |
| | 41-55 | Otter, giant | 5 |
| | 56-70 | Skunk, giant | 5 |
| | 71-85 | Stag, giant* | 5 |
| | 86-00 | Wolverine, giant | 5 |
| 6 | 01-25 | Bear, brown | 6¼ |
| | 26-50 | Lion | 5½ |
| | 51-75 | Porcupine, giant | 6 |
| | 76-00 | Tiger | 6¼ |
| 7 | 01-50 | Boar, giant | 7 |
| | 51-00 | Lion, spotted | 6½ |
| 8 | 01-50 | Bear, cave | 7½ |
| | 51-00 | Tiger, sabre-tooth | 7½ |
| 9 | -- | Oliphant | 8½ |
| 10 | -- | Bear, polar | 10 |
| 11 | -- | Elephant (African) | 11 |
| 12 | -- | Mastodon | 12 |

| | | | |
|---|---|---|---|
| 13 | -- | Mammoth | 13 |
| 14+ | -- | Whale | (to 36) |

***Stag:** This is a large male deer that can butt for 2-8 or strike with its hooves for 1-3/1-3.
***Giant stag:** A very large stag, 7' at the shoulder and weighing about 1,500 pounds. It can butt for 4-16 (4d4) or strike with its hooves for 1-4/1-4.

## Terrain Guide

**Plain:** downs, heath, meadow, moor, prairie, savanna, steppe, tundra
**Scrub:** brackens, brush, bush, thickets, veldt
**Forest:** copses, groves, jungle, rain forest, woods
**Rough:** badlands
**Hills:** bluffs, dunes, ridges (gorge, rift, valley, canyon)
**Mountains:** glacier, mesa, tor
**Desert:** barrens, flat, waste
**Swamp:** bog, fen, marsh, mire, morass, quagmire, slough
**Pond:** lake, pool, tarn

# Monster Summoning

## Aquatic Monster Summoning, Salt Water

**Monster Summoning I**
1 Barracuda (1 HD)
2 Lamprey, common
3 Merman
4 Otter, sea
5 Piranha (3d4 appear)
6 Urchin, black

**Monster Summoning II**
1 Barracuda (2 HD)
2 Dolphin
3 Locathah
4 Ray, ixitxachitl
5 Ray, sting
6 Sea horse
7 Seawolf, lesser
8 Urchin, green

**Monster Summoning III**
1 Barracuda (3 HD)
2 Crab, giant
3 Lacedon (ghoul)
4 Sahuagin
5 Selkie
6 Urchin, red

**Monster Summoning IV**
1 Hippocampus
2 Kapoacinth (gargoyle)
3 Lobster, giant (crayfish)
4 Merrow, ogre
5 Otter, giant
6 Shark (3-5 HD)

7 Triton
8 Urchin, yellow

**Monster Summoning V**
1 Crocodile, giant
2 Lamprey, sea
3 Scrag (troll)
4 Sea lion
5 Selkie
6 Shark (5-6 HD)
7 Spider, giant marine
8 Water weird
9 Urchin, silver
0 Roll again with 1d8

* This creature has a 10% chance to become free-willed for the duration of the spell if ordered to act against its nature or inclinations.

**Monster Summoning VI**
1 Eel, marine
2 Narwhal
3 Octopus
4 Seawolf, greater
5 Shark (7-8 HD)
6 Snake, giant sea (8 HD)

**Monster Summoning VII**
1 Ray, manta
2 Slug, giant sea
3 Snake, giant sea (10 HD)
4 Squid, giant

**Monster Summoning VIII**
1 Eye of the deep
2 Dragon turtle (12 HD)
3 Kraken*
4 Shark, giant
5 Vodyanoi (16 HD)*
6 Whale, killer
7 Whale, small herbivore (12 HD)
8 Worm, mottled (purple)

**Special Encounters:** Roll on the appropriate table. If the encounter is not suitable, then none occurs.
**Surface Encounters:** Unintelligent monsters are 75% likely to be driven off by flaming oil nearby, 90% if actually burned by it. Large amounts of food thrown overboard are 50% likely to end such an encounter.
**Fish School:** This is a large group of one type of fish, the aquatic version of herd animals. They usually do not attack unless commanded by magical means. If panicked, they might mill about, obstructing vision and movement. If large enough, they might cause buffeting damage (1-2 to 1-8, depending on size).
**Ghost Ship:** This is a lost ship manned by undead. Although it can be seen at any time, it usually attacks only at night, when its masters are at full power. Roll percentile dice once for the crew and once for their leaders. *Crew:* 01-40 = 10-40 skeletons; 41-80 = 10-40 zombies; 81-00 = 10-20 ju-ju zombies. *Leaders:* 01-30 = 1-4 wights; 31-60 = 1-3 wraiths; 61-80 = 1-2 spectres; 81-95 = 1-2 ghosts; 95-00 = 1 lich.
**Hazard (ice):** This can be a single huge ice mountain or 10-20 smaller, grinding floes. Hard contact with ice reduces seaworthiness by 5% and is 10% likely to require a seaworthiness check to avoid sinking.
**Seaweed:** This includes both floating masses of weed and beds on the bottom. The former slows ships by 50%. The latter are 30-300' high and reduce vision to 10 feet. Both provide a 40% chance for another encounter if moved through or investigated.
**Sunken Ship:** This is a victim of a storm, ice, or hostile action. Sometimes these have their original cargo, and may be inhabited. Roll percentile dice: 01-10 = Has merchant treasure (see Men, merchant); 11-20 = No treasure; 21-60 = 2-24 lacedons (original crew); 61-00 = Monster (roll on appropriate encounter table).
**Special Encounters:** These can include morkoth, mottled worms, shipwreck survivors, an eye of the deep, sudden storms, seaweed that allows underwater breathing when eaten, giant clams, aquatic versions of carnivorous plants, storm giants, and so on.

# Aquatic Monster Summoning, Fresh Water

**Monster Summoning I**
1 Frog, giant (1 HD)
2 Koalinth (hobgoblin)
3 Lamprey, common
4 Nixie (3d4 appear)
5 Otter, common
6 Piranha (3d4 appear)

**Monster Summoning II**
1 Eel, electric
2 Frog, giant (2 HD)
3 Kuo-toa
4 Leech, giant (2 HD)
5 Lizard man
6 Piranha, giant

**Monster Summoning III**
1 Crab, giant
2 Crocodile, common
3 Frog, giant (3 HD)
4 Lacedon (ghoul)

**Monster Summoning IV**
1 Beetle, giant water
2 Crayfish, giant
3 Kapoacinth (gargoyle)
4 Kelpie
5 Merrow, ogre
6 Otter, giant
7 Pike, giant
8 Spider, giant water

**Monster Summoning V**
1 Crocodile, giant
2 Eel, giant electric
3 Scrag (troll)

4 Water weird

**Monster Summoning VI**
1 Eel, marine
2 Gar, giant
3 Octopus
4 Seawolf, greater
5 Snake, giant sea (8 HD)
6 Vodyanoi (8 HD)

**Monster Summoning VII**
1 Catfish, giant
2 Greenhag
3 Naga, water
4 Snake, giant sea (10 HD)

**Monster Summoning VIII**
1 Slug, giant sea
2 Dragon turtle (12 HD)
3 Kuo-toan monitor < br> 4 Worm, mottled (purple)

**Special Encounters:** Roll on the appropriate table. If the encounter is not suitable, then none occurs.
**Surface Encounters:** Unintelligent monsters are 75% likely to be driven off by flaming oil nearby, 90% if actually burned by it. Large amounts of food thrown overboard are 50% likely to end such an encounter.
**Fish School:** This is a large group of one type of fish, the aquatic version of herd animals. They usually do not attack, unless commanded by magical means. If panicked they might mill about, obstructing vision and movement. If large enough, they might cause buffeting damage (1-2 to 1-8, depending on size).
**Ghost Ship:** This is a lost ship manned by undead. Although it can be seen at any time, it will usually attack only at night, when its masters are at full power. Roll percentile dice once for the crew and once for their leaders. *Crew:* 01-40 = 10-40 skeletons; 41-80 = 10-40 zombies; 81-00 = 10-20 juju zombies. *Leaders:* 01-30 = 1-4 wights; 31-60 = 1-3 wraiths; 61-80 = 1-2 spectres; 81-95 = 1-2 ghosts; 95-00 = 1 lich.
**Hazard (navigational):** This can ground or damage a vessel that does not have aboard a pilot familiar with the waters. Such hazards as sandbars and submerged logs often change position.
**Seaweed:** This includes both floating masses of weed and beds on the bottom. The former slows ships by 50%. The latter are 30-300' high and reduce vision to 10 feet. Both provide a 40% chance for another encounter if moved through or investigated.
**Special Encounters:** These can include morkoth, mottled worms, shipwreck survivors, an eye of the deep, pearl beds, sudden storms, seaweed that allows underwater breathing when eaten, giant clams, aquatic versions of carnivorous plants, storm giants, and so on.

# Appendix III: NPCs

## NPC Parties

To avoid delays, create NPC parties before play. The tables allow such parties to be set up quickly and impartially, and the DM is encouraged to make any changes that will enhance play. The tables should be considered a starting point.

A typical NPC party has 2-12 members -- 2-5 major characters and the rest henchmen or men-at-arms.

**Characters:** The Character Subtable provides a typical party structure by limiting number and classes of the NPC characters encountered. Determine character race (20% demihuman) and demihuman multiclasses on the Racial Subtable (multiclass results can exceed the Character Subtable limits).

**Character Level and Equipment:** These will usually be comparable to those of the player characters, but NPC level will rarely exceed 12th. Arms, armor, and equipment will be typical: a 1st level warrior would have scale or chain armor and minimal gear. At 2nd level, banded or plate mail is typical, weapons profuse, and equipment complete (much oil, holy water, mirrors, etc.). NPC magic will be used if a fight breaks out. Note that if the NPCs are defeated, their magical items will enter your campaign.

**Character spells:** These are selected by the DM according to those most suited to the NPC party. Wizards are subject to the limits of spells known. Henchmen spellcasters are treated likewise.

**Henchmen:** The major NPCs will have a total of 2-5 henchmen, up to the party size, with any remainder men-at-arms. If the encounter is below the 3rd dungeon level, all those with the major NPCs will be henchmen.

Henchman class and race is determined as for the major characters. Major NPCs are assigned henchmen in order of Charisma, allowing for compatibility (e.g., a paladin would not follow a thief, nor would a ranger below 8th level have henchmen). A henchman's level is one-third of that of his master (round up or down). If the master's level is above 8th, the henchman has 1 additional level per 3 full levels of the master. Thus, a 5th level mage would have a 2nd level henchman, while an 11th level mage would have a 5th level henchman (4 + 1). Henchmen are armed much as major NPCs, though they are not as heavily ar-
mored. Their magic is assigned as for major NPCs, but is usually less powerful.

**Men-at-Arms:** Little detail is needed for these other than hit points. They often have poor armor and few weapons: for example, studded leather, crossbow and dagger, or (at best) scale mail, shield, spear, long sword, and backpack. They are seldom found underground below the 3rd dungeon level.

## Character Subtable

| Dice Score | Character Type* | Maximum Number in Party |
|---|---|---|
| 01-17 | Cleric | 3 |
| 18-20 | Druid | 2 |
| 21-60 | Fighter | 5 |
| 61-62 | Paladin | 2 |
| 63-65 | Ranger | 2 |
| 66-86 | Wizard | 3 |
| 87-88 | *Specialist* | 1 |
| 89-98 | Thief | 4 |
| 99-00 | Bard | 1 |

* Typically, 20% of these will be non-human.

## Race Subtable

| Dice Score | Race | % of Multiclass |
|---|---|---|
| 01-30 | Dwarves* | 15% |
| 31-55 | Elf | 85%** |
| 56-65 | Gnomes* | 25% |
| 66-90 | Half-Elf* | 85%** |
| 91-00 | Halflings* | 10% |

* In an evilly aligned party, these will be half-orcs (elves will be renegade drow). The chance for a multiclass half-orc is 50%: fighter-thief (01-33), fighter-cleric (34-45), or cleric-thief (45-50).
****** If the roll for multiclass is 01-20, the character is triple-classed.
**Multiclass levels:** For two classes, subtract 1 level; for three classes, subtract 2 levels. Adjust each class downward to the racial maximum, if applicable.

# Magical Items for NPC Parties

| Level | Chance | No. of Items | Table |
|---|---|---|---|
| 1st | 10% | 1 | I |
| 2nd | 20% | 2 | I |
| 3rd | 30% | 2 | I |
| | 10% | 1 | II |
| 4th | 40% | 2 | I |

Use random determination only when any general magical item would be suitable to the individual. Note that some items are in groups or multiples.

# Magical Items for Character Encounters

**TABLE I**

| Die | Item (d20) |
|---|---|
| 1 | 2 Potions*: flying, healing* |
| 2 | 2 Potions: *extra-healing, polymorph (self)* |
| 3 | 2 Potions: *fire resistance, speed* |
| 4 | 2 Potions: *healing, hill giant strength* |
| 5 | 2 Potions: *heroism, invulnerability* |
| 6 | 2 Potions: *human control, levitation* |
| 7 | 2 Potions: *animal control, diminution* |
| 8 | 1 Scroll: *1 spell Level 1-6* |
| 9 | 1 Scroll: *2 spells Level 1-4* |
| 10 | 1 Scroll: *protection from magic* |
| 11 | 1 Ring: *mammal control* |
| 12 | 1 Ring: *protection +1* |
| 13 | 1 Armor: *+1 leather* |
| 14 | 1 Shield: *+1* |
| 15 | 1 Sword: *+1(no special abilities)* |
| 16 | 10 Arrows: *+1* |
| 17 | 4 Bolts: *+1* |
| 18 | 1 Dagger: *+1* |
| 19 | 1 Javelin: *+2* |
| 20 | 1 Mace: *+1* |

**TABLE II**

| Die | Item (d20) |
|---|---|
| 1 | 2 Potions: *oil of etherealness, superheroism* |
| 2 | 2 Potions: *ESP, gaseous form* |
| 3 | 1 Scroll: *3 spells 2-9 or 3-7* |
| 4 | 2 Rings: *fire resistance, invisibility* |
| 5 | 1 Ring: *protection +2* |
| 6 | 1 Staff: *striking* |
| 7 | 1 Wand: *magic missiles* |
| 8 | 1 Wand: *wonder* |
| 9 | 1 *bracers of defense AC 4* |
| 10 | 1 *brooch of shielding* |
| 11 | 1 *cloak of elvenkind* |
| 12 | 1 *dust of appearance* |
| 13 | 1 figurine: *serpentine owl* |
| 14 | 3 *javelins of lightning* |
| 15 | 1 *jar keoghtom's ointment* |
| 16 | 1 *robe of useful items* |
| 17 | 1 set: *chain mail +1, shield +2* |
| 18 | 1 set: *chain mail +3* |
| 19 | 1 Sword: *+2(or* +1 with abilities*) |
| 20 | 2 Weapons: *crossbow of speed, hammer +1* |

**TABLE III**

| Die | Item (d20) |
|---|---|
| 1 | 1 Ring: *spell storing* |
| 2 | 1 Ring: *mind shielding* |
| 3 | 1 Rod: *cancellation* |
| 4 | 1 Staff: *command* |
| 5 | 1 Wand: *fear* |
| 6 | 1 Wand: *negation* |
| 7 | 1 *bag of tricks* |
| 8 | 1 *boots of speed* |
| 9 | 1 *boots of striding and springing* |
| 10 | 1 *cloak of displacement* |
| 11 | 1 *necklace of missiles* |
| 12 | 1 *pipes of the sewers* |
| 13 | 1 *rope of climbing* |
| 14 | 1 *rope of entanglement* |
| 15 | 1 *scarab of protection* |
| 16 | 1 set: *plate mail +2, shield +3* |
| 17 | 1 Shield: *+5* |
| 18 | 1 Sword: *+3(or +2 with abilities*)* |
| 19 | 1 Mace or hammer: *+2* |
| 20 | 1 Spear: *+2* |

**TABLE IV**

| Die | Item (d20) |
|---|---|
| 1 | 1 Ring: *djinni summoning* |
| 2 | 1 Ring: *human influence* |
| 3 | 1 Ring: *spell turning* |
| 4 | 1 Rod: *smiting* |
| 5 | 1 Rod: *terror* |
| 6 | 1 Wand: *lightning or fire* |
| 7 | 1 Wand: *illusion* |
| 8 | 1 Staff: *thunder & lightning* |
| 9 | 1 *amulet of life protection* |
| 10 | 1 *cube of force* |
| 11 | 1 *deck of illusions* |
| 12 | 1 *eyes of charming* |
| 13 | 1 *helm of teleportation* |
| 14 | 1 *horn of blasting* |
| 15 | 1 *robe of blending* |
| 16 | 1 *stone of good luck* |
| 17 | 1 set: *plate mail +3, shield +4* |
| 18 | 1 Sword: *+4(or +3 with abilities*)* |
| 19 | 1 Arrow: *of slaying (character class)* |
| 20 | 1 Net: *of entrapment* |

* Intelligence, if any, will not exceed 16.

# Introduction

## Balor the Hill Dwarf Introduces the Dwarves

*Dwarves are the greatest race ever created by the gods. We are far superior to the pansy elves, smelly goblins, dirty orcs, and misshapen humans. Dwarves are perfectly shaped, solid and strong, like the stones that form our dwellings. Our skins are the color of the earth, our hair and beards are of the finest hue and texture imaginable.*

*Dwarves are more than just an attractive race. Imbued with unchanging attitudes and steadfastness, we do not waver, even in the face of great adversity. Well suited to our*

*lives underground, we can see in the dark and detect underground dangers and pitfalls. Our craftsmen have created the finest cities and buildings in the world. Our bridges and high vaulted chambers are wonders to behold, with a strength and permanence of form that other races have never duplicated.*

*We have no fear of magic. We shake off its effects as easily as we slay the goblins who lurk in the dark. We are impervious to poisons and noxious substances that would kill those of lesser races. Such is our vigor that even cursed weapons fail to possess us, for our inherent vitality is invincible.*

*Dwarves are also great warriors, well disciplined, and organized into armies that strike fear into evil monsters everywhere. Our combat skills against the filthy dark dwellers are beyond question. It is a particularly stupid goblin, pig-faced orc, or brainless hobgoblin who does not quake with fear at the sound of dwarven boots. Our battle axes have drunk deeply of the blood of such creatures, our hammers have smashed thousands of their skulls. We will continue until there are none left to kill. That is not an idle boast, it is an oath.*

*Yet we are a peaceful people. We do not seek war, nor do we steal from others. Those are the actions of other, less honorable races. We see to our own and those who attempt to steal that which is ours will die. That is not a threat, it is the way of the dwarf. If you do not wish to feel our wrath, leave us alone.*

## Dwarves As You Know Them

The *Monstrous Compendium*®, Volumes One and Two, discussed hill and mountain dwarves, and the duergar (gray dwarves); where they live, their appearance, combat abilities, friends, enemies, and how they view the world.

The ADVANCED DUNGEONS & DRAGONS® 2nd Edition *Player's Handbook* and *Dungeon Master's Guide* introduced methods of creating dwarf characters. *The Complete Book of Dwarves* expands the scope of previous texts by making available new subraces of dwarves and by providing new rules for players and DMs. All of the new information is directed specifically to dwarf characters.

## Dwarves As You Will Know Them

Player charecters have usually been hill dwarves. Now you will be able to choose from six subraces of dwarves. In addition to hill, mountain, and duergar, three other types of dwarves are introduced in this book: deep, gully, and sundered dwarves. While these have appeared in other AD&D game products, they are made available here with the same attention to detail that the hill dwarves were given in the *Player's Handbook*. Each of the six subraces of dwarves has its own special advantages and limitations, which make the characters unique and fun to play.

*Your Life as a Dwarf* examines the social organizations of the dwarves and the crafts clans. It describes a typical family and details dwarf education.

Character kits have been previously introduced with this series. They enlarge the basic character classes of warrior, thief, and priest. *The Complete Book of Dwarves* presents 24 new kits created especially for dwarf characters, including seven kits designed exclusively for use by multi-class characters. Kits like animal master, axe for

hire, and hearth guard greatly expand the kinds of characters that can be played.

In Chapter 7, players will find useful hints on playing typical, and not so typical, characters. You will also find extensive information on the background and stronghold of your character, in Chapter 11. Dwarf strongholds are not merely fortresses, but homes and work places as well. Some strongholds may not even be fortified, but dwarves will always refer to their home as a stronghold. It is a matter of racial pride and a warning that a dwarf's home is well defended.

DMs will find the expanded information invaluable in fitting dwarf characters into their campaign worlds. Whether dwarves are a dominant race or just a people living in isolation under the earth, there are plenty of suggestions and ideas for strongholds and adventure settings.

## The *Complete Player's Handbook* Series

The *Complete Book of Dwarves* complements the other books in the series. These handbooks contain information useful to dwarf characters and there is a wide range of character classes to choose from. The *Complete Priest's Handbook*, with its descriptions of dwarf religions and optional rules for priests, is particularly recommended. Also recommended are the *Complete Fighter's* and *Complete Thief's Handbooks* for their new combat options, weapon specializations, thief abilities, and thieves' guilds. All three of these books are indispensable to DMs and players with dwarf characters.

The *Complete Book of Dwarves* is specifically targeted to dwarves adventuring in their own societies and provides extensive background information on dwarf cultures, society, creation myths, and campaign settings.

Like the other books in this series, the rules presented in this book are optional. Although the other books in this series are useful they are not essential. All you need to use this book are *the Player's Handbook* and the *Dungeon Master'sGuide*.

If you use the *Complete Book of Dwarves* with the original AD&D® game, instead of the AD&D 2nd Edition game, be aware that the references refer to AD&D 2nd Edition books. Players using older books will need to ignore some of these. In most cases, the relevant material will be found in the index or table of contents.

Finally, many of the rules presented in this book depend upon the use of weapon and nonweapon proficiencies described in the *Player's Handbook*. If you have not been using these proficiences in your campaign, we highly recommend that you familiarize yourself with them and introduce them into your game.

# Chapter 1: The Creation of Dwarves

Recorded by Marak, Golden-Hammer, son of Jardak, Hammer of the Orcs

*In the age before the beginning of time there were no dwarves, elves, or humans and the world was not yet made. Only the Eternal Forge existed, in the Home of the Maker, in the Caverns of the Everlasting Flame. Into the Eternal Forge the Maker placed stone and fire. As the fire heated the stone it expanded, and rivers of molten ore ran from the interior of the stone, flowing along its sides. With tongs and hammer the Maker forged the world. He struck and titanic mountains rose from the surface; again, and hills*

*formed, leaving deep valleys and great hollows.*

*When he was pleased with its shape and form, he quenched the world in the Trough of Life. As the water struck the surface, clouds of steam rose to form the sky. The waters of the Trough settled in valleys and flowed into the hollows to become seas.*

*The Maker held up his work and saw that it was fitting. He set the world upon a great pinnacle of the finest mithril, and there it remains until this day.*

*The Maker laughed and decided to test his world. He would make a race of miners and forgers and they would strive to find the mithril pinnacle upon which the world rests, deep in its heart.*

*And so the Maker returned to the Eternal Forge in the Caverns of the Everlasting Flame. Taking water from the Trough of Life and stone from the earth he held them together. When he was satisfied, he added molten iron to strengthen it. He gathered this fine alloy and shaped it on the Anvil of Spirit. To assist him, the Maker created the gods. He beat them into their shapes. Like him, the gods were broad and stocky, with fine, long beards of rusty-red iron or shimmering mithral.*

*Then he quenched them in the Trough of Life so that they, like the world, could take part of its life-giving waters. One by one he lifted them up and blew on them. Their eyes opened and they lived.*

*The Maker had forged the gods from the elements of the earth, but his work was not yet finished. He took the Gods of Crafts and taught them how to make things that would please him; he taught the God of Fire to burn and to fan the flames of life. He taught the Gods of the Elements the use of their powers. He revealed to them all the place of the gods in the world.*

*Then the Maker took rock and iron and heated them in the Eternal Forge. He forged the most pleasing shapes. These he took and quenched in the Trough of Life, and so the first dwarves were created.*

*Each of the gods then took one of the dwarves and revealed to him the secrets imparted by the Maker. But to Frar, the Father of Dwarves, the first King, the Maker himself spoke. He told Frar of the mithril pinnacle and gave him the gift of wisdom to rule his people. And so the First Dwarves came into the world in full knowledge of their arts and crafts.*

*Once the First Dwarves had learned these things, the Maker placed them in a land he had chosen for them on the earth, into the mines and caverns he had created for their entertainment and their joy. In these sacred caverns the First Dwarves multiplied and prospered, but some became restless and went in search of greater riches. These were Glordin Anvil Forger, son of Bardin Hammer Beater. . .*

The original text continues with a catalog of genealogies. As we resume the narrative, a thousand years have passed, and dwarfkind has expanded through the valleys and mountains of the land.

*After the First Dwarves had been laid in their tombs, Blight came into the world. The god of Evil nursed a dark and ancient envy of the Maker's creation of the dwarves. In cheerless caverns, which knew not the glow of dwarves' hearts, he labored to imitate the maker. Goblins, hobgoblins, evil giants, and other monsters he made, and dreamed that they would destroy the dwarves. In imitation of the Maker he labored, but he lacked the*

*true water from the Trough of Life to mix with the stone and to make clean clay. And so they were tainted with his impurities.*

*Not content to work his own will, his twisted tongue sowed discontent among the gods. A few began, like him, to imitate the Maker. So it was that elves, gnomes, halflings, and humans came into the world. But these races lacked the iron that had been forged into every dwarf's soul, they were sickly and pale to behold. To compensate for their deficiencies, the god of Evil bestowed magic. He had overlooked dwarven resistance to his evil, so it was used by other races against themselves.*

*Then did the god of Evil send his creatures against the dwarves. The monsters were driven back many times, yet they bred quickly and returned again and again in ever increasing numbers.*

*Now at this time the lesser races spread over the world above, and they learned of the wealth of the dwarves. And so, men and elves began to covet the dwarves' jewels and mineral wealth. Some sought to trade, others lied and used treachery to acquire dwarven treasures. An alliance of men and elves formed against the dwarves and they brought war to the mountain homes. Thus were the great gates of the dwarf kingdoms closed and the stone halls sealed from the evil of those beneath the sun.*

*The lesser races, not content to leave the dwarves in peace, began to dig into the earth, but knew naught of its ways. Their folly awakened the dragons.*

*The dragons rose in the fury of broken sleep demanding tribute, but the lesser races could not satisfy their greed. They appeased the dragons with tales of dwarven gold, and told them that the mining of the dwarves had disturbed their slumber. Those who had traded with dwarves told what they had learned of the secrets of their realms. And so the dragons came to our ancestral halls and blew in the gates. Spitting fire, they slew many. Those who survived fled their inheritance into the world above.*

*Since that day new homes have been created and we give thanks to the Maker for our increased wealth. But prophecy says that one day the caverns of the First Dwarves will be reclaimed. Then will we be free from the attacks of monsters and the ways of elves and humans.*

*I, Marak Golden-Hammer, son of Jardak, Hammer of the Orcs, son of Makktat Elf-Slayer. . .*

The text again is given over to genealogies before ending with Marak Golden-Hammer's seal.

## The Creation of the World

Dwarves are a long-lived race, 350 years on average, and so they are closer to the creation of the world than shorter lived races, such as humans. Dwarves have a clear idea of how they and the world came into existence and this in turn affects how they see themselves, the world, and other races. Many are the myths of creation. The Scrolls of Narvil, much debated, describe creation as an accident.

*After the Creator had forged the world and made the dwarves, he became weary and slept. Some Lesser Gods, jealous of the Creator's skill, bound him as he slept. They heated the Great Forge to make races in their own likenesses, men, and elves. These they*

*placed upon the world.*

*But they fell to arguing among themselves over which part of the world should be given to their peoples. The clamor of dispute woke the Creator who saw what they had done and became angry. But they laughed at him and bound him fast and swore he would never be released.*

*They fueled the fire of the Eternal Forge and continued to work. However, they did not know how to control the Great Forge and it became too hot. Great globules of molten stone flew into the air and fell to the earth. As they fell, the Creator breathed on them to cool them so that his people would not be injured. The force of his breath gave life to the molten fragments and these became dragons.*

*And so, of all the creatures of the earth, only the dwarves and the dragons were made by the Creator. Dwarves by the skill of his hands, and dragons by the power of his breath.*

The idea of a forge to create the world and its people is a typical dwarven myth. Marak and Narvil share the myth, though they name it differently. Marak speaks of a Maker and Narvil of a Creator. Dwarves in different parts of the world will have contrasting views of the creation myth, in far kingdoms even contradictory views.

Some might believe the world was an accident, a piece of rock that was chipped away from a greater one by the blow of a hammer or other force, and became separated from it, and developed on its own.

The creation story is normally part of a greater cycle of creation, in which the world is created only to be ravaged, but ultimately saved, as Narvil foretold:

*The Creator tried to break his bonds, but they were too secure. He argued with the Lesser Gods but they would not listen. "You cannot rule the world unless you can work the forge," he warned.*

*Sometimes when the forge became too hot or too cold, he gave the Lesser Gods advice, "add more air", "use less fuel". They laughed at him for his weakness in telling the secrets of the forge. Again he warned: "One day, the forge will burn beyond your control and the world will be seared by the heat of its flames. Then you shall free me or all will perish, even we. Then will I bring justice to the world you have abused. And my people shall be saved from your waging of war."*

Other myths exist. Gully dwarf priests believe the world was swallowed by a giant monster, digested, and later reformed.

Many foretell the destruction of all within the world. Some tell of a world ravaged by dragons who burned away all life with their fiery breaths. Only the races living deep within the world survived. Dwarves, orcs, and goblins, protected in their subterranean homes, escaped the wrath of the dragons.

Different mythical beliefs may cause friction between dwarves and other races and even among the dwarves themselves. Most mountain dwarves shun humans and believe in the quest for mithral, the metal of unconquerable weapons. Irvak, a mountain dwarf teacher, tells children why.

*Beware the ways of man. He is greedy and avaricious beyond understanding. He*

*seeks to possess wealth and riches, but most of all power over others. It is our duty to resist the mad lust of humankind to dominate other races. Not all men are evil, but the worst are their leaders who lead them into wars against us. It is written that only through the power of mithral can we protect our halls.*

This mountain dwarf credo is rejected by Yakir, a gully dwarf priest.

*Learn to accept the ways of humans, we have no other choice. If a man kicks you, keep out of reach of his boot. If he spits at you, it will not break your bones. We breed slowly and must protect our numbers. If we fight mankind, they will eventually kill us all. Avoid wealth and riches, but if you must have treasure, hide it well in a filthy place where none would guess to look. Always avoid mithril and those who bear it. It is so precious that men are driven crazy with desire.*

## What is the World?

To most dwarves the world is made up of the dark places underground. The lands above are strange and remote. Almost certainly they would have been formed or shaped by the gods of other lands. Most dwarves believe that the world is made up of a number of parts created for different peoples. Dwarves were given the deep earth as their own, elves the forests, halflings the fields; each in their own place.

Many believe that the whole world was originally given to the dwarves. Their legends contain tales of how parts of the world were taken away by other gods when they created the other races.

Few dwarves could have any real knowledge of the shape of the surface of the world and their subterranean lives have caused them to develop some very strange beliefs: worlds shaped like a globe, an egg, a flattened disk, a jagged rock with a central pinnacle and even a great depression in the earth, among them.

Many legends are concerned with the depth of the earth. Many deep dwarves believe that it is possible to tunnel so far down that the diggers emerge through the bottom of the world. Their priests and sages argue incessantly as to what lies at the bottom of the word. Some claim that only empty space exists beneath the world. Most deep dwarf miners believe that the world rests on a spike of gold that will one day make them rich beyond even dwarven dreams of avarice. Some duergar religions proclaim that the world rests on their dwarvish equivalent of hell and, if they dug through to it, they would gain the aid of the evil creatures who dwell there. With the aid of these allies, the duergar would destroy all who oppose them.

Some think the world is a living organism or an intricate machine that needs careful maintenance if it is to continue. They believe each race was created to look after its part of the world, the dwarves caring for the underground realms.

## What Are the Celestial Lamps?

Dwarves may have been created underground, but sooner or later they emerged into the world above. At that point they wondered about the lights moving in the sky, and what the sun was. The dwarves compared these celestial bodies to fire beetles or bright

gems rather than natural phenomena. Narvil's scrolls equate the sun with the blazing flames shooting from the chimney of the Great Forge.

*After their arguments, the Lesser Gods grew weary and slept. The Creator, bound and tied, remained vigilant. Through the night he watched the Great Forge slowly cool. When the flames were almost extinguished, and all was dark, he blew on the embers to light the fire. Red embers and fresh flames blew up the chimney of the forge and created the First Dawn.*

The heavens are interpreted differently by Or-Kazil, the gem-master and mystic who caught the light of the sun and placed it in the gems of Arbir. On the stone of his hall is an inscription. The difficult text is a masterpiece of dwarven poetry.

*Fear is the sun. The light. Carried by the watchman in daily traverse.*
*Great is the light of his torch. It conceals his presence.*
*Fear is the moon. Its ghostly light. Gray scarred surface, a spoiled gem.*
*Bring me a jewel from the night sky. One that twinkles in the watchman's light as he walks behind the world.*
*Set it upon my tomb.*

### The Dwarven Gods

In one creation myth the gods were made by the Maker into shapes he found pleasing. In other creation tales all gods descend from a common ancestor, and have since multiplied. Each god, at his birth, chose his own form to be superior, then created a race in his own image. The gods mated with their creations to make other gods, which then took their place in the pantheon.

Tales abound of racial heroes elevated to godhood for great deeds or leading exemplary lives. Ancestor worship thrives among these heroes' descendants.

### The Dwarven Afterlife

Like humans and other races, dwarves have their own view of the afterlife. The majority of dwarf warriors and priests expect to journey to some great hall of heroes to wait for the day when they will be called upon to fight their enemies once again. Craft oriented dwarves look forward to an afterlife of hard work and other pleasures. The more pessimistic religions even claim that no afterlife exists. They do, however, say that a dwarf can gain immortality by leaving stories of his deeds, or by creating superior artifacts.

## Chapter 2: The Dwarf Subraces

Basic information on dwarves can be found in the *Player's Handbook*. This chapter provides additional material about hill, mountain, sundered, deep, duergar, and gully dwarves. The differences between them may have been part of their creation or may have

evolved over thousands of years of hard living.

The following descriptions are provided as background only, not definitive guidelines. Although each subrace is given an alignment, individuals may have their own alignments. Similarly, the subrace does not depend on location. Mountain dwarves may be found living at depths normally associated with deep dwarves. Although they live at such depths, they are mountain dwarves, not deep dwarves.

Chapter 4 describes adjustments to attributes and experience levels for each type of dwarf. Here we are concerned with origins, appearance, and the social and psychological differences between the subraces.

## Hill Dwarves

Hill dwarves live in areas of rolling hills. Their strongholds are primarily located underground, though they frequently have outposts on the surface.

A typical hill dwarf stands 4 feet tall and weighs about 150 pounds. He is stocky and muscular. His skin is a deep tan or light brown in color and he has ruddy cheeks and bright eyes. His hair could be black, gray, or brown. He favors dark, somber, earth-toned clothes, and wears little jewelry.

Hill dwarves are the most common dwarves. They have adapted well to life above and below ground. They claim that they have always lived in the hills, but they may have migrated there either by traveling above ground, or via underground passages. If by surface travel, they are probably descended from mountain dwarves.

The alignment of the hill dwarves is usually lawful good, but there is no reason they cannot be of another alignment. So long as the majority of remain lawful good, strongholds of chaotic, neutral, or evil dwarves will not unbalance a campaign and will give it more flavor and variety.

## Mountain Dwarves

These dwarves live beneath the mountains. Their strongholds are usually isolated and they have little contact with other races. Mountain dwarves tend to like their privacy and actively discourage visitors to their strongholds.

A typical mountain dwarf is, on average, 42 feet tall and weighs about 170 pounds. His hair is a lighter shade than his hill cousin's, and his skin is slightly more red in color.

Mountain dwarves claim that they are the first dwarves and all other dwarves are descended from them. They are wary of hill dwarves because of their closer dealings with humans, elves, and other races. They are clannish and keep to themselves. The majority are of lawful good alignment.

## Deep Dwarves

Deep dwarves live far beneath the surface of the earth. They may always have lived there, or they may have gone deep underground to escape a dreadful cataclysm, marauding monsters, or perhaps were driven downward by mountain or hill dwarves.

Deep dwarves average 4 feet to 42 feet tall and weigh about 120 pounds. They are large boned, but leaner than other dwarves. Their skin varies from pale brown to light tan,

and often carries a reddish tinge. Their eyes are large, but without the sheen of their surface cousins; in color, a washed-out blue. Hair color ranges from flame red to straw blond. The females wear their beards long, unlike other dwarf women (who are typically clean-shaven).

Deep dwarves have little or no contact with the surface. It is too far for them to travel to the world above. They may be on friendly terms with hill and mountain dwarves, or they may harbor a grudge against them. They may avoid them because they consider them tainted by the influence of other races.

Frequently neutral in alignment, deep dwarves may also be lawful good or lawful neutral. They are just as conservative as hill or mountain dwarves, and consider themselves to be the sole repositories of dwarven culture.

## Sundered Dwarves

Unlike most dwarves, sundered dwarves live on the surface. Once hill or mountain dwarves, they were cut off from their kin and traditional ways of life. Where deep dwarves went downward, sundered dwarves were forced onto the surface.

They may have been driven there by volcanoes or earthquakes that shattered their subterranean homes, or perhaps by orcs or dragons. Finding no safe haven underground, they were forced above. Some may even have chosen to abandon their homes and give up the subterranean life.

Over the centuries sundered dwarves adapted as best they could, but abandoning their natural habitat has taken its toll. They have lost much of their racial pride, and tend to be a miserable and dirty people. They have developed an irrational phobia of dark places, yet are uncomfortable under the open sky, in rain, and with most surface conditions.

Sundered dwarves may be found living among other races. They may make up the majority of the inhabitants in a ghetto, or small groups of them may be found living or adventuring with other races.

Although their traditional homes are gone, sundered dwarves continue to follow the crafts, especially mining and smithing. They will work for humans or elves.

With a height of 42 to 5 feet, a typical sundered dwarf is slightly taller than a mountain dwarf, but he is of slimmer build, weighing about 155 pounds. His skin is usually lighter than a hill dwarf's, more pink than brown. His hair is dark with tinges of blue. Stronger than other dwarves, they gain a +1 bonus to Strength in character generation.

Sundered dwarves are usually lawful neutral in alignment. Their society retains its traditional lawful organization, but is more concerned with maintaining its laws than ensuring that all citizens share in its benefits.

## Duergar (Gray Dwarves)

Duergar, or gray dwarves, live deep underground, sometimes below the deep dwarves. They rarely venture above ground, finding it painful, except during heavily overcast days or at night. The light does not cause them damage, but it does affect their ability to see clearly.

A typical duergar is 4 feet tall and weighs 120 pounds. Emaciated, they possess pasty

skins and white or dull gray beards. Men and women may be bald, and those who are not usually shave their heads.

Most duergar are lawful evil with neutral tendencies. Other dwarves find their ways repulsive. Duergar war on other dwarf races, and sometimes even join forces with orcs and other evil races to raid dwarf strongholds.

They frequently compete with deep dwarves for living space and minerals. Usually the duergar are bested in such struggles. Consequently, numerous duergar strongholds are exceptionally poor, having been driven into areas rejected by others. In some cases, however, this may have been to their advantage and may have led them to the discovery of hidden subterranean wealth that they could secretly acquire.

Duergar may at one time have lived with other dwarves before they were driven into the deep for their worship of evil gods. They may have been created by the evil gods to balance the races of lawful good dwarves. If that is the case, they will have a divine mission to eradicate or enslave all dwarves of good alignment.

Even though their society is evil, they still retain many of the social structures of hill and mountain dwarves. They are clan based, but their crafts are usually inferior to those of other dwarves.

## Gully Dwarves

Gully dwarves are the most degenerate of all the dwarf races. Lacking any racial pride, they make virtues of cowardice, filth, witlessness, and dirty tricks. They live in abandoned strongholds, human villages, or in old mines and caves, in sewers, refuse dumps, or the slums of larger towns and cities. Elves will not tolerate their depravity.

An average gully dwarf is 4 feet tall and weighs only 100 pounds. He is more slender than hill or mountain dwarves and has thin fingers. It is a status symbol for a gully dwarf to have a large pot belly for it displays his skill as a scavenger.

Skin ranges in color from olive brown to light yellow, reminiscent of old parchment. It is often hard to determine a gully dwarf's skin color, however, because of the thick layers of dirt, scar tissue, boils, and scabs covering his skin.

Their beards and hair range from a dirty blond to a dull, indeterminate color. Female gully dwarves have hairy cheeks, but no beards. The eyes of both sexes are dull and lifeless, varying in color from watery blue through green to hazel.

Gullys are renowned for being stupid and obnoxious. In spite of this they have high opinions of themselves and take themselves very seriously. They consider other dwarves to be "uppity" and "stuck up warts." Gully dwarves will lie, steal, bully, and cheat each other and every other race they encounter. If attacked, they grovel, whine, run away, or do whatever it takes to avoid injury. If combat cannot be avoided they will fight half-heartedly, usually with their eyes closed.

Because gully dwarves live in places that even orcs consider unattractive, they have few racial enemies. Scavenging most of their equipment from the junk heaps of other races, their "wealth" does not tempt others. Carrion crawlers have been known to turn up their tentacles rather than eat a gully dwarf.

Where do they come from? Other dwarves claim they are a cruel jest played by the gods on a mischievous stronghold of dwarves. Narvil believes that they are outcasts from a stronghold who later bred and infested the world. Perhaps they are the result of cross

breeding between dwarves and gnomes, or dwarves and goblins. They may even have been the result of a vile experiment by an evil wizard. No one knows for sure, least of all the gullys themselves.

They are always treated with contempt, although they may be employed to perform menial tasks. Enclaves of gully dwarves could exist in most strongholds where they would be little better than slaves.

Gully dwarves are often of chaotic neutral alignment, but this diverse people may be of any alignment.

# Chapter 3: Your Life as a Dwarf

This chapter examines the lifestyle of the dwarves, the organization of the clans, and the family, the smallest unit of dwarf social organization.

The clans are the basis of dwarf society. A few dwarves follow professions that set them apart, but they are influenced by mainstream dwarf society, its values and structures, though they may no longer follow these.

## Dwarf Clans

Gareth, a human merchant, on the dwarf clans:

*The dwarves are a close knit bunch, all right. Make no mistake, entire families carrying out the same trade. It's almost unheard of for one of them to take up a different trade from that of their clan. They like to keep things in the family. Most of them don't differentiate between their clan and their guild.*

*The dwarves like to keep things tightly regulated. Every product has a fixed price and a time assigned to making it.*

*Trying to bargain with them is like trying to batter down one of their strongholds with your head. No give and take. No matter how many of them you try to deal with, the price is always the same. Take it or leave it. It's the worst kind of restrictive trade. Worse than we had 'round here before the government stopped it.*

*Still, I'll say one thing for them, you know you're getting quality goods every time. They never try to sell you anything shoddy or of inferior quality. It's a matter of pride for them.*

Dwarf clans are family groups that are all related to one another. All the members of a clan trace their lineage back to a common ancestor. This could be the founder of a stronghold, but it may go back only as far as the previous generation.

Each clan specializes in a particular craft or skill: blacksmithing, mining, and weaponsmithing are examples.

Different clans usually live close to each other so that they can trade skills among themselves. The relationships between clans are complicated and interdependent. The blacksmith clan needs to eat, so they trade with bakers and butchers.

Most clans are concerned with the manufacture of goods and services. They love to create things from raw material, and delight in the working of stone and metal. There are clans that specialize in military and political activities. Military clans include specialists,

such as Hearth Guards, Animal Masters, and Sharpshooters. A political clan is usually responsible for governing the stronghold and comprises the king's or ruler's own family, plus other high born dwarves. These dwarves have undergone long apprenticeships in their chosen trade and are experts. Like other dwarves, they are convinced that they are always right. They tend to be argumentative with outsiders, even with political families from other strongholds.

In major strongholds, each clan practices its own craft. In smaller ones, a clan may practice a number of crafts. Out of preference, dwarves practice one craft only, and that one skill may be honed to a higher level than would be possible if two, three or four skills were practiced.

Dwarf priests are drawn from all the clans in a stronghold and may be the only dwarves who are not tied closely to their clans. Many priesthoods, like those concerned with arts and crafts, are a part of their clans and closed to all others. The priests who serve the blacksmith's god, for example, are the spiritual leaders of that clan.

## Clans and Guilds

The clans are regulated by guilds that legislate all matters of trade. Guilds specify weights and measures, quality, and the pricing of items.

For example, the Guild of Bakers establishes the weight, price, and ingredients of loaves of bread. All clans conform to these strictures. Those of other strongholds will have different strictures imposed by their guilds. This leads to situations where dwarves from one baker's clan will get into heated arguments with a baker's clan from another stronghold over which one's loaf is of the correct weight. This, combined with their stubborn nature and inability to compromise, is why dwarves are so wary of each other. One view is always right, and all others always wrong.

(Note, however, that this does not mean that dwarves slavishly adhere to narrow production standards. Within the limits established by the guilds is tremendous room for individual expression. In fact, two loaves of bread that conform to the same guidelines may appear completely different to the uninitiated. And each guild typically has a bewildering array of accepted standards to choose from for any specific type of item.)

Even though the guilds control the business of the clans, they may not control the clan politically. This is left to elders who handle marriage arrangements, housing, and political dealings with other clans. The elders are the oldest dwarves in the clan. They are frequently also the richest, having amassed large fortunes over the centuries. Some may be guild masters, but this is not a requirement. When this does occur, differences between clan and guild become even more blurred.

## New Clans

New clans are formed when a dwarf decides to take up a different profession from that of his own clan. He may learn a new profession by apprenticing himself to another clan with the understanding that he will either become a member of the clan through marriage, or that he will practice his new trade at a different site. In both cases, he relinquishes membership in his original clan and swears never to reveal the secrets of its

guild to others.

If he has served his apprenticeship and does not marry into the new clan, he is obliged to move to a different stronghold or found a new one. His descendants follow his profession. Although still related by blood to his original clan, he is no longer considered to be part of that clan. Ties to his immediate family remain strong, and he may call upon them for aid if he needs assistance. If he is attacked or insulted, his brothers and sisters will quickly come to his aid, as will others of their clan, but he cannot expect their help in matters of trade and daily life.

### Clans and Society

A sick or injured dwarf will be fed and cared for by his clan. Those in good health are expected to work in order to maintain the welfare and reputation of the clan. No dwarf would ever do otherwise.

Someone who cheats or doesn't pull his own weight earns the disapproval of his fellow clansmen. He will be warned and pressure will be brought to bear to ensure that he does not bring the name of the clan into disrepute. If he does not heed the warnings, he will be ostracized. An ostracized dwarf loses all benefits provided by the clan. The clan's guild will prevent him from working and confiscate his tools if it can. If he shows a desire to mend his ways, he will be allowed back into the clan, and the guild will lift the ban. If not, he will be left to himself and even his family will shun him.

## Loyalties

To an outsider, dwarf clans appear very complex, and the relationships between them highly convoluted, because they are. Dwarves would not organize their lives any other way. They know where their loyalties lie: first to the family, then to the clan, the guild, the stronghold, and then to any other strongholds to which the clan is allied. Dwarves are a proud race and maintain their loyalties. They are willing to defend each other, often to the death. An insult against one dwarf is considered to be an insult against all dwarves.

## World View

Most dwarves choose life underground. It is unusual for them to live in a surface settlement unless events force them up.

Living underground for thousands of years has affected the world view of dwarves dramatically. They believe themselves to be the dominant race in the world, the primary force of civilization and culture. This attitude applies even in campaigns where other races are actually predominant. Dwarves who live below ground don't care who controls the land above so long as they are left alone. The surface races may as well be on another plane of existence. Dwarves see little reason to communicate with other races unless an overpowering common cause exists.

This dwarfcentric view is deeply rooted in all dwarves, regardless of where they live, even when among other races. Dwarves in such places may grudgingly admit that humans or elves have achieved some level of civilization and political power, but these are inferior to their own achievements.

### Love of Stability

Life underground has had a lasting effect on dwarf personalities. They have developed an instinctive love of earth and rock that represent stability and permanence. Earth and rock may be tunneled and carved, arched and buttressed, yet they remain always solid and reliable.

The sea, however, is ever changing, with no stability, and prone to tempestuous storms. It represents the force of chaos prevalent in the world above, and is the antithesis of the safe, womblike caverns that are home to the dwarves.

Themes of solidity and reliability recur continually in the dwarvish world view. The world is solid and constant, so life should be conducted in the same manner. This is closely allied to their predominantly lawful good alignment.

Dwarves value law and order, and see these as part of the natural order of the world. Society should be as solid and reliable as the stone of the earth. Dwarves live 350 years on average, during which time trees grow and die, axe hafts are made and replaced many times, and wooden structures decay and rot away. Compared to the strength and durability of metal and rock, other things seem very transitory. Building to last means building well.

## Dwarven Crafts

Dwarves are expert craftsmen not out of some god-given ability, but because they serve long, exacting apprenticeships. Dwarves traditionally serve a 25-year apprenticeship, which begins at the age of 25. To dwarves this is part of life. "A job worth doing, is worth doing well." This attitude is deeply ingrained and explains why dwarves love to create beautiful objects and lavish so much time on them. They seek to create that which will last until time's end, and they have difficulty comprehending why other races consider work a chore rather than an act of artistic expression to be savored and enjoyed. Dwarf craftsmen, because of their skills, produce weapons, armor, and other goods more quickly than other races, yet of superior quality.

## Dwarves and Humor

Dwarves are viewed as humorless, if not downright grumpy, by other races. This is a fair assessment. They do not often tell jokes, and have no appreciation of practical jokes. Society is based on law, order, and a respect for one's fellows. A dwarf does not abuse that respect by ridiculing another's dignity.

Dwarves love to work and find pleasure in it. This pleasure is so spiritually uplifting that any attempt at humor appears facile. Those not content with work or their position in life may need such diversion, but humor is seen as insult.

That's not to say that dwarves are humorless, they have a very black humor concerning their racial enemies, but their sense of humor is very different from that of humans, for example. They do not find jokes about personal suffering or failure funny. They do find those based upon clever stories entertaining. The problem is that dwarven jokes tend to follow a standard narrative pattern. Because of their great length, endless

genealogies, and catalogs of dwarven concerns, it is difficult for other races to maintain any interest in them. Dwarf comedians, telling jokes to other races, are frequently annoyed when audience attention slips after 15 minutes or so, or when the audience has no concept of the importance of lineage in the joke's 'punch paragraph!' Races who have been subjected to dwarven humor fail to realize that it does not rely on the delivery of one liners, but on the slow presentation of a chapter, if not an entire book.

## Wealth

The dwarven concept of wealth is different, as well. Dwarves are attracted to objects for their intrinsic beauty, not for any commercial value. They prize fine workmanship, but know that craftsmen only augment what the earth has provided.

Gold has the greatest significance to them, not for its value, but for its natural beauty and pliability. In the hands of a master craftsman, gold can be heated and poured into molds, beaten with a hammer, drawn into wires, or carefully filigreed with a chisel. Well made golden objects are treasured for workmanship and beauty. Poorly made objects are melted down to be remade as coins or other objects.

Dwarves are aware of the scarcity of gold, and of its value. No dwarf has ever sold gold at less than its current value, a fact that has led other races to see them as mean and avaricious.

The dwarves' passion for gold is well known, as is their love of gemstones. They love to possess these treasures of the earth, polishing and cutting them into brilliant shapes that catch the light perfectly. Each stone is seen as a shining example of the beauty of the earth. To those who have left their underground homes, they are reminders that true beauty comes from within the earth.

Dwarves are well aware of the value of gems. Where others value stones by weight and scarcity, dwarves value them according to their beauty.

They have, however, no desire to own or collect pearls. As products of the sea and shellfish, they are not considered to be gems. Dwarves find them unattractive. Pearls lack the deep lustre of natural stones. Still, it is a foolish dwarf who does not realize that beauty is in the eye of the beholder. While pearls are worthless, dwarves are aware of their trade value.

Gold and gems are their greatest loves, but other metals are important to them too. Platinum has many of the attributes of gold and is even rarer. Silver is easy to work and holds its shape better than gold. Its color is not as desirable, but it has its own appeal. Copper and other metals are also considered beautiful. While other metals are more common than gold, their comparative rarity lends them value.

Iron ore is crucial to the dwarves. With it they make weapons, armor, forges, and tools. Iron ore veins are seen as the bones of the earth; bones bequeathed to the dwarves to be used for their own purposes. When forged with carbon, dwarves transform iron into steel that is durable and hard without being brittle.

## Crafts

Though they would love to work exclusively with gold and gems, dwarves are a practical folk. They know that iron and steel wear hard and are infinitely more practical

as tools. Therefore they work extensively in iron and steel. Dwarf craftsmen produce some of the finest weapons, armor, and tools in any world. These goods, because of their quality, bring higher prices that are gladly paid for dwarven craftsmanship. All crafts necessary to ensure the strongholds are places of beauty are also worked.

## Individualism

Dwarves willingly live under lawful institutions, respecting privacy and personal space. Law induces order, organization, and a stable society. The society reflects the natural order of the world, with everything in its proper place. Laws exist to be obeyed, not to be broken. Society exists so that dwarves may be free from unnecessary intrusions.

Even though law is important, dwarves are fairly individualistic. They have personal views that they rarely make known to others, one reason they are seen as a taciturn race. However, when a dwarf thinks that his own views are not being heard, he will become grumpy, silent, and bear his distress stoically.

This stoicism, and the desire not to grieve others, is evident in the way they view wealth as a private matter. Only powerful and respected dwarves are expected to display wealth openly, and even then ostentatious displays are frowned upon. All dwarves are expected to, and prefer to, keep their wealth hidden.

It is considered bad manners to flaunt accumulated wealth. Such behavior is offensive and has caused dwarves who travel in the surface world to be deeply insulted. Wealth, particularly gems and precious metals, are for personal delight. They should be carefully hoarded and displayed for one's closest family or cherished friends. It is a mark of acceptance and friendship among dwarves for one to reveal his wealth. By doing so, he is not only sharing the joy of his possessions, but is saying, "You are my friend, whom I trust not to steal from me." (The exception to this, of course, is wealth displayed through excellent craftsmanship in utilitarian items. A beautifully crafted and gilded axe with an inlaid gem or two is not ostentatious if it is functional. Dwarves claim this is not a subjective distinction, but most other races find it hard to follow the reasoning.)

Other races, and elves in particular, find this attitude very strange. Humans and elves delight in the display of their wealth, allowing others to admire its beauty. No dwarf would do such a thing. It's no surprise that dwarves are considered mean and greedy by races who cannot understand their motivation.

## Emotions

A private people, dwarves often have difficulty expressing emotion. Their society is structured to make displays of anger, envy, jealousy, and hatred unnecessary. They are capable of harboring grudges and hatreds, but these are usually directed outside of the stronghold.

Dwarves rarely insult or distress each other, but other races distress them greatly. Not giving them the respect they demand, enquiring casually about wealth, or making them the butts of jokes, are guaranteed to make dwarves angry. But this anger will normally only show itself as a scowl or a contraction of the brows. Other races have concluded, therefore, that dwarves are humorless, not realizing that dwarves do not release their anger. They allow it to simmer and increase until they explode, becoming their own

stereotypes #grumpy, taciturn, stubborn, and unyielding. Dwarves often despair at the extremely poor manners of other races.

## Attitudes Toward Other Races

Dwarves are basically good people. They seek to harm no one, merely to coexist with them, or even better, to be left alone. Because of their good nature, dwarves have been known to persevere in the face of insults and inexplicable behavior. They have banded together with men and elves in times of crisis, and have entered long term trade agreements of mutual benefit.

They have little patience for the ways of humans who simply do things wrong. Humans either waste time in petty pursuits or are so keen to achieve their goals, they are willing, almost eager, to be forceful and rude. They have no conception of the proper rhythm of the world, which is hardly surprising since they allow their lives to be dominated by the changes of night and day and the seasons. No sooner do they achieve something, than their children want to change it, replace it, or worse, lose interest in it entirely.

Elves should know better, but they lack the simplest virtues of patience, diligence, and consistency. They are renowned for wasting their lives enjoying themselves instead of producing lasting goods.

The differences between elves and dwarves have led to many disagreements. This usually occurred because dwarves considered agreements to be binding until the end of time, while the elves thought they were to last as long as they were useful. Entire strongholds may have been threatened or destroyed because elves failed to honor a pledge. Perhaps some minor slight elves have forgotten, has been harbored and nurtured and passed on to the next generation.

As fellow underground dwellers, gnomes are looked upon more favorably by dwarves, though the gnomes' delight in black humor and practical jokes has caused friction.

## War to the Death

Dwarves do not compromise when dealing with evil races, particularly when competing with them for living space or when their welfare is threatened.

Dwarves detest drow, orcs, goblins, hobgoblins, and evil giants, eradicating them whenever found. Some strongholds are not above ensalving such creatures and forcing them to work in labor camps.

Their hatred of evil races is as ancient as the dwarves themselves. Originally, wars were fought to determine who had the right to live underground, but the conflict has spread to the surface. In most game worlds there should be places where dwarves have been driven from their ancient strongholds by orcs, goblins or other creatures of darkness. They now bear a burning and eternal hatred for them.

Dwarves have no doubt that they are involved in a war of massive proportions. It is known as the "War to the Death," for the dwarves have sworn to fight until their enemies are destroyed.

## Isolationism

The dwarves' desire for isolation should be no surprise. Clannish by nature, many are suspicious even of dwarves from other clans, to say nothing of other strongholds.

It is among mountain dwarves that isolationism is strongest. Mountain dwarves prefer not to deal with other races. They even have difficulty understanding hill dwarves. Some of them believe that hill dwarves have been contaminated by living closely to other races; "hill dwarves have lost the rock of their dwarvishness."

All dwarves have a tendency to isolationism; to what extent that affects individual player characters depends on the background of the character.

## Dwarven Hearths

Dwarven families are called hearths, a term which means "the place where children are born and raised." The hearth is the basic unit of dwarf society. A clan may be composed of two to a hundred or more families, depending on its strength.

A hearth includes grandfather and grandmother, their children, and any offspring of their children. Family members share the same dwelling and are extremely close-knit. Unlike human or elf families, the dwarven hearth is not an insular unit, but part of a larger clan. Hearths within a clan are united by blood, and this links the clan together, making it more than just a collection of individual families.

A hearth has a single line of descent. Cousins, aunts, and uncles are not part of the hearth but, as members of the clan, are close to the family.

In some ways the hearth is a convenient social organization rather than an important entity in its own right. Its primary purpose is to create a legal and social environment into which children may be born and to provide a stable environment in which children may be nurtured and educated in the rudiments of dwarf beliefs and conduct. At the core of the hearth is the institution of marriage.

### Marriage

Dwarves are not romantics. The vast majority of marriages are arranged by clan elders. Their main concern is to secure the continuation of the clan by ensuring that children are properly raised. They select suitable males from eligible candidates and ensure that the family has a warm and secure place to live.

Dwarf society is about one-third female. Dwarves are monogamous, and marriages are entered into for life. That, along with the fact that males outnumber females about two to one, means that many males do not marry. A woman who loses her spouse will, after a year of mourning, remarry. Grandparents play as important a role in child rearing as do parents; elders find mates for widowed grandmothers.

Divorce does not exist in dwarf society. Couples who have grown distant from one other will continue to share the hearth and the responsibilities of child rearing. Only death can end a marriage.

### Life Cycle of the Dwarves

Dwarves reproduce very slowly compared to humans and orcs. The birth of twins is rare and triplets and quadruplets do not occur. The majority of families have only one or two children to care for. This is seen as a virtue because it allows them to lavish their time and care on one child, and give that child a better education than would be possible with several.

Until the age of 10, young dwarves are cared for within the hearth. During these formative years, they learn to speak and are taught the traditions and history of their clan and stronghold. The children socialize with others daily, often in a special clan nursery, while their parents and grandparents are at work. In the nursery the children are taught the rudiments of their clan's craft. Children from an armorer's clan will play with miniature suits of armor, those from a baker's clan will play with scales and bread dough. They are allowed to follow their natural instincts and are provided toy tools and allowed to dig tunnels and "hidey-holes" in the nursery.

At the age of 10, more formal education begins. For eight hours every day the children learn runes and local history. Training in crafts begins with basic techniques and skills constantly drilled into them. Their education continues until their 25th year.

## Apprenticeship

On their 25th birthday, great celebrations are held to mark the coming of age. The whole clan assembles to witness the event and join in the fun. The climax of the celebration arrives when parents deliver the youth to the clan's guild master and apprenticeship begins. Males and females both serve the same apprenticeship, with no differentiation based on sex.

Once the apprenticeship begins, the youth leaves his family hearth and goes to live in the apprentices' dormitories; if apprenticed to individual craftsmen, to the craftsman's hearth. They may return home for one day a week, otherwise they are busy learning their trade.

Dwarf apprenticeships are served for 25 years. At the end of the apprenticeship, celebrations are held to mark the dwarf's entry into adulthood and the acceptance of adult responsibilities.

## Marriageable Age

Once dwarves have attained adulthood, they are eligible for marriage. Most female dwarves are expected to marry at this time. Females from military clans, such as Hearth Guards, frequently delay marriage until later in life. Few young males have much hope of marrying soon, as the clan elders invariably choose suitors who have plied their craft for at least 10 years after apprenticeship. Males, achieving adult status, will spend their time honing their skills and amassing wealth. Those from military clans may leave their strongholds to go adventuring, in the hope of acquiring wealth and reputation enough to enhance their chances of marriage.

## Adult Life

Adult dwarves usually work 8 to 12 hours a day. Those with children are limited to 8

hours a day and are expected to spend the rest of the time with their children. Female dwarves work the same hours until a month before they are ready to give birth. Pregnancies are 12 months long, and tradition dictates that the month preceding the birth be spent preparing the hearth for its new member.

After working hours, the time of unmarried dwarves is their own. For the first few hours, unmarried dwarves usually seek their own solitude, and an opportunity to count their wealth. Then they will visit the hearths of married relatives. Around the hearths stories are told, songs are sung, and children play. Single dwarves often congregate in one of the clan's great halls to feast and swap stories, and to be amused by entertainers with juggling, acrobatics, and other displays of skill. After an evening's amusement, they sleep 8 hours before rising to work.

## Dwarves' Diet

Dwarves enjoy a wide variety of food, with a preference for meat. Hill, mountain, and sundered dwarves keep cattle, goats, sheep, pigs, and fowl. These animals are grazed above ground on upland meadows or plateaus. Sundered dwarves keep their livestock close to home, hill and mountain dwarves allow their stock to roam.

In high ranges, mountain dwarves keep animals more suited to subterranean existence: giant lizards and beetles. Deep dwarves and duergar also keep lizards and beetles, and these are selectively bred for cooking. Gully dwarves eat anything they can scavenge and rarely breed or maintain any animals for food. The few gullys who have tried were so wretched at it their animals sickened and died.

Although meat is a staple of their diet, large quantities of grains are also consumed. When possible wheat, rye and barley are grown close to the stronghold. They are harvested and kept in underground granaries. Many who live close to humans or halflings buy large quantities of grain to supplement their own production.

Dwarves who live in the deep earth substitute various types of fungi for grains. Like the giant lizards and beetles, many of these fungi have been carefully bred to produce a wide variety of flavors to excite the palate. Most are very careful about the kinds of fungi they eat, but gully dwarves will eat anything. As a result, many gully dwarves suffer from indigestion and bowel disorders.

Dwarven cooking also makes use of vegetables for flavor and variety. They do not eat spicy or heavily seasoned food, and consequently dwarven cooking tastes bland to humans and elves, but the food is wholesome, consisting of thick stews served on broad slices of bread. While they are not voracious eaters like halflings, few humans or elves can eat as much as a dwarf in a single meal.

## Clothing

Dwarven clothing tends to be heavy, somber in color, and serviceable. Made from thick wool or spun strands of fungi, it is designed to keep the dwarves warm in the unheated places in their strongholds. To the untrained eye, colors are uniformly drab grays and browns. Dwarven languages have over 500 words for rock, and almost as many to describe different rock hues. Particular shades of gray and brown reveal much about the clan and status of dwarves, if one has the eye to see.

Boots, belts, and hats are usually made by the leather guilds of tanned leather from the hides of cattle or giant lizards.

### Music and Singing

Dwarves love to sing. Many have rich baritone voices that echo splendidly about their chambered halls. Numerous great halls are specially constructed around natural acoustic properties. Except for solo performances by entertainers, singing is a group activity. On formal occasions songs written to display their vocal ranges are sung by massed choirs. On less formal occasions, any dwarf may sing within a hall or around the hearth.

Their songs speak of the beauty of the earth, commemorate famous deeds of valor, or sing of the construction of a magnificent bridge or other edifice. Some are laments that tell of the death of a loved one or great hero, or the loss of a stronghold to monsters.

The songs tend to be long and very well written. Most races would lose patience with a spoken story, but even elves have sat entranced for hours by the story songs of dwarves.

Dwarves also enjoy playing instruments; flutes, horns, bagpipes, drums, and percussion instruments especially. They rarely play stringed instruments because short fingers are ill suited to plucking strings and picking out chords. Their music is either martial or mournful. Rarely will musicians accompany singers: music dampens the true resonance of the voice. However, special songs have been written, and are performed, for voice and instrument.

## Chapter 4: Character Creation

Balur the Hill Dwarf delivers his unbiased opinions on his cousins.

*Pah! The only decent dwarves are hill dwarves. That's because ain't nothing funny or odd about us. Not like others. You can depend on hill dwarves. We keep to ourselves. We don't cause any trouble and we don't steal from decent folk.*

*Not like those sundered and gully types. Steal the clothes off your own back, they would, if you didn't constantly watch 'em. Dirty too. Never known one of 'em to wash, or change his clothes either. They must sell all the clothes they steal. Probably to deep dwarves and duergar.*

*Nasty those duergar. Name means "lurkers in the dark." Shifty, dangerous bunch. Like to ambush you. Pepper you with crossbow bolts and stab you in the back. They give us all a bad name. Bunch of murdering goblin lovers.*

*Deep dwarves 're all recluses. Greedy they are, only live that deep 'cause they've tunneled out all the gold above. That was our gold too! They stole it, but we can't prove it. Say they were there first. Liars.*

*Now, mountain dwarves. They're not a bad lot. A bit uppity, but that's because they live in the mountains. We leave 'em alone. No point going all that way just to find you're not wanted. Most of 'em live behind locked doors.*

*So there you have it! If you want to deal with dwarves, deal with us. We not only live closer to you, we don't harbor any grudges against other folk, except pansy elves, goblins, pigfaced orcs, and filthy hobgoblins. No fairer folk considering what we had to*

*put up with!*

## Creating Dwarf Characters

### Selecting Class or Multi-Classes

Dwarves may be warriors, priests, thieves, or multi-class warrior/priests or warrior/thieves. If you choose a multi-class character, familiarize yourself with their benefits and limitations in the *Player's Handbook*.

You can determine your character's class in several ways. You may choose which class or multi-class combination you want to play or you may generate the character's attributes and decide which character to play according to the die rolls; or your DM may assign you a character class.

The advantages and limitations of each character class will be further modified by the subrace of your character.

### Ability Scores

Any of the six dice rolling methods in the *Player's Handbook* are acceptable. However, if you want to generate a specific class of character, methods V and VI work best. They allow you to custom design your character and are more likely to result in good ability scores. Don't make any adjustments to your rolled attributes until you've read the chapter on subraces, the procedures are different from those of the *Player's Handbook*.

### Subraces

The maximum experience levels that can be achieved by each subrace are listed in *Character Class Maximum Levels* in this chapter. Take a look at these before deciding on your subrace. If you wish to play a thief, see the *Thieving Skill Adjustments Table*.

Subraces have advantages and disadvantages. A character of a subrace that has a large number of advantages will require more experience points than usual to advance in level.

## Subrace Distinctions

Each subrace has the following elements:

**Ability Score Adjustments** are made to the character's attributes when the subrace is first selected. Add them to or subtract them from your rolled attributes and enter them on your character sheet.

**Ability Scores** list the maximum and minimum abilities scores that a character of that subrace can have when created. A character whose attributes exceed the maximum is reduced accordingly. If he does not qualify for the minimum attributes, he must choose another subrace.

A character's ability scores may change through play, in which case he may exceed or fall below those given here. Initially, the character's scores must conform to the those of the subrace.

**Languages** are the languages commonly known by members of the subrace.

Depending on the campaign background, all dwarves may speak the same language or different languages such as hill, deep dwarf, or duergar. If all dwarves speak the same language, entries such as "hill dwarf" are treated as dwarf. Your character always speaks his own native language.

If you are using the nonweapon proficiency system, languages cost proficiency slots as described in the proficiencies chapter. A character's own language does not cost a slot. Without the proficiency system, your character will know a number of additional languages depending upon his Intelligence score (see *Player's Handbook*).

**Infravision** gives the range of the subrace's infravision in feet.

**Special Advantages** that the race enjoys are listed here. Advantages common to all subraces are not included, but will be covered later.

**Special Disadvantages**, such as fighting at penalties in bright light, are described here.

**Racial Enmities** sometimes allow special combat modifiers to take effect when fighting specific enemies.

**Additional Experience Costs** are levied against certain subraces because they benefit from a number of advantages, which make them more powerful than others. To balance this, they are required to earn additional experience points before they can gain a new level. These additional experience point costs are expressed in terms of percentages that need to be earned. A +10% experience cost indicates that members of the subrace must earn an additional 10% experience points to increase in level.

For example, deep dwarves require an additional 10% experience points. A 1st-level deep dwarf warrior therefore requires 2,200 experience points to become a 2nd-level warrior instead of the usual 2,000. A 3rd-level deep dwarf thief would require 5,500 experience points to become a 4th-level thief.

In the case of multi-class characters, the character needs to gain the additional experience points in both classes. A 1st-level deep dwarf warrior/cleric requires 1,650 experience points to achieve 2nd-level priest status, and 2,200 to become a 2nd-level warrior.

**Life Expectancy** is an average, used to determine initial and maximum ages of characters.

## Hill Dwarves

The most common dwarf, hill dwarves are found in many AD&D® campaign worlds. Methods for creating them are in the *Player's Handbook*, and are included here to complete the subraces.

Ability Score Adjustments: The initial ability scores are modified by a -1 penalty to Charisma and a +1 bonus to Constitution. The minimum and maximum ability scores are as shown.

**Hill Dwarf Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 8 | 18 |
| Dexterity | 3 | 17 |
| Constitution | 11 | 18 |

| | | |
|---|---|---|
| Intelligence | 3 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 3 | 17 |

**Languages:** Hill dwarf, common, gnome, goblin, kobold, orc.
**Infravision:** 60 feet.
**Special Advantages:** None.
**Special Disadvantages:** None.
**Racial Enmities:** Ogres, trolls, ogre magi, giants, and titans suffer a -4 penalty to attack hill dwarves.
**Additional Experience Cost:** None.
**Life Expectancy:** 350 years.

## Mountain Dwarves

Mountain dwarves are also fairly common. Players who have existing mountain dwarf characters generated by using the *Player's Handbook* need only make minor adjustments to their characters. These include height, weight, and age. Otherwise keep the character as he is.

**Ability Score Adjustments:** Initial ability scores are modified by a -1 penalty to Charisma and a +1 bonus to Constitution. The minimum and maximum ability scores are as shown.

**Mountain Dwarf Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 8 | 18 |
| Dexterity | 3 | 17 |
| Constitution | 11 | 19 |
| Intelligence | 3 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 3 | 16 |

**Languages:** Mountain dwarf, common, gnome, goblin, kobold, orc, ogre, troll.
**Infravision:** 60 feet.
**Special Advantages:** None.
**Special Disadvantages:** None.
**Racial Enmities:** Ogres, trolls, ogre magi, giants, and titans suffer a -4 penalty to attack mountain dwarves.
**Additional Experience Cost:** None.
**Life Expectancy:** 400 years.

## Deep Dwarves

Deep dwarves live far under the earth and have superior infravision.

**Ability Score Adjustments:** Initial ability scores are modified by a -2 penalty to Charisma and a +2 bonus to Constitution. The minimum and maximum ability scores are as shown.

**Deep Dwarf Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 8 | 18 |
| Dexterity | 3 | 16 |
| Constitution | 13 | 19 |
| Intelligence | 3 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 3 | 15 |

**Languages:** Deep dwarf, duergar, drow, illithid, kua-toa, troll, troglodyte, svirfneblin, undercommon, sign language.
**Infravision:** 90 feet.
**Special Advantages:** Excellent saving throws against magical attacks and toxins. A deep dwarf figures his Constitution saving throw bonuses for a normal dwarf and adds an additional +1 to his bonus.
**Special Disadvantages:** Deep dwarves suffer a -1 penalty to all rolls in bright sunlight or within the radius of a continual light spell. Light spells have no additional effect.
**Racial Enmities:** Ogres, trolls, ogre magi, giants, and titans suffer a -4 penalty to attack deep dwarves.
**Additional Experience Cost:** +10% experience points to gain a new level.
**Life Expectancy:** 380 years.

## Duergar

Duergar, or gray dwarves, are typically evil, but player characters can be of any alignment. Most good or neutrally aligned races are suspicious of duergar.

**Ability Score Adjustments:** The initial ability scores are modified by a B2 penalty to Charisma and a +1 bonus to Constitution. The minimum and maximum ability scores are as shown.

**Duergar Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 8 | 18 |
| Dexterity | 3 | 17 |
| Constitution | 11 | 18 |
| Intelligence | 3 | 16 |
| Wisdom | 3 | 18 |
| Charisma | 3 | 15 |

**Languages:** Duergar, deep dwarf, drow, illithid, kua-toa, troll, troglodyte, ghoul, undercommon, sign language.
**Infravision:** 120 feet.
**Special Advantages:** Duergar are stealthy. Parties or individuals at least 90 feet ahead of the party gain a surprise bonus. This causes a -2 penalty to the opponent's surprise rolls. If a door or other screen is opened, the bonus is lost. Duergar receive a +2 bonus on their

own surprise rolls.

In addition to the standard saving throw bonuses against magical attacks (see *Saving Throws*), duergar are unaffected by paralysis, *illusion* and *phantasm* spells. They are immune to all magical and alchemical poisons. Against natural poisons they gain the standard dwarf saving throw bonus.

In addition they possess the innate magical abilities of *enlarge* and *invisibility*. They can use each of these powers once per day. A duergar uses the *enlarge* ability as though he were a wizard twice his own level. A 2nd-level duergar uses *enlarge* as though he were a 4th-level wizard. He may use it only to affect himself and whatever he is wearing or carrying.

Special Disadvantages: Duergar are adversely affected by bright light such as sunlight or *a continual light* spell. They are not affected by the light of torches, lanterns, magic weapons, *light* or *faerie fire*.

Affected by bright light, his enhanced ability to gain surprise is negated. Dexterity is reduced by -2 and hit rolls are made at a -2 penalty.

In situations where a duergar is in darkness but his opponents are in bright light, his Dexterity and surprise advantages are unaffected, but he suffers a -1 penalty to his attack rolls.

Other dwarves distrust duergar and react to them at -3 penalty. If the character kits are being used, this penalty is cumulative with any incurred when choosing a particular kit.

**Racial Enmities:** Ogres, trolls, ogre magi, giants, and titans suffer a -4 penalty to attack Duergar. These dwarves do not gain any advantage when fighting orcs, half-orcs, goblins, or hobgoblins.

**Additional Experience Cost:** Duergar require 20% additional experience points.

**Life Expectancy:** 400 years

## Sundered Dwarves

Sundered dwarves are unlike any other dwarves, tending to be dirty and unkempt, though not as filthy as gully dwarves. They live on the surface and suffer from claustrophobia.

**Ability Score Adjustments:** The initial ability scores are modified by a -1 penalty to Charisma, and +1 bonuses to Constitution and Strength. The minimum and maximum ability scores are as shown.

**Sundered Dwarf Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 8 | 18 |
| Dexterity | 3 | 17 |
| Constitution | 11 | 18 |
| Intelligence | 3 | 16 |
| Wisdom | 3 | 18 |
| Charisma | 3 | 16 |

**Languages:** Common, any dwarf dialect, elf, goblin, orc, gnome, kobold, halfling, hobgoblin.

**Infravision:** 30 feet.
**Special Advantages:** None.
**Special Disadvantages:** Sundered dwarves are claustrophobic. A sundered dwarf must roll a successful saving throw vs. death in order to overcome his fear of the underground before he can enter dungeons, caves, and tombs. If the check fails, he may not enter. Once underground he must make a saving throw each day. If he fails, he will want to leave the underground by the most direct route.

Underground, a sundered dwarf attacks with a -2 penalty to his rolls. Should he fail his claustrophobic saving throw, the penalty increases by -1 for each additional day he stays underground. If he fails to reach open air, he may attempt further saving throws each day to overcome his claustrophobia. These saving throws are made at the same penalty as the dwarf's current attack roll penalty.
**Racial Enmities:** Sundered dwarves are harder for ogres, trolls, ogre magi, giants, and titans attack. These races subtract -4 from their attack rolls when fighting sundered dwarves.
**Additional Experience Cost:** None.
**Life Expectancy:** 250 years.

## Gully Dwarves

Gully dwarves are stupid. They are master scavengers and have raised groveling to an art form. They do not fight very effectively. Players should bear these restrictions in mind when considering playing a gully dwarf character.

**Ability Score Adjustments:** The initial ability scores are modified by a B2 penalty to Charisma and +1 bonuses to Strength and Dexterity. The minimum and maximum ability scores are as shown.

**Gully Dwarf Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 18 |
| Dexterity | 6 | 18 |
| Constitution | 8 | 16 |
| Intelligence | 3 | 12 |
| Wisdom | 3 | 14 |
| Charisma | 3 | 12 |

**Languages:** Gully dwarf, common, gnome, orc, goblin.
**Infravision:** 60 feet.
**Special Advantages:** A gully dwarf may attempt to grovel. Any time he is in a dangerous situation and is not immediately engaged in melee, he may throw himself on the mercy of his attacker, or faint in the hope that he will be ignored in the ensuing melee. This causes his opponents to make a saving throw vs. magic. If they are successful they may attack the gully dwarf. If they fail they may not attack him for 1d6 rounds, but they may restrain him or tie him up. The saving throw is modified by the gully dwarf's level as shown on the Groveling Table.

**Groveling Table**

| Level | Modifier |
|---|---|
| 1-4 | 0 |
| 5-8 | -2 |
| 9-12 | -3 |
| 13+ | -5 |

**Special Disadvantages:** Gully dwarves are usually stupid. A player character gully dwarf is an exception to the rule, being superior to others of his kind by virtue of his ability to think. However, players should not abuse this ability and allow their characters to concoct clever plans and schemes. Intelligence checks may be requested to see if the character could actually come up with such ideas.

The chance of a magical item failing in the hands of a gully dwarf is increased from 20% to 40%.

**Racial Enmities:** Ogres, trolls, ogre magi, giants, and titans suffer a -4 penalty to attack gully dwarves.

**Additional Experience Cost:** None.

**Life Expectancy:** 250 years.

## Ability Score Modifiers

### Constitution Modifiers

Dwarves are nonmagical and gain the following bonuses to saving throws against poisons and magical attacks.

**Saving Throw Bonuses Table**

| Constitution | Save Bonus |
|---|---|
| 3 | - |
| 4-6 | +1 |
| 7-10 | +2 |
| 11-13 | +3 |
| 14-17 | +4 |
| 18-19 | +5 |

Deep dwarves add a +1 to all above bonuses.

### Magical Malfunctions

Although they gain some benefits from being nonmagical, dwarves suffer from it as well. If a magical item is not specifically created for the dwarf's class, there is a 20% chance (40% for gully dwarves) that the item will malfunction when it is used. A check is made each time the dwarf uses the item and affects only the current use; it may work properly the next time. This applies to rods, staves, wands, rings, amulets, potions, horns, jewels, and most other magical items. Also, DMs should note that a malfunction is not

usually just a simple failure to function. The item usually does something dramatic and colorful, at the DM's discretion.

Dwarves have learned to master some magical items. Weapons, shields, armor, gauntlets, and girdles always work.

Dwarf priests and warrior/priests may use clerical items without malfunction.

Dwarves also recognize cursed magical items that malfunction in their hands. They may dispose of malfunctioning items.

## Underground Detection Abilities

Since dwarves are essentially creatures of the underground, they gain certain detection abilities automatically:

| **Detect or Determine . . .** | **Roll 1d6** |
|---|---|
| Grade or slope in passage | 1-5 |
| New tunnel/passage construction | 1-5 |
| Sliding/shifting walls or rooms | 1-4 |
| Stonework traps, pits, and deadfalls | 1-3 |
| Approximate depth underground | 1-3 |

## Combat Bonuses

All dwarves, unless otherwise specified in the sub-class section, gain a +1 bonus to attack orcs, half-orcs, goblins, and hobgoblins. If the campaign background makes it possible, this bonus may be changed. Instead, the object of their hatred may be any other monster. The character may come from a stronghold that has never fought orcs, but does have a long history of warfare against drow and duergar. In that case, give the +1 attack bonus against drow and duergar instead.

If this option is used, bonuses gained from character kits are added to it.

## Character Class Maximum Levels

The maximum levels dwarves can achieve are restricted and are listed according to subrace. Multi-classed characters may advance to the maximums of each class.

**Standard Class Limit Table**

| | **Character Class** | | |
|---|---|---|---|
| **Subrace** | **Warrior** | **Priest** | **Thief** |
| Hill | 15 | 10 | 12 |
| Mountain | 16 | 10 | 12 |
| Deep | 14 | 12 | 10 |
| Duergar | 12 | 12 | 14 |
| Sundered | 14 | 10 | 15 |
| Gully | 8 | 8 | 16 |

## Exceeding Level Limits

Characters may exceed the maximum levels and advance to any level, but they must earn two, three, or even four times the amount of normal experience points required for each level. This is an optional rule.

Alternatively, a character may exceed maximum level limits if he has extremely high ability scores in his prime requisites. For example, a hill dwarf warrior is limited to 15th-level. With a Strength of 18, he may be allowed three bonus levels and advance to 18th-level. Bonus levels required are as follows:

**Bonus Levels Table**

| Prime Requisite | Bonus Levels |
|---|---|
| 14-15 | +1 |
| 16-17 | +2 |
| 18 | +3 |
| 19 | +4 |

## Movement Rates and Encumbrance

All dwarf subraces have a base movement rate of 6. If the optional encumbrance rules are used, these may be adjusted for dwarf characters. Because they are stocky and sturdy folk, they are more adept at carrying heavy loads than other races. To simulate this with the encumbrance category rule, allow dwarves to reduce the movement penalty as follows: Light encumbrance has no effect on movement, Moderate reduces movement by one-third, Heavy by one-half, and Severe by two-thirds.

If the optional system is used, the character's movement rate is determined using *Table 48* on page 78 of the *Player's Handbook*, except that the modified movement rate is read from the next column to the left. Cross reference the character's Strength with his encumbrance. At the top of the column is the movement rate, shift one column to the left and use the modified movement rate. For example, a dwarf with a Strength of 16, carrying 100 pounds, has a movement rate of 5.

## Thieving Skill Adjustments

The Thieving Skill Subracial Adjustment Table gives adjustments to be made to a character's thieving skills by subrace. Those for hill and mountain dwarves are the same as in the *Player's Handbook*.

**Sub-racial Thieving Skill Adjustments Table**

| Skill | Hill | Mtn. | Deep | Duergar | Sundered | Gully |
|---|---|---|---|---|---|---|
| Pick Pockets | --- | --- | +5% | +5% | --- | +10% |
| Open Locks | +10% | +10% | --- | --- | +5% | -5% |
| Find/Remove Traps | +15% | +15% | +10% | +10% | +10% | +5% |
| Move Silently | --- | --- | --- | +10% | +5% | --- |
| Hide in Shadows | --- | --- | +5% | +5% | +5% | -5% |
| Detect Noise | --- | --- | --- | +10% | --- | --- |
| Climb Walls | -10% | -10% | -10% | -10% | --- | -5% |

| | | | | | | |
|---|---|---|---|---|---|---|
| Read Languages | -5% | -5% | -15% | -15% | -10% | -25% |

## Other Characteristics

Each dwarf name consists of a prefix and a suffix. To create a name either select or roll for a prefix and a suffix. Gender is indicated by the suffix, so male character names are generated using the Male Suffix Table and female names on the Female Suffix Table. For example, a roll of 2 on the Prefix Table gives "Bal-," and a roll of 1 on the Male Suffix Table gives us "-aim," for the name Balaim.

**Dwarf Name Generator Tables**

**Prefixes (1d20)**

| | | | |
|---|---|---|---|
| 1 | B- | 11 | Gil- |
| 2 | Bal- | 12 | Gim- |
| 3 | Bel- | 13 | Kil- |
| 4 | Bof- | 14 | Mor- |
| 5 | Bol- | 15 | Nal- |
| 6 | D- | 16 | Nor- |
| 7 | Dal- | 17 | Ov- |
| 8 | Dor- | 18 | Th- |
| 9 | Dw- | 19 | Thor- |
| 10 | Far- | 20 | Thr- |

| **Male Suffixes** | | **Female Suffixes** | |
|---|---|---|---|
| 1 | -aim | 1 | -a |
| 2 | -ain | 2 | -ala |
| 3 | -ak | 3 | -ana |
| 4 | -ar | 4 | -ip |
| 5 | -i | 5 | -ia |
| 6 | -im | 6 | -ila |
| 7 | -in | 7 | -ina |
| 8 | -o | 8 | -on |
| 9 | -or | 9 | -ola |
| 10 | -ur | 10 | -ona |

If you cannot create a name you like, try adding a "b," "d," "f," "g," "k," "m," "t," "v," or "z" between the prefix and the suffix.

### Height and Weight

Either choose your character's height and weight or generate them randomly. They are listed on the table below for each subrace. Take the base score appropriate for your race and add the die roll modifier. Bizarre combinations should be ignored and rerolled.

Females tend to be lighter and shorter than males so the base numbers for height and

weight are divided into male/female values. There is a broad range in each category.

**Average Height and Weight Table**

| Race | Height (in.) | Weight (lbs.) |
|---|---|---|
| Deep | 45/42+2d6 | 100/80+4d10 |
| Duergar | 41/40+2d6 | 95/75+5d10 |
| Gully | 40/38+2d6 | 80/65+4d10 |
| Hill | 43/41+1d10 | 130/105+4d10 |
| Mountain | 49/47+1d10 | 145/115+5d10 |
| Sundered | 50/48+1d10 | 135/110+3d12 |

### Starting Age and Life Span

Choose or generate a character's starting age and possible life span using the table below. To determine starting age, add the die roll to the base starting age. You will only have an idea of how long he is likely to live, assuming he dies of old age!

As an alternative you may play an older character, one who has been drawn or forced into adventuring late in life. Your character starts at 1st-level, but his ability scores are adjusted to reflect his greater age as shown on the Aging Effects Table.

These adjustments may result in either exceeding or falling below the minimum and maximum abilities required for your subrace, but this is not a problem as long as the character met them before he aged.

### Appearance

Now decide on the appearance of the character's hair and beard color, eyes, skin, and so forth. Look at the typical appearances given for each subrace of dwarf for an idea of what the character might look like. Each of the optional character kits contains a suggested distinctive appearance to further flesh out any dwarf character.

**Aging Effects Table**

| Race | Starting Age | Middle Age* | Old Age** | Venerable Age*** | Maximum Age |
|---|---|---|---|---|---|
| Deep | 45+3d12 | 140 | 187 | 280 | +2d100 |
| Duergar | 40+4d6 | 150 | 200 | 300 | +2d100 |
| Gully | 30+2d12 | 200 | 134 | 200 | +5d20 |
| Hill | 40+5d6 | 125 | 167 | 250 | +2d100 |
| Mountain | 50+6d6 | 150 | 200 | 300 | +2d100 |
| Sundered | 25+4d4 | 100 | 134 | 200 | +5d20 |

* -1 Str/Con; +1 Int/Wis
** -2 Str/Dex; B1 Con; +1 Wis
*** -1 Str/Dex/Con; +1 Int/Wis

## Chapter 5: Proficiencies

Proficiencies are the best way to quantify the various skills that distinguish dwarves from each other.

## Acquiring Proficiencies

How weapon and nonweapon proficiency slots are acquired is described on page 51 of the *Player's Handbook*. Detection proficiency slots are described below.

Refer to the following table when it is necessary to determine the number of proficiency slots a character starts with, the number available, and at what levels new ones are acquired.

**Proficiency Slots**

| | Weapon Proficiencies | | Nonweapon Proficiencies | | | Detection Proficiencies | |
|---|---|---|---|---|---|---|---|
| **Group** | **Initial** | **#Levels** | **Penalty** | **Initial** | **#Levels** | **Initial** | **#Levels** |
| Warrior | 4 | 3 | -2 | 3 | 3 | 5 | 4 |
| Priest | 2 | 4 | -3 | 4 | 3 | 5 | 4 |
| Thief | 2 | 4 | -3 | 3 | 4 | 5 | 3 |
| Warrior/Priest | 4 | 3 | -2 | 4 | 3 | 5 | 4 |
| Warrior/Thief | 4 | 3 | -2 | 3 | 3 | 5 | 3 |

## Weapon Proficiencies and Specialization

Only single-class fighters may have weapon specialization. Multi-class fighter/priests and fighter/thieves have other benefits to offset their lack of specialization. *The Complete Fighter's Handbook* contains many new and useful forms of weapon specialization that will enhance the abilities of dwarf warriors. You do not need to use it in your campaign, the AD&D® game works perfectly well without the optional rules, but they are recommended.

## Nonweapon Proficiency Groups

Nonweapon proficiencies are used to add more depth to a character and to assess his chances of success at certain tasks. Dwarves come from a different cultural background than humans and other races so they do not automatically learn their nonweapon proficiencies from the same groups. Dwarves may draw proficiencies from the groups below, instead of those on pages 54-55 of the *Player's Handbook*.

The number of slots needed for proficiencies and the ability modifier may differ from those in the *Player's Handbook*. These changed costs and ability modifiers are used for dwarf characters only.

Initial nonweapon proficiencies have been selected for the various dwarf kits in the next chapter. If you are using the kits, the tables below are only useful when the character gains experience and becomes eligible for additional slots. If you design your own kits, or do not use kits, these tables will still prove useful.

There are six dwarf nonweapon proficiency groups: General, Crafts, Warrior, Rogue,

Priest, and Special Background. When a player selects a proficiency from those categories listed under "Proficiency Groups," it requires the number of proficiency slots listed. If a proficiency is selected from any other category, it will require one additional proficiency slot beyond the number listed. A proficiency not listed in any of the dwarf groups may still be purchased (from the *Player's Handbook* or other supplement), but at the cost of two additional proficiency slots

**General Group:** This group is available to all dwarves. It is part of their background and training.

**Craft Group:** The craft group represents the clan-based nature of dwarf society and the long apprenticeships that young dwarves undergo before becoming adults. A dwarf may choose one craft at no cost in proficiency slots.

**Warrior, Priest, and Rogue Groups:** Multi-classed characters may select proficiencies for each of their classes. A warrior/priest could choose from both Warrior and Priest groups.

**Special Background:** This group is only used if the dwarf is from an unusual background, such as dwarves who live in a stronghold subject to heavy flooding during the spring thaw. These dwarves would have learned to swim to avoid drowning when their tunnels filled with water. They may also have become expert boatwrights and boat handlers.

**Dwarf Nonweapon Proficiency Groups**

| Swimming | 1 | Strength | -1 |
| Weather Sense | 1 | Wisdom | -1 |

## Nonweapon Proficiencies

New proficiencies are described here, with additional information about dwarf proficiencies. Those not described are unchanged from the descriptions in the *Player's Handbook*.

### Alertness

A character with this proficiency is able to instinctively recognize signs of disturbance in the immediate vicinity. This gives a +1 bonus on the character's surprise rolls when he makes a successful proficiency check.

### Animal Lore

The effectiveness of this proficiency varies according to the background of the dwarf. A dwarf who has lived his entire life underground knows little about animals living above ground, but he will be very knowledgeable about those underground. In this case, a dwarf gains a +1 modifier to his Intelligence when dealing with underground animals, but has no knowledge of surface creatures. A sundered dwarf who fears the underground may only have knowledge of above ground animals.

Dwarves with backgrounds of trade with other races or who live both below and above ground, may have normal animal lore proficiency with no modifiers, knowing both above and below-ground animals.

A character may imitate the calls and cries of animals as described in the *Player's Handbook*.

### Armorer

Dwarves are more adept at making armor than other races. Their armorers are the finest in any world and their special skills are carefully hidden from outsiders. They are capable of producing high quality armor very quickly. Instead of 2 weeks per level of AC below 10, a dwarf armorer requires only 12 weeks per point of AC below 10. While a human armorer takes 10 weeks to make a suit of chain mail, a dwarf armorer labors only 72 weeks (5 H 12).

*The Complete Fighter's Handbook* contains extensive rules about the use of the armorer proficiency and is recommended to any character interested in utilizing this proficiency to the fullest.

### Astrology

Astrology is only available to dwarves who live on or near the surface of the world. Deep dwarves and others who do not have easy access to the surface do not have the astrology proficiency. In order to use astrology, you have to see the stars.

### Blind-fighting

Blind-fighting is cheaper for dwarves; they only gain the benefit when fighting invisible opponents. Their inherent infravision allows them to fight effectively, even in total darkness.

### Boating

A character with the boating proficiency is needed to guide a boat down a rapid stream and to reduce the danger of capsizing a canoe or kayak. He also assures the maximum speed of a boat.

This proficiency is distinct from Navigation and Seamanship, which apply to ships on oceans, seas, and large lakes.

### Boatwright

The boatwright proficiency allows a character to construct all kinds of watercraft up to a maximum length of 60 feet. Larger vessels cannot be built.

The time required to build a boat depends on size. As a general guide, a boat requires one week of construction time per foot of length. Two characters with the boatwright proficiency cut this time by half; three reduce it to one-third. A maximum of one boatwright per 5 feet of length can work on the same vessel.

The basic boat includes hull, masts (if applicable), deck, and benches as required. Features such as a cabin or a sealed hold add about a week apiece to complete. Characters without the boatwright proficiency can aid the boatwright in construction, but two such characters equal the time savings that one additional skilled boatwright could provide.

### Direction Sense

Dwarves receive a +2 bonus to their modifier when using their direction sense underground. They may use it above ground, but at a -2 penalty to Wisdom. Sundered dwarves should reverse these modifiers to reflect their fear of the underground.

### Dwarf Runes

Dwarf runes are the basic dwarven alphabet and are taught to all young dwarves as a part of their basic education. Depending on the campaign background, runes may have been a gift from the gods, a creation of the dwarves themselves, or an altered form of some other written language. Dwarves will still claim runes to be an intrinsic part of their cultural heritage, and they may take offence if accused of having copied runes!

Dwarven runes are found engraved in stone and only rarely written on such transitory materials as parchment, cloth or paper. They are used to denote ownership, give warnings of nearby dangers and to record history. The tombs of dwarves who have been properly interred, as opposed to hasty burial during battle, are engraved with runes that tell the occupant's clan, his parentage, children, and the deeds of his life. In the absence of proper interment, dwarves erect stone monoliths or engrave entire cavern walls depicting the deeds of their dead. These list the clans, the names of those who died and the nature of their deaths. The numbers of slain enemies are greatly detailed.

Dwarven runes are not a phonetic form of writing, but a conceptual one, with each rune delineating an idea or implying a range of ideas depending on placement. A single rune might convey pages of human or elf writing or be as simple as a sign saying "stairs." It's a matter of knowing what the rune means and how it is to be interpreted in context. Dwarven runes do not contain conjunctions or pronouns, but proper names are

represented by altering an existing rune. This makes runes difficult for other races to understand, and dwarves consider themselves superior to races who cannot read even the most simple of them. All dwarves know them at no cost.

### Endurance

A hardy and resilient race, dwarves automatically gain the Endurance proficiency (see the *Player's Handbook*, page 58) at no cost.

### Fungi Recognition

Although they prefer not to, dwarves sometimes have to survive on a diet of fungi. They would rather use these as supplements to their regular diet, but when times are hard, or when involved in an extended underground expedition, it is useful to be able to tell edible fungi from the poisonous or unwholesome varieties. Approximately 50% of underground fungi are poisonous. They may cause an upset stomach or be so poisonous they cause death. It is impossible to harvest edible fungi without the fungi identification proficiency.

If the character has plenty of light and an opportunity to study the fungus in question closely for 10 minutes, no proficiency check is required. If he is unable to see the fungus properly, often the case when using infravision, or has to make a hasty decision about edibility, a proficiency check must be made.

### Gem Cutting

A dwarf with this proficiency may cut 2d8 gems per day instead of 1d10. He also has a greater chance of increasing the value of a gem. If a dwarf rolls a 1 or a 2 during cutting, he increases the value of the gem to that of the next most valuable class (see page 134 of the *Dungeon Master's Guide*). For example, Duram is cutting a fancy stone with a finished value of 100 gp. He does an exquisite job and actually increases its value to that of a precious gem with a value of 500 gp.

Any character who fails a gem cutting roll cuts the gem, but does so poorly and reduces its value to the next lower category. Duram, flushed with success, tries his hand at a precious stone with a finished value of 500 gp but he slips with his chisel and reduces its value to that of fancy gem (value 100 gp).

A character who rolls a 20 when cutting a gem splits it in half and ends up with two uncut gems with a combined value one class lower than that of the original gem. Duram starts one more gem. It has a value of 50 gp. He places his cutting clamp, over tightens the jaws, and splits the gem in half (he rolls a 20!). He now has two uncut gems with a value of 5 gp each.

### Intimidation

This proficiency allows a character to intimidate others to do as he wishes. It involves an implicit threat of violence. Threatened NPCs will do as they are told, but will harbor resentments against him. If an opportunity arises for intimidated NPCs to revenge

themselves they will do so.

Intimidation may be attempted with one of two abilities, Strength or Charisma. If intimidating by Strength, the character is threatening immediate, personal, bodily harm. If by Charisma, the intimidation consists of subtle threats, which need not be physical. No matter which ability is used, the intimidation attempt is always modified by the difference between the experience level of the intimidating character and the experience level or Hit Dice of the victim(s). Creatures with less than one Hit Die are considered to have a level of 0.

A 6th-level warrior attempting to intimidate an HD1-1 goblin would gain a +6 bonus to his intimidation ability. Against a 10th-level human warrior, our 6th-level dwarf's intimidation proficiency would be reduced by -4. Higher level characters are less likely to be intimidated.

When a character is attempting to intimidate more than one character, and all are within 1-4 experience levels of each other, the level is the average of them. If one or more characters are over five experience levels above the others, the highest experience level is used, the other characters gaining confidence from the presence of a powerful individual.

When attempting to intimidate more than one, the number of characters is used as a negative modifier. If a dwarf is attempting to intimidate five goblins, his intimidate proficiency is reduced by -5.

Intimidation may only be used against intelligent creatures; slimes and shambling mounds are too stupid to notice that someone is trying to intimidate them.

Player characters are never forced to submit to intimidation, and may choose how they are going to react to an attempt.

### Local Dwarf History

This proficiency is different from the local history proficiency, a character with this proficiency is only knowledgeable about dwarf history. This is chiefly concerned with lineages and events affecting dwarves. It deals with the founders of the clans and strongholds, and traces the descendants to the present. The battles and events of clan and stronghold are known, as well as the fates of those who have left to establish new homes or who perished while adventuring.

The extent of geographical knowledge is dependent on the campaign background. Those who have had no contact with the world above may be totally ignorant of what lies on the surface, but will have extensive knowledge of their own stronghold. Those whose relatives have established new strongholds or are members of such strongholds would have knowledge of the area between the two and some knowledge of the geography surrounding them. Even so, most dwarves, unless they live in close proximity to other races, have a very hazy idea of where the sea is, for example.

While a character with this proficiency knows dwarf history, his knowledge of the history of other races is minimal. If humans fought a great battle against each other, a dwarf who did not live with humans is not likely to have heard of it. If the battle involved dwarves he would probably know of it. If it involved dwarves from his own stronghold or clan, he would have extensive knowledge of the events leading to it and the course of the battle. As with some other dwarf proficiencies the exact extent of an individual's

knowledge is determined by his background.

The local dwarf history proficiency may be used to entertain other characters. When so engaged, he gains a +2 bonus to his Charisma while dealing with dwarves. With other races he does not gain the bonus, because dwarf stories tend to be dull, slow moving and overly concerned with who is related to whom, their places of origin, and all of the places the heroes' ancestors founded along the way. Trying to tell a dwarf story to hostile beings is likely to incite them to violence. Orcs will not be impressed, even with the best-told dwarf tale.

### Locksmithing

With the locksmithing proficiency a character can make and repair all kinds of mechanical locks. Thieves with this proficiency gain a 10% bonus to their lockpicking skill, because they are intimately familiar with the internal structure and working of locks.

### Mining

The *Player's Handbook* provides basic information on mining and this proficiency is described in detail in Chapter 8. Mining operations are usually at the heart of dwarf strongholds.

### Modern Languages

The modern languages dwarves may learn are determined by the campaign background. If a character lives in a stronghold that has had no contact with goblins, he is unlikely to have learned goblin. The languages for dwarves in the *Player's Handbook* should be considered as suggestions only. Dwarves may learn any language that suits their background. Suggested languages are: deep tongue, drow, elf, gnome, goblin, local human common tongue, kobold, orc, troll, ogre.

### Pest Control

This proficiency is used to keep dwarf strongholds free of pests like rats, carrion crawlers, jermalaines, kobolds, and other small creatures. Similar to the set snares proficiency, it is concerned with catching underground pests and does not use snares. Traps are set to trigger metal cages, drop nets, or iron doors that shut off individual tunnel sections. Spring traps or small deadfalls may be rigged (damage 1d6 maximum) using this proficiency. There is no -4 modifier when using pest control to trap larger creatures.

Only thief characters may use this proficiency to rig larger traps suitable for human or orc sized creatures. These traps may include crossbows, larger deadfalls, and spiked springboards.

A character with this proficiency does not have the ability to make the items required for these devices, he can only set the traps and their triggers.

A proficiency check must be rolled when the trap is set. A failed proficiency check means that the trap will fail to operate. It may not have been set properly, was poorly

concealed, or it was too small or too large for the creature to trigger.

Setting a trap takes one hour and the character must have the proper equipment and materials with him.

Characters with the animal lore proficiency gain a +2 bonus when attempting to set traps to catch animal pests.

### Riding, Airborne

This proficiency is rare among dwarves, and is most frequently found in those living in remote mountain areas, among dwarves who have befriended giant eagles or have tamed and trained winged mounts: griffins, hippogriffs, or others. This proficiency may not be used to leap onto the backs of mounts, unless you also have the jumping proficiency. In other respects, this proficiency is unchanged from the *Player's Handbook*.

### Riding, Land Animals

Because of their stout, stocky build, dwarves are uncomfortable riding horses or other animals of similar size. They are capable of riding donkeys, ponies, and smaller creatures. Dwarves may leap onto their saddles. Some suitable mounts for dwarves are dire wolves, giant boars, and giant lizards.

### Sign Language

Sign language is most frequently used by dwarves who were engaged in long running warfare with other dwarves or races. It permits silent communication with anyone who sees and understands the signals. The maximum range is usually line of sight in a lit area, or the extent of the receiver's infravision. Sign may be an extensive language capable of handling long conversations, or simply a means of communicating a few easy to understand phrases such as "attack," "orcs behind the rock," or "you three move left." A proficiency check is made when speaking or interpreting sign. The +2 bonus should only be used when giving short, easily recognized commands. More detailed signals require a -1 modifier.

### Signalling

The signalling proficiency allows a character to send messages underground using sound. To send a signal, tap on a section of wall with a rock, hammer, or a piece of metal. The sound will echo through rock to a distance of 1d4 miles. The sound transmitted by this proficiency resembles morse code and it may be used to send extensive messages or short commands and instructions. To send a message, roll a proficiency check. If successful, the message transmits as desired. If not, the message may be only partially understood or complete nonsense. It may even convey a meaning contrary to the message sent. Successful transmission of a message is no guarantee that it will be understood by the receiving end and proficiency checks are required to correctly interpret the message. It is possible to fail to understand an incorrectly sent signal, yet still infer a message from it, one very different from what was intended.

### Slow Respiration

A character with this proficiency has the ability to enter a deep trance and reduce the amount of air he needs to stay alive. To induce the trance, he must be in a restful position, either sitting or lying down. After concentrating for one turn, pulse and breathing drop well below normal, so that breathing requires only 10% of the rate when resting. The character emerges from his trance at will, fully aware of anything that has occurred nearby.

### Smelting

The smelting proficiency is closely tied to the Mining proficiency. Between them they provide all of the metal to the strongholds. With this proficiency a smelter can be operated. See Chapter 9.

### Sound Analysis

This proficiency allows a character to gauge the size of underground areas by generating noise and analyzing the echoes that return. Using this skill, he can calculate distances up to one mile, and determine sound direction.

To use sound analysis, the character must work in absolute silence. The sound created must have a sharp, staccato quality. A howl or wail is ineffective, but a clicking sound, or loud "hey" works well.

The PC must make a proficiency check. If the check is successful, he has correctly analyzed the size of the area in question to within plus or minus 25% of its height, width, and length. If the check fails, the echo has become garbled in its reverberations. No further attempts by the PC to analyze that area will succeed, though others with the proficiency may try.

A proficiency check of 5 or less means the character has learned not only the size of the analyzed area, but other details as well: the number of branching side passages, whether there is a straight or wandering corridor, and whether or not water exists.

The disadvantage of this ability is that, while it is useful for learning about a completely unknown area, it announces the characters to all creatures in hearing range. They will certainly be prepared, and may go looking for the intruders.

### Survival, Underground

Underground survival provides knowledge of the underground. It helps the character distinguish between edible and poisonous insects and to be able to determine the safety and stability of tunnels, cavern ceilings, and the like.

### Underground Navigation

A character with this proficiency can determine direction underground and the shortest route to the surface. By careful analysis of air currents and contents, a character

can even determine whether there are any pockets of poisonous gas in the air. A successful proficiency check is required to use the proficiency.

### Weaponsmithing

A dwarf weaponsmith is not only more skilled than a human one (Intelligence -1, instead of -3), but capable of producing weapons at a faster rate. The costs remain the same.

**Weapon Construction Table**

| Weapon | Construction Time | Material Cost |
|---|---|---|
| Arrowhead | 7/day | 1 cp |
| Battle Axe | 7 days | 10 sp |
| Hand Axe | 3 days | 5 sp |
| Dagger | 3 days | 2 sp |
| Heavy Crossbow | 15 days | 10 sp |
| Light Crossbow | 12 days | 5 sp |
| Fork, Trident | 15 days | 10 sp |
| Spear, Lance | 3 days | 4 sp |
| Short Sword | 15 days | 5 sp |
| Long Sword | 23 days | 10 sp |
| Two-handed Sword | 34 days | 2 gp |

*The Complete Fighter's Handbook* contains extensive rules on the use of the weaponsmithing proficiency and is highly recommended to those interested in using the proficiency to the fullest.

### Dwarven Detection Proficiencies (Optional)

Not all dwarves have the same ability to detect underground phenomena, some are better than others. Detection proficiencies may be used as an alternative to the system described on page 21 of the *Player's Handbook* to detect slopes, new tunnels, sliding walls, stonework traps, pits, deadfalls, and depth underground. Like nonweapon proficiencies, it is an optional system. If you don't use nonweapon proficiencies in your game, then detection proficiencies may be ignored. If you do use them, detection proficiencies will adapt the abilities more smoothly to your game.

### Number of Detection Proficiencies

A dwarf character receives his standard number of nonweapon proficiency slots according to his character class. In addition, he receives another five slots solely to buy

detection proficiencies. The initial number of proficiencies increases if he is of high Intelligence. Detection proficiency slots must be used to purchase detection proficiencies, but may be spent on any the player wishes.

### Using Detection Proficiencies

Detection proficiencies may be used any time a dwarf is underground, within 10 feet of the particular phenomena. Determining depth underground is the exception to this rule and may be attempted any time.

To use a detection proficiency, a dwarf must concentrate for one melee round. Any modifier for the proficiency listed in the *Detection Proficiency Table* is added to the appropriate ability score. A +1 modifier is acquired if the dwarf is actually touching stonework. Detection proficiencies are checked by rolling 1d20. If the character rolls his adjusted ability score or less, he is successful, otherwise he fails. A roll of 20 always fails.

If successful, the dwarf sees the phenomenon or becomes aware of his approximate depth underground. If he fails, he cannot try again within that 10-foot area.

Improving Detection Proficiencies

The Proficiency Slots Table shows the number of levels the character needs to attain to acquire new detection proficiency slots. These slots may be spent on any detection proficiency, but not nonweapon or weapon proficiencies. However, nonweapon proficiency slots may be spent to improve detection proficiencies.

**Dwarven Detection Proficiencies Table**
**Detect or Determine . . .**

| | **# of Slots Required** | **Relevant Ability** | **Check Modifier** |
|---|---|---|---|
| Grade or Slope in Passage | 1 | Wisdom | +4 |
| New Tunnel/Passage Construction | 1 | Wisdom | +4 |
| Sliding/Shifting Walls or Rooms | 1 | Wisdom | +2 |
| Stonework Traps, Pits, and Deadfalls | 1 | Wisdom | 0 |
| Approximate Depth Underground | 1 | Wisdom | 0 |

# Chapter 6: Dwarf Kits

The kits in this chapter allow further individualization of dwarf characters. Each kit is a collection of abilities, proficiencies, advantages, and disadvantages which better define the character.

The kits are entirely optional. A dwarf character can easily be created without them, but the kits will add detail. Only one dwarf kit is allowed per character.

It is possible to incorporate these kits into existing campaigns. A kit must be compatible with a character's past actions, background, and established personality traits. If a fighter has been played as cautious and careful, resorting to combat only when negotiation has failed, it would be unseemly to make him a Battlerager.

Once a particular kit has been assigned, it cannot be exchanged for a new one. The

character can abandon it, but gives up all benefits and hindrances.

When designing a new character, first determine his ability scores, class or classes, specialization, and alignment. Once these elements have been decided, choose a kit, proficiencies, money, equipment, and other details.

The kits in this book are unique to dwarves. Although other races may have similar kits, these kits are permitted to dwarf characters only. However, the kits in the *Complete Player's Handbook* series may be used with dwarf characters, unless explicitly stated otherwise. When using the *Complete Fighter's*, the *Complete Priest's* or the *Complete Thief's Handbooks*, their guidelines should be followed.

Five different character classes are discussed in this chapter. There are kits for warriors, priests, thieves, warrior/priests, and warrior/thieves. A character may only use a kit that belongs to his class. It is not possible, for example, for a thief to use a warrior kit. Multi-class characters are an exception. A player with a multi-class character is not restricted to these options. He may choose any one kit from those relevant to his character. A warrior/priest could choose a warrior, a priest, or a warrior/priest kit. A character may have only one kit.

A multi-classed character is not allowed to specialize in any weapon when selecting a warrior kit. A few of the multi-class kits allow characters to be weapon specialists, but these are the only ones allowed. The Battlerager cannot be used as a multi-class kit, only single class warriors may use this kit.

## The Composition of the Kits

Each kit consists of several elements:

First is a description of the background, appearance, and manner of the characters in this kit, including any requirements necessary to take the kit.

**Role:** The role of the character in dwarf society and in the campaign.

**Secondary Skills:** If you are using the secondary skills rules from the AD&D® 2nd Edition game, the kit may require your character to take a specific skill instead of choosing or randomly rolling for it. It is recommended that, in order to get the most out of the kits, you use the weapon and nonweapon proficiency rules instead.

**Weapon Proficiencies:** The kit may require a dwarf to take a specific weapon proficiency, or to choose one from a limited range.

Weapon proficiencies required for a kit are not bonuses unless specified. They must be taken to fill the weapon proficiency slots available to a 1st-level dwarf.

**Bonus Nonweapon Proficiencies:** Character kits provide bonus nonweapon proficiencies free, without having to spend any of the slots they would normally be granted. Even if the proficiencies belong to groups other than Dwarf or General, there is no charge for them.

**Recommended Nonweapon Proficiencies:** Some Nonweapon Proficiencies are recommended, not required. If the character decides to take a recommended nonweapon proficiency, it still fills one of the slots.

**Equipment:** Some dwarf characters use specific equipment, while others have limitations or restrictions on the way they acquire or use equipment.

**Distinctive Appearance:** Many kits have a distinctive appearance, making the character special and more easily recognizable for what he is. These are suggestions only,

and not requirements.

**Special Benefits:** Most kits grant special benefits.

**Special Hindrances:** Any disadvantages that hinder a character.

**Wealth Options:** Some kits have special rules regarding wealth. These specify the amount of money received when a character is created and limit how it can be spent.

## Warrior Kits

Warriors make up the majority of any dwarf stronghold, being both craftsmen and soldiers. Other, more specialized dwarf warriors are described below.

### Animal Master

The Animal Master has a close affinity with the animals employed to guard strongholds. He looks after and controls them, making sure they are properly fed and exercised. He trains them to act as guards and to attack on command. Animal Masters develop a deep bond with their animals and are reluctant to endanger the animals' lives.

An Animal Master must have a Wisdom of 12 or more.

**Role:** Well respected members of dwarf society, Animal Masters are usually welcome at any stronghold, though they are treated with wary respect. If they are willing to train others in the art, they are even more welcome.

Animal Masters are responsible for looking after a stronghold's animal guards. These are usually 2d4 brown bears or 5d4 wolves, but other animals such as giant lizards, cave bears, boars, or giant rats may be used. They may train a stronghold's cavalry mounts, if these are present.

**Secondary Skills:** An Animal Master should have Groom (animal handling) and Trapper/Furrier secondary skills.

**Weapon Proficiencies:** They may be proficient with any weapon.

**Bonus Nonweapon Proficiencies:** Animal Lore, Animal Training (chosen animal), Endurance.

**Recommended Nonweapon Proficiencies:** Animal Handling, Animal Training (other animal), Appraising, Direction Sense, Dwarf Runes, Etiquette, Herbalism, Hunting, Modern Languages, Rope Use, Sign Language, Signalling, Underground Survival.

**Equipment:** When created, the Animal Master may have any kind of weapons and equipment. He starts with one fully trained animal of his choice, which he may equip with leather or metal armor.

**Distinctive Appearance:** Animal Masters frequently dress in the pelts or skins of their animal charges. This helps bond him to his animals and makes them more accepting of his presence.

**Special Benefits:** An Animal Master gains an Animal Training proficiency. This bonus proficiency is automatically at +1. He must choose the kind of animal he is capable of training upon taking the proficiency. He may buy another Animal Training proficiency but the second does not gain the +1 bonus.

The bonus Animal Mastery proficiency allows him to train four animals at one time, instead of three. For each additional slot spent on Animal Training, one extra animal can

be trained.

Because of his affinity with them, an Animal Master reduces the time it takes to train the animals by one week per slot spent on the proficiency, but it never takes less than two weeks. This extra slot includes the Animal Trainer's initial +1 bonus. He can increase the number of tasks he can teach an animal by +1 for each slot spent on Training. One who chooses brown bears as the animals for his bonus proficiency can teach four bears at one time. He can teach them 2d4+1 tricks or tasks in 2d6-1 weeks.

When working with wild animals, he gains a +4 ability modifier to his chances of taming them, if the animals are of a litter whose mother he has trained. When working with such animals, an Animal Master's commands are obeyed on rolls of 1-19 on a 1d20. Only when he rolls a 20 will the animals refuse to obey.

If an Animal Master has the Sign Language proficiency, he may direct his own trained animals with it. They must be able to see his hands for this to work.

An Animal Master with the Signalling proficiency can direct personally trained animals by using simple sound signals. When working with animals other than his own, he may direct them by making a successful Animal Training check.

**Special Hindrances:** Animal Masters tend to be loners, spending more time with animals than with other dwarves. Consequently, there is always a level of distrust. Most dwarves, obsessed with their crafts, have little in common with Animal Masters who dedicate their lives to creating a rapport with their animals. Other dwarves react to Animal Masters at B2. This does not mean they will be antagonistic, but that they are wary of the trainer and his animals. They will show respect, but without friendship.

**Wealth Options:** An Animal Master starts with only 4d4x10 gp.

### Axe For Hire

An Axe For Hire is a mercenary who is willing to sell his services to the highest bidder. Usually an all-round fighter, capable of engaging in hand to hand combat, he is able to use a crossbow and other missile weapons.

**Role:** He is frequently a dwarf with a severe case of wanderlust and a strong desire to travel beyond his stronghold. The best way to accomplish this is to hire out as a guard or a mercenary. He may find employment with a merchant who is setting out on an expedition deeper underground, or planning to travel above. He may be working for a dwarf noble who is visiting relatives in other lands, or trying to recapture a mine from orcs or dragons. Perhaps he has traveled to aid a stronghold attacked by monsters.

He may accept employment with another race, providing the money is good enough. He wants to be paid to fight.

**Secondary Skills:** An Axe for Hire should have the Weaponsmith, Armorer or Bowyer/Fletcher secondary skills.

**Weapon Proficiencies:** They may choose any weapons they like.

**Bonus Nonweapon Proficiencies:** Endurance, Local Dwarf History, Local History.

**Recommended Nonweapon Proficiencies:** Alertness, Armorer, Bowyer/Fletcher, Direction Sense, Fire-building, Dwarf Runes, Survival, Underground Navigation, Weaponsmith.

**Equipment:** An Axe for Hire may spend his starting money on whatever arms, armor, and equipment he can afford. When he is created, if it is agreed that he is part of a

military force with specific equipment requirements, he is required to buy that equipment, but at half the price.

**Distinctive Appearance:** These are the most individualistic of dwarves and do not conform to any single standard.

**Special Benefits:** Fighters receive one free weapon specialization (a hand or missile weapon). It must be one commonly associated with dwarves.

When employed, he never pays for his own upkeep. Rooms at inns, food and drink are all supplied by his employer.

**Special Hindrances:** Dwarves are clannish folk who distrust anyone with an independent attitude. When reacting with other dwarves in any situation other than military, an Axe for Hire suffers a -3 reaction penalty.

In addition, an Axe for Hire who is part of a military force is subject to the discipline and dictates of its commander. He is no longer free to come and go as he pleases. He is further restricted by the contract he has signed with his employer. Many of these are for a fixed duration, and require him to be available throughout the term. Disappearing before the end of the contract is likely to give him a poor reputation as a mercenary.

There is always a fear that he has been hired to undertake a suicidal mission or to act as a decoy or sacrifice, while others have more important, and safer, duties.

**Wealth Options:** He receives the standard 5d4x10 gp starting money.

### Clans dwarf

The Clansdwarf is what most people think of whenever dwarves are mentioned. They are the majority in dwarf society, its craftsmen and militia. They are skilled in a craft and receive military training from adolescence.

**Role:** Clansdwarves are usually closely bound to their stronghold and only leave to conduct their craft somewhere else (at a location that is usually turned into another stronghold). They give dwarf society its particular qualities of kinship and careful optimism.

They are not restricted to the strongholds and may be found living in ghettoes or on the edges of the towns and cities of another race, making a living by selling their services.

While clansdwarves are craftsmen, all dwarf settlements pride themselves on their militia. They are armed and equipped with items of their own manufacture, and train regularly in small unit and large scale tactics. Many clansdwarves are justifiably proud of being expert fighters as well as superb craftsmen.

**Secondary Skills:** Any suitable craft skill.

**Weapon Proficiencies:** Clansdwarves may be proficient with: axe, hammer, light or heavy crossbow, mace, pick, polearm, short sword, spear.

**Bonus Nonweapon Proficiencies:** Clansdwarves gain two craft proficiency slots of their choice. Both must be spent on the same craft. They also receive the Dwarven Runes and Endurance proficiencies.

**Recommended Nonweapon Proficiencies:** Appraising, Artistic Ability, and any related to their first craft.

**Equipment:** Clansdwarves may buy any equipment they like.

**Distinctive Appearance:** The craft of a clansdwarf is readily apparent from his clothing. Each clan has a unique emblem or cut of cloth that distinguishes them from all

other clans. This may be as obvious as a leather-working apron or as discrete as a small anvil badge.

**Special Benefits:** Clansdwarves gain a +3 reaction bonus when dealing with others of their clan. They gain a +2 reaction bonus when dealing with dwarves of other clans engaged in the same craft.

Clansdwarves are always sheltered and given aid within their own clan. Unless one is known to have injured members of his own clan, he will be fed and housed gladly.

**Special Hindrances:** A Clansdwarf is part of a tightly-knit society that never forgets either a misdemeanor or shoddy workmanship. He is expected to be scrupulously honest and professional in his dealings with others. Any dwarf who violates that trust becomes an outcast, no longer welcome at the hearths of his clan. News of bad behavior spreads quickly, and other dwarves, hearing of it, will react to him with a -3 penalty.

A Clansdwarf who becomes an outcast may again be accepted by his kin, but the process takes years. It is better to keep one's nose clean and do the job than to provoke trouble.

**Wealth Options:** A Clansdwarf starts with the standard 5d4x10 gp.

## Hearth Guard

A Hearth Guard is a female dwarf who has received intensive military training. Frequently a weapon specialist, she fights as well as, if not better than, most males.

Not all strongholds have Hearth Guards. Some see fighting as a male role and do not encourage women to take up arms. In most strongholds, Hearth Guards form a respected, elite fighting force dedicated to defending the stronghold and its children from external threats.

Not all female warriors are Hearth Guards. Any of the kits can be used for female characters, so a player is not restricted to playing a Hearth Guard character just because she is female. No male dwarves, however, may become Hearth Guards.

**Role:** Hearth Guards were originally formed as a purely defensive force to defend the stronghold in case of attack. In a few strongholds, male dwarves have come to see women as superior and leave all important decisions to them.

Hearth Guards are highly regarded. They form an effective fighting force, well trained in combat and tactics. Outside dwarf society, they are a curiosity, if others are even aware of them. As a result, other cultures are suspicious of Hearth Guards, if not scathingly critical of their abilities. Any who see them in this light are in for a nasty surprise.

Although originally formed to protect strongholds, members are as free as any dwarf to adventure or travel; they are not restricted to a stronghold.

**Secondary Skills:** She should have Weaponsmith, Armorer, or Bowyer/Fletcher secondary skills.

**Weapon Proficiencies:** Hearth Guards must be proficient in traditional weapons of battle; axe (one or two handed), spear, and light crossbow. She may only specialize in these weapons.

**Bonus Nonweapon Proficiencies:** Endurance, Fire Building, and Local Dwarf History.

**Recommended Nonweapon Proficiencies:** Alertness, Blind-fighting, Direction

Sense, Dwarf Runes, Fletcher/Bowyer, Intimidation, Local Dwarf History, Rope Use, Sign Language, Signalling, Slow Respiration, Weaponsmithing.

**Equipment:** When a Hearth Guard is created she must be equipped with at least chain mail armor, a battle axe, a spear, and a light crossbow.

**Distinctive Appearance:** Hearth Guards are distinguished by red surcoats with orange fire badges embroidered on the front.

**Special Benefits:** A Hearth Guard fighter receives one free specialization in battle axe, spear, or light crossbow. She must pay the initial weapon proficiency, but the specialization is at no cost.

She also gains an additional +1 bonus to attacck and damage when defending her stronghold. When fighting to protect young dwarves, she gains a +2 bonus to attacck and damage rolls. To gain this bonus the attacker must be in a position to physically harm the young, or about to enter a nursery or home.

**Special Hindrances:** Within dwarf society only the most male oriented strongholds react negatively to Hearth Guards. In the male dominated societies of other races, a female dwarf wearing armor and carrying weapons is sometimes not taken seriously; NPCs react at -3 to the Hearth Guard.

**Wealth Options:** She receives the standard 5d4x10 gp. If this is not enough to buy the required equipment, the equipment is provided free, but the character starts with no money.

## Battlerager

The Battlerager fills a particular niche in dwarf society and culture. He is a fearless warrior, able to create an insane rage within himself which increases his fighting ability and distorts his physical features.

While enraged, a Battlerager's face becomes twisted and his teeth grind together. Spittle flies from his mouth and dribbles down his beard. His eyes enlarge, bulge, and become bloodshot. Size increases (his height by an inch or more) as his muscles swell and his body expands.

His fighting ability becomes awesome, allowing him to fight longer and harder than any other dwarf. While in his rage, he is almost unstoppable. A dangerous enemy, he is a menace to friend and foe alike.

A Battlerager must have a minimum Strength of 15 and Intelligence and Wisdom scores no higher than 10.

**Role:** He is believed to have been touched by a dwarven deity, and is held in reverence and fear by his fellows. Madness and irrational behavior are commonly associated with Battleragers. Many believe that, if killed in battle, Battleragers return to the earth, to be reborn with more power. Therefore they have no fear of death.

While there is no Battlerager Guild, they tend to band together and occupy outlying sections of strongholds. They are given to drinking, rowdy and boisterous singing, and drunken dancing. Others prefer not to socialize with Battleragers if possible. They are quick to anger and will avenge any imagined insult with a battle axe.

In war Battleragers come into their own. Groups, and even individuals, will charge ahead of the military to attack the enemy with no regard for their own safety.

In a campaign, Battleragers are dangerous not only to others but to themselves.

Battleragers players must be reckless, never weighing the odds. They are argumentative, coarse, and definitely not diplomats! "If it moves, kill it!" is the likely response of a Battlerager. Most of them live short, often glorious, lives.

**Secondary Skills:** Battleragers have no secondary skills of any worth.

**Weapon Proficiencies:** Battleragers must specialize in battle axe (single or two-handed) and warhammer. Warhammers are thrown at enemies while charging, usually accompanied by a battle cry such as "Stitch that, Goblin!" They cannot start with any other ranged weapon proficiency, and it is forbidden to learn or use a ranged weapon. (Unthinkable! Missile weapons are coward's toys!)

**Bonus Nonweapon Proficiencies:** Endurance, Intimidation, Singing.

**Recommended Nonweapon Proficiencies:** Appraising, Armorer, Blind-fighting, Dancing, Direction Sense, Sound Analysis, Underground Navigation, Underground Survival.

**Equipment:** Battleragers must start play with a battle axe and a warhammer. They may wear any type of armor, but it must be slightly larger than required to accommodate the increased size when in battle rage. They usually carry wineskins containing a vile concoction of fermented goat's milk and herbs "gutshaker". They are the only creatures known to drink gutshaker without becoming violently ill.

**Distinctive Appearance:** Battleragers are the most distinctive of warriors. With rings through their noses, ears, and sometimes lips, they will dye their hair and beards vivid colors. They often shave their faces and heads, sometimes leaving long tufts of hair that are stiffened with lime or thick grease. Tattoos on the face and body in the form of spirals and abstract designs are a source of intense pride for all Battleragers.

**Special Benefits:** They excel at fighting. Not only are they specialists with battle axe and warhammer, they are able to enter a furious killing rage that endangers friend and foe alike. They have little control over it. Any time one feels insulted, threatened, or when in combat, he will bellow a battle song at the top of his lungs. After five rounds, during which time he can fight or perform other activities, he enters the rage. This lasts until there are no enemies left to slay. Whether enemies are standing to fight or lying wounded on the ground, the Battlerager will hack them apart. He will then turn to anyone left alive, even his friends. During the rage, Battleragers continue to sing, pausing only to scream insults at foes.

A Battlerager can try to come out of the rage at the beginning of each round by making a Wisdom check. If he succeeds, his rage ends and he suffers the effects below. If not, he remains enraged. He may attempt withdrawal each round, until he succeeds.

He may attempt to prevent a killing rage by making a successful Wisdom check. If he succeeds, he can control himself for the rest of the encounter. During the next five rounds, he will gnaw ferociously on his shield rim or grind his teeth together in an effort to control himself. If he fails the check, he enters the rage.

A *silence* spell will prevent him from entering a rage, but he will attack the character who cast the spell, if he can tell who it was. If not, he will attack all who get in his way.

**The Killing Rage:** While in a killing rage, the Battlerager receives the following special benefits: +1 to attack, +3 to damage, +10 hp, and -1 bonus to his AC (e.g., AC 4 drops to AC 3).

- Immunity to these wizard spells (no saving throw necessary) *charm person*, *emotion*, *fear*, *friends*, *hypnotism*, *sleep*, *irritation*, *ray of enfeeblement*, *scare*,

*geas*; and these clerical spells *command*, *charm person or mammal*, *enthrall*, *cloak of bravery*, *remove fear*, *symbol*.
- He gets a +4 saving throw bonus, on top of his dwarf bonus, against these wizard spells: *blindness*, *Tasha's uncontrollable hideous laughter*, *hold person*, *charm monster*, *confusion*; and against these clerical spells *hold person*, *hold animal*.
- The *finger of death* spell kills a Battlerager instantly, if he fails to make a saving throw. If he makes his save, he doesn't suffer the 2d8+1 points of damage until his killing rage ends.
- While in the rage, he is immune to KO results from the Punching and Wrestling rules and takes only half damage from bare-hand attacks.

**Killing Rage Disadvantages:** A Battlerager suffers the following disadvantages while enraged:

- He is oblivious to pain. The DM takes note of the Battlerager's current hit points when the character first enters his killing rage, reducing them as he takes damage. The player is not told how many points of damage he takes from enemy attacks, or how many he has left. He is only aware that he is enjoying himself tremendously. He is told how much damage his character has received when he falls over dead or the rage ends.
- He must continue to fight each melee round until all opponents have been killed. He may attack any enemy within range of his weapon. If none are in range, or once he kills an opponent, he must attack the nearest enemy.
- He cannot take cover from missile attacks.
- If another character does something that he interprets as an attack, such as hitting him to move him out of the way, he must roll an Intelligence check. If successful, the Battlerager may ignore his friend. If he fails, his friend becomes his enemy, and is treated as an enemy until the fight is over and the rage has passed.
- He is temporarily unaffected by the clerical spells *bless*, *cure light wounds*, *aid*, *cure serious wounds*, *cure critical wounds*, *heal*, *regenerate*, and *wither*. He only gains the benefits of these spells when he is not enraged.
- The *taunt* spell is automatically successful and causes him to abandon his current enemy and rush to attack the taunter.
- Once the rage is over, he loses all of its advantages, including the 10 bonus hit points. This could cause him to die instantly, or collapse unconscious, if he has 0 or less hit points remaining.
- After the rage subsides, he suffers a -1 penalty to his attack rolls, a -3 penalty to damage rolls, and +1 penalty to his AC. This effect remains for the same number of rounds that he was enraged.

**Special Hindrances:** Being a psychopathic killer with an axe is a special hindrance in itself, particularly because he is a liability to himself and all who adventure with him. Other dwarves react to Battleragers with a -3 reaction adjustment penalty. But instead of attacking, they will withdraw. Other races automatically sense the latent violence in a Battlerager and react to him with a -2 penalty, though they may not have enough common sense not to attack him.

**Wealth Options:** The Battlerager receives the normal 5d4x10 gp.

## Highborn

Highborns are members of families who hold political power within a clan. A Highborn dwarf may belong to the ruling family of a stronghold. They are able to trace their lineage back to the beginnings of time. Highborn ancestors include the great warriors and craftsmen of legend. They tend to behave in an arrogant manner to other dwarves, believing their lineage makes them superior to their fellows. They consider themselves the epitome of dwarf culture, the finest members of their race.

**Role:** Highborn dwarves are the law enforcers of a stronghold. They uphold the law, insuring that they continue to benefit from the order of dwarf society. They expect to be admired and treated with much respect, if not subservience.

Highborns believe that the continuance of dwarf society rests firmly on their shoulders. It is their responsibility to ensure that life continues in a regular, orderly manner, so that clansdwarves may ply their crafts in peace and security.

Highborn dwarf adventurers are the younger sons or daughters of a wealthy family. As part of their education they are expected to travel in order to learn how other dwarf strongholds are managed, and to experience first hand the way other races organize themselves. Usually, this simply increases the highborn's sense of his and his race's importance, as he constantly compares the shortcomings of others to his own inflated opinions.

**Secondary Skills:** The Scribe secondary skill is suitable for Highborn dwarves.

**Weapon Proficiencies:** Highborn dwarves must take the sword, hammer, and light crossbow proficiencies. The last proficiency may be used for a weapon of his choice, or to specialize in one of the required choices.

**Bonus Nonweapon Proficiencies:** Endurance, Etiquette, Heraldry, Local Dwarf History.

**Recommended Nonweapon Proficiencies:** Appraising, Artistic Ability, Blind-fighting, Hunting, Modern Languages, Mountaineering, Survival (any).

**Equipment:** Highborn dwarves must always look their best to set an example to other dwarves. They must start with at least banded mail armor. Since this is worn to reflect status, it costs at least 10% to 25% more than usual, as do the fine weapons Highborns must use.

**Distinctive Appearance:** Their status is apparent from the fine craftsmanship of weapons, armor, and clothing.

**Special Benefits:** Dwarves of lawful alignment respect Highborn dwarves and react to them with a +3 bonus. A Highborn may also demand food and shelter from other dwarves, and this is willingly provided for him and his retinue. The Highborns administer justice among members of their clan. In matters involving two clans, only the ruling family of the stronghold can make binding decisions.

**Special Hindrances:** A Highborn dwarf may administer justice, but his decisions may be later overruled by a Highborn clansman of greater status.

Highborns need to maintain their status by finding and purchasing the best goods available. This means that they always spend an additional 10% to 25% on goods and services. If a Highborn fails to do so, his reaction bonus drops by -1 each occurrence, until it reaches 0. He may only increase his reaction to its former level by engaging in

conspicuous consumption. This means a new suit of clothes and new equipment for himself and his retainers, all purchased at 25% above the usual price. He must throw a banquet for his entire clan (costing 1,000 to 5,000 gp), giving gifts to show that he deserves the respect offered him by those of lower status. These gifts are usually craft related, such as a fine set of tools, an anvil, or a loom.

Nonlawfully aligned dwarves tend to be irritated by Highborn dwarves' superiority and react to them at -3.

Highborn dwarves are too proud for their own good, seeing themselves and their race as superior to all others. This attitude causes other races to react to them with a -2 penalty.

**Wealth Options:** Highborn dwarves start with 400 gp, plus the standard 5d4x10 gp.

## Outcast

The Outcast is the misfit, the dwarf who breaks all the rules governing behavior; he refuses to fit easily into any niche, or to settle at one job for long. His behavior is usually so at odds with others that he is soon ostracized by his fellows. Outcasts can be found wandering deep underground or among humans, elves, gnomes, or monsters.

Role: Outcasts are typically of neutral or chaotic alignments. They may be good or evil, but the one thing they have in common is an aversion for the regimented lifestyles of their fellows. Evil Outcasts are likely to become racial traitors and lead the dwarves' enemies against them. Good-aligned Outcasts are likely to find the company of other races more in line with their own natures.

Although Outcast dwarves are normally not found in strongholds, whole communities of them have grown up at the edges of certain strongholds. They have usually been given unpleasant jobs that no one else wants, such as cleaning sewers or disposing of garbage.

**Secondary Skills:** Outcasts may choose any secondary skill.

**Weapon Proficiencies:** They often pick weapons that are not normally associated with dwarves, such as the short bow, quarterstaff, sickle, sling, or whip. They may have any weapon they choose.

**Bonus Nonweapon Proficiencies:** Appraising, one craft proficiency (player choice), Endurance, Survival (any).

**Recommended Nonweapon Proficiencies:** Animal Handling, Blind-fighting, Direction Sense, Dwarf Runes, Intimidation, Modern Language, Riding (pony).

**Equipment:** Outcast dwarves may have any kind of equipment.

**Distinctive Appearance:** Many who live among other races follow their adopted race in matters of dress. They often wear bright colors. Near strongholds they are usually poorly dressed, wearing only rags and castoffs.

**Special Benefits:** By paying an additional 10% experience cost to increase in level, an Outcast may Move Silently as a ranger of the same level. For example, a warrior needs 2,000 experience points to reach the 2nd-level. If he takes the Move Silently option, he pays an additional 10%, or 2,200 experience points to become a 2nd-level warrior. This ability must be taken when the character is first created, or it is forever lost. The XP penalty must be paid at every level.

**Special Hindrances:** The Outcast suffers a -3 reaction penalty from all other dwarves with the exception of other Outcasts and Wayfinders.

**Wealth Options:** Outcasts start with only 3d6x10 gp.

## Rapid Response Rider

Rapid Response Riders are the dwarves' equivalent of cavalry. Mounted on suitably sturdy beasts, they are capable of moving faster than other dwarves, and packing more punch when they attack. Ponies or mules are commonly used as mounts, but creatures such as bears, boars, and dire wolves are sometimes used. Flying creatures, griffons, hippogriffs, or pegasi, may be employed. In such cases, Land Based Riding Proficiency references should be changed to Airborne Riding.

Rapid Response Riders are found in only a few strongholds. They are not extensively used and appear chiefly in strongholds that are under constant threat of attack.

They are often quite tall, as dwarves go, and that extra height helps a lot when riding.

**Role:** They are well trained, but something of an anomaly in a military based on infantry units. While respected, they are considered odd by other dwarves. They stick together and consider themselves both elite and superior to other dwarves, whom they see as lowly foot sloggers.

**Secondary Skills:** The character should take the Groom (Animal Handling) secondary skill.

**Weapon Proficiencies:** Rapid Response Riders must be proficient, and ideally specialized in, the lance (any, according to mount's size). They may use any other weapons they see fit.

**Bonus Nonweapon Proficiencies:** Animal Training, Endurance, Riding (Land Based). The type of mount must be noted for proficiencies.

**Recommended Nonweapon Proficiencies:** Animal Handling, Armorer, Blind-fighting, Intimidation, Leatherworking, Sign Language, Signalling, Tracking, Underground Direction Sense, Underground Navigation.

**Equipment:** They may wear any kind of armor except plate mail. They must start play with a lance, but otherwise may have any kind of weapon.

**Distinctive Appearance:** They will usually wear some form of leather trousers to protect their legs. They tend to select fierce looking armor, with studs, protruding hooks, or horned helmets.

**Special Benefits:** A Rapid Response Rider starts with a fully grown mount that has at least 75% of its possible hit points. Roll hit points normally; if they come to less than 75% of the possible total, increase it to 75%.

Their mounts are highly trained and respond to all commands given by their masters. They do not have telepathic rapport with their mounts, and if the mount is killed, they lose only the mount.

Rapid Response Riders gain a +1 to attack and damage rolls when fighting mounted.

**Special Hindrances:** Because of their close affinity to their mounts, most dwarves react with a B2 penalty.

**Wealth Options:** Rapid Response Riders start with 5d4x10 gp.

## Sharpshooter

A Sharpshooter is highly skilled with either the light or heavy crossbow. He has spent

the majority of his youth training as a Bowyer/Fletcher, and has had regular practice with his crossbow. He is skilled in rapid loading and expert at inflicting the most damage possible with his weapon. Exuding confidence in his abilities, he tends to disdain those who resort to hand-to-hand combat.

**Role:** Sharpshooters form either part of a crossbow unit or make their living shooting for prize money at fairs. When in battle, a Sharpshooter's targets are enemy officers, wizards, and clerics, to prevent them from coordinating attacks or casting spells.

**Secondary Skills:** He should have the Bowyer/Fletcher secondary skill.

**Weapon Proficiencies:** A Sharpshooter must be a specialist with either a light or heavy crossbow (and, therefore, must be a fighter). He may not begin play with any hand weapon specializations, but may learn them later in his career. If gunpowder weapons are used, a sharpshooter may specialize in the arquebus. All the special benefits for crossbows are available for arquebuses; the character has a supply of perfectly molded arquebus balls and superior gunpowder.

**Bonus Nonweapon Proficiencies:** Artistic Ability, Bowyer/Fletcher, Endurance.

**Recommended Nonweapon Proficiencies:** Alertness, Appraising, Direction Sense, Rope Use, Sign Language, Signalling.

**Equipment:** Sharpshooters start with the crossbow of their choice, at no cost.

**Distinctive Appearance:** They are set apart from other dwarves by the care they lavish on their crossbows and bolts. The crossbow is made of the finest materials and the butt is often inlaid with intricate patterns. The bolts have only the finest flights, and they burnish the points to a fine, razor sharpness.

**Special Benefits:** In addition to his crossbow specialization, he gains a further +1 to attack rolls. He fires faster than other specialists as shown on the Sharpshooter Attacks Table.

**Sharpshooter Attacks Table**

| Level | Light Crossbow | Heavy Crossbow |
|---|---|---|
| 1-6 | 3/2 | 1/1 |
| 7-12 | 2/1 | 3/2 |
| 13+ | 5/2 | 2/1 |

This increased rate of fire assumes that the Sharpshooter has time to lay out his bolts in easy reach, minimizing the time required to nock a bolt. He gains these advantages only with the type of crossbow in which he has specialized.

When using his personal weapon and sharpened bolts, a Sharpshooter can inflict extra damage. In his hands, a light crossbow causes 1d6 damage vs. any size creatures. A heavy crossbow causes 1d6+1 vs. S/M, and 1d8+1 against larger creatures. He only gains these bonuses when he uses his personally built and maintained crossbow and his own sharpened bolts.

**Special Hindrances:** Sharpshooters may not start with any hand weapon specialization, and are limited to short weapons, daggers, and hand axes.

If a Sharpshooter loses his custom-built crossbow or has no time to sharpen his bolts, he loses his ability to increase damage. He cannot just pull out another crossbow previously built; it must first be used for 1d4 weeks to "break it in." In addition, it takes

one hour to sharpen each bolt and they must be carefully stowed, if they are not to become dulled.

**Wealth Options:** Sharpshooters start with 5d4x10 gp, plus their own customized crossbow.

## Priest Kits

The creation myths of the dwarves described in Chapter 1 can be used as the basis for designing numerous dwarf religions. Players will benefit from the *Complete Priest's Handbook* that describes 41 priesthoods that may be used with dwarf characters. While recommended, the *Complete Priest's Handbook* is not essential. The priest and warrior/priest kits work as well with clerics from the *Player's Handbook*.

**Barred:** This paragraph applies only to dwarf priests (single or multi-classed) using the *Complete Priest's Handbook*. It refers to priesthoods in the handbook and details which of the priest classes (plus cleric) may not take the kit. If it is not being used, the section may serve as a guide to the kind of religion the kit should have.

### Crafts Priest

Crafts priests are those who are dedicated to the patron deities of one of the dwarven crafts. Although they frequently will have a temple in a stronghold, they usually preside over a shrine or chapel in the workshops where their craft is practiced. They are usually members of that craft's clan.

**Barred:** Crafts priests usually worship the god of crafts, but they may belong to most other religions. In such cases, they are the priests who prepare ceremonial and sacrificial items. Priests of the following gods may not be crafts priests: birth and children, death, evil, disease, fertility, justice, marriage, love, mischief, trickery, and trade.

**Role:** Crafts priests are more concerned with their crafts than with the welfare of fellow dwarves. They will seek out the finest raw materials and are often engaged in expeditions to discover new mines or found new strongholds. Their expertise in these matters is highly sought. Rarely tied to a central temple, they are free to go where they please.

**Secondary Skills:** Crafts priests may choose any secondary skill.

**Weapon Proficiencies:** They may be proficient with any of these weapons: axe, hammer, light or heavy crossbow, mace, pick, polearm, short sword, spear.

**Bonus Nonweapon Proficiencies:** Artistic Ability, any Craft proficiency, Endurance, and Religion.

**Recommended Nonweapon Proficiencies:** Appraising, Dwarf Runes, Etiquette, Local Dwarf History, Underground Navigation.

**Equipment:** Crafts priests must have access to the tools required for their craft. If these are large, such as a forge, the priest is not required to own one, but the DM should inform him where he can go to use one. Apart from that, Crafts priests may use any kind of equipment.

**Distinctive Appearance:** According to the specific religion.

**Special Benefits:** A Crafts priest gains a +3 reaction bonus when dealing with dwarves of his own clan, and a +2 reaction bonus with dwarves from other clans engaged

in the same craft.

Unless a Crafts priest has injured members of his own clan, he will gladly be given food and shelter by his clansmen.

**Special Hindrances:** Crafts priests have no special hindrances.

**Wealth Options:** They start with 3d6x10 gp.

## Pariah

A Pariah is a priest who has left his stronghold, either voluntarily or under pressure. His practice of religion was so repulsive that other dwarves expelled him. He will often worship gods of an evil alignment, but may worship chaotic good or chaotic neutral gods.

Pariahs may be priests who have turned to one of the darker gods of a pantheon, or he may be part of a group of Pariahs, within or on the fringes of dwarf society. Priests from evil strongholds are usually pariahs.

**Barred:** Priests of the god of community and most good aligned deities may not take this kit. However, pariahs may be priests of chaotic gods.

**Role:** They may be the priests for a community of Outcasts, in which case they are the spiritual leaders of such communities. These may be situated on the outskirts of strongholds or within a ghetto of another race's town or city.

Pariahs may also exist in a dwarf community, where they keep their power hidden from those who do not share their religion. They are secretive, and often fearful of discovery. Even so, their religion may have a substantial number of adherents among the otherwise lawful good dwarves. In an evil campaign, they may engage in kidnapping and sacrifice.

They may be wandering priests who join adventures for financial reward or to pursue some personal goal.

**Secondary Skills:** Pariahs may choose any secondary skill.

**Weapon Proficiencies:** A Pariah may use any weapon that is not forbidden by his religion.

**Bonus Nonweapon Proficiencies:** Disguise, Endurance, and Religion.

**Recommended Nonweapon Proficiencies:** Any.

**Equipment:** A Pariah must spend all of his starting funds on equipment. Any money not spent is lost.

**Distinctive Appearance:** Pariahs have no distinctive appearance, as they have no desire to be singled out.

**Special Benefits:** By paying an additional 10% experience cost to increase in experience level, a Pariah may Move Silently as a ranger of the same level.

If a Pariah is of chaotic or evil alignment, he may elect not to have any superiors.

**Special Hindrances:** Unless he lives in a community of Outcasts, a Pariah is not free to openly worship his deity. Priests of other dwarf religions will actively prevent him from doing so, even by imprisonment or execution. They are more likely, however, to try to persuade him of the error of his ways by engaging him in interminable religious debates.

**Wealth Options:** A Pariah starts with the standard 3d6x10 gp.

## Patrician

A Patrician is a priest of a Highborn clan. He often acts as the voice of his family in religious matters and sees to their spiritual welfare. The priestly equivalent of the Highborn warrior, he traces his lineage to the very beginning of time.

Because of their backgrounds, Patricians often rise quickly in the hierarchy until they gain a position commensurate with the political clout of their families. They have little to do with everyday religion and have little contact with the mass of dwarves. With the exception of other Highborns, Patricians are frequently arrogant and patronizing toward others.

**Barred:** A Patrician is not barred from being a member of any religion. However, he will not join a religion that calls upon him to give his money away or to dress in a common fashion.

**Role:** Patricians can be aggravating individuals who shirk religious duties. They expect and demand respect, if not subservience. Their patronizing manner can be fun to play, but should be tempered with a willingness to heal or to aid others in times of need.

**Secondary Skills:** Patricians may choose any secondary skill.

**Weapon Proficiencies:** Patricians may choose any weapon permitted by their religion.

**Bonus Nonweapon Proficiencies:** Endurance, Etiquette, Local Dwarf History, Religion.

**Recommended Nonweapon Proficiencies:** Appraising, Artistic Ability, Blind-fighting, Herbalism, Hunting, Modern Languages, Mountaineering, Reading/Writing, Survival (any).

**Equipment:** They must dress according to their station and start play with at least banded mail armor. This costs 10% to 25% more than usual, the same as for any Highborn. Patricians must also have fine weapons costing 10% to 25% more as well.

**Distinctive Appearance:** They are clothed in the finest regalia of their religion, even when performing mundane tasks.

**Special Benefits:** Dwarves of lawful alignments respect Patricians and react to them with a +3 bonus. Other dwarves willingly provide food and shelter for Patricians.

**Special Hindrances:** Although a Patrician is primarily a political appointee, he is sometimes asked by the high priest of his religion to undertake dangerous missions. The Patrician is expected to organize and equip a party of dwarves out of his own funds.

As a Highborn, he is expected to keep up appearances, buying only the finest equipment for the party and spending 10% to 25% more on equipment and services. If a Patrician fails to do this, his reaction bonus drops by -1 for each dwarf that he fails to adequately equip until it reaches 0. He may increase his reaction bonus to its former level by donating large amounts of money to his religion and by undertaking some hazardous mission.

Nonlawfully aligned dwarves are irritated by the Patrician's superior airs and react to him at -3.

Wealth Options: A Patrician starts with 350 gp, plus 3d6x10 gp.

## Ritual Priest

The Ritual Priest is the most common priest in dwarf society. He officiates at

religious meetings and insures that worship is properly conducted. He presides over marriages, deaths, and name-giving ceremonies for children.

Adept at fighting, the Ritual Priest is often willing to give his life in the defense of his stronghold.

**Barred:** There are no barred religions for a Ritual Priest.

**Role:** He devotes most of his time to the worship of his gods and the needs of his fellow dwarves. He is often called upon to intercede with his deity on their behalf. His deity may call upon him to perform some quest or he may be granted a vision. He may be ordered by his superiors to perform a special task. A party of adventurers is then formed.

**Secondary Skills:** He should have the Scribe secondary skill.

**Weapon Proficiencies:** A Ritual Priest may be proficient in any of the weapons available to priests, plus: battle axe, crossbow, hand/throwing axe, morning star, military, and warhammer.

**Bonus Nonweapon Proficiencies:** Dwarf Runes, Endurance, Local Dwarf History, Religion.

**Recommended Nonweapon Proficiencies:** Ancient History, Astrology, Healing, Herbalism, Local History, Reading/Writing.

**Equipment:** Ritual Priests may have any kind of armor.

**Distinctive Appearance:** According to his religious custom.

**Special Benefits:** He is always respected by other dwarves, and may ask and be granted shelter in any stronghold. He receives a +1 reaction adjustment when dealing with dwarves.

**Special Hindrances:** A Ritual Priest has no special hindrances.

**Wealth Options:** A Ritual Priest receives the standard 3d6x10 gp.

## Warrior/Priest Kits

Warrior/priests are common in dwarf society. They combine the fighting abilities of the warrior with the spiritual powers of the priest. They may be part of a religion comprised of warrior/priests or they may complement a religion, providing it with additional muscle.

### Champion

A Champion is a member of a religion who has been selected to undergo intensive training as a warrior. He is expected to defend his creed at all times, and may be called upon to do so in single combat against an evil monster or members of an enemy religion.

A Champion must have Strength and Wisdom scores of at least 15. He must also have a Charisma of at least 14.

**Barred: A** Champion cannot belong to a religion that has restrictions against violent behavior.

**Role:** The Champion defends his religion with his life and superior combat ability and maintains a clear head to promote it. As a defender of his creed, he must always act in its best interest, even when doing so causes him distress or physical harm.

**Secondary Skills:** He should have the Armorer and Weaponsmith secondary skills.

**Weapon Proficiencies:** He may have any weapon proficiency. Unlike other

warrior/priests, he may specialize in one weapon. This weapon must be chosen when the kit is taken and cannot be changed. He may never specialize in any other weapon.

**Bonus Nonweapon Proficiencies:** Endurance, Intimidation, Religion.

**Recommended Nonweapon Proficiencies:** Alertness, Ancient History, Blind-fighting, Dwarf Runes, Hunting, Local Dwarf History, Musical Instrument, Singing.

**Equipment:** A Champion is allowed one weapon specialization (this is an exception to the restriction against multi-class characters). This weapon is specially blessed and acts in all respects as a *magical weapon +1*; it can even harm monsters that can only be hit by magical weapons. The weapon may be +2 or higher and/or have added bonuses when used to attack certain types of monsters, such as undead. The blessed weapon belongs to his church and he is charged with its care. It may never be lent and, if lost, his paramount duty becomes its recovery.

A Champion who finds a superior weapon and decides to keep it must return his blessed weapon to the main temple of his religion as soon as he is able.

**Distinctive Appearance:** Champions are marked by their role and have an air of superiority. They usually dress in fine clothes, unless specifically forbidden to do so by their religion.

**Special Benefits:** See Equipment and Weapon Proficiencies.

**Special Hindrances:** He may never a refuse a fight related to his religion. He must defend it at all times. He may be requested to perform tasks set by his superiors. If he refuses to accept a challenge or a quest, he loses his weapon specialization and his religion will send another Champion to reclaim his blessed weapon.

Wealth Options: A Champion starts with 6d4x10 gp.

## Temple Guard

Temple Guards are warrior/priests normally stationed in a religion's temple. They have a good mix of abilities from both classes, and form the elite of a religion's warriors.

**Barred:** If *The Complete Priest's Handbook* is used, Temple Guards cannot belong to a religion that has poor fighting abilities.

**Role:** A Temple Guard has a number of roles in a campaign. He guards the precincts of his temple, protecting its members from attack. He is the weapon instructor for priests of his religion, and it is his duty to train them in the use of the religion's chosen weapons.

He may act as a representative of his religion and may rise in its hierarchy, like any other priest. His duties, however, are concerned with organizing defenses and outfitting and leading expeditions, rather than with religious services.

**Secondary Skills:** A Temple Guard may have any secondary skill.

**Weapon Proficiencies:** He must be proficient in a weapon that is representative of his religion. If he worships the god of war, his proficiency would be battle axe.

**Bonus Nonweapon Proficiencies:** Alertness, Religion.

**Recommended Nonweapon Proficiencies:** Blind-fighting, Dwarf Runes, Etiquette, Intimidation, Modern Languages, Sign Language, Signalling.

**Equipment:** After he has bought his weapons and holy symbol, a Temple Guard must buy the best armor he can afford.

**Distinctive Appearance:** Temple Guards dress according to their religion, but always have a more martial appearance than other priests. They always carry a weapon

and shield.

**Special Benefits:** Any time the Temple Guard is fighting in defense of his temple or other holy place of his religion, he gains a +2 to attack and damage rolls and a +2 to his saving throws.

**Special Hindrances:** A Temple Guard is rarely a free agent and is usually given his orders by a High Priest. This may lead to long periods of temple duty, interspersed with special missions.

Wealth Options: Temple Guards start with 5d4x10 gp.

## Vindicator

The Vindicator is imbued with the spiritual power of his deity. When this power is manifested, he becomes a fearless and powerful warrior. He is able to enter a rage similar to that experienced by Battleragers; his face becomes contorted and he grinds his teeth together. See Battlerager for details concerning changes in appearance.

A Vindicator must have a minimum Strength of 15, Intelligence no higher than 10, and Wisdom no higher than 14.

**Barred:** Vindicators cannot belong to any religion that is concerned with peace or love. They worship gods of war, death, elemental forces, lightning, fire, strength, or thunder.

**Role:** They are often the most potent force of a religion, expected to give their lives for their religion. Most are well aware that their lives are likely to be short, though sometimes glorious.

**Secondary Skills:** Vindicators may choose any secondary skill.

**Weapon Proficiencies:** They must be proficient in battle axe (one or two handed) and warhammer, regardless of the restrictions imposed by their religion. They cannot start play with any ranged weapon other than warhammer, and may not have any other ranged weapon proficiency.

**Bonus Nonweapon Proficiencies:** Endurance, Intimidation, Religion, Singing.

**Recommended Nonweapon Proficiencies:** Appraising, Armorer, Blind-fighting, Dancing, Direction Sense, Healing, Herbalism, Sound Analysis, Underground Navigation, Underground Survival.

**Equipment:** Vindicators must start play with a battle axe and a warhammer. They may wear any type of armor, but it must be slightly larger in size than normal to accommodate their increased size when in a killing rage (see Battlerager).

**Distinctive Appearance:** They usually have facial and body tattoos.

**Special Benefits:** Vindicators gain all the special benefits of Battleragers, but are not allowed to specialize in any weapon.

Because of their higher Wisdom, Vindicators are usually able to exert more control over their own actions.

**Special Hindrances:** Vindicators have the same hindrances as Battleragers, except that members of their own religion do not react to them with a negative penalty.

When enraged, Vindicators cannot cast any spells, but may benefit from spells cast prior to becoming enraged.

**Wealth Options:** Vindicators start with 5d4x10 gp.

## Thief Kits

True dwarf thieves who steal from other dwarves to make a living are almost nonexistent in dwarf society. Dwarves caught stealing are heavily fined and may be banished if they continue. True dwarf thieves are usually found plying their illegal trade among other races. *The Complete Thief's Handbook* contains kits for them. Here we look at characters who, while technically of the thief class, are a part of lawful dwarf society. They may be of any alignment.

### Diplomat

Diplomats are found only in strongholds that have dealings with other races. They act as middlemen, translators, and spokesmen. They must rely on their wits to smooth the way, particularly when negotiations sour. A Diplomat's minimum Charisma is 13.

**Role:** Diplomats may represent their stronghold, act as interpreter for the stronghold's leader, or be employed by a dwarf merchant. Sometimes a Diplomat will be hired by humans or other races to assist making deals with the dwarves of a particular stronghold.

Many use their position to spy upon other race's defenses. Most races consider such activities as espionage, but dwarves view it as merely taking necessary precautions.

**Secondary Skills:** A Diplomat should have the Trader/Barterer secondary skill.

**Weapon Proficiencies:** Any kind of weapons normally permitted thieves.

**Bonus Nonweapon Proficiencies:** The Diplomat starts with any four modern languages.

**Recommended Nonweapon Proficiencies:** Alertness, Blind-fighting, Disguise, Gaming, Local History, Reading Lips, Sign Language, Tightrope Walking, Ventriloquism.

**Equipment:** Because of the sensitive nature of their missions, Diplomats should dress as unobtrusively as possible and possess easily concealed weapons such as daggers and darts.

**Distinctive Appearance:** Diplomats tend to look like everyone's idea of a typical dwarf. Even though different races or cultures see them in different ways, Diplomats know how to dress in order to match the preconceptions of others.

**Special Benefits:** Diplomats gain a +10% modifier to Detect Noise and a +5% modifier to the Open Locks ability.

They gain a +3 reaction bonus dealing with other races, except racial enemies; then the reaction bonus drops to +1.

**Special Hindrances:** Diplomats suffer a B10% penalty to their Pick Pockets ability.

**Wealth Options:** Diplomats receive 3d6x10 gp instead of the normal 2d6x10 gp.

### Entertainer

Dwarves enjoy entertainment during leisure hours, although other races are surprised there are dwarves whose trade is to entertain. There are dancers, singers, jugglers and tumblers, musicians, tightrope walkers, and fire eaters. They rarely tell jokes.

To be an Entertainer, a character has to have a minimum Dexterity of 14.

**Role:** Like most dwarf trades, Entertainers are governed by a guild. They are trained

from an early age and are very adept at what they do.

Humans and elves often find the sight of dwarf Entertainers gamboling around a stage hilariously funny, much to the annoyance of the Entertainers and dwarves in the audience. The performance of an Entertainer is meant to display the physical prowess of the dwarves in an edifying manner. They are certainly not meant to be laughed at!

**Secondary Skills:** Any.

**Weapon Proficiencies:** Entertainers may use any weapon.

**Bonus Nonweapon Proficiencies:** An Entertainer may choose two of the following skills: Dancing, Juggling, Local Dwarf History, Musical Instrument, Rope Use, Singing, Slow Respiration, Tightrope Walking, Tumbling, Ventriloquism.

**Recommended Nonweapon Proficiencies:** All of the above, plus Alertness.

**Equipment:** Entertainers start with rope, juggling balls and skittles, and a musical instrument. These are provided by the Entertainers' Guild.

**Distinctive Appearance:** Entertainers usually dress in sober dwarven colors; dark browns or slate grays. They can easily be identified by their equipment, which they take everywhere.

**Special Benefits:** Entertainers gain a +1 ability modifier when using the Singing, Dancing, Juggling, and Rope Use proficiencies.

**Special Hindrances:** Entertainers tend to be laughed off stage when they perform outside dwarf society. This makes them reluctant to perform for any audience not made up of dwarves.

**Wealth Options:** Entertainers start with only 2d4x10 gp.

### Locksmith

Locksmiths are masters at building and taking apart locks. These craftsmen are well respected in dwarf society. In many ways the true thief's worst enemy, locksmiths make it hard for a thief to exercise his trade.

**Role:** They are expert in making and opening locks. They are also expert at finding and disarming traps. Their craft safeguards homes and builds strong locks for the gates of dwarf strongholds.

To adventurers, there are many benefits to having a locksmith along. They can find and remove traps, open locks, and have all of the other skills of thieves.

**Secondary Skills:** Locksmiths often have technical skills, such as Mason, Miner, or Woodworker/Carpenter.

**Weapon Proficiencies: They** usually carry axes and hammers. Practical dwarves, they know that not all locks can be picked. Sometimes it is necessary to break a door down instead.

**Bonus Nonweapon Proficiencies:** Carpentry, Locksmithing.

**Recommended Nonweapon Proficiencies:** Alertness, Engineering, Stonemasonry.

**Equipment:** Locksmiths should have one set each of lock making and lock picking tools.

**Distinctive Appearance:** No distinctive appearance.

**Special Benefits:** They gain a +10% modifier to their Open Locks ability in addition to that provided by the Lockpicking proficiency, and a +10% bonus to their Find/Remove Traps ability.

**Special Hindrances:** Locksmiths have a -10% penalty to their Climb Walls ability and a -5% penalty to their Pick Pockets ability.

**Wealth Options:** They start with 4d4x10 gp.

### Pest Controller

Pest Controllers keep a stronghold free from rats, giant spiders, centipedes, carrion crawlers, kobolds, and other pests. They are experts at setting traps and in eradicating minor animal and monster nuisances.

**Role:** Pest Controllers are members of the Pest Control Guild. Through experience they learn all of a stronghold's tunnels, passages, and sewers. Although they perform an invaluable service keeping underground settlements habitable, their true worth becomes apparent when a stronghold is under attack. Then they use their expertise to rig traps along passages of expected enemy advance to slow and kill the invaders. Enemies entering a dwarf stronghold are likely to find their way beset with deadly traps.

As members of an adventuring party, Pest Controllers are useful to protect the party's camp area and to find and disarm traps set by others.

**Secondary Skills:** They should have the secondary skill of Trapper/Furrier.

**Weapon Proficiencies:** Pest Controllers usually carry daggers and darts, but may use any type of weapon normally permitted to thieves.

**Bonus Nonweapon Proficiencies:** Animal **Lore, Pest Control.**

**Recommended** Nonweapon Proficiencies: Alertness, Blacksmithing, Blind-fighting, Carpentry, Direction Sense, Set Snares, Sign Language, Signalling, Stonemasonry, Tracking, Underground Survival, Weaponsmithing.

**Equipment:** Pest Controllers should equip themselves with cages and other traps. If one has the blacksmithing or weaponsmithing proficiencies it can be assumed he has built 1d4 traps before starting play.

**Distinctive Appearance:** Pest Controllers wear shiny black leather armor and black leather helmets.

**Special Benefits:** They gain a +5% bonus to their Move Silently and Find/Remove Traps abilities.

**Special Hindrances:** They have a -10% penalty to their Pick Pockets ability. Other dwarves, except Vermin Slayers and Wayfinders, consider them to be unsavory characters and react to them with a -2 penalty.

**Wealth Options:** They start with the standard 2d6x10 gp.

## Warrior/Thief Kits

Multi-class warrior/thieves fill many specialist roles. With their ability to fight effectively, coupled with their thieving abilities, their services are much in demand. Warrior/thieves are often more than just the sum of their parts. The kits below describe some of the ways in which they fit into dwarf society.

### Ghetto Fighter

Ghetto Fighters live in the ghettos of nondwarven towns or cities. Generally from

poor families, they have had to look after themselves from an early age. The typical Ghetto Fighter has a hardbitten, self-centered attitude, developed in order to survive the rigors of the ghetto.

Ghetto Fighters may come from dwarf strongholds. In such cases they would be from poor clans with bad reputations. Such characters are always suspect to other dwarves, and they find it difficult to make a living by honest means.

**Role:** The Ghetto Fighter never forgets his lowly origins and may harbor resentments against dwarves who are better off. However, he stays true to his roots, and will try to better the lives of ghetto children.

**Secondary Skills:** A Ghetto Fighter may have any secondary skill.

**Weapon Proficiencies:** Weapon proficiencies available to Ghetto Fighters are determined by the campaign background. If the Ghetto Fighter is from a repressive city, most weapons may be forbidden to citizens, and dwarves may be especially restricted. It may be illegal for dwarves to possess any weapons within the city, with stiff fines or imprisonment the usual punishments. In such a city, a Ghetto Fighter would be restricted to concealed weapons; daggers or darts. In other societies, Ghetto Fighters may be allowed to be proficient in any weapon.

**Bonus Nonweapon Proficiencies:** Alertness, Disguise, Endurance.

**Recommended Nonweapon Proficiencies:** Blind-fighting, Forgery, Gaming, Local History, Lip Reading, Sign Language, Tumbling, Ventriloquism.

**Equipment:** Ghetto Fighters should start play with thief's picks and a rope. Otherwise, they may equip themselves as they see fit.

**Distinctive Appearance:** Ghetto Fighters do not have a distinctive appearance, but many bear scars or have amputated fingers from street fighting. Some wear an eyepatch.

**Special Benefits:** A Ghetto Fighter gains a +1 bonus to attack and damage when using a dagger or knife. When attacking with two weapons, he does not suffer any penalty with his primary weapon, and only a -2 attack penalty with his secondary weapon (see the *Players Handbook*, page 96). If his secondary weapon is a dagger or knife, he still gains the +1 to attack and damage.

He gains a +5% modifier to his Pick Pockets and Hide in Shadows skills.

**Special Hindrances:** Ghetto Fighters have bad reputations with the authorities of the town, city, or stronghold in which they live. Law enforcement agents of the same town, city, or stronghold react at -3 to a Ghetto Fighter.

He suffers a -5% penalty to his chance to Find/Remove Traps.

**Wealth Options:** A Ghetto Fighter starts with only 3d4x10 gp.

## Trader

Dwarf merchants who trade mainly with other races, the Traders seek to drive the hardest bargain they can. They usually deal in dwarven weapons, armor, and other metal goods, but will trade in uncut gems, iron, or other ores when there is a glut of them.

Traders transport their wares on mules or ponies, taking their goods to human and elven towns or cities where they sell them to local merchants. Some traders have established their own shops in such places, eliminating the middleman.

**Role:** They are often willing to travel vast distances in search of bargains. Some Traders deal with the races of the Underdark, particularly deep gnomes, and sometimes

with drow or duergar. Others act as the only contact some mountain dwarf strongholds have with the outside world. Traders are vital to the strongholds, bringing in goods that local dwarves are unable to manufacture themselves.

Traders are adventurous by nature and are always looking for a good deal. Entire campaigns may be based around the activities of a Trader and his companions, transporting goods through hostile lands or in search of lost treasure.

**Secondary Skills:** Traders should have the Trader/Barterer secondary skill.

**Weapon Proficiencies:** Traders should be proficient in light crossbow and a concealable hand weapon such as a dagger, knife, or hand axe. Otherwise, they may be proficient in any weapon they choose.

**Bonus Nonweapon Proficiencies:** Appraising, Endurance, Navigation.

**Recommended Nonweapon Proficiencies:** Alertness, Animal Handling, Direction Sense, Hunting, Local Dwarf History, Local History, Riding (Land Based), Survival (as appropriate), Underground Navigation.

**Equipment:** A Trader starts his career with a mule and packs and panniers for carrying goods and equipment.

**Distinctive Appearance:** Traders do not have to belong to a guild and have no standard appearance.

**Special Benefits:** A Trader gains a +1 to attack and damage only when protecting his goods or animals.

A Trader also gains a +1 reaction bonus from merchants and other traders. This bonus is based on his reputation as a fair and honest Trader. If he cheats on a deal and is later discovered, the bonus changes to a -2 penalty.

**Special Hindrances:** Traders have no special hindrances.

**Wealth Options:** A Trader starts with 4d4x10 gp.

### Vermin Slayer

The Vermin Slayer is a highly skilled specialist who enters the tunnel systems of monsters such as kobolds, goblins, and jermlaines, with the intention of eradicating them. Vermin Slayers are also adept at negotiating the constricted passages created by giant rats, centipedes, and other pests and vermin.

They are used to fighting in confined spaces and are experts at hiding in shadows, where they wait to surprise their prey.

Vermin Slayers are similar to Pest Controllers, but where a Pest Controller uses traps to catch his prey, Vermin Slayers actively hunt victims with light crossbows and hand axes or hammers.

A Vermin Slayer must have minimum scores of 14 in Strength and Dexterity.

**Role:** They belong to their own guild, which sells their services to those who require them. Many operate as freelancers, selling their skills to humans and other races who are experiencing problems with "vermin."

Within dwarf societies plagued by pests, Vermin Slayers are highly regarded. Their willingness to enter narrow tunnels is seen as commendable by other dwarves. In strongholds where they are not constantly employed, they are often viewed with suspicion and distaste. Many have been known to turn to illegal activities in order to support themselves, but their willingness to enter even sewers has proved their worth as

recoverers of lost items and has earned them a reputation for being incredibly tough.

Outside of dwarf society, Vermin Slayers are something of an enigma. They do not readily fit the image other races have of the trades. Most humans are amazed that a skill as specialized as Vermin Slayers even exists. Even so, they easily find work in human cities as pest exterminators, and their services have often been called upon to eradicate bands of raiding kobolds and goblins from their lairs.

**Secondary Skills:** A Vermin Slayer should have the Hunter secondary skill.

**Weapon Proficiencies:** Vermin Slayers must be proficient in light crossbow and hand axe, hammer, or dagger. Many favor the specialist weapons of the close combat fighter. Generally, Vermin Slayers should choose fast weapons that require little space.

**Bonus Nonweapon Proficiencies:** Alertness, Endurance, Tracking, Underground Navigation.

**Recommended Nonweapon Proficiencies:** Direction Sense, Sign Language, Underground Survival, Pest Control, Blind-fighting, Intimidation, Set Snares, Swimming.

**Equipment:** Vermin Slayers may spend their money on any kind of equipment. Depending on the current job, they have a wide variety of armor options available. If stealth is required, they should wear no more than leather armor. When seeking to destroy the opposition, metal armor may be worn, even though this causes their thief skills to be negated.

Most Vermin Slayers carry at least two light crossbows, allowing them to fire two shots before having to reload.

A new Vermin Slayer character receives a light crossbow, 10 bolts, and a quiver free of charge.

**Distinctive Appearance:** They are distinguished by the bandannas around their heads, and by their habit of hanging the dried heads or skulls of their vermin victims about their waists.

**Special Benefits:** Vermin Slayers receive a +5% bonus to their Find/Remove Traps, Detect Noise, and Move Silently skills. Because of their special training, Vermin Slayers receive a +1 bonus to attack and a +2 bonus to damage with one chosen hand weapon, when fighting small sized creatures. They receive a -1 initiative bonus anytime they are fighting in a restricted tunnel or passage.

**Special Hindrances:** Vermin Slayers have a -10% penalty to their Pick Pockets skill and a -5% penalty to their Read Languages skill.

They are not trained to fight large creatures, so ogres, trolls, ogre magi, giants, and titans find them easier to attack than other dwarves. Large creatures are only penalized -2 when attacking Vermin Slayers.

**Wealth Options:** Vermin Slayers receive the standard 5d4x10 gp starting gold, plus their free light crossbow, 10 bolts, and quiver.

## Wayfinder

The Wayfinder is a hardy mix of warrior and thief who usually operates independently of other dwarves. He cares for himself, acting on his own initiative, and is able to survive for long periods of time on a minimum of food.

A Wayfinder must have a minimum Intelligence of 12.

**Role:** Wayfinders are traditionally employed as underground explorers and spies.

They chart the best routes underground, note supplies of food and water, and mark down the location of any mineral deposits they find.

Wayfinders are frequently employed to explore new areas for mining and to chart underground waterways. This is the only dwarf kit with Swimming as a bonus proficiency.

The dwarven military employs them as underground scouts and guides. These intrepid explorers frequently venture into monster-infested caverns in order to learn the numbers and positions of guards, and any weakness in the monster defenses. Once they have reported their intelligence, they guide the dwarf troops to the locations, following their own mapped routes.

In human society the Wayfinder has found employment with mine owners, prospectors, and parties of adventurers. The Wayfinder's combat and thief skills make him doubly useful to his colleagues.

Some Wayfinders have become very rich discovering lodes of the finest silver, gold, and even mithril during their explorations. Their ability to find alternate routes makes hiding the discovery from their employers a simple task, and then they can exploit it themselves.

**Secondary Skills:** A Wayfinder should have the Navigator secondary skill.

**Weapon Proficiencies:** Wayfinders may chose any weapon proficiencies permitted to warriors and thieves.

**Bonus Nonweapon Proficiencies:** Endurance, Swimming, Underground Navigation, Underground Survival.

**Recommended Nonweapon Proficiencies:** Alertness, Blind-fighting, Direction Sense, Fungi Recognition, Herbalism, Local Dwarf History, Locksmithing, Mining, Modern Languages, Rope Use, Set Snares, Sign Language, Signalling, Slow Respiration, Tracking.

**Equipment:** Wayfinders should start with a suit of leather armor and a shield. They should carry basic survival equipment such as ropes, pitons, a hammer, food supplies, waterskin, etc.

**Distinctive Appearance:** They usually dress in black leather armor and carry black shields. Unlike most dwarves, their beards are either worn very short or braided into tight ringlets, which give their chins a jagged appearance.

**Special Benefits:** They gain a +10% bonus to their Hide in Shadows and Move Silently skills. They are also able to learn languages easily. Each language learned by a Wayfinder costs only half its listed number of slots. So, for the cost of one slot, a Wayfinder could learn both the Sign and Goblin Language proficiencies.

**Special Hindrances:** Wayfinders have a -10% penalty to their Pick Pockets and Read Languages skills.

They are not quite trusted by other dwarves due to their independent nature. The fact that some Wayfinders have cheated on their employers in the past has deepened the distrust. As a result, Wayfinders have -2 reaction penalty when dealing with other dwarves. This penalty is ignored in situations where a Wayfinder's services are being actively sought; then their independent nature is viewed more positively. Other dwarves will remain suspicious of a Wayfinder's motives.

**Wealth Options:** Wayfinders start with the usual 5d4x10 gp for multi-classed warriors.

# Chapter 7: Role Playing and Personalities

Farondil, an Elf, Speaks of Dwarves

*Let's get one thing straight, I have nothing against dwarves personally. It's just that they're so different from regular folk. They really are a bit freakish. Just look at them. Four foot six at best, often just as wide. The proportions are all wrong. And that hair! It grows all over the place. Most of them look like they've rugs stuck to their faces. And the smell! The less said about that, the better.*

*I'm really not prejudiced, but I do believe in calling a squat a squat. And that's just what they are, squat and ugly things, the victims of a mean joke of the gods. No wonder they live below ground. No one takes them seriously, except themselves. And they do take themselves seriously. A few have even had the nerve to call me flighty, if you can believe that.*

*Besides, they are so obsessed with work they never laugh, never have any fun. Work, work, work, that's all they do besides sleep, drink vast quantities of alcohol, and smell. Mind you, it's hardly surprising given their repressive society. Those guilds are nothing short of legalized slavery.*

*Underground is the best place for them. Down there, they can't go 'round depressing other folk. You can tell how bad it is down there by the number of them who escape every year. You know the type, either greedy merchants or homicidal killers. Have you ever tried discussing philosophy with a dwarf? They're not at all interested in life, stars, flowers, or freedom. One rude little beast had the effrontery to tell me to shut up with my "mindless pansy drivel," or he'd hack my legs off. Ha! The stumpy little runt couldn't reach any higher, my legs were all he could hit!*

*Oh, they're all right from a distance, I suppose. Just keep them in their holes, away from decent folk, and everything will be fine. I'm not prejudiced, but I still don't want any living in my woods!*

Other races tend to stereotype dwarves, lumping them all together as suspicious, avaricious, taciturn, obstinate, grumpy, grim, and humorless creatures. They see them as rigid and unyielding as stone, while grudgingly admitting that dwarves are hardy and tenacious fighters.

While all that is true, it is a gross generalization. Many dwarves will not fit neatly into another race's conception of them. No two are exactly alike. They may have the same character kit, but each has his own goals, interests, quirks, and flaws setting him apart from his fellows. There are, however, certain discernible qualities shared by the entire race.

## The Dwarven Personality

*"Humph! Get lost!"*
--Dwarven Maxim

Dwarves are not humans with short legs, broad torsos, and long beards. They are

another race entirely, with distinctive personality traits and beliefs that set them apart from humans. Playing a dwarf is more challenging than playing a human warrior, cleric, or thief. As humans, we know our basic traits, and portray them easily in a game. It is more difficult to make dwarves believable and fun, but the potential reward is worth the effort.

### Basic Personality

Dwarven personality is molded by many factors. They see themselves as a proud and noble race, maintaining their own ways. This is not because they are stubborn, but because experience has taught them that their ways are best. They do not understand why other races consider them dour and taciturn. Believing that there is a time and place for everything, dwarves approach work seriously, with an attitude of commitment. Dealing with other races is always seen as work and dwarves always work solemnly. While this has led to false portrayals, dwarves don't care. They know they are superior to all other races. If others fail to recognize this, it is not the dwarves' loss. They are content to leave others alone, unless they are in direct conflict or competition for living space or resources. When attacked, the entire stronghold will fight.

Knowing how the race generally feels about most things helps to define individual player characters. Even if the character's personality is entirely different from the norm, it can be defined by noting the differences.

## The Dwarven Personalities

The following personalities are provided as spurs to the imagination. They are intended as concepts to be used and developed by players with dwarf characters. Each personality provides a framework for the character's role playing personality, and can be amended, added to, or combined with other personalities.

Players are encouraged to alter and modify the personality types in any way they like. Characteristics can be combined to create new types.

A player may wish to change his character's personality. In the course of adventuring, he may have experiences that cause him to change and grow. Such changes should be rare, and should mark a major turning point in life. A personality should not be changed just for the sake of trying something new. The change should develop naturally out of the events of the campaign, perhaps as a result of a catastrophic event.

Each personality description includes the following information:

It starts with a general description of the character's attitudes, motivations, and outlook. It suggests how he is likely to function in a typical campaign. In some cases, recommendations are made as to what type of player may find a particular personality the most enjoyable to play.

**Best Suited For:** Some personality types are more appropriate for certain alignments than others, and some are more appropriate for certain kits. These are recommendations, not hard and fast rules. Novice players are advised to remain within the alignment and kit recommendations.

**Combat Situations:** Each personality type approaches combat situations differently. Some might charge straight ahead with weapons swinging, while others might hold back

to size up the enemy before committing themselves.

**Role Playing Situations:** How is a character likely to react to NPCs? These suggestions should be used as guidelines when role-playing conversations, small talk, interrogations, and interviews. There are also ideas about how the character might interact with other PCs.

## The Decadent

The Decadent is one who follows the ways of other races instead of dwarven ways. He may have been living in close proximity to other races, such as elves or humans, or he may have made a conscious decision that another culture had superior qualities to his own. Possibilities include a dwarf who was captured while young and raised by a tribe of orcs. His loyalties would be to orcs, rather than his own race. A character may have converted to the other race's religion, forswearing dwarven things.

**Best Suited For**: Decadent dwarves are suitable for all kits and alignments except the Battlerager. The Outcast kit is a good choice. A Decadent personality allows a player to role-play someone who is outwardly dwarven, but is far from dwarven inside. It also allows dwarf priests or warrior/priests to be members of another race's religion.

**Combat Situations:** There is no specific Decadent combat response.

**Role Playing Situations:** Decadent dwarves may act like humans, elves, or others in dwarf form, and will share the attitudes of their adopted race.

They are viewed with suspicion by other dwarves. They are never completely trusted. Dwarves will be circumspect with a Decadent dwarf.

They don't get on very well with other dwarves, seeing them as deficient in some way. Many other races have difficulty accepting a Decadent dwarf unless he grew up as part of their society. A dwarf who was raised by a tribe of orcs would be accepted by the orcs of that tribe, but he would still be a racial enemy to other orcs who don't know him.

## Glory Seeker

The Glory Seeker hopes to become famous by performing heroic deeds. He dreams of becoming one of the heroes of legend whose deeds are still sung though the hero died a thousand years ago.

**Best Suited For:** Axe for Hire, Battlerager, Highborn, or any priest or warrior/priest kit. Lawful and good alignments are best for a Glory Seeker, but chaotics may also fill this role.

**Combat Situations:** He fights for glory, reveling in the action, and dreams of his portrayal by storytellers to generations yet unborn. His love of action causes him to take risks, but he will try to avoid endangering his companions. He will place himself in grave danger to protect others or to rescue them, or even just to see if he can survive it, if that action alone would be heroic.

**Role-Playing Situations:** He enjoys being the center of attention, but is not necessarily a skilled speaker. He may recognize his weaknesses and allow others to lead in negotiations. He wishes only to be acknowledged for the hero he is. When dealing with dwarves, particularly if he is the only dwarf in a party, he will take command of the situation, or at least make it clear that he is the leader of the party, even if he is not. He

wishes others to see him as an epic figure.

## The Grumbler

The Grumbler loves being unhappy. Nothing satisfies him. It's either too damp, too dark, too smelly, too cold, too hot, or simply wrong. There is never a right. He may grudgingly admit that things are not too bad, but they are bad enough. He is only happy when he has something to be unhappy about.

He is not always vocal about his unhappiness. A few well-placed moans may be the best protest, as long as everyone knows that he is not happy.

**Best Suited For:** Most kits, except the Diplomat, will work. To give him something to grumble about, see to the negative side of the kit. For instance, a Locksmith could be complaining that he's always the one to open locks and look for traps. The Vermin Slayer risks his neck exploring tunnels, with little thanks. The real key to playing a grumbler is remembering that he actually enjoys what he does, he just never admits it.

**Combat Situations:** The Grumbler may approach combat as just another chore to be done, or as an opportunity to take out his unhappiness on others. He may approach combat with disguised zeal, never admitting his enjoyment. Taken to extremes, the Grumbler will complain about the sloppy fighting methods of his opponents, or their treachery, which caused him injury.

**Role-playing Situations:** He fits the stereotype of the dour, taciturn dwarf. He only speaks to complain, and something as simple as ordering a room at an inn sounds like a complaint ("And don't stick me in a room infested with lice, I want a decent one--make sure it isn't over the common room or I won't get any sleep").

## The Hoarder

This character is obsessed with acquiring, hoarding, and counting wealth. He never spends it if he can avoid it, and he is always the first one to search the pockets of vanquished opponents. In his spare time he counts his gold and polishes his gems. He takes the race's love of wealth to an avaricious extreme, and may become violent if someone even looks at his treasure. He doesn't like talking about it because talk arouses others' greed. He covets any treasure that isn't his, and is often spotted eyeing it enviously. Other party members can easily manipulate him by offering gems and other material rewards.

**Best Suited For:** Any alignment. A good character will be a private individual who doesn't want others prying into his affairs. He won't steal from other party members, but he is not averse to pocketing an odd gem or trinket found on an enemy or in a treasure haul (especially if no one else noticed it). He readily rationalizes why he should have things that aren't currently his. Neutral and evil characters are more likely to steal, but they are smart enough not to be obvious. Leave one of them alone with a treasure chest and he is guaranteed to rifle it, pocketing the choicest items. This is the wrong character to leave guarding the packs.

Any type of thief character makes an ideal Hoarder, as do most other character kits except Diplomat and Highborn.

**Combat Situations:** The Hoarder is often a determined fighter who realizes that the

quickest way to get more loot is to take it from people or creatures who no longer need it (*i.e.*, dead ones). His greed can lead him to be foolhardy, or to go off on his own in dangerous areas. The sight of a beautiful gem in the eye of a statue, across a chamber full of orcs, is likely to lead a Hoarder to fight his way to it, or leave his companions to fight while he sneaks around the edge in the hope of pocketing the gem in the confusion.

**Role-playing Situations:** The Hoarder is always looking for the best deal in any situation. Unlike the Statesman, he is frequently not very good at getting it; his greed is so apparent that others can easily manipulate him and strike hard bargains.

### The Optimist

The optimist is an outgoing, cheerful character, always looking on the bright side, even when circumstances are dire. To the optimist, there is always a brighter and better tomorrow, and even the worst situation can be turned to advantage.

**Best Suited For:** Ideally suited to players who wish to play cheerful characters. Taken to its extreme, an Optimist can be as much an irritation as a Grumbler. Instead of finding fault, every situation has a redeeming quality.

The Optimist works best with good or neutral characters, evil isn't very optimistic (but may hide behind an optimistic facade).

Entertainer, Animal Master, and Sharpshooter work well with this personality, but it can be used interestingly with Ghetto Fighter.

**In Combat Situations:** The Optimist is no fool. In combat he is capable of weighing the opposition and acting to ensure the best possible result. He is not given to rushing into combat, but neither will he shirk his responsibilities. He may counsel a timely retreat or a rear-guard action, rather than a frontal assault, but when the chips are down, he'll meet his fate with a grin. He genuinely believes that any odds can be overcome with the right plan.

**Role-playing Situations:** The cheery good nature of the Optimist suits him well. He enjoys meeting people of other races and he often changes the opinions of those who think all dwarves are dour.

### The Paragon

The Paragon takes racial pride to the extreme. Dwarf achievements are the highest possible and no other race can hope to measure up to the standards dwarves have set. He finds fault with others, especially other races, but he can just as easily find fault with other subraces. He is always comparing the lifestyles and actions of others to his own way of life, and they rarely, if ever, match his standards.

To this character, elves are flighty and apathetic; orcs are wretched, brutal, and depraved; humans and halflings too easily distracted; and gnomes are obsessed with the wrong things.

**Best Suited For:** Any alignment will work well. Lawful good Paragons will be helpful and offer unwanted suggestions of how others can improve themselves and benefit from being lawful and good. Chaotics will simply be showoffs and fault finders. Evil and neutral characters can be vindictively opinionated and callous about others. A Paragon may be used with any kit.

**Combat Situations:** Paragons can always find reasons to be in combat. "Pah! They need a dwarf in there to show them how it's done; humans and elves got no idea." They can just as easily find reasons not to get involved; "Don't see why I have to fight 'em; it's a human problem, not mine!"

**Role-playing Situations:** A bad choice for a Diplomat. It is too easy for him to be obnoxious and rude to others. Given the will to remain silent, he's still likely to open his mouth and cut loose with barbed comments. In everyday situations, he is likely to make more enemies than friends. He creates friction among fellow party members, particularly if there are other races present, with his opinions.

## The Phobic

He is scared. He may be unable to approach bodies of water, or has a morbid fear of heights, or a fear of open spaces, or of enclosed places, or of certain types of monsters: goblins or umber hulks, perhaps.

Whatever the phobic is afraid of, it prevents him from fully functioning when dealing with the object of his phobia. He may simply refuse to go anywhere near it. This may be represented in gaming terms by giving the character penalties to his attack and damage rolls; penalties of -2 to -5 are suitable. Or he may have to make a saving throw vs. paralyzation to approach the thing he fears.

**Best Suited For:** Players who enjoy flawed characters will find Phobics good fun to play, though they are more restricted than other character types.

Any alignment or character kit can be used with a Phobic. Sundered dwarves are always claustrophobic. A Phobic may easily be combined with another personality; a Glory Seeker with a fear of water, for example.

**Combat Situations:** The Phobic performs well until faced with the object of his phobia. Then he becomes reluctant to fight, and may even flee as if affected by a *fear* spell. A saving throw may be called for in such situations to see whether he continues to fight, or flees.

**Role-playing Situations:** In most situations the Phobic functions normally, acting as the player wants, but faced with his phobia, he changes dramatically. When he is combined with other personalities, there are intriguing possibilities. Imagine an orc-hating Battlerager who has a suicidal disregard for his own safety when fighting orcs, but turns and flees when faced with a single kobold.

## The Pragmatist

In any given situation, the pragmatist knows what has to be done and does it, ruthlessly and efficiently. He takes only calculated risks, and is never foolhardy.

**Best Suited For:** Pragmatists are only suitable for neutral and evil characters. Good characters suffer from having to do the right thing; Pragmatists do the required thing. Suitable for Axe For Hire, Vermin Slayer, Sharpshooter, Trader, or Ghetto Fighter.

**Combat Situations:** He prefers to weigh the odds before committing to combat, considering weaknesses and opportunities that may be exploited to best advantage. Once engaged, he will fight to eliminate his opponents as quickly as possible, by any means, however ruthless or underhanded.

**Role-playing Situations:** A Pragmatist can be gruff and taciturn, or he may be more open, even happy and gregarious. In negotiation, he pushes for the best deal, but he also knows when he has achieved all he can.

### The Statesman

The Statesman is concerned with getting the best deal for his clan, stronghold, and race, in that order. He exudes natural leadership, or at least likes to think that he does. This may be a result of his birth, his upbringing, or his own inflated opinion of himself. He takes charge of most situations, acting in a decisive and imposing manner.

**Best Suited For:** The Statesman is best suited for the Diplomat and Highborn kits. The Champion and Ghetto Fighter are also useful. Chaotic characters are usually too carefree or self-centered to make good Statesmen.

**In Combat Situations:** He does not see himself as a good combatant. He would rather engage in diplomacy, but if that fails he may try to take command of a party. His success depends on whether he is also a competent commander.

**Role-playing Situations:** In these situations, he is at his best. He loves to present his credentials and debate issues and try to obtain the best deal. He tends to become the mouthpiece for a party, negotiating for necessities.

# Chapter 8: Mining

## Mining

New dwarf strongholds are established for a wide variety of reasons, but they are almost always sited near substantial deposits of minerals or gems. This chapter contains rules for establishing and operating mines. It is assumed that most existing strongholds are built around profitable and extensive ones.

## Conducting a Survey

Not all regions will yield something of value, regardless of the success of the proficiency roll. Examples of places where mining is a waste of time include regions of deep sand or dirt and areas of hardened lava. Streams flowing through these regions may have carried traces of ores or a gemstone, but a character with the mining proficiency knows that mining these areas is guaranteed to yield nothing.

If a miner seeks to excavate an area that might yield valuable material, he can make a Mining proficiency check after surveying the area. He may determine that increasing the area of his survey sweep could yield something of value.

The length of time required for a survey will depend upon the conditions of the search. Under ideal conditions, it would take a week to survey an area of 4 square miles. Ideal conditions mean that the character is not constantly fending off goblins and marauding bandits, nor is he hunting for food. If the search is being conducted above ground, deep snow could make prospecting nearly impossible, while even a thin layer would triple the time needed. Steady rainstorms, rough terrain, and short daylight hours

all interfere with a survey of the surface.

Underground searches are limited by the natural formations of caverns and passages. The area that can be examined in one week is reduced underground to 2 square miles, conditions permitting. The natural shape of the passages may be such that the character is restricted to a narrow 100-yard stretch, or that the search must be carried deeper into the earth.

After the search is completed, a proficiency check must be made by the miner. If unsuccessful, the search has either failed to discover anything of value or the character thinks he has found the best site for the mine. The miner may search the area again, seeking to verify his original findings, but it becomes increasingly more difficult; the amount of time required is multiplied by the number of surveys (the second survey takes twice as long, the third takes three times as long, etc.) and a cumulative -1 penalty is imposed on each subsequent proficiency check (-1 on the second check, -2 on the third check, etc.).

If the check is successful, the surveyor has determined the extent of mineral wealth in the area, within a reasonable margin of error. This does not guarantee a successful mine, but does locate the best site for one. If the area contains nothing of value or is unsuitable for mining, a successful proficiency check reveals that fact.

## Mine Products

When a miner locates minerals, consult the Mining Products Table.

**Mining Products Table**

| Roll D100 | Product of Mine |
|---|---|
| 01-30 | Copper |
| 31-40 | Tin |
| 41-66 | Lead |
| 67-84 | Iron |
| 85-92 | Silver |
| 93-97 | Gold |
| 98 | Platinum |
| 99 | Mithril* |
| 00 | Gemstones* |

* Indicates only that mithril or gemstones may be present. Mithril exists deep under the earth, in dense metamorphic formations. The actual presence of mithril must be confirmed by checking the Mithril Formation Table. If gemstones are indicated, check the Gemstones Table.

**Mithril Formation Table**

| Roll D10 | Metal Discovered |
|---|---|
| 1-5 | Silver (highest quality) |
| 6-8 | Gold (highest quality) |
| 9 | Platinum (highest quality) |
| 10 | Mithril |

**Gemstones Table**

| D100 | Class of Stone |
|---|---|
| 01-25 | Ornamental |
| 26-50 | Semi-precious |
| 51-70 | Fancy |
| 71-90 | Precious |
| 91-94 | Gems |
| 95-96 | Jewels |
| 97-99 | Roll twice on this table |
| 00 | Roll three times on this table |

## Quality of Mine

Because a mine has been established does not mean that it automatically yields valuable metal or gems. The quality of the ore must be determined. Even the highest quality metal requires some processing before it can be sold.

### Metals

If the yield of the mine is a metal, it will probably be in the form of ore (metal-bearing rock). While pure nuggets may be discovered occasionally, a character with the smelter proficiency must separate the metal from the ore.

The quality of the ore is equal to the number of coins that can be produced from it by a single miner in one week. A copper mine, with a rating of 200 cp, would mean that a single miner, working for one week, produces a pile of ore that can yield 200 cp of copper when smelted. The amount of coinage indicates how much is produced, not that coins must be produced. One-thousand coins of iron, for example, equal one suit of plate armor, 100 spear heads, or 500 arrowheads.

To determine the quality of the mined ore, roll 1d10 and compare it to the result for that metal on the Ore Quality Table. This equals the coin equivalent produced per week per miner.

**Ore Quality Table (Roll 1d10)**

| Metal | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10* |
|---|---|---|---|---|---|---|---|---|---|---|
| Copper | 100 | 200 | 250 | 300 | 350 | 400 | 500 | 750 | 1000 | 2000 |
| Iron | 200 | 300 | 500 | 700 | 900 | 1200 | 1600 | 2000 | 3000 | 4000 |
| Silver | 25 | 50 | 100 | 200 | 300 | 400 | 500 | 750 | 1000 | 2000 |
| Gold | 10 | 25 | 50 | 100 | 200 | 300 | 400 | 500 | 750 | 1000 |
| Platinum | 5 | 10 | 20 | 40 | 75 | 100 | 250 | 400 | 800 | 1000 |

* If a 10 is rolled, roll 1d10 again. If another 10 results, the mine is a pure vein of the highest quality and requires no smelting. If 1-9 results, the metal must be smelted.

Ideally, the smelted metal has the same value as its coin equivalent: i.e., 20 10-coin ingots of silver are worth 200 sp. In a true medieval economy, however, everything is

negotiable. Miners may not be able to get this much for their bullion, or may get more, depending on local conditions, who the buyer is, and regional supply.

If a character sells the ore without smelting, the selling price can be no more than 25% of the value of the pure metal, and it may be as low as 5%. The asking price will depend on the difficulty of transportation and the cost of smelting the ore.

## Gemstones

Newly mined gemstones are not nearly as valuable as they are after finishing. Gemstones are rough and even unrecognizable when first discovered. Characters with the Mining or Gem Cutting proficiencies can correctly identify a stone after 1d6 rounds of study.

The quality of a gemstone mine depends on the number of stones in each find and the value of the stones. The number of stones is that which one miner can excavate in one week.

The value of the stones is the average value for an uncut stone, which is 10% of its cut value. To realize the full amount from the gemstones, a miner needs to employ a character with the Gem Cutting proficiency. Some stones are more or less valuable than this amount, but the average is as accurate as we need to get to calculate the income from the mine.

The output of a gemstone mine does not remain constant, it is rolled each week to determine the worth of that week's output. The number of miners at work each week is determined before the dice are rolled.

### Gemstone Quality Table

| Class of Stone | #/dwarf /week | Average Uncut Value |
|---|---|---|
| Ornamental | 4d10 | 1 gp |
| Semi-precious | 3d6 | 5 gp |
| Fancy | 1d12-1 | 10 gp |
| Precious | 1d10-1 | 50 gp |
| Gems | 1d6-1 | 100 gp |
| Jewels | 1d4-1 | 500 gp |

In addition to the base value of the stones mined in a given week, there is a 1% chance per week of operation that a miner will discover an exceptional stone. If an exceptional stone is found, its value is equal to the base value of the mine's stones multiplied by a d100 roll. For example, an exceptional stone found in a semi-precious stone mine is worth 10 gp (the average value of an uncut, semi-precious stone) x d100. Players may also consult the Type of Stones Table to determine the exact types of stones found.

### Types of Stones Table

## Ornamental Stones

| 1d100 | Stone Type |
|---|---|
| 01-08 | Azurite |
| 09-16 | Banded Agate |
| 17-24 | Blue Calcite |
| 25-32 | Eye Agate |
| 33-40 | Hematite |
| 41-48 | Lapis Lazuli |
| 49-56 | Malachite |
| 57-64 | Moss Agate |
| 65-73 | Obsidian |
| 74-82 | Rhodocrosite |
| 83-91 | Tiger Eye Agate |
| 92-00 | Turquoise |

## Semi-Precious Stones

| 1d100 | Stone Type |
|---|---|
| 01-07 | Bloodstone |
| 08-15 | Carnelian |
| 16-23 | Chalcedony |
| 24-31 | Chrysoprase |
| 32-39 | Citrine Quartz |
| 40-47 | Jasper |
| 48-55 | Moonstone |
| 56-59 | Onyx |
| 60-67 | Quartz Crystal |
| 68-75 | Rose Quartz |
| 76-83 | Sardonyx |
| 84-91 | Smoky Quartz |
| 92-00 | Zircon |

## Fancy Stones

| 1d100 | Stone Type |
|---|---|
| 01-12 | Alexandrite |
| 13-25 | Amber |
| 26-38 | Amethyst |
| 39-51 | Chrysoberyl |
| 52-64 | Flourite |
| 65-77 | Jade |
| 78-90 | Jet |
| 91-00 | Tourmaline |

## Precious

| 1d100 | Stone Type |
|---|---|
| 01-25 | Aquamarine |
| 26-50 | Blue Spinel |
| 51-75 | Peridot |

| | |
|---|---|
| 76-00 | Topaz |

### Gems

| 1d100 | Stone Type |
|---|---|
| 01-25 | Garnet |
| 26-50 | Jacinth |
| 51-75 | Opal |
| 76-00 | Red Spinel |

### Jewels

| 1d100 | Stone Type |
|---|---|
| 01-25 | Diamond |
| 26-50 | Emerald |
| 51-75 | Ruby |
| 76-00 | Sapphire |

## Types of Mines

The two types of mines commonly in use are placer mines and underground mines.

### Placer Mines

Placer mining involves a pan or sluice to sift gravel, dirt, sand, and water from a flowing stream or river. This technique is most commonly employed above ground, but can be conducted below. Placer mining is a relatively simple operation requiring little equipment. At the basic level, the only requirements are a character with a shallow pan and a great deal of patience.

Placer mines collect mineral deposits from underground veins eroded by water and tumbled downstream. Finally deposited in the streambed, the miner harvests them from the water. Only mineral wealth, eroded from deposits, collects along the streambed. Since erosion is slow, placer mining is much less profitable than deep mining.

Placer mines do not yield profitable amounts of copper, iron, mithral, or gemstones. Characters who have discovered gold, silver, or platinum may try to mine the deposits. Underground mines are required for all other metals and gems. To calculate the value of placer mines, determine the quality and then roll 1d4 and multiply by 10. This is the percentage of its top value the mine will yield. For example, if a gold mine could yield 100 gp per week, a placer mine will yield only 10 to 40 gp per week.

### Tunnel Mines

Operating an underground, or tunnel, mine requires a great deal more work than placer mines, but the potential for wealth is much greater. Underground mining tunnels into the earth, searching for veins of ore and gem-encrusted rock that is removed and the minerals and gems then extracted.

## Excavating a Tunnel Mine

Excavating a tunnel is hard work and time consuming. The rates for excavating by the various races follow. Rates are in cubic feet, per miner, per eight-hour day.

**Mining Rates Table**

| Type of Rock<br>Race of Miner | Very Soft | Soft | Hard |
|---|---|---|---|
| Gnoll, Halfling, Human | 75 | 50 | 25 |
| Gnome, Kobold | 80 | 60 | 30 |
| Goblin, Orc | 85 | 65 | 30 |
| Dwarf, Hobgoblin | 90 | 70 | 35 |
| Ogre | 150 | 100 | 50 |
| Hill Giant | 250 | 150 | 75 |
| Fire Giant, Frost Giant | 300 | 200 | 100 |
| Stone Giant | 500 | 350 | 175 |

A tunnel mine must follow the shifting vein of mineral through the earth. Such a path typically requires a tunnel 10 feet wide and 10 feet high.

When a miner discovers a vein, roll 1d10 and multiply by 10; this is the depth in feet needed to intersect the vein. Mining may now begin in earnest. To determine the path of the vein, roll 1d4 and consult the Mineral Vein Direction Table.

**Mineral Vein Direction Table**

| D4 Roll | Vein Runs |
|---|---|
| 1 | North-South |
| 2 | East-West |
| 3 | Northeast-Southwest |
| 4 | Northwest-Southeast |

The vein always runs at least 20 feet in the direction indicated. After each 20-foot section is excavated, roll 1d10 and check the Vein Path Alteration Table to determine the new path of the vein.

**Vein Path Alteration Table**

| D10 Roll | Change |
|---|---|
| 1-2 | Steep descent |
| 3-4 | Shallow descent |
| 5 | Curves right (10-60 degrees) |
| 6 | Curves left (10-60 degrees) |
| 7 | Continues straight\ |
| 8 | Shallow ascent* |
| 9 | Steep ascent* |
| 10 | Vein ends |

* If the mine starts on the surface, the first time this is rolled it is treated as descent rather than ascent.

Miners who wish to continue working the mine must follow the vein, even if it goes in a direction they do not wish to follow. If the path of the vein takes a course that makes it impossible to follow, such as emerging into thin air through a cliff face, that particular course of the mine has run out. If the vein ends in both directions, the mine is played out. This rule takes priority over the *Duration of Mining Site* rules.

In unusual circumstances, say a tunnel that ends at a cliff which overlooks a gorge, miners may try to pick up the vein again on the other side. The DM must decide how likely that vein is to continue, depending on the situation.

### Shoring a Tunnel

A tunnel mine must be supported, or shored, with wood or stone pillars. Otherwise, sections of the tunnel will almost certainly cave in. Shoring can be done by characters with Mining, Carpentry, or Stonemasonry proficiencies.

Each 10-foot section of tunnel requires two side and one ceiling brace, each at least 1 foot thick. If the tunnel is 10 feet wide and 10 feet high, each brace uses 30 feet of bracing material. Each shoring brace requires four hours to build.

### Playing Out a Mine

Mines contain finite amounts of mineral wealth. Sometimes, this amount is enough to keep miners busy for generations. More frequently the mine plays out after a period of intensive mining.

To determine the length of time a mine will produce before depletion, roll 1d100 at the start of the mining operation. The result is the number of weeks the mine can be worked. If the result was doubles (11, 22, 33, etc.), the mine has a much longer duration. Roll 1d100 again, the result is the additional number of months the mine will produce. Add this figure to the number of weeks set by the first roll. If the second roll is also doubles, roll 1d100 a third time, the result is the number of additional years the mine is will operate. Further doubles rolls are treated as tens of years, hundreds of years, and so on.

For the sake of convenience, treat each month as four weeks and each year as 48 weeks or 12 months when totaling up the mine's longevity. Please note that a "week" is the amount of work that one dwarf can perform in a week. If 12 dwarves are engaged in excavating a mine, 12 weeks of the mine's lifetime are used up for each week of operation.

If the mine is a placer mine, disregard any doubles rolls for the duration of the find. A placer mine is always depleted after 1d100 hours of work.

## Overseeing Mining Operations

In order for a mine to produce at maximum efficiency, the character in charge must

make a successful Mining roll each week of the mine's operation. If the roll succeeds, the mine produces normally. If it fails, production is reduced by half for that week. This could be the result of pilfering among laborers, a cave-in which causes the loss of valuable production time, the intrusion of some monster--an umber hulk or ankheg, perhaps--or plain old bad decisions on the part of management. The exact details should be worked into an adventure if possible; hunting the umber hulk through the tunnels or rescuing trapped miners before they suffocate.

Although overseeing a mine provides steady work, player characters will probably find it best to hire an NPC with Mining proficiency to act as overseer, freeing themselves up for more exciting pursuits.

# Chapter 9: Equipment

This chapter describes the equipment used by dwarves: smelters, two-handed battle axes, close combat weapons, and war machines.

## Smelters

A smelter is a very hot furnace used to separate metal from ore-bearing rock. The furnace is super-heated by forcing air from a bellows, often operated by two or more dwarves, through burning coal. Ore is fed into the smelter in iron buckets moving along a chain, which tows the buckets along a rail and dumps their contents into the furnace.

The ore is heated to the metal's melting temperature (which is below the rock's). Water or acid are occasionally added to enhance the process. The molten metal runs out from the base of the smelter and into molds or troughs known as "pigs," hence the term pig iron. The pigs are sold to blacksmiths, weaponsmiths, and armorers to produce metal goods, weapons and armor. Smelters can also make alloys, such as steel or bronze.

The amount of ore that can be processed is more a function of the size of the smelter than of any character's work rate. A small smelter can process ore as fast as four miners can dig it. A medium smelter can process the ore produced by up to 20 miners. A large smelter can process ore excavated by up to 100 miners.

In addition to the cost of smelting equipment, a smelter is expensive to maintain because of the materials required to operate it. A small smelting operation costs 5 gp per day to operate, the cost of a medium operation is 12 gp per day, and a large one costs 25 gp per day to run. Smelter costs only apply when the smelter is in operation. To keep it operating at maximum efficiency, it is common practice to collect a stockpile of ore before firing the furnace. Once all the ore is smelted, the equipment is allowed to cool and is then cleaned.

Given its bulk, even a small smelter is not very portable.

| **Smelters** | **Cost** | **Size** |
|---|---|---|
| Small | 1,000 gp | 30'x30' |
| Medium | 2,000 gp | 50'x50' |
| Large | 5,000 gp | 75'x75' |

## New Weapons

Most weapons used by dwarves are described in the *Player's Handbook*. Here we look at the two-handed battle axe and close combat weapons.

## Two-Handed Battle Axe

The two-handed battle axe has a longer haft than a standard battle axe and must be wielded with two hands. With two large blades extending from it, it allows the user to swing it in an arc without having to change the angle of the blade.

## Close Combat Weapons

A whole range of weapons have been developed to suit the close fighting style of some warriors. These weapons are not standard to any kit, but are favored by warriors who fight in confined spaces. Axes For Hire, some Battleragers, and aggressive Hearth Guards may decide to specialize in them. A character's Strength bonus is added to the damage they cause.

### Head Spike

This unusual weapon consists of an iron helmet with a large (1 to 2 foot) spike on the top, sometimes called a "belly skewer." A fighter employs this weapon when charging. Running, bent forward, he attempts to spear his opponent in the stomach. The attack roll is made at a -3 penalty, and he loses any armor class benefits high Dexterity may give him. If he impales his enemy, he scores double damage.

### Knee And Elbow Spikes

These are spiked guards used in close combat to elbow and knee opponents. When not in use they appear to be decorative stubs at the center of the knee and elbow cups, but, activated by pressure, spiked blades jet out and lock in place. Since they are strapped to the character as part of his armor, it is virtually impossible to disarm him.

When a fighter is being grappled or wrestled he may elect to make an attack with his spikes, instead of boxing or wrestling. This attack is made with a -2 attack penalty.

### Glove Nail

This is a gauntlet constructed of iron or steel, with a large spike protruding from its face. Warriors usually wear glove nails on both hands. Used for slashing, generally at an enemy's face, these are sometimes called "face rippers."

**Weapon List**

| Item | Cost (gp) | Weight (lbs) | Size | Type | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Two-handed | | | | | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| battle axe | 10 | 10 | M | S | 9 | 1d10 | 2d8 |

**Close Combat Weapons**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Head Spike | 10 | 10 | M | P | 4 | 1d6 | 1d8 |
| Elbow spike | 1 | 2 | S | S | 2 | 1d4 | 1d4 |
| Knee spike | 3 | 2 | S | P | 1 | 1d4 | 1d4 |
| Glove Nail | 2 | 2 | S | P | 2 | 1d4+1 | 1d4 |
| Chain Flail | 1 | 5 | L | B | 6 | 1d4+2 | 1d4+1 |

### Chain Flail

The chain flail is a 6-foot length of weighted chain. In combat it is whirled around very fast and swung at the enemy's legs. A character who is proficient with a chain flail will use it to knock his opponent off balance. He must state that he is attacking the legs, and rolls at -4 attack. If he succeeds, he rolls for damage normally. In addition, his target must succeed in a Dexterity check or be knocked to the ground by the chain's impact.

## War Machines

Dwarves produce some technologically advanced war machines for the defense of their strongholds, and to attack their enemies above and below ground.

War machines have both an armor class, indicating how difficult the machine itself is to damage, and hit points, measuring how much damage the machine can take and continue working.

### Grinder

A grinder is constructed of wood or metal and consists of a series of huge, rotating blades designed to chop up and drive back attackers. They are custom built to the widths of the corridors where they will be used. The blades in front fill the corridor, leaving only a few inches at the sides.

With the aid of a complicated gearing system, six dwarves are able to propel a grinder at high speeds using pedals and cranks. The pedalers sit behind an iron shield, which protects them from missiles and many spells.

A grinder has a THAC0 of 10 and inflicts 3d8 damage per round on anything within reach of its blades. The best way to avoid one is to flee or to cause enough damage to stop it from working.

The flaws of the grinder are its inability to turn corners and the difficult ascent of steep corridors. Dwarf engineers have been able to overcome these problems to a limited degree. Most areas designed for grinder usage have smoothly curving corners that channel, rather than restrict, the grinder's movement. Circular rooms have also been constructed at points where tunnels converge to allow grinders to change direction (much like a roundhouse). There are even a few turntables set in the floors, at strategic locations, to allow even faster redirection.

To permit grinders to ascend steep passages, a cable is fastened to the back of the machine and connected to a winch at the top of the ascent. As the grinder descends the

tunnel, the cable is let out. When it reaches bottom, the cable is winched back, pulling the grinder to the top, ready for another run.

### Ballista

Three sizes of these giant crossbows are used by dwarves. They fire large bolts in flat trajectories. Each ballista requires a crew to move, load, and fire. They are slow to load; the rate of fire displays how often they may be fired.

When used in dwarf strongholds, ballistas have pedal and gear systems similar to a grinder. This, coupled with a winch system, allows them to be moved back and forth and traversed from side to side. A ballista is pedaled forward to fire its bolt, then winched back, out of sight, to be reloaded.

### Orc Masher

The orc masher is not a war machine as such, but it is found as a standard part of most stronghold defenses. It is a large iron slab, at least 1 foot thick, covered with spikes. The full width of a corridor, it is mounted either on rollers or hinged to the ceiling.

The roller version is placed at the top of steep slopes. If invaded, teams of dwarves lure the invaders up the slopes. Niches have been hollowed out of the walls to allow the dwarves to dodge out of the corridor. The orc masher rumbles down, picking up speed, and smashing everything in its path. It is then winched back, ready for another run.

The ceiling version is less effective. It is mounted at T-junctions and swings down from the ceiling, slamming invaders into the wall.

| **Weapon Table** | | | **Damage** | | | | **Hit** |
|---|---|---|---|---|---|---|---|
| **Weapon** | **Movement** | **S/M** | **L** | **ROF** | **AC** | **Pts** | **Crew** |
| Grinder | 12/6/1* | 3d8 | 3d8 | NA | 0 | 100 | 6 |
| Light ballista | 9 | 2d6 | 3d6 | 1/3 | 2 | 30 | 1 |
| Medium ballista | 6 | 3d6 | 4d6 | 1/4 | 0 | 50 | 2 |
| Heavy ballista | 3 | 4d6 | 5d6 | 1/5 | 0 | 75 | 4 |
| Orc masher, roller | 12 | 4d6 | 4d6 | N/A | NA | N/A | N/A |
| Orc masher, ceiling | NA | 3d6 | 3d6 | N/A | N/A | N/A | N/A |

# Chapter 10: Dwarf Strongholds

Malakar the Orc on Dwarf Strongholds

*Us orcs is 'ard. But them stunty dwarves is 'ard, too. Much 'arder than elves 'n' oomans. They dig into those 'oles of theirs, and fill 'em wif traps 'n' hurty stuff. Theyz got loads of twisty tunnels wif big iron gates and fings wot fall on yer 'n' squash yer flat.*

*We is bestest at nicking their 'oles from 'em. We got lots, much more than wot you can count on two 'ands. Orcs are right 'ard. We kill dwarves, cook 'em, eat 'em, 'n' then use their beards fer beds. We's takes their gold too, they gots lots.*

*I 'eard of a place wot got both stunties 'n' orcs in it. Big, 'uge place it is, wif lots and lots of tunnels. Orcs got one 'alf, stunties got t' other 'alf. Fight'n all the time. Ain't many*

*stunties left there, them bin done for by orcs. Them all be dead soon, but ain't it 'alf great of 'em to build us strongholds!*

Strongholds are the homes and workplaces of the dwarves. They can range from simple family residences to huge subterranean cities. The stronghold design sequence allows you to design a stronghold, either by making a series of choices, or by random die rolling. You may also combine the two methods.

Designing a stronghold by making choices creates the most consistent and logical stronghold, one that fits perfectly into your campaign world. A major stronghold is an ideal adventure setting.

The random method uses a series of die rolls, often modified by previous rolls. If you choose this method you may ignore or augment any unusual results.

Ideally, the random method should be used in conjunction with making choices. This way, you can guide the design process by selecting certain features while omitting others. You can let the dice decide those areas of stronghold design about which you have no clear ideas. It can also be an entertaining method to rationalize some of the strange results achieved by purely random design.

When using the tables it is important to bear in mind that they are guidelines. They do not attempt to cover the enormous diversity of factors that determine a stronghold's constituent parts. Do not feel constrained by them. Expand on any of the categories as needed.

For example, the design sequence places one dominant subrace in a stronghold containing several. You may decide that you want the subraces to be equal, no one being more powerful than the others. You may also want all six subraces to be present in the stronghold. While this scenario cannot be created using the design sequence, follow your own instincts and ignore those parts of it that limit you.

If the player characters are to adventure in a dwarven setting, then the setting should be as detailed as you can make it, including the names of the leaders, clans, military forces, and the backgrounds of the subraces.

If the campaign is to take place in a human or other setting, then players need only enough information to give an idea of what the strongholds are like. This does not have to be very detailed.

## Designing Dwarf strongholds

The stronghold design tables are intended to make creating a stronghold an easy task. They do not attempt to deal with every aspect of design. The tables do not define the numbers or sizes of individual dwellings or work places, or specify the exact numbers of NPCs within them.

## Name of the Stronghold

Every stronghold needs a name. You may choose a name or randomly create one using the *Stronghold Name Generator*. To use the generator, first turn to the dwarf name generator in Chapter 4. Roll 1d4 to determine the number of syllables in the stronghold's name. Roll for each syllable on the *Dwarf Name Prefix Table*. Then, either assemble

them in the order generated or rearrange them to make a better sounding name. Then turn to the Stronghold Suffix Table, below, and roll once to finish the name. Feel free to add other letters between each prefix and/or suffix if the name is too difficult or simply does not 'sound right'.

**Stronghold Suffix Generator**
**Roll 1d20**

| | | | |
|---|---|---|---|
| 1 | -ack | 11 | -hak |
| 2 | -arr | 12 | -hig |
| 3 | -bek | 13 | -jak |
| 4 | -dal | 14 | -kak |
| 5 | -duum | 15 | -lode |
| 6 | -dukr | 16 | -malk |
| 7 | -eft | 17 | -mek |
| 8 | -est | 18 | -rak |
| 9 | -fik | 19 | -tek |
| 10 | -gak | 20 | -zak |

## Subraces Present

Most strongholds were created by a particular subrace of dwarf. This subrace is the one that controls the stronghold and comprises the majority of its citizens. You may choose, or you may wish to generate randomly on the *Subrace Table*, who holds the stronghold.

Choose or randomly determine the number of dwarves present. This will give you the number of male dwarves living in the stronghold. There are approximately half as many females as males, regardless of subrace. The number of children is equal to about half of the female population. If, for example, the total population of the stronghold is around 400, there would be 225 males, 112 females and about 63 children.

**Subrace Table**

| **1d100** | **Main Subrace** | **#Dwarves** |
|---|---|---|
| 01-10 | Deep Dwarves | 3d100+50 |
| 11-20 | Duergar | 2d100+100 |
| 21-30 | Gully Dwarves | 1d100+100 |
| 31-70 | Hill Dwarves | 3d100+100 |
| 71-90 | Mountain Dwarves | 3d100+100 |
| 91-95 | Sundered Dwarves | 2d100+50 |
| 96-00 | Mixed Subraces | See below |

You may decide that your selected subrace is the only one present, or you may wish to add others to the stronghold. A mixed stronghold is one having more than a single subrace of dwarves. The primary one is dominant and holds political power over the stronghold, but they do not have to be the majority within it.

The Dominant Subrace Table determines the subrace that controls the stronghold. If you want to add other minor subraces to the stronghold, the table will show you how

many are present. You can select this or determine it randomly.

**Dominant Subraces Table**

| 1d100 | Dominant Subrace | # Other Subraces |
|---|---|---|
| 01-10 | Deep Dwarves | 1d3 |
| 11-20 | Duergar | 1d4 |
| 21-25 | Gully Dwarves | 1d2 |
| 26-70 | Hill Dwarves | 1d4 |
| 71-90 | Mountain Dwarves | 1d4 |
| 91-00 | Sundered Dwarves | 1d3 |

## Modifying the Dominant Subrace

In strongholds having one or more minority subraces, the number of the dominant subrace is altered by the Modified Subrace Table, according to the number of other subraces present. If, for example, there are there are 200 deep dwarves in a stronghold with three other minor subraces present, the number of deep dwarves is reduced by 50% to 100.

**Modified Subrace Table**

| Other Subraces Present | Modifier |
|---|---|
| 1 | -10% |
| 2 | -25% |
| 3 | -50% |
| 4 | -75% |

## Determining the Number of Subrace Members

So far, you know how many subraces are in the stronghold, but not which ones they are, nor their numbers. The Subrace Tables list the main subrace and the subraces likely to share a stronghold with them. Once the minor subraces have been selected, choose or randomly determine their numbers.

In the event that a random roll results in the same subrace being designated more than once, maintain their numbers each time they occur, as though they were a different subrace. Total the results to determine the numbers present.

**Deep Dwarves Subraces Table**

| 1d100 | Subrace | # of Subrace |
|---|---|---|
| 01-25 | Duergar | 5d10 |
| 26-50 | Gully | 3d12 |
| 51-75 | Hill | 2d10 |
| 76-00 | Mountain | 3d6 |

**Duergar Subraces Table**

| 1d100 | Subrace | # of Subraces |
|---|---|---|
| 01-40 | Deep Dwarves | 3d12 |
| 41-60 | Gully Dwarves | 3d10 |
| 61-80 | Hill Dwarves | 2d12 |
| 81-00 | Mountain Dwarves | 2d12 |

**Gully Dwarves Subraces Table**

| 1d100 | Subrace | # of Subrace |
|---|---|---|
| 01-20 | Deep Dwarves | 1d10 |
| 21-40 | Duergar | 2d6 |
| 41-60 | Hill Dwarves | 3d12 |
| 61-80 | Mountain Dwarves | 2d10 |
| 81-00 | Sundered Dwarves | 2d6 |

**Hill Dwarves Subraces Table**

| 1d100 | Subrace | # of Subrace |
|---|---|---|
| 01-10 | Deep Dwarves | 1d12 |
| 11-20 | Duergar | 2d8 |
| 21-40 | Gully Dwarves | 4d10 |
| 41-90 | Mountain Dwarves | 3d6 |
| 91-00 | Sundered Dwarves | 3d6 |

**Mountain Dwarves Subraces Table**

| 1d100 | Subrace | # of Subrace |
|---|---|---|
| 01-10 | Deep Dwarves | 2d10 |
| 11-20 | Duergar | 2d10 |
| 21-25 | Gully Dwarves | 2d6 |
| 26-70 | Hill Dwarves | 2d12 |
| 91-00 | Sundered Dwarves | 3d6 |

**Sundered Dwarves Subraces Table**

| 1d100 | Subrace | # of Subrace |
|---|---|---|
| 01-60 | Gully Dwarves | 10d10 |
| 61-80 | Hill Dwarves | 3d12 |
| 81-00 | Mountain Dwarves | 2d10 |

Subraces living in strongholds held by others are almost always a minority. They are there because they are exiles, traders who have established a sizable base, or because they have particular skills to sell. Subraces may also be present because they have experience in fighting certain kinds of monsters, or because they have been cut off from their own people by disaster. They may have intermarried with the dominant race.

You may generate these subraces in more detail by treating them as trading enclaves or family strongholds. The following paragraphs give some general guidelines on how the various subraces function within another subrace's stronghold.

Deep dwarves usually live at great depths and keep to themselves. As minor subraces, they tend to be in small family groups, plying a craft or trade.

Duergar living among other subraces are usually not of an evil alignment unless the stronghold's alignment is evil. They may be tolerated by neutral dwarves, but are always treated with wary suspicion.

Other subraces living among the duergar will usually be evil and will have joined the duergar to avoid persecution in their home strongholds. Evil duergar strongholds will tend to enslave other subraces, unless they are allies.

Gully dwarves may be found living among any subrace of dwarf, usually employed to perform menial or unpleasant tasks.

A gully dwarf stronghold may contain other subraces, but these will usually share similar attitudes and behavioral patterns with them.

Hill and mountain dwarves may be found at any depth and living with any other subrace. They are clannish and keep to themselves. They are likely to be the employers of other subraces. While these others will usually be present in the stronghold on a fixed term contract, it is not unusual for a stronghold to have enclaves of other dwarves who have been there for generations.

Sundered dwarves are only found living among other dwarves when a part of the stronghold is above ground. Hill dwarf strongholds, which are built above and below the hills, are ideal. If the stronghold is entirely below ground, sundered dwarves will congregate around one of its entrances, where they will construct shanty towns in order to conduct trade.

## Overall Alignment

You may either select a stronghold's alignment to match that of its dominant race or roll on the Overall Stronghold Alignment Table. A stronghold's overall alignment determines its general outlook. Not all of the stronghold's inhabitants need to be of this alignment. In good aligned strongholds, evil characters will usually keep their alignment hidden from their fellows.

**Overall Stronghold Alignment Table**

| 2d6 | Deep | Duergar | Gully | Hill | Mountain | Sundered |
|---|---|---|---|---|---|---|
| 2 | CN | LG | LG | LE | LE | CE |
| 3 | NE | NE | LN | LN | LN | NE |
| 4 | NG | LN | LE | LN | LN | LG |
| 5 | N | LE | NG | LG | LG | LE |
| 6-8 | N | LE | CN | LG | LG | LN |
| 9 | N | N | N | LG | LG | N |
| 10 | LN | CN | NE | NG | NG | N |
| 11 | LG | CE | CG | CG | N | CN |
| 12 | LE | NG | CE | N | N | CG |

## Types of Strongholds

Strongholds vary in size and importance. You may have an idea of the kind of stronghold you want. If not, you can determine it randomly.

The population modifier is used to determine the number of dwarves who live in a stronghold and the numbers of each subrace will be modified by this percentage. For all strongholds, other than secondary ones, you'll need to adjust the numbers previously acquired. To do this, multiply the numbers you have by the percentage given.

Depending upon who built the stronghold, it may extend above ground, with stone towers and battlements, spreading over the sides of hills or mountains. Sundered dwarves always build their strongholds above ground. Deep dwarves and duergar never do.

**Stronghold Type Table**

| 1d100 | Type of Stronghold | Population Modifier |
|---|---|---|
| 01-05 | Major | 200% |
| 06-55 | Secondary | 100% |
| 56-70 | Outpost | 40% |
| 71-80 | Ghetto | 25% |
| 81-90 | Trade Enclave | 10% |
| 91-00 | Family | 5% |

**Major strongholds** are capital cities. Some dwarves who live in them are powerful, and often rule secondary strongholds.

Gully and sundered dwarves never build major strongholds. Gully dwarves may live in them, but they will have moved into them only after the original inhabitants have been killed or driven away.

Major strongholds contain large numbers of dwarves. They are the height of dwarf engineering and construction and are nearly always located around a very profitable mine. The gates of major strongholds are sturdy and flanked with stone towers.

**Secondary strongholds** are the most common. They are similar to major strongholds, but are not as large. They may be independent or allied politically and militarily with a major one. Most major strongholds began as secondary and grew in size and importance over centuries.

**An outpost** is a stronghold that has been founded to protect an area or to expand the realm of a secondary or major stronghold. It may have been a mine that grew in size and began to accommodate more than just the miners who worked there.

**Mines** are established to extract minerals from the earth. The dwarves who live in them are engaged chiefly in the mining of gemstones or in mining and smelting ores. Such an outpost is rarely self-sufficient, but relies heavily on trade or outside supply.

**Trade enclaves** are situated in the towns and cities of other races and subraces for the purpose of conducting trade. They may be fortified houses or stone forts for the traders, their guards, and their families.

**Ghettoes** are areas within cities and towns of other races where clusters of dwarves live. This could be a wealthy city block inhabited by well-to-do dwarf merchants and craftsmen or an impoverished shanty town where dwarves eke out a living as best they can.

**A family stronghold** is home to a single family of dwarves. They are small and often consist of a single house or underground cavern inhabited by a family. Dwarves who live

in family strongholds tend to be very reclusive and clannish.

## The Age of the Stronghold

Because they live so long, dwarves find it easier to measure the passage of time in terms of generations, instead of years. A dwarf thinks of his stronghold as being founded three generations ago, not 1,000 years before. Using the size of the stronghold, determine its age using the Number of Generations column.

The period represented by a generation will vary between subraces. To find the approximate number of years since a stronghold's foundation, multiply the number of generations by the dominant race's life expectancy on the table below.

**Age of Stronghold Table**

| Type of Stronghold | #Generations |
|---|---|
| Major | 2d10 |
| Secondary | 2d6 |
| Outpost | 1d6-1 |
| Ghetto | 1d4-1 |
| Trade Enclave | 1d4-2 |
| Family | 1d6-1 |

On any roll of 0 or less (after modifiers are applied) the stronghold has been founded in the current generation.

**Racial Modifiers:**
Subtract 2 for gully dwarves, 1 for sundered dwarves.

**Life Expectancy Table**

| Type of Dwarf | Life Expectancy |
|---|---|
| Hill | 350 years |
| Mountain | 400 years |
| Deep | 380 years |
| Duergar | 400 years |
| Sundered | 250 years |
| Gully | 250 years |

## Government

Dwarves are traditionally ruled by a king or chief, but these are only two of the possible forms of government available. Major strongholds are always ruled by a feudal king. You may decide otherwise, but this should be a conscious decision, not determined by a random roll of dice. You may select the type of government in other strongholds or roll on the Government Table.

**Government Table**

| 1d100 | Government |
|---|---|

| | |
|---|---|
| 1-10 | Colony |
| 11-20 | Conquered |
| 21-60 | Feudal |
| 61-80 | Guild |
| 81-90 | Oligarchy |
| 91-100 | Theocracy |
| 101-110 | Anarchy |

**Modifiers:**
Add 10 for gully dwarves
Add 10 for chaotic aligned strongholds

**A colony** is a stronghold specifically established by another stronghold and under the direct rule of its parent. Colonies may be founded to expand political power, to subjugate conquered races, or to exploit mineral resources. They may also be established to protect strategically important areas or to redistribute excess population.

**A conquered stronghold** has been conquered by invaders and is now controlled by them. The conquered people may have been enslaved by the conquerors. To discover who the conquerors are, consult the War Table below.

Chances are that the conquered dwarves will not be allowed any weapons or armor. Some may have banded together to form a resistance and may be hiding in secret locations in or near the stronghold.

**Feudal strongholds** are ruled by a dwarf king or one of his nobles. Major strongholds nearly always have monarchs, but even a lowly family stronghold may be ruled by a king whose power extends only to his immediate family.

Secondary strongholds and outposts may be ruled by a king, or by a prince or duke who owes allegiance to a major stronghold.

**A guild stronghold** is ruled by the guild masters of each clan. The guild masters meet to regulate all aspects of life within the stronghold. They may be headed by a guild master who is elected by the others, for one or more years.

**An oligarchy** is an elite group of dwarves, elected or selected on the basis of their wealth, to rule a stronghold. Oligarchies usually work to further their own goals and ambitions. The oligarchic members may be Highborns, Guild Masters, or merchants who have amassed large fortunes.

**A theocracy** is a stronghold ruled by priests of one or more dwarven deities. Theocracies attempt to impose their strictures and beliefs on all the inhabitants of the stronghold. They will typically strive to suppress other religions.

**An anarchy** is a form of nongovernment usually restricted to gully dwarves, but may be found in any stronghold with a chaotic alignment. In anarchy, citizens do what they want, when they want to do it. An anarchy could be tempered by a desire to maintain society by avoiding harm to others, as in a community that is chaotic good. Alternatively, it could be a case of no one having any regard for the effects of their actions on others.

## Attitude

A stronghold does not exist in isolation; it has contact with other strongholds and

races. The nature of these contacts determines the stronghold's attitude and its military strength. The percentage of dwarves in the militia refers to the number of male and female dwarves who regularly drill and carry arms. They are included when determining the armed forces of a stronghold (see Military Forces).

**Attitude Table**

| 1d20 | Attitude | Dwarves in Militia |
|---|---|---|
| 1 | Decadent | 25% |
| 2-3 | Declining | 50% |
| 4 | Dispossessed | 50-100% |
| 5 | Exiled | 50-100% |
| 6-7 | Expansionist | 100% |
| 8-9 | Friendly | 50% |
| 10 | Integrated | 25% |
| 11-20 | Isolationist | 75-100% |

**A decadent stronghold** is one in which traditional dwarf values have been forgotten or are little used. These dwarves will exhibit personality traits more in keeping with other races.

The NPC military forces of a decadent stronghold are likely to be badly trained and fight at B1 to attack and damage.

**A declining stronghold** was once powerful and rich, but has fallen upon hard times. Its mines may have played out, or it may have been struck by a plague that devastated the population. Perhaps the once profitable trade it conducted with neighboring races has ended, and now the stronghold is short of commodities that it once took for granted. A declining stronghold may have been involved in a war that so taxed its resources that real recovery was too expensive.

**Dispossessed** dwarves have lost their ancestral homes and now live in a situation they believe is temporary, even though they may have been there for generations. They have a passion to reclaim their ancestral homes and may even mount expeditions to do so. Or they may accept that their homes are lost and establish new ones for themselves. Even then, groups will periodically set out to attempt to recapture the ancestral stronghold. Consult the War Table to determine who drove them from their ancestral hearths.

**Exiled** dwarves have been expelled by their own kind. This may have been for some evil act or practice, or they may have been forced out by others who were evil. In either case, they seek to return to their homes.

**Expansionist** societies are strong and robust. They seek to expand into new areas, even if they must go to war to acquire them. A stronghold with this attitude is frequently antagonistic toward other races. It may seek to expand underground at the expense of other subterranean races. It may be expanding above ground, perhaps driving elves from a nearby forest so that the dwarves can get at the mineral deposits beneath it.

**Friendly** dwarves are as open as dwarves ever get. This doesn't mean that other races are welcome, but that friendly types are less closed than the rest of their race. They usually have more dealings with humans or elves than others, except for integrated strongholds.

**Integrated strongholds** are those that have become a part of another race's society. They most frequently occur among sundered dwarves or dwarves in trade enclaves. They will retain their traditional ways and lifestyles, but are more knowledgeable about the races they live among than other dwarves. Integrated strongholds are most likely to have trade and military agreements with other races. They are likely to join with armies of other races to defeat a common foe.

**Isolationist** dwarves avoid dealings with all races, and often with other dwarf subraces. They look only inward and keep their gates firmly locked. Visitors are unwelcome and trespassers are dealt with sharply. They usually live in remote or inhospitable regions. Mountain and deep dwarves are frequently isolationist. Some live close to other races, but shun all contact with them.

## Resources

No absolute figures are given for stronghold resources because campaigns frequently have different scales of wealth. The Stronghold Resources Table uses relative divisions of wealth, but does not express what these resources are.

The Starting Gold Modifier is an optional rule that may be applied to a character's starting wealth to take into account the relative wealth of his home stronghold. These modifiers cannot reduce a character below the minimum character funds for his class. That is, if he rolls 5d4x10 gp for his starting wealth, the minimum he could generate is 50 gp; his starting wealth may not fall below this amount.

For example, a warrior from a poor stronghold must subtract 10-60 gp from his starting gold. He rolls his normal 5d4x10 gp for a miserly total of 60 gp. Then he rolls his poor stronghold penalty of 1d6x10 gp and gets -60 gp! Since this would leave him with no money at all, he automatically receives the minimum of 50 gp.

**Stronghold Resources Table**

| 1d20 | Relative Resources | Starting Gold Modifier |
|---|---|---|
| 1 | Very Poor(subsistence) | -1d8x10 gp |
| 2B5 | Poor | -1d6x10 gp |

| Outpost | 0 |
| Ghetto | -3 |
| Trade Enclave | +2 |
| Family | 0 |

## Relationships with Other Player Character Races

Even the most isolationist strongholds must have some sort of relationship with other player character races, even if very distant ones. Strongholds may have friendly ties with other races, or they may be at war with them.

Whether you select the stronghold's relationships, or determine them randomly, a separate determination must be made for each race that lives near the stronghold. DMs who want the detail can determine different relations toward each settlement in the area, even if many of them house the same race.

If the stronghold has a friendly, open relationship with the race, members of the race may visit the dwarves regularly and a few may even live among them. Trade is brisk.

An indifferent relationship is one that is neutral and businesslike. Trade is likely, but few members of the race visit the stronghold. The only ones likely to live among the dwarves are merchants.

In a cautious relationship, the stronghold does not welcome visitors from the other race. Those who enter are searched and watched closely. The stronghold tries to avoid confrontations and giving offense, but relationships are strained and guarded. No one of the outside race lives among the dwarves.

In a threatening relationship visitors are actively discouraged by the threat of violence. They are turned back at the borders or held and interrogated to learn why they are in the dwarves' territory.

In a hostile relationship, intruders are attacked and driven back from the stronghold's borders. Armed forces are ready to repel invaders. Relationships are strained and an uneasy peace might exist as described under War/Peace.

In a war situation, combat is regular and serious. The DM can decide who started the war and why. In any case, all of the stronghold's resources are allocated to gaining victory over the enemy.

**Relationship to Other Player Character Races**

| 1d20 | Elves | Gnomes | Halflings | Humans |
|---|---|---|---|---|
| 1 | Friendly | Friendly | Friendly | Friendly |
| 2 | Indifferent | Friendly | Friendly | Friendly |
| 3 | Indifferent | Friendly | Friendly | Friendly |
| 4 | Indifferent | Friendly | Indifferent | Indifferent |
| 5 | Cautious | Indifferent | Indifferent | Indifferent |
| 6 | Cautious | Indifferent | Indifferent | Indifferent |
| 7 | Cautious | Indifferent | Indifferent | Indifferent |
| 8 | Cautious | Indifferent | Indifferent | Indifferent |
| 9 | Cautious | Indifferent | Indifferent | Indifferent |
| 10 | Threatening | Indifferent | Cautious | Indifferent |

| | | | | |
|---|---|---|---|---|
| 11 | Threatening | Indifferent | Cautious | Cautious |
| 12 | Threatening | Indifferent | Cautious | Cautious |
| 13 | Threatening | Cautious | Cautious | Cautious |
| 14 | Threatening | Cautious | Cautious | Threatening |
| 15 | Hostile | Cautious | Threatening | Threatening |
| 16 | Hostile | Cautious | Threatening | Threatening |
| 17 | Hostile | Threatening | Threatening | Hostile |
| 18 | Hostile | Threatening | Threatening | Hostile |
| 19 | At War | Threatening | Hostile | Hostile |
| 20 | At War | Hostile | Hostile | At War |
| 21+ | At War | At War | At War | At War |

**Modifiers:**

**Stronghold Alignment**

| | |
|---|---|
| lawful good | -2 |
| lawful evil | +2 |
| neutral evil | +2 |
| chaotic neutral | +1 |
| chaotic evil | +5 |

**Race's Alignment**

| | |
|---|---|
| lawful good | -2 |
| neutral good | -1 |
| lawful neutral | -1 |

**Stronghold's Attitude is:**

| | |
|---|---|
| Expansionist | +5 |
| Friendly | -5 |
| Isolationist* | 0 |

If the stronghold is isolationist, treat all results of 4 or less as 9's on the Relationship Table.

## War and Peace with Other Races

Dwarves not only have dealings with other human and demihuman races, they also have to contend with evil monsters and other races below ground. A war may have been raging for generations or it may have just begun. To determine if the stronghold is at war with any underground races, use the War/Peace Table.

**War/Peace Table**

| **1d20** | **Situation** |
|---|---|
| 1-10 | Peace |
| 11-15 | Uneasy Peace |
| 16-20 | War |

**Attitude Modifiers:**

| | |
|---|---|
| Declining | +2 |
| Dispossessed | +10 |
| Expansionist | +5 |
| Friendly | -5 |

If the stronghold is at peace now, it may have been at war in the past. Roll on the Peace Table to determine how long the stronghold has been at peace.

**Peace Table**

| 1d10 | Duration |
|---|---|
| 1 | 1d12 months |
| 2 | 1d6 years |
| 3 | 2d6 years |
| 4 | 3d10 years |
| 5 | 5d10 years |
| 6 | 1d4 generations |
| 7 | 2d6 generations |
| 8 | 2d10 generations |
| 9-10 | Always at peace |

If the stronghold has been at war, roll on the War Table to determine its enemies. To discover the length of the war, roll on the War Duration Table.

The reasons for peace are as varied as the reasons for war. The enemies may have been eliminated, or injured so badly that they moved to another place. The war may have collapsed a major tunnel system, sealing off the defenders from their attackers.

An uneasy peace is one in which friction still exists between the dwarves and their enemies. The stronghold may again go to war, but one or both sides are licking their wounds. Diplomatic incidents may still occur over disputed territory.

Roll on the War Table to determine the stronghold's enemies. To establish the length of the peace, roll 1d8 on the Peace Table.

Even defeated enemies may still be in a position to threaten a stronghold, and may be preparing a renewed assault even now. Bands of orcs, for example, could have been defeated three generations ago. Since then, they have been breeding and enlisting other orcs and giants against the day when they will storm the stronghold's defenses.

An Aggressive stronghold is likely to be preparing a preemptive attack against its foe. An Isolationist one will be engaged in strengthening its defenses, anticipating an attack. A Decadent stronghold is likely to ignore the buildup, while a Declining one may be powerless to do anything about it and may well be overrun when the attack comes.

## War

To determine who is at war with the stronghold or has been at war with it, choose or roll on the War Table. Feel free to select races not on the table if that suits your campaign. Creatures on the War Table are listed by general category only. All giants are

included in the giant entry. Some races may have other races serving them as troops or slaves. As always, ignore any illogical results.

**War Table**

| 1d100 | Enemy |
|---|---|
| 01-05 | Beholders |
| 06-10 | Dragons |
| 11-20 | Drow |
| 21-30 | Dwarves* |
| 31-35 | Giants |
| 36-40 | Gnolls |
| 41-50 | Goblins |
| 51-60 | Hobgoblins |
| 61-65 | Lizard Men |
| 66-70 | Mind Flayers |
| 71-75 | Ogres |
| 76-85 | Orcs |
| 86-90 | Trolls |
| 91-95 | Undead |
| 96-98 | Roll two more times |
| 99-00 | Roll three more times |

* If dwarves are rolled they will be duergar if the stronghold is good or neutral in alignment. If the stronghold is evil, roll on the Main Subrace Table to determine their enemies. These enemies can also be evil dwarves (*i.e.*, duergar can fight duergar).

## Duration of the War

The length of the war is determined first in terms of years, and then generations. If the duration of the war is more than the age of the stronghold, then the stronghold has been at war since its founding. Its inhabitants have never known peace.

**War Duration Table**

| 1d10 | Duration |
|---|---|
| 1 | 1d8 days |
| 2 | 1d4 weeks |
| 3 | 1d12 months |
| 4 | 1d6 years |
| 5 | 2d6 years |
| 6 | 3d10 years |
| 7 | 5d10 years |
| 8 | 1d4 generations |
| 9 | 2d6 generations |
| 10 | 2d10 generations |

## Types of War

Once it has been determined that a war is in progress, or that one occurred in the stronghold's past, you can then determine what type of war it was.

**War Type Table**

| 1d10 | War Type |
|---|---|
| 1-3 | Sporadic |
| 4-5 | Steady |
| 6-8 | Escalating |
| 9 | Siege |
| 10 | Invasion |

**Attitude Modifiers:**

| | |
|---|---|
| Declining | +3 |
| Isolationist | +1 |

**Sporadic:** The war consists of sporadic skirmishes and border incidents. No major battles have been fought and neither side is making any real progress, or even pushing the point very hard. Enemies rarely penetrate far into the stronghold and are content just to test its defenses every once in a while.

**Steady:** A steady war consists of constant pressure maintained by both sides. Border skirmishes are common and the enemy makes regular raids against the stronghold. The stronghold sends forces to attack enemy camps and lairs.

**Escalating:** The war steadily increases in scale. Both sides are adding more resources in an effort to prevail. Large battles are likely and the stronghold's militia is always armed and ready to fight. Wars may continue to escalate for years, or they may quickly culminate in one decisive battle.

**Siege:** One side has adopted (or been forced to adopt) a completely defensive stance. Perhaps goblin forces surround the stronghold, cutting it off from all outside contact. Or perhaps the dwarves have done the same to a giant fortress. In either case, constant pressure must be maintained against the besieged. Attempts are made to pollute or poison water supplies, destroy food reserves and crops, and shut off supplies of air to underground defenders. The defenders may send out parties to secure aid from other strongholds, or conduct sorties to disrupt the attackers.

Life in strongholds under siege is much harsher than normal. Food and water are often in short supply and the inhabitants must contend with the constant threat of storming parties, disease, and declining morale.

**Invasion:** The primary defenses of the stronghold have been overrun and enemy forces occupy substantial portions of the stronghold. Alternatively, the dwarves may have advanced from their stronghold into the enemy's territory in force. The goal may be to punish raiders, or capture ground, or conquer and subjugate the enemy, or eliminate the enemy entirely.

## Militia

We have already established the number of citizens in the militia on the Attitude

Table. Look up the dominant race and multiply the total militia number by the percentage given to determine how many militia members are of the dominant race.

All members of the militia are 1st-level. Their leaders are usually of higher levels and are in addition to the total number of militia in a stronghold.

The armor type is assigned for an average stronghold. This may be adjusted to reflect the wealth of the stronghold. The militia of a poor stronghold may only be able to afford leather armor, while a rich one could outfit its militia in banded or even plate mail armor.

**Morale:** An average morale is furnished for each militia. This is modified according to the attitude of the stronghold.

**Leaders:** The number and experience level of leaders is determined by the number of dwarves in the militia. In the case of hill dwarves, for example, for every 40 militia members there is a 2nd-to 6th-level leader present. For every 160 militia there is a 6th level leader present, and so on.

**Morale Modifiers:**

| | |
|---|---|
| Decadent: | -3 |
| Declining: | -2 |
| Expansionist: | +2 |
| Isolationist: | +1 |

## Deep Dwarves

Morale: Elite (13)

Deep dwarf militia are equipped with scale mail armor and carry shields.

| **Weapons** | **Total Militia** |
|---|---|
| Axe and light crossbow | 15% |
| Axe and heavy crossbow | 15% |
| Axe and hammer | 25% |
| Spear and sword | 25% |
| Pick and hammer | 10% |
| Two-handed sword | 10% |

**Deep Dwarf Leaders (Plate mail and shield)**

| **# Militia** | **Class** | **Level** |
|---|---|---|
| every 40 | Warrior | 3 |
| 50+ | Warrior | 7 |
| | Warrior | 4 |
| 100+ | Warrior/Priest | 4-7/5-8 |
| 200+ | Warrior | 9 |
| 300+ | Warrior | 10 |
| | Warrior | 8 |
| | Warrior/Priest | 7/8 |
| | Warrior/Priest | 5/5 |
| | Warrior/Priest | 4/4 |

## Duergar

Morale: Elite (13)
Duergar militia are equipped with chain mail armor and carry shields.

| Weapons | Total Militia |
|---|---|
| Pick and hammer | 20% |
| Spear and pick | 20% |
| Spear and hammer | 20% |
| Pick and light crossbow | 20% |
| Hammer and sword | 10% |
| Hammer and heavy crossbow | 10% |

**Duergar Leaders (Banded mail and shield)**

| # Militia | Class | Level |
|---|---|---|
| every 4 | Warrior | 2 |
| every 9 | Warrior | 4 |
| 50+ | Warrior | 6 |
| | Warrior | 4 |
| 100+ | Warrior/Priest | 3-6/4-7 |
| 300+ | Warrior | 10 |
| | Warrior | 8 |
| | Warrior/Priest | 7/8 |
| | Warrior/Priest | 5/5 |
| | Warrior/Priest | 4/4 |

## Gully Dwarves

Morale: Unsteady (7)
Gully dwarf militia is equipped with leather armor and shields. They only fight when forced to. The first reaction of most gully dwarves, militia or otherwise, to danger is to drop their weapons and run away!

| Weapons | Total Militia |
|---|---|
| Any they can scavenge | 100% |

**Gully Dwarf Leaders (Chain mail and shield)**

| # Militia | Class | Level |
|---|---|---|
| every 4 | Thief (Leather) | 2-6 |
| every 5 | Warrior | 2-4 |
| every 10 | Warrior | 2-6 |
| 50+ | Warrior | 8 |
| 100+ | Warrior | 10 |
| | Priest | 1-10 |

## Hill Dwarves

Morale: Elite (13)
Hill dwarf militia is equipped with chain mail armor and shields.

| Weapons | Total Militia |
|---|---|
| Sword and spear | 20% |
| Sword and light crossbow | 15% |
| Axe and hammer | 25% |
| Sword and polearm | 10% |
| Axe and heavy crossbow | 10% |
| Axe and mace | 10% |
| Hammer and pick | 10% |

**Hill Dwarf Leaders (Plate and shield)**

| # Militia | Class | Level |
|---|---|---|
| every 40 | Warrior | 2-6 |
| 160+ | Warrior | 6 |
| | Warrior | 4 |
| 200+ | Warrior/Priest | 3-6/4-7 |
| 320+ | Warrior | 8 |
| | Warrior | 7 |
| | Warrior/Priest | 6/7 |
| | Warrior/Priest | 4/4 |

## Mountain Dwarves

Morale: Elite (13)
Mountain dwarf militia is equipped with chain mail armor and shields.

| Weapons | Total Militia |
|---|---|
| Sword and spear | 30% |
| Sword and light crossbow | 10% |
| Axe and hammer | 25% |
| Sword and polearm | 05% |
| Axe and heavy crossbow | 10% |
| Axe and mace | 10% |
| Hammer and pick | 10% |

**Mountain Dwarf Leaders (Plate and shield)**

| # Militia | Class | Level |
|---|---|---|
| every 30 | Warrior | 2-6 |
| 150+ | Warrior | 6 |
| | Warrior | 4 |
| 200+ | Warrior/Priest | 3-6/4-7 |
| 300+ | Warrior | 8 |
| | Warrior | 7 |
| | Warrior/Priest | 6/7 |

| | | |
|---|---|---|
| | Warrior/Priest | 4/4 |
| | Warrior/Priest | 4/4 |

## Sundered Dwarves

Morale: Steady (11)
Sundered dwarf militia is equipped with ring mail armor and shields.

| **Weapons** | **Total Militia** |
|---|---|
| Axe and sword | 15% |
| Axe and spear | 15% |
| Axe and light crossbow | 15% |
| Polearm and mace | 05% |
| Polearm and hammer | 10% |
| Hammer and heavy crossbow | 15% |
| Pick and dagger | 10% |
| Mace and sword | 10% |
| Two-handed sword | 05% |

**Sundered Dwarf Leaders (Chain mail and shield)**

| **# Militia** | **Class** | **Level** |
|---|---|---|
| every 50 | Warrior | 2-7 |
| 100+ | Warrior | 8 |
| | Warrior | 5 |
| 150 | Warrior/Priest | 2-7/3-8 |
| 300+ | Warrior | 9 |
| | Warrior | 8 |
| | Warrior/Priest | 7/8 |
| | Warrior/Priest | 3/3 |
| | Warrior/Priest | 3/3 |

## Special Forces

In addition to militia, a stronghold may have special types of forces. These are described in the Character Kits and include Hearth Guards, Battleragers, and Vermin Slayers, among others. The number of special forces should not be more than 10 to 20% of the total number of male dwarves present in a stronghold. For simplicity, add these to the number of male dwarves in the militia rather than subtracting them.

## War Machines

A stronghold may also have war machines available. These are described in Chapter 9. Roll once for every 50 militia members in the stronghold.

**War Machine Table**

| **1d10** | **# War Machines** |
|---|---|

| | |
|---|---|
| 1-5 | None |
| 6-8 | 1 |
| 9 | 2 |
| 10+ | 3 |

**Attitude Modifiers:**

| | |
|---|---|
| Decadent: | -3 |
| Declining: | -2 |
| Isolationist: | +1 |
| Expansionist: | +2 |

### Animals

Certain strongholds are guarded by animals. Select these according to whether the Animal Master kit is being used, and the subrace of the dwarf. Suitable animals include bears and wolves for mountain and hill dwarves, steeders for duergar, giant lizards for deep dwarves, giant rats and beetles for gully dwarves, and dogs and wolves for sundered dwarves.

### Total Strength

Finally, add up the number of leaders in the militia, plus special troops, and add these to the number of dwarves in the stronghold to determine its total strength.

## The Stronghold of Bazzakrak

In this example, we are going to create a major stronghold for mountain dwarves. The DM has already decided that this is to be a powerful and expansionist stronghold. However, since the details have not yet been worked out, he consults the stronghold design sequence for inspiration. He will choose those elements he wants from the design sequence, rather than rely on random die rolls. But, working through the sequence, he allows the dice to determine certain features for him.

### Naming the Stronghold

The DM has already come up with a name and, because he is creating a mountain dwarf stronghold, there is no need to roll for a primary subrace. He wants the stronghold to be very large so he selects the maximum number of mountain dwarves possible, 350. He notes this on the design sheet.

### Subraces Present

As he looks over the next part of the design sequence, the DM decides that it would be fun to have a few other subraces of dwarves present. He selects two: duergar and gully dwarves. He also chooses the maximum number possible, 20 duergar and 12 gully dwarves.

Rather than generate separate strongholds for the subraces, the DM assigns them as part of the mountain dwarf stronghold. He decides that the duergar once lived beneath the stronghold, where they fought the mountain dwarves. Two generations ago, the duergar were finally defeated and most of them fled. A few, however, were captured and imprisoned. These later renounced their evil ways. When they did so, they were given their freedom and permitted to remain within the stronghold. Although they have not married into any mountain dwarf clan, the duergar have proved themselves to be loyal and valuable members of the stronghold. They remain a distinct group, but have served admirably in the stronghold's military forces. They even helped to defend against other duergar who attacked the stronghold.

The gully dwarves, on the other hand, have never been really integrated into the stronghold. They are outcasts who live and work in the garbage pits. They have been here for four generations, and were first attracted to the stronghold by wondrous tales of "huge treasure pits," filled with broken items and bones. The gully dwarves serve a useful role recycling garbage. They pretty much keep to themselves and rarely venture far from the garbage pits. They continue to follow the ways of gully dwarves. A wily deep dwarf merchant sells whatever useful items the gully dwarves recover and provides them with trinkets and toys in exchange. While few mountain dwarves will socialize with them, the gully dwarves are recognized as performing a useful and valuable function within the society.

Without consciously doing so, the DM has also introduced a deep dwarf merchant into the stronghold. To keep matters simple, he decides that this deep dwarf is the only one present. He is the sole survivor of a deep dwarf stronghold that was overrun by drow.

The DM now has three other subraces present in his stronghold, but he decides not to reduce the number of mountain dwarves accordingly. Bazzakrak is to be a very large stronghold.

## Alignment

As he wants Bazzakrak to be expansionist, the DM chooses lawful neutral for its alignment. This allows it to impose the will of its leaders on others without being too concerned about whether their actions are seen as 'good'. He does not want the player characters to be evil, so he dismisses lawful evil as a possible alignment. The other alignments do not fit his conception of how the stronghold operates, so he does not consider choosing one of those. When he later discusses alignments with his players, he decides that he will give them the choice of lawful good, lawful neutral, or neutral good for their characters' alignments. But he also knows that it may be necessary to allow other alignment choices depending on the character kits he makes available to them.

## Size of Bazzakrak

As it is a major stronghold, the DM now increases the numbers of dwarves present by 200%. This gives him 700 mountain dwarves, 24 gully dwarves, and 40 duergar. At first he considers not doubling the number of duergar, but later thinks it would be good to allow them as player characters. He increases the number of deep dwarves to three by giving the merchant a son and a daughter. Now the son and the daughter can become

player characters, if any of the players wish to play them.

### Since Time Began

The DM wants Bazzakrak to be very old, so he decides that 20 generations have passed since its founding. This equates to 8,000 years, a very long time for a stronghold to have grown and expanded.

Bazzakrak is to be very important in the DM's campaign world, and he decides that it was founded by the mountain dwarves' god of war. Not only does this fit in with his conception of the stronghold, but it also gives the stronghold a religious significance that is in keeping with its importance in the campaign.

### Death to Our Enemies

Originally, the DM intended to make Bazzakrak a feudal stronghold, but it now occurs to him that, because Bazzakrak was founded by a god, it would be logical to have it ruled by the priests of that god. He determines that the high priest is also the king, making the stronghold a feudal theocracy ruled by warrior/priests. He decides as well that the king's office is hereditary, passing to the king's eldest son.

A stronghold ruled by warrior/priests fits neatly into his original conception of an expansionist stronghold. On the stronghold design sheet he notes that all of the stronghold's mountain dwarves and duergar are in its militia. The gully dwarves keep to themselves, so there is no need to include them in the militia (they wouldn't be much help anyway).

### The Riches of the Earth

As Bazzakrak is to be the largest stronghold in his campaign world, the DM wants it to be a wealthy one. It will not only have the resources to pursue its ambitions of conquest, but the player characters will benefit from the optional starting gold rules when they first outfit their characters.

### Threatening the Enemy

Bazzakrak is an expansionist stronghold, but does not have any ambition or desire to spread above ground. Therefore, the DM is not concerned about its relationship to other player character races apart from the gnomes. He determines randomly that the relationship with the gnomes is "cautious." Gnomes are not welcome at Bazzakrak, but the stronghold does not seek to conquer gnomish territory.

Then, out of curiosity, he decides to roll relationships with elves and humans, too (ignoring halflings because he has decided that none live in the area). He gets an "at war" result with the elves, but downgrades that to "hostile." Relations with the humans are "indifferent," so the two races have little to do with each other.

### War is Our Life

Up until now, the DM has not really considered whose territory the dwarves of Bazzakrak are expanding into. He knows that at one time, Bazzakrak defeated a force of duergar and that the duergar have attacked the stronghold within the current generation. So it is safe to assume that the stronghold is at war with them. The two subraces are competing for the same underground territory and resources. But this is all too neat. An expanding stronghold would also have come into contact with other subterranean races. He adds trolls and goblins to the list of the stronghold's enemies.

Bazzakrak is now at war with three races. It is time to determine how long these wars have been going on. The war with the duergar has been sputtering on for at least two generations. The DM decides to randomly roll for its duration, using 2d6, and discovers that the war has been fought, off and on, for eight generations. It has been a steady war of occasional small skirmishes.

The DM has no clear idea about the wars against the trolls or goblins, so he lets the dice decide. He rolls 1d10 to determine the Troll War's duration and gets a 5--2d6--years with a follow-up roll of nine years. Checking the war type, he gets a sporadic war. This looks good. The dwarves expanded into troll territory nine years ago. Since then the two races have been fighting. The dwarves have not pushed any further into troll country, and the trolls content themselves with minor raids.

The DM then discovers (through the magic of dice rolling) that the war with the goblins has only just begun, four weeks before. This war is much more intense. It is an invasion; the dwarves have entered the goblin's territory and are intent on wiping out their hated enemies. This is also good for his campaign, as it allows his 1st-level player characters to fight in the front line without too much danger of them being killed.

After a bit of thought, the DM decides that the war will spread. There are more goblins than the dwarves anticipated, plus they have allies who may come to their aid (the trolls are logical friends at this time). The war could even turn into a subterranean world war, as more races are drawn into it. But all that is for the future. The DM can provide this extra information after he sees how the actual campaign progresses.

### The Militia of Bazzakrak

With war on three fronts, Bazzakrak needs a well-equipped militia. As a wealthy stronghold, this is not a problem. Its mountain dwarf and duergar militias wear plate mail armor and enjoy higher-than-normal morale.

### Special Forces of Bazzakrak

To allow his players a wide choice of character kits, the DM does not specify any special forces. He is going to wait to see what kits his players choose. Then he'll decide how many special forces he wants the stronghold to have. As an alternative, the DM may decide that he wants the adventuring party to consist primarily of Wayfinders and Vermin Slayers and possibly a Vindicator or Battlerager along to spice things up. In this case, he would define which special forces are available, and this would limit the choices available to his players.

### War Machines and Animals

He has no clear idea of what he wants here. He decides to leave these sections until he knows which characters his players choose.

### Finishing Touches

The DM has completed the design sequence and has created the bare bones of Bazzakrak. He now needs to flesh out some NPCs and draw a few maps. Once he's done that, its ready for play. Later he can elaborate upon its history and background, as his campaign progresses or as he feels inspired. For now, Bazzakrak provides sufficient information to give him and his player characters the impression that it is a real and vibrant place.

# Chapter 11: Designing Dwarf Campaigns

This chapter is for DMs who want to design the background of a dwarf campaign. We have looked at the creation myths of the dwarves, how they and the world were formed, how dwarves have developed, their history, why subraces of dwarves exist, and how dwarves interact with other races. We shall now explore the kinds of campaigns that can be run using dwarves as the main characters.

## Creating a History

The creation text of Marak is one of many possible backgrounds for a dwarf campaign. It revealed how a stronghold of dwarves might view the world and their place in it. You could use this as part of your campaign background or develop your own myth cycle. The myths may be accepted by all dwarves, or may only be held by one stronghold or subrace. The creation myth may be believed as truth by all dwarves, but with dissension among elements of related history, such as the names of the heroes or the precise role of the gods.

In the first creation myth all dwarves began life together and later migrated to new strongholds. They could trace their lineage back to the First Dwarves, their common ancestors. Since all of them came from common stock, subrace variations had to be explained.

As an alternative, after they were created, they could have been placed by the gods in caverns around the world. This would permit them to live in any place or situation, without having to make up stories about how they spread across the world. They could live beneath tropical islands, under ice caps, or steamy jungles, as well as the more temperate hilly and mountain country. They may have been isolated from others and their developments and subsequent histories may have diverged in countless ways. In such cases, you will need to decide how these dwarves would differ from the more traditional hill dwarves of the *Player's Handbook* and Monstrous Compendium Appendix. Do they constitute definitive subraces of dwarves, with marked differences in appearance and outlook, or are they just hill dwarves living in unusual places?

## Choices of Subraces

As DM you have full control over which dwarf subraces to include in your campaign world, either as player or nonplayer characters. You may decide that some of these subraces do not exist in your campaign world at all. In Chapter 4, six different subraces are available for player characters. You do not have to use all of them. You may wish instead to restrict players to hill and mountain dwarves.

If dwarves are an underground race, with little surface contact, why are hill and mountain dwarves different? The distinctions may have arisen from an encounter with other races such as elves or humans, or because the mountains are also inhabited by evil monsters, and the hills are less prone to monster incursions.

Mountain dwarves have far less contact with humans and elves, who only expand into the mountains in search of mineral wealth or when population pressures or warring enemies force them into new areas.

If, in your campaign world, the gods created the different subraces of dwarves, then there is no reason to come up with any other rationale why there are several kinds of dwarves in the world. The creation myth explains the differences. If not, you need to include the separation of the subraces as part of your history of the dwarves.

If you have already worked up the mythic history of your world, using the suggestions in *The Complete Priest's Handbook*, all you need to decide is how dwarves fit into that history.

Alternatively, you may create your own myths for your world. There is no reason why dwarves and humans should agree how the world was created. They could share common beliefs, but with more emphasis being given to the gods of each race and their role in the mythic history of the world.

## The Importance of Myth

You will need to decide on the importance of dwarves in your campaign world. If humans are the dominant race, then much of what follows can be worked into a human oriented campaign world. If dwarves are to play an important role in the campaign, then it is important to have more fully defined creation myths and histories for the dwarves.

However you design your campaign setting, you need to make some key decisions. Do dwarf myths tell the whole story? Do other races share the dwarf myth? Does each race and culture have its own interpretation of a common myth? Was the world created by one being or by many? What role did each being take in creating it? Was it the god or gods of one particular race who created the world? Or was the world created by a variety of racial gods, each one concerned with protecting his own creation?

In some belief systems, the world may always have existed. Creation myths would then be concerned with the creation of a particular race and their place within it. You don't have to work up all the answers in detail, all you need is a general framework, so that you can develop other aspects of the campaign's design around the mythos.

Some readers may be wondering why they should bother with this at all. Yes, you could just define things as they are now, with no regard for the distant past. But a well-developed mythology makes your campaign more vibrant. The religious beliefs and mythological backgrounds of dwarves, humans, and other key races helps not only to

explain, but to define, racial friendships and animosities. A history of the races can be built on that background to explain the times and events of your campaign.

How much you tell your players is up to you, depending on the type of campaign you are running. Remember that no religion holds all the answers to the questions of the universe. Where gaps disturb our understanding, people tend to make up suitable stories to fill them. Uncomfortable truths sometimes get hidden this way. Even when mythic history is largely true, each race has a vested interest in emphasizing its own importance and supporting its racial views. The history of a war between dwarves and elves is likely to sound very different when recounted by those two sides.

Bear in mind that, given the pride and stubbornness of the dwarves, they are likely to believe that they were the first race, even if other races claim (and can support their claims) that they existed before the dwarves. The dwarves may even see other races as failed attempts to produce beings as perfect as dwarves.

## The Importance of the Gods

You will also need to decide how important the dwarven gods are to the dwarves. Do the gods govern all aspects of life, or are they only worshipped for certain key functions or to request favors? Do the gods hand down laws as masters addressing servants, or do they simply light the way and let their followers interpret signs as best they can?

You need to determine the size of the dwarven pantheon. This is particularly true in a campaign that involves priest player characters. Each of the gods within a pantheon should have some special attribute for which he or she is venerated. Some may have more than one. Typical attributes for dwarven gods are arts and crafts, each art and craft with its own deity. War, justice, earth, elemental forces, good, metalwork, race, and strength all have their patron deities. Given that dwarves breed so slowly, and that this is seen as a reason for their decline, an interesting religion might deal with fertility. Perhaps the fertility goddess is dead or imprisoned. If she is held prisoner, where and by whom?

*The Complete Priest's Handbook* will be very useful in helping to create and populate your pantheon. It includes 41 sample religions suitable for dwarves. DMs interested in creating well-balanced and detailed religions will find it an invaluable tool.

When designing a dwarven pantheon, it is not necessary to flesh out all of the gods. A few of the major deities are enough to start with; others can be added as needed. As with all gods, a few decisions must be made about their abilities.

Are they immortal? Do gods live forever, or will they eventually age and die? Are they indestructible? The gods may be immune to damage, or they may be injured. Does rapid healing follow injury, or can they actually be killed?

How much influence do the dwarven gods exert upon the world? The gods may use the dwarves as pawns in a cosmic game, or they may be remote from daily events. In a campaign where each race has its own pantheon, it is advisable to let the various races of gods take a background role, rather than competing for power.

How interested are the dwarven gods in the world? They may not take any interest in the world on the surface and be content to restrict their activities to the subterranean realms. Why, for example, would a dwarvish God of War be concerned with conquering the agricultural lands belonging to humans or halflings? He would be far more interested in capturing the mineral rich lands beneath the surface, and leave the world above to

other races. Dwarven gods of the arts and crafts may also be so absorbed in the development of their own skills that they are not interested in other affairs.

What are the gods' intentions toward the world? This is an important question. What do the dwarven gods want with the world and its races? The gods might want to see their own race dominant, or at least protected. Or they may simply wish to pursue their own affairs. Most dwarven deities may be content to be properly recognized and worshipped, but don't overlook the activities of evil or chaotic gods who act out of malice or a sense of mischief. They may be more interested in upsetting the stable lifestyle of the dwarves and their fellow gods than with establishing their own power base. Perhaps they are so discontented that they are prepared to lead evil races against the dwarves in order to destroy the other gods.

## The Races of the World

You also need to decide whether dwarf creation stories for other races are true or whether they are simply the views of the dwarves.

Humans are traditionally seen as a new race in the process of seizing power from the declining elder races of elves and dwarves, or as having already usurped them. This may be the case in your world, or you may have human lands existing far from dwarf and elf territory with little contact between them. Another interesting twist is to look at the earlier stages, when humans are still an upstart race in a world dominated by dwarves and elves.

## Wars and Conflicts

Unless dwarves in your world are a relatively recent race, they will have a long history of conflict behind them. These conflicts could have involved strongholds of dwarves fighting each other, or their traditional goblin, orc, hobgoblin, and giant enemies. Wars against humans or elves may also have occurred.

### Dwarf Versus Dwarf

Conflicts between dwarves could have led to the original separation of the subraces. Unless you are running a deep earth campaign, it's best to allow hill or mountain dwarves to be the victors of such conflicts, so that they retain possession of the strongholds that are higher and better positioned.

Conflicts may take place between strongholds of hill dwarves. A real or imagined slight could cause them to turn on each other. Such a war could rage for hundreds or even thousands of years. It may even have gone on for so long that its original causes have been forgotten and all either side now knows is their vehement hatred for the enemy.

Civil wars are, alas, a possibility within in a stronghold. A major disagreement between clans may lead to a stronghold being split into factions, each controlled by separate clans more than prepared to make war upon the others.

Intradwarven wars may also be caused by competition over mineral rights, particularly where rich lodes of gold or mithral exist. Disputes may arise over possession of a powerful artifact, such as an anvil capable of creating magical weapons.

Wars may also be initiated by the intervention of evil deities, or by other races who succeed in fomenting trouble between rival strongholds. Duergar are invariably ready to attack other strongholds in order to capture slaves and loot, or merely to exercise their hatred of other dwarves.

## Dwarves Against Evil

Dwarves have traditionally fought long and bitter wars against their evil enemies beneath the earth. This struggle has become one of "kill or be killed." As well as goblins, orcs, hobgoblins, and giants, the war could involve drow, mind flayers, ogres, trolls, or any other intelligent race that inhabits the deep earth.

In some worlds these wars have raged constantly for centuries. In others they are sporadic affairs where evil races make small gains, or are pushed back each time they try to advance. Entire mountain ranges once filled with majestic dwarf strongholds may have fallen to hordes of goblins and orcs. These once exalted halls are now infested with evil monsters. The descendants of those who were driven from their ancestral halls now long to drive out the goblins and restore those halls to their former splendor.

Situations can exist where the dwarves are constantly under siege. They beat back the orcs, but orcs breed faster than dwarves do, so it is only a matter of time before the orcs' losses are replenished. (By extension, it can be seen that in order to prevail in a war against any of the fast-breeding goblinoid races, dwarves must inflict much heavier casualties than they suffer. In fact, dwarves must be very careful to avoid heavy losses in any but the most desperate engagements.) Dwarves have been known, grudgingly, to turn to humans and elves for assistance in times of need.

## At War with Humans and Elves

Dwarven relationships with humans and elves are usually cautious. Dwarves may have fought elves or humans over mineral rights or other disputes. Elves are often haughty toward the dwellers underground and this attitude makes for tense interracial understandings.

Previous conflicts could have ended in stalemate with neither race gaining the upper hand. A tenuous peace may now exist between them. Alternatively, a war could have been fought that ended with few dwarves left alive. In self-defense, the survivors shut themselves in their strongholds and severed all ties with other races.

Another possibility is that, in a war between elves (or humans) and dwarves, the dwarves emerged victorious. The difficulty is that success took a very heavy toll upon dwarf lives and resources. The victors returned to their strongholds only to come under attack by goblins and orcs. Already weakened by the first war, they found themselves unable to defeat the monsters and were driven from their stronghold. During the years that followed, the elves (or humans), recovered from the war and prospered, while the dwarves struggled to survive. The dwarves would be very resentful toward the elves (or humans), even accusing them of inciting the goblin/orc attacks. (And at the same time, the elves and humans might seize the opportunity to work some revenge on the enemy that so recently humiliated them.)

These are broad historical scenarios, even the most cataclysmic of wars may have

taken place so long ago that no one really remembers it. But dwarves and elves, especially, have long memories. The resultant racial animosity survives and trust between the races has vanished.

Relationships between humans, elves, and dwarves do not have to be antagonistic. They may simply fail to understand one another and find it difficult to adapt to the ways of the other. Rather than risk conflict, trade and other deals could be carried out diplomatically, in order to minimize the possibility of misunderstandings.

### Dragon Wars

Dragons, with their love of treasure, have always looked with envy on the wealth of the dwarves. Dragons cannot mine gems and ores and dwarves can. Dragons look at dwarves as a race that has been created, not only to supply them with wealth, but with nourishment as well.

Dragons have taken over entire strongholds, killing or driving the inhabitants away. These strongholds may be held by a single dragon, families of them, or by one dragon with hordes of other evil allies.

The dwarves would then attempt to take back their homes and treasures. They may not react favorably when humans and other races drive out the dragons, only to keep dwarven ore and gems for themselves. When the dwarves demand their treasures and are told that they cannot have them, it is likely to lead to war.

## Campaign Environments

In the standard adventure campaign characters are drawn from a wide range of classes and races. The heroes travel through a variety of lands, meeting different races and cultures. Your knowledge of dwarves may now be used to good effect to develop strongholds, and to provide additional background information for player characters.

### The All-Dwarf Party

In this campaign all of the characters are dwarves. There are no wizards in the party. Warriors, priests, thieves, warrior/priests, and warrior/thieves may be present, but there are no dwarf wizards. There may be reasons for human wizards or gnome illusionists to join the party to alleviate the deficiency in magic. You may decide to retain the true dwarven flavor by allowing wizards only as opponents.

This type of campaign works well when the dwarves are beset by an outside threat. Perhaps the stronghold is under attack by hordes of monsters and no other assistance can be secured.

### The Outcasts' Party

In the outcast, party the player characters are principally or exclusively dwarves, but are outcasts from their own society. Perhaps they befriended an elven wizard or warrior/wizard. They may have been falsely accused of some heinous crime, murdering their lord or betraying their own stronghold to orcs. They would wander the world, above

or below ground, seeking to clear their good names and to become wealthy and famous heroes.

### The Single Class Party

Here, all the characters have the same class. They are all warriors, priests, thieves, or multi-classed. They may be part of the same military force, temple, or guild, and may have been given a mission to perform. This campaign can be very exciting while the group has a clear and common goal. If there is no goal, however, the campaign can quickly fall apart. For this reason it works best as a limited-duration adventure, with everyone understanding that the group of characters will disband when their quest is completed and a new group will be created.

### The Vendetta Party

This campaign is similar to the standard adventuring party except that it emphasizes interracial animosity. The characters are members of different races (or subraces) and each has a grudge against the others. There may have been fierce wars and broken alliances in the recent past, so that there is no trust among them. This type of party needs to have clear adventuring goals that depend upon the cooperation of the whole party, in order to achieve a final purpose. Otherwise, its members will fall to squabbling endlessly, and it would probably end in them killing each other. Ideally, by the end of the mission, they will have learned enough about each other to overcome their prejudices.

### The Vendetta Campaign

This campaign involves one of the traditional enemies of dwarves: orcs, goblins, elves, or humans. Perhaps the elves are trying to discredit the dwarves or shut down their trading operations, or the dwarves have decided that they don't want humans expanding into their mountains. The dwarves may have explained to the humans that they are not welcome and the humans responded by murdering the dwarves' ambassadors. If the humans are a young race, they may have been tricked into an evil alliance by crafty giants or vengeful elves.

### The Wide World Campaign

In the wide world campaign the dwarves travel around the globe, often in the company of other races. Dwarves in this campaign may visit strongholds, but they travel primarily through human lands. This is closest in tone to what many players would consider a "typical" AD&D® game.

### The Deep Earth Campaign

In this campaign the dwarves can be members of any subrace and the entire campaign is set underground. It may be deep within the earth where deep dwarves and duergar live. It may be a stronghold of hill or mountain dwarves who have either turned their backs on

the world above or have had little contact with the outside.

A big advantage in this campaign is that you don't need to design any of the world's surface and you can effectively dispense with the histories of humans and elves. You will need maps of the extensive caverns and dungeons where the campaign is to take place. The deep earth campaign can take place within caverns or a hollow earth. It may involve an epic journey to the center of the globe.

While some people consider this setting limiting, it really is no different from a surface campaign. The biggest difference is that characters never see the sky. Anything that is possible on the surface is possible beneath the surface (this is a fantasy game, after all). And the unusual setting can make even familiar and worn-out plots seem fresh and exciting!

### Dwarf Wars

Interdwarven warfare can involve wars between subraces or between different strongholds of the same subrace. It will work best if one side is clearly the bad guys and the other side (preferably the one the PCs are on) is clearly the good guys. The player characters may be able to resolve the dispute through clever diplomacy or intervention before the war escalates out of control. It could be a blood feud between two clans that has been raging for years and will only end when one side has been destroyed or driven away.

### The Lost Clan

Considering the way dwarves move, expand, and relocate, it is not unreasonable to assume that occasionally an entire clan could drop from sight. The PCs may be an expedition sent out from the central stronghold to track down and reestablish contact with a lost clan of dwarves that disappeared generations before. Or they could be from that lost clan, trying to work their way back to the surface of the world to once again link up with other dwarves.

### The Siege Campaign

A siege campaign is set within a stronghold or a series of strongholds. The dwarves are under constant attack by bands of evil monsters in a fight to the death. The evil creatures are probably under the sway of a powerful and charismatic tyrant who is leading them on a rampage across the dwarves' territory. For added tension, the dwarves may possess a powerful artifact that this tyrant needs to guarantee his conquests, and now he will stop at nothing to get it. The evil forces may have already captured the upper or lower levels of the dwarves' stronghold, along with hundreds of captives, and cut the dwarves off from the outside world.

For a different twist, the PCs may be a returning party of adventurers who find themselves unable to get back into their stronghold because it is ringed by besieging enemies. Or this scenario could be combined with the lost clan concept, and the characters must escape through the enemy camp, find the fabled lost clan, and return at its head to drive the monsters from the gates and save the stronghold.

## Creating New Kits

After you have designed your campaign world, you may wish to add proficiencies that are specific to the world you created. Using Chapter 6 as a guide, many new kits can be created. If you wish to design a kit, consider the following questions about the dwarf and his role in your campaign:

**Description:** What is the dwarf like? Is he drawn from specific literary or mythological sources? Are there any special requirements for a character who wishes to play this type of dwarf?

**Barred:** If the dwarf is a priest, are there any reasons certain dwarves should not be allowed to be priests in this kit?

**Role:** What place does he have in the campaign? How is he regarded by his own race and culture? By other races and cultures? Is there a particular attitude or outlook he needs in order to acquire this kit?

What kinds of activities does he perform in a campaign? Is he a typically taciturn dwarf, or a loud-mouthed oaf? What is his relationship with other characters? Is he friendly, distanced, wary, impassive? Does he harbor any strong racial hatreds? How does he react to elves, gnomes, and other nonhuman races?

**Secondary Skills:** If you are using the secondary skills system, decide whether the kit requires any particular skills.

**Weapon Proficiencies:** Certain types of dwarves favor particular weapons. Note these, along with any weapons the character must have.

**Nonweapon Proficiencies:** Many dwarves have certain skills in common, and all should have the Endurance proficiency. You may assign one or two proficiency slots that are without cost to the character. If appropriate, these may come from listings other than the Dwarves and General listings in Chapter 5.

**Equipment:** If a kit is best known for specific types of equipment, the character should purchase the specified equipment at the start of the campaign. If some, but not all, dwarves of this type use the same equipment, it need not be required. In that case, simply list it as recommended.

**Special Benefits:** Although not necessary, most kits should have some special benefit. Any kind of benefit is acceptable, but it should relate to the way this particular dwarf operates in fiction, mythology, or in your own image of him.

Possible benefits include:

- Bonuses to reaction rolls, particularly with certain races.
- Bonuses on proficiency use, especially in specifically defined situations.
- Bonuses to attack and/or damage rolls, especially against certain enemies or in special circumstances.
- A free weapon specialization.
- Special resistances, such as immunity or a saving throw bonus against specific magical attacks.
- Special rights within the culture in which the dwarf normally travels, such as immunity from prosecution or free lodging on demand.

**Special Hindrances:** One or more special hindrances should be imposed to limit the character.

Possible hindrances include:

- Penalties to reaction rolls, especially from certain races.
- Penalties to attack and/or damage rolls, particularly against certain enemies or in special circumstances.
- Restrictions against learning certain proficiencies.
- Social or cultural restrictions affecting how easily the character can mingle with diverse groups. He may be prohibited from carrying weapons within his stronghold, or cannot marry, or is punished excessively for certain crimes.

**Wealth Options:** Does the dwarf have less or more starting gold than other characters? Are there any restrictions placed on how starting gold must be spent?

You may also adapt kits to other classes by adjusting the kit's skills, weapons, proficiencies, benefits, and hindrances.

# Introduction

*We do not deign to acknowledge the slanderous propaganda spread by the stunted humans who call themselves dwarves. The little miners have always had a rather, shall we say, biased outlook on history and the true workings of reality. They call themselves the finest creatures to grace the worlds with bodies like that, we suppose one would have to have an active fantasy life.*

*For those graced with true vision, Elves comprise the finest race in all the worlds. We*

*are that which other races aspire to be: Our longevity, our beauty, and our craftsmanship are all the stuff of legends. Certainly, each of these attributes can be recreated in some fashion by the lesser races, but theirs is an artifice of face and form and creation never as fine as those that come naturally to us.*

*Our lives are long and filled with happiness, for we recognize the impermanence of all things, excepting ourselves. Indeed, we do not suffer death as do the mortals. Only through violence, accident, or disease do we die at all.*

*Although we vanish from the ken of mortal knowledge after hundreds of years of existence in this plane, you may rest assured that we continue on elsewhere. Even those who perish on the battlefield do not truly die, but instead become part of the earth's cycle of growth and rebirth. Our spirits linger on, for we are intimately tied to the world and its core. Indeed, we are the integral part of that core.*

*We would turn now to other matters, for to continue on in this vein would, no doubt, lead you to believe that we are boasting of elven prowess. We do not boast. Anyone who has seen even the slightest fraction of elven ability knows the truth of what we say within these pages.*

*Yes, we are a proud race, but do we not have just cause? Are we not Elves—creatures of most wondrous might? Simply understand that we are what we are and that nothing you can do will change us—then may we become good friends. But beware: We are a complex race, and the workings of our lives will ever be a mystery to you, our dreams foreign from yours. You will never truly understand us, no matter how you try.*

Enigmatic and powerful, elves have dominated the fantasy landscape for years. Although their civilizations and powers have always been a mystery to those who travel in the realms of fantasy, their influence is undeniably strong. Abandoned cities, lost technology, forgotten lore . . . all these things and more lie within the mystique of the elves. Their land, their culture, and their philosophy remain cryptic mysteries to those not blessed with the love of elves.

No longer. With *The Complete Book of Elves*, many of the elves' mysteries are open for perusal. But take care with the information gleaned; some secrets of the elven way of life still remain hidden—knowledge forever forsworn from non-elves. Be forewarned: The pieces of fact and fiction learned within can, if incorrectly applied, spell destruction for those who misuse this knowledge.

## The AD&D® Game Elf

*Monstrous Compendium® I* and *II* as well as the *Player's Handbook* (*PHB*) present elves in some detail. Are those the final word on elves? Hardly not! Here, at last, is the book that deals with elves in depth, in all their myriad facets and mysterious ways. While this book may not answer every question about elves, it will provide answers and ideas for dealing with the typical elf.

Although elves often follow the same patterns in their lifestyles and have similar thought processes, there is no such thing as a "typical" elf. Even more than with humans, no two elves are alike. They may react in a like way in various situations, but they are completely different individuals. Elves have loves and hates, fears and superstitions, honors and ethics. To assume they are all the same grievously insults them.

Chapters One through Eight deal with elven lore, including tendencies, societies, lives, and more. Chapters Nine through Thirteen detail elven role-playing. It is important to remember that there are always exceptions to the rules, both those presented here and elsewhere. What is presented in this book is the "typical" elven way of life—facets that players can add to their favorite elf character. Ultimately, character creation is something best left to the imagination of the player and the mandates of the Dungeon Master. This book offers suggestions for such creation and for the role-playing of these elves.

## Other Complete Handbooks

Like *The Complete Book of Elves*, the other books in the *Complete Handbook* (*PHBR*) series offer useful advice on the creation of unique characters. However, none of these books is essential to the play of the game. All that is absolutely necessary for playing are the core rules: the *Player's Handbook* and the *DUNGEON MASTER™ Guide* (*DMG*). The other *PHBR* books are recapped below, and their usefulness to elf PCs is explained.

- **PHBR1**, *The Complete Fighter's Handbook*, offers several character kits that work very well for elves (such as the Swashbuckler and the Cavalier), suiting elf temperaments and preferences. Other kits are less elven, but still offer interesting role-playing aspects. Still others, such as the Berserker and Beast-Rider, should be used only by savage elves or those who have no connection to elven life.

  *The Complete Fighter* contributes important fighting styles and offers more weapon proficiency rules. These can be especially useful to the elf PC, allowing him or her to demonstrate absolute mastery of a weapon. Furthermore, the section on combat rules adds an interesting flavor to a campaign.

- **PHBR2**, *The Complete Thief's Handbook*, is handy for those who wish to play elf thieves. The search for knowledge and intriguing new items often leads elves to a life of crime, although this is often just a phase through which they pass. However, many of them find a natural talent for thievery; as such, *The Complete Thief* can provide suggestions on how to best deal with that thief. Whether the elf rogue is simply a street thief or one who leads such a life as a demonstration of the impermanence of physical things to the shorter-lived races, there are myriad ideas for the player in this book.

- **PHBR3**, *The Complete Priest's Handbook*, does not specifically deal with anything pertaining to elves. However, it is useful for creating entirely new deities for elves and for designing a new pantheon of gods. There are also specialty priests and new priest kits, but none of these are elf-specific.

- **PHBR4**, *The Complete Wizard's Handbook*. As an extraordinarily magic-oriented race, there is much in this book that players of elf PCs will find useful. Any wizard, no matter his or her race, will find this book a trove of information.

- **PHBR5**, *The Complete Psionics Handbook*, is only useful if psionics are available in

a campaign. If they are, then this book is a must.

- **PHBR6**, *The Complete Book of Dwarves*, is useful to elf characters only as research on the dwarf races. However, dwarves and elves do not often exchange information of this sort. A Dungeon Master (DM) might prefer that his or her elf players not have access to this book.

- **PHBR7**, *The Complete Bard's Handbook*, is not recommended for the elf character, although it is a very useful book. The section on "Elf Minstrels" is especially helpful for those who wish to play a bardlike character of mixed elven descent. There is also a fine section on musical instruments and spells, which might prove useful for fleshing out an elf PC. Otherwise, there is little here for use with pure elves. Half-elves, however, will find the book invaluable.

## House Rules

Naturally, everything presented in this book is optional to each campaign. Just as the DM has the final say on whether any of the rules presented in the core books (the *PHB* and *DMG*) apply to his or her campaign, so does the DM have the last word on whether to accept the ideas presented in this book.

Remember, there are no right or wrong rules—whatever fits the style of the campaign is acceptable. As long as each rule is reasonable, appropriate, and fair, any additional house rules the DM cares to impose are permissible. If the players do not like these new rules, they have the option of discussing them with the DM or choosing another campaign. On no account should players or DMs try to force their views regarding optional rules down another's throat—regardless of how appropriate that action may seem to be.

## Important Note

Anyone using this book should be aware that it is designed for use with the AD&D® 2nd Edition game. References to the *Player's Handbook* and the *DUNGEON MASTER™ Guide* refer to the AD&D® 2nd Edition books. Those using older books must consult the index of the first-edition books to find the subject mentioned and ignore the page numbers mentioned therein.

Furthermore, many of the rules mentioned in this book are dependent on the use of optional proficiency rules. It is strongly recommended that all players and DMs familiarize themselves with these rules in order to fully enjoy this book. Otherwise, they are cheating themselves out of the opportunity to fully exploit the rules contained here.

Lastly, since elves make no distinction between male and female, the personal pronouns in this book alternate between genders. Not all examples will be only of "he" or "him"; some will consist of only "she" or "her."

But, come: The elves are waiting.

# Chapter 1: The Creation of Elves

*From the primordial turmoil at the center of the universe sprang the gods full-fledged, full-formed. Each claimed jurisdiction over certain effects, all being equally endowed with the power and force of the cosmos. They cooperated for the first (and the last) time to create the worlds. But some gods used their powers more wisely than their brethren.*

*An early alliance formed among these wiser gods. They knew how to manipulate their power. This gathering of gods, who called themselves the Seldarine (or the Brothers and Sisters of the Wood), imparted their very essence into creating certain aspects of the worlds.*

*While other gods squabbled over jurisdiction and possession of this virtue and that attribute, the Seldarine modified some of the lands, making their worlds lush and green and beautiful. In addition, they created vessels that would one day hold the spirit of the first sentient life to set foot upon these worlds—the race of beings known as Elves. They crafted these vessels with thought and care, and gave them extraordinary beauty. The other gods grew black with jealousy, and they thirsted to imitate the Seldarine.*

*These gods hastily fashioned their own vessels, vying against those created by the Seldarine. But they would not invest the time vital to creating a race, and so their results were flawed—the gods did not care. Their creations were nothing like those shaped by the Seldarine. Most were Monsters, creatures that would one day haunt the dreams of Elves. Of all the crude creations, only the vessel reserved for Man held a glimmer of potential, for they would one day have the ability to change the land as would the Elves.*

*The gods of the new races tried too hastily to reproduce a feat that had taken the wiser gods eons. But neither group's constructs would not come to life until the historic meeting between Corellon Larethian and Gruumsh, leader of the Anti-Seldarine.*

-Larian Songshine,
priest of Corellon
Larethian

In the subject of elven mythology, the gods have strangely little to say, leaving one to ponder it as may be.

The elves believe that their religion is closer to actual history than are the religions of other races. There may be some truth in this belief, since the elves have such long lifespans, with memories to match. They have far fewer generations between their creation and the present day. Thus, they claim, there has been far less dilution of the truth; unlike the other stories, they state, the elven chronicle is pure.

The countless years that have passed since the beginning of the universe have seen hundreds of generations of elves. By way of comparison, thousands—even millions—of generations of other races have lived and passed into dust during that time. Small wonder, then, that the elves feel their histories have been less tainted through the vagaries of time than those of other races.

There are far fewer variations on the creation story in the elf race than in any other. The humans have untold numbers, practically one for each town. The dwarves have several more, and they constantly change them to glorify their race and their tribe over others. Halflings and gnomes, too, have excessive myths, although they are less likely

than dwarves to extol their own virtues in such a manner. Likewise, the orcs and other evil humanoids all have their favorite stories to comfort them in their dank, smoky caves.

Following is a continuation of the elven story of creation as told by Larian Songshine. While not necessarily an impartial retelling, it does manage to capture the essential ingredients of the elven story of creation.

*When the god Gruumsh saw the creation of the Seldarine, the Elves, he regarded it as an abomination—and he became enraged. For the first time, desire for blood pulsed in a god's veins. Gruumsh prepared to crush the Seldarine, and some gods flocked to his standard while others stood aside. Still more, such as Moradin Soul-Forger and Garl Glittergold, aligned with the Seldarine, for they had—though not in conjunction with the Seldarine—set aside areas of the world for their own purposes.*

*When the inflamed Gruumsh attacked Corellon Larethian, the leader of the Seldarine, a mighty battle began: the Godswar. How long it raged over the pristine fields of the planets, no one knows. Each combatant drew great wounds from the spirit and the body of his or her foe. While the other contenders fell by the wayside (badly hurt, though not mortally wounded), Gruumsh and Corellon would not break off. Instead, they continued their fierce combat. They traversed the planes, and they splashed the other's blood across the lands.*

*As night drew near, the powers of Gruumsh strengthened, while those of Corellon waned. All seemed lost for the Seldarine. Tears from the moon landed on Corellon's upturned, stricken face, and they mingled freely with his blood. Then Corellon looked to his companions—and it was there he found fortitude. He drew back his sword and, with one fearful blow, clove out the orb of Gruumsh (who became known as Gruumsh One-Eye). The god howled in pain, black ichor spewing from the wound. Gruumsh turned and fled to the netherworld. There he nursed his hate, seeking forever after ways to shape the enemies of the Seldarine. And the greatest of his creations, made in the burning heat of rage and the blackness of his blood, was the Orcs. That is why, to this day, the Orcs and the Elves are such bitter enemies. From the beginning, even before their creation, the very essences of their gods strove against one another.*

*With Gruumsh's defeat, the Seldarine and their allies continued with their works. The Seldarine gathered the moon's tears and the blood shed by Corellon in that great battle, placed these into the vessels they had created, and infused them with their own spirit. Each god imparted virtue into his or her creation, feeding and nurturing the newly formed race. Thus were the Elves born from the blood of Corellon Larethian, mixed with the soil of the world, blessed with the tears of the moon, and given their nearness to divinity.*

*The other gods saw this example and set about infusing life into their own sadly misshapen vessels, with varied results. Alas, all other races were but sad imitations of the Elves.*

The tale of the Godswar explains some of the elven traits, both physical and mental. Being formed of the blood of the god Corellon Larethian accounts for why elves possess such long lifespans. Tears from the moon provide a rationale for the elves' ethereal beauty—a beauty that often led the lesser races to think of elves as gods. The soil of the earth explains the connection all elves feel with the land.

To the elves, their legends provide some measure of assurance that they play a grand role in the scheme of things. Study of elven legends explains why elves are so certain of their rightful place in life, and why they rarely worry about afflictions that would be crises for lesser beings.

Other elven myths provide different insights into the elf character. Following is an accounting from Sarathos-Telanith, which sheds further light on elf history—specifically, the times that were responsible for initial fragmenting of the elf nation: the *Elfwar*.

*After the Godswar, the deities divided the world among themselves so that their creations could prosper and grow. The Seldarine chose the forests for their children, the Elves, but secretly encouraged them to spread as they would. The other gods did likewise, and the races fought for land: The hatred introduced by Gruumsh the Cursed One had spread to the mortal species.*

*The Elves were, at this time, all one people. There were variations, but these were individual, rather than any sort of societal rift. All differences were a matter of personal inclination, and the Elves lived in harmony with one another.*

*There were those who lusted for power, and those who could not bear to live within the confining walls of a city. Others were rabidly xenophobic, wanting to bar outsiders such as Humans and Dwarves from the Elflands, keeping away the taint of those "unfavored by the gods." Still others, more moderate in most things, were scorned by their brothers or even despised.*

*Each Elf thought he knew best, and each tried to impose his views on his brother. Evil flourished in this atmosphere of distrust and dissent. The great Elf cities of old deteriorated, and the Spider Queen Lolth gained a foothold in the hearts of many Elves. They used her to gain greater power and influence, and her evil ways led them even further astray. These Elves practiced dark magic and forbidden lore to make themselves mighty, and they turned from the light they had loved so much.*

*The tension grew unbearable. The Elves who had embraced the teachings of Lolth marched into the cities and slaughtered their brethren. The first attack came under cover of darkness, and the other Elves could not mount a defense. But they had seen the dark time to come, and they had readied themselves for war. Their preparations were not in vain. They returned fire.*

*The Elfwar raged for decades, neither side gaining victory. Thousands of Elves perished on both sides, and the number of wounded grew ever higher. The Elves of Lolth took the name Drow to signify their new allegiance, and they took the cities they had captured as their homes. They massed for the final battle, and Lolth covered the land in loathsome clouds of black to strike fear in the hearts of mortal Elves. The Drow were prepared to win—but then the gods themselves intervened.*

*Corellon Larethian and his companions struck deep into the heart of Drow territory. Long and hard they fought, seeking the evil in that land. Finally, Corellon Larethian came upon the dread Spider Queen, and he attacked. Magic flared and spat; blood merged in rivulets. Then Corellon struck Lolth a telling blow, driving her deep into the earth. With her defeat, the haze over the battlefield lifted, allowing the bright light of the sun to bathe the land in its healing rays.*

*The Drow turned their faces away from the sun's purification, preferring instead their fallen goddess. They consciously chose the shadows over light, and Corellon decreed that*

*such treachery would forever show upon their faces. It is for this reason that the skin of the Drow is dark.*

*Corellon forced the evil Elves into the rift where he had banished Lolth the Spider. After the last Drow was driven underground, he and his fellow gods abandoned the Elves to their own devices, preferring instead the plane of Arvandor.*

The rifts and turmoil created by the Elfwar have permanently scarred the elf psyche. Although many factions were appalled at the breaking away of the drow, some could not contain their discontent. Several such groups chose to strike out on their own: an event called the Fractioning. Thus, the division of elves, begun by the drow, continued. The elven race divided into the grey elves, who had chosen the mountains as their home; the sylvan elves, who had returned to the forests of their birth; and the high elves, who chose to remain in the elven cities and be the keepers of the elven way of life. Still more sought farther afield, roaming the oceans, the arctic wastes, and the skies above.

In time, these elven nations grew further apart, each coming to develop special characteristics. The grey elves became ever more aloof, while the sylvan elves grew as wild as the forests. The explorers adapted themselves to new lands, regardless of where they settled. Still others continued to roam, leading a nomad's life. In campaigns, these nomadic elves are considered high elves.

These nomadic elves encountered the other races that had been so haphazardly scattered about the world. The elves were often a source of legend to the dwarves, humans, gnomes, and halflings. Initial contact was relatively peaceful, particularly with gnomes and halflings. But suspicions remained, and tensions grew, particularly between elves and dwarves.

None are truly sure of the reason behind the war with the dwarves. Some claim the dispute was a territorial matter, while others hold it was a difference in ideologies. Of course, both elves and dwarves name the other as instigator. Whatever the cause, they fought brutal, bitter wars for many years. They have since reconciled to a degree, but there has never been total trust between the two races.

The first elven contact with humans has been lost to the mists of time. Since the elves were figures out of human myth, the humans were more inclined to hold them in awe. This attitude has carried over even unto the present day, and the elves remain enigmas to humans.

Although elves and humans have not gone to full-scale war with one another, there have been a number of small clashes. Many of these are over human encroachment into the forests and their heavy-handed techniques for logging. The elves take exception to the death of virgin forest. Further, some humans, out of greed and jealousy, have taken advantage of the elves' trust to slay and destroy them.

Thus, elves have come to mistrust humans as well; many have withdrawn beyond human ken. While some remain in the lands known to humans, more have returned to the fabled Elflands.

The elves are a proud people. They see the unbridled thirsts in the human race; that, coupled with their amazing fecundity, make them a serious threat to all that the elves originally accomplished. The elves watch the humans, and there is fear in their hearts.

## Chapter 2: Variations on a Theme

*There are nearly as many types of Elves as there are Humans . . . perhaps more. After all, you Humans are different only in appearance. We Elves have more substantial differences, more than slight dissimilarities in philosophy. The Aquanesti, or Aquatic Elf as you call them, is as different from a Grey Elf as a dolphin is from a mountain lion, yet there are no petty racial quarrels between us that characterize the existence of every race but ours. What is the problem with Humans and Dwarves that you cannot live in peace with your own?*

*Certainly, we once had a history of intraracial conflict, but those days are long since past. We have our disagreements with one another, but we settle them like civilized folk—and I am beginning to believe that Elves are the only civilized folk in all the realms known to mortals.*

*Although we continue to war with the Drow, the cause of that war is far more than the color of their skin or their beliefs. It is the fact that their very existence is an affront to ours, that they were created by perversions within our own race. Our war is nothing less than sublime effort to undo an error made hundreds of centuries ago.*

*We do not judge anything by the color of their skin. Granted, we find it tempting to do so in the case of the Drow, but even we—who have so often been betrayed by our dark-skinned cousins—find it within ourselves to judge each of them by their own merits.*

*Unlike the Humans, the Dwarves, and the Small Ones, we Elves are not so much shaped by our heritage as by the way in which we are taught to live. Tales of Dark Elves who have the heart of High Elves exist, as do tales of treachery and deceit among High Elves. While both cases are rare, they have happened—and will happen. Always, we attribute these to the way in which the Elf was raised, for we know that is more important than blood. The marked differences in our brethren appear only when grand conglomerations make their individual traits societal.*

-Eronion Marathas, elven seer

None are truly certain from whence the first elves arose. The elves themselves claim they arose from the blood of Corellon Larethian, while other races hold that they sprang full-fledged into the world, without divine intervention. One thing is certain, however: No matter where they came from, they have spread to nearly every world on the Prime Material Plane. Their affinity with the worlds on which they have made their homes leads one to suspect a more elemental nature to their being. However, since they have often been residents of these worlds longer than humans have existed, human sages are often inaccurate when speculating about origins.

Elves have adapted to life in nearly every environment possible. The mountains, the forests, the plains, the waters, and the underground all know the taste of elves. The snowy wastes have felt the light touch of elven boots, as have the hot sands of deserts.

The elves' curiosity about life makes it only natural that they expanded their holdings to such an extent. They wish to be sure of their world, and they cannot understand it if they cannot experience it. If an elf accurately reports her experiences, other elves can understand that world intuitively.

Yet elves are notorious for their desire to see things for themselves. Even when a

place has been experienced and reported, many elves will still have a wish to see the place. Along the journey, they are likely to view each passing locale with great interest, stopping to explore anything that catches their interest. For this reason, the elf race as a whole is likely to have heard of any given location on any of the worlds they inhabit.

Through their inherent connection with all the worlds, elves adapt more easily than many other races. For this reason, they can be found in any clime, under almost any extreme.

Descriptions of the standard AD&D® game elves follow. These include aquatic, dark, grey, high, and sylvan elves, as well as half-elves. (Descriptions of elves specific to a campaign world—originally all high elves—are found later in this chapter.)

Tables 1 and 2 list the heights and weights, respectively, of the elf subraces. Note: Because females tend to be shorter and lighter than males, base numbers are divided into male/female values. The modifiers allow for a broad range in each listed category.

**TABLE 1: ELF SUBRACES HEIGHT**

| | **Height (in Inches)** | |
|---|---|---|
| **Subrace** | **Base** | **Modifier** |
| Aquatic | 50/50 | 1d8 |
| Drow | 50/55 | 1d10 |
| Grey | 60/55 | 1d12 |
| High | 55/50 | 1d10 |
| Sylvan | 60/55 | 1d12 |

**TABLE 2: ELF SUBRACES WEIGHT**

| | **Weight (in Pounds)** | |
|---|---|---|
| **Subrace** | **Base** | **Modifier** |
| Aquatic | 85/75 | 2d12 |
| Drow | 80/95 | 3d10 |
| Grey | 85/75 | 3d10 |
| High | 90/70 | 3d10 |
| Sylvan | 95/80 | 3d12 |

Any player may feel free to choose one of these subraces as a PC with the DM's permission. Otherwise, an elf player character is assumed to be a high elf (the most common subrace).

Naturally, the descriptions contained here do not apply to every elf. There are as many different types of elves as there are humans, each acting differently from his or her fellows. What follows is merely the tendencies a subrace tends to evince, not the actual patterns each elf must follow. Not all grey elves are snobs, nor are all drow elves evil personified.

## Aquatic Elves

Although not as frequently encountered as other elf subraces, aquatic elves (also known as sea elves) are actually as common as their landbound brethren. They patrol the deeps of oceans and large inland waters, holding court beneath the waves. Often they are only seen when they frolic with dolphins in kelp beds.

Aquatic elves have gill slits much like fish, through which they process oxygen. They can also survive out of water for a short time by breathing. Their skin is typically silver-green, matching the seaweed near their territory. Some possess a bluish tinge to their skin, although this is quite rare. Aquatic elves' hair complements their skin and is also green or blue-green. The overall effect is one that makes them difficult to discern underwater, especially near kelp beds. Because of their coloring, they gain the typical elven ability to camouflage themselves in their natural environment.

Although their lives seem spent in frivolous activity, these elves play an important role in the underwater ecology: They serve to keep the seas safer for inhabitants. As do the elves of the forests and the mountains, sea elves keep the devastation of such creatures as sahuagin and ixitxachitl to a minimum. The sahuagin are to the aquatic elves what orcs are to land elves; they are a nuisance and a menace, but now a serious threat. Unfortunately, the sahuagin do not see things this way and often plan wars on the sea elves.

These elves dislike sharks intensely. Although a natural part of the ecological cycle, elves dislike any creature that is rapacious and cruel. Additionally, any beast that the sahuagin identify with closely (as they do with sharks) is considered to have few redeeming features. Since sharks relish the taste of sea elf, the elves organize hunts against this menace.

Because they fear the strange and terrible monsters that dwell in the sea, the aquatic elves and the dolphins have taken it upon themselves to keep at least some of it safe for those who travel across it. In many realms, no one would travel on the sea otherwise, for the danger would be far too great. Thus, most seaside communities severely punish those who incur the wrath of sea elves. Only the most evil of people encourage the death of sea elves and dolphins. Reprisal for their murder is always swift and brutal; the elves tolerate not the killing of either brethren or friend.

Although they may survive on land, aquatic elves prefer not to do so, for it causes them immense pain. They can walk on land for a number of days equal to their initial Constitution score. However, they endure increasing pain as time spent out of water wears on, and their ability scores and proficiencies are affected. Every two days, these scores decrease by –1 until the elves return to water. If a physical score (Strength, Dexterity, Constitution) reaches 0, the elf dies.

In salt water, the sea elf's attributes return to normal within 15 minutes. In fresh water, an elf merely stops losing his or her scores; they do not revert to normal until the elf enters salt water. The time spent in fresh water does not count against time away from the sea, and these elves may dwell in fresh water indefinitely. If they enter the water before their attributes are to decrease again, the water acts as a revitalizing force; the suffering period begins anew when they emerge from water.

**EXAMPLE:** *Theriatis the sea elf must journey to the airlands to aid friends, to whom he owes a favor. He has a 16 Constitution and can therefore stay away from his beloved ocean for 16 days, or a little more than two weeks. He travels for four days to where his*

*friends are to meet him. Since he has been away from salt water for four days, he loses two points from all his attributes, and his proficiencies suffer accordingly.*

*On his way back to the ocean, Theriatis must travel another four days. On the third day of travel, his scores are at a –7, and he is totally exhausted and pain-wracked. He finds a pond in which he can rest and stays there overnight. The next day, when he begins his travel, he is somewhat refreshed and may travel for two more days before his scores descend another notch. Finally, he reaches the ocean, and its cool waters wash over him; the brine clears out his gills, and the relaxing currents massage his exhausted muscles. Within 15 minutes, Theriatis has returned to normal, and he may resume his usual activities.*

Obviously, the sea elves do not lightly leave the sanctuary of their oceans. The harsh environment of the land world discourages any sea elf who foolishly wishes to leave the soothing waves. This does not mean that the sea elves have no dealings with those who breathe air. Any elves (excepting drow) are welcome to visit the land of the sea elves, and they will be greeted royally. Trade delegations are common between land and sea elves, although it is usually the land elves who must travel, for they have magicks more suited for the foreign environs of water.

Sea elves commonly travel with elven ships, defending those aboard from attacks beneath the waves. Since they are accomplished at scuttling the ships of evil humans and humanoids, aquatic elves are feared by pirates and those who would prey on elven craft.

Aquatic elves often consort with dolphins and hippocampi, and the latter are bred as mounts. Dolphins and sea elves are usually on the best of terms and easily befriend one another. They serve each other's needs, giving mutual protection and aid.

Aquatic elf society consists mainly of those sea elves who dwell in a five-mile area. There is a titular king or queen to whom they pay homage, but he has no real power over daily life. Sea elves live as they please, coming together under a ruler only in times of undersea emergency or great trouble for the world in general. The lords and ladies of the ocean cities do little other than escort visitors and conduct the trade that aquatic elves find so enjoyable. The rest of the population consists of artists, hunters, and farmers, all concerned with making survival possible and life pleasant for the rest of the community.

These elves have cities of living coral, supplemented with glittering crystal domes. Their undersea paradise is marked by sea elf farmers tending schools of fish; it is also marked by the peace one can find beneath the waves. The wash of blue- and green-dappled light has inspired abovesea artists for years—and will no doubt continue for years to come.

## Dark Elves

The dark elves (also known as *drow*) are evil cousins of the other elves. Driven beneath the surface long ago by the light-loving elves, these sinister beings have made a home for themselves in what they call the Underdark, the niche they have brutally carved in the underground caverns. They have become the masters and mistresses of dark grottoes, and any intelligent creature shuns them.

Originally the drow were simply elves who held more with the tenets of might than those of justice. In their quest for more power over life, they inevitably began dealing

with the forces that would one day corrupt them. Their elven brethren, dismayed at the initial change in their formerly peaceful kinsmen, sought to reason with them. The drow, seeing this effort as aggression, responded by slaying emissaries and invading elven cities. Convinced of the evil of the drow, the other elves banded together to drive them from the land.

A long, painful war marched across the centuries; elf slew elf, and great magicks flew. Much of the world lay in devastation, soaked in the blood of elves. Finally, however, the good and neutral elves triumphed, and they drove the drow underground. The corruption of the drow echoed in their appearance, for their skin darkened and their hair turned white. Their eyes glowed red—further evidence of the fires burning within their breasts.

The drow are reputedly as widespread as the other subraces of elves—perhaps even more so. No one not of drow heritage knows exactly how far their underground holdings extend. It is well known that they have a certain grasp on interdimensional magic, for they use it to travel long distances. They hate the light, and they have extensively researched ways to travel while avoiding the sun, which is anathema to them. The drow have extensive tunnel networks, which may or may not canvass their world.

Drow are typically shorter than other elves, and they retain the Dexterity common to elves. In all other respects, save their height and coloring, drow resemble their aboveground cousins.

Drow craftsmanship is truly a marvel to behold, wrought with strange and intricate designs. Unfortunately, their works are unable to exist outside the drow world, and the items disintegrate, albeit slowly, when away from the radiation of the Underdark.

Their society is usually matriarchal, with the female drow holding the majority of power. Male drow are entrusted with the relatively unimportant jobs of swordplay and some sorcery. Females, on the other hand, command the important positions in drow society. They are the priestesses of their dark goddess, Lolth (or sometimes Lloth), Queen of the Spiders.

These females wield their tremendous goddess-given power mercilessly. Using the threat of intense punishment, they keep the males cowed and submissive. They are the top of the social hierarchy in the Underdark; they jealously guard their power against lowly males who might try to take that power away.

Since drow females have greater power than males and are physically stronger and more intelligent as well, the drow have a difficult time believing that males can hold power in other societies. Thus, they do not believe that any threat mustered by males could seriously threaten the drow.

Despite their chaotic evil nature, the society of the drow is rigidly structured and divided. Social strata and classifications are virtually immutable. A drow can advance in her caste, certainly, but cannot advance beyond it. The chaotic nature of the drow is most evident when one seeks advancement—an advancement typically made through death.

Drow constantly seek to improve their position in society and in Lolth's eyes. If it comes at the expense of another's life, so much the better—that makes one less drow to challenge the newcomer, and it ensures greater security in the new position.

Drow have an abiding hatred of all things aboveground, but nothing draws their wrath quite like the good elves. The drow take any chance they can to destroy other elves they encounter. Even the few evil elves aboveground are seen as enemies, and the drow do not

hesitate to betray such a one when he or she has served a purpose.

## Grey Elves

Grey elves are at once the most noble and most reclusive of the elves. They have withdrawn from the world after making their mark, which was to ensure that the world was well on the path to goodness. The grey elves view themselves as the protectors of good in the world, but they will stir from their mountains and meadows to protect the "lesser" races only when they are faced with great evil.

Grey elves act much like human knights—supercilious and condescending, full of their own importance. They think nothing of speaking their minds, provided that this remains within the bounds of elven decorum. They are often haughty, disdaining contact with most others, including all other elves save grey elves.

This subrace garbs themselves in wool tunics of gold, silver, white, or yellow. Over these, they wear cloaks of dark blue or purple. Their dress alone often makes them the most striking of the elves, and their elegant bearing and pure beauty make them almost appear as supernatural creatures.

When arming themselves for battle, they don shimmering suits of plate or chain mail, protecting the head with winged helmets. Their weapons, created by master elf crafters, shine brightly under any light. Mounted warriors ride griffons or hippogriffs into battle, swooping down upon their enemies with dreadful perfection.

Taller and more slender than the other elves, grey elves typically have silver hair and amber eyes. This does not give them any special abilities, but it does serve to distinguish them from their high elven brethren. Somewhat rarer are those grey elves who have pale golden hair and violet eyes. These elves are often known as *faerie* and are probably those who first made contact with humans.

While not exactly bigoted toward other races, the grey elves do believe in the purity of the elven line. They are the least tolerant of other races, and they take pains to ensure that they remain secluded from all—sometimes even other elves. Only the mightiest mages of other races are allowed within their mountain citadels, and these are greeted with suspicion. The grey elves are not rabid in their dislike of the shorter-lived races, but they do fear the corruption that the other races can bring to the elves.

Because of their reverence for the sanctity of elven blood, grey elves have striven to maintain their original ideals. They consider themselves to be the purest form of all elves. They believe that, since the other elves do not concern themselves with maintaining their purity, their role in the elven world is less than that of the grey elf. These elves feel that they are the "true" elves and that others are somehow lesser versions. The grey elves staunchly believe this to be true, despite the fact that they are an offshoot of the original high elf line.

Grey elves disguise the entrances to their mountain meadows and remote cities with powerful magic, ensuring that only those who are elves or familiar with the elven dweomer can discover their retreats. If members of another race find their hideaways, the grey elves are not averse to casting a high-level *forget* spell. They have worked long and hard to achieve their hidden lands, and they welcome not those who stumble across them.

Of all elves, grey elves rely the most on their intelligence. While other elves are by no means stupid, grey elves trust less in physical prowess than they do the mind. Their line

breeds more mages and mage combinations than any other, and some of the most esteemed of their subrace are scholars.

Their entire existence is based on developing and discovering new knowledge, and they therefore spend less time on the pleasurable pursuits that occupy other elves' lives. Their mages are without peer in the elven world. Even mages of greater power from other races speak of the knowledge of the grey elves with no small measure of fascination.

Because the only wizard specialties available to elves are Diviner and Enchanter, grey elves usually do not become specialist wizards. Instead, they learn more about magic in general; their long lifespans ensure that they are among the most knowledgeable mages on any world, though not necessarily the most powerful.

However, like all elves, their crafters have had centuries to perfect their art. Since the grey elves have a much fiercer dedication to perfection than other elves, their products are finer than any others in the world. Only some dwarves can rival the expertise shown by grey elves—but even then they cannot rival the sheer beauty exhibited in elven manufacture.

It is a guaranty that almost any grey elven work can hold the strongest magicks and enchantments. The very qualities of the manufacture work subtle charms into the item, making it more receptive to whatever potent magic a mage might use to enhance it. The grey elves have produced most of the magical items attributed to elvenkind. They are particularly devoted to the creation of tomes and scrolls.

Grey elves often have the most extensive libraries of anyone in the world. Any grey elf community of more than 50 years will have a communal library rivaling those of any major city or wizard. Such libraries are open to all elves who wish to better themselves and increase their knowledge. Since the grey elves value the constant expansion of their stores of books, many spend their lives in research (either magical or scientific), writing learned treatises.

Because they spend so much time in research, grey elves often have little time to spare for physical labor, although this does not preclude craftsmanship. In order to maintain their cities, they must rely on "lesser" elves for the upkeep of their realms. Since almost all of these servant elves have been brought up in the particular atmosphere of the grey elves, they believe that their lot in life is to serve the grey elves. Although some do leave, most do not have the spirit to do so. Many are truly happy performing tasks for their masters and would not dream of departing. The stratified society offers them security and comfort.

Grey elves are not harsh taskmasters, but neither are they forgiving. When a servitor elf fails in a task or performs it poorly, punishment is swift and to the point. Few make the same mistake twice.

Grey elf society is among the most rigidly defined in any world. They are ruled by a hereditary monarch, either male or female, who can be succeeded by any of the other members of the House Royal. This is subject to approval by a majority of the House Noble. The ruler must have all decisions ratified by such a majority.

Beneath these two Houses are the Merchant Houses, of which the Guild Houses are a part. The House Protector is equal to the Merchant Houses. Beneath the Merchant Houses are the Servitor Houses. Beneath them are the casteless elves, who have almost no voice in grey elf society.

Interestingly enough, most other elves do not readily befriend grey elves, for they see

the grey elves as far too serious and arrogant. Indeed, some elves think the grey subrace is far closer to the word "human" than "elf." They think the grey elves have lost the elven joy of life, for the grey elves prefer to spend their time with books rather than revel in the outdoors and the goodness of life. Instead of exploring the boundaries of life, they are learning to be serious.

In some elves' eyes, grey elves have even gone so far as to enslave other elves—if not in fact, then at least in spirit. The grey elves' "servants" have none of the typical elven love of life, nor do they have that spark that is so particularly elven. This causes many elves to shun much contact with the grey elves. Even though the servitor elves are there by choice, such order and lawfulness inherent in the grey elf society seems repulsive and even dwarvish to most elves.

## High Elves

The most commonly seen of all elves, the high elves are also the most open and friendly. They have no compunction about traveling in the world outside their lands, and they do so much more often than other elves. Since they have the most contact with the non-elven world and since their subrace is more adventurous than other elves, most elf PCs are high elves.

While at first they may seem aloof and arrogant, a glimmer of true self can be learned with a little effort. High elves know the value of friendship and alliance with the other good races of the world. However, they are not always easily befriended. Many high elves are cautious about trusting the shorter-lived races; quite a few learned to distrust humans and dwarves in their younger days. Thus, although high elves serve the cause of good, one can never be sure of what the reception from them will be.

High elves are very pale. Though they spend a great deal of time outdoors, their skin simply doesn't tan, no matter how long they are in the sun. However, their skin is less a corpselike pallor than the color of new cream. Their hair and eyes fall into two major variations. One is fair not only of skin, but of hair as well. These elves generally have blond hair and blue eyes. The other variation, equally numerous, seems far more mysterious. They have dark hair, ranging from sandy brown to sheerest black, and intense green eyes. These two varieties of high elves have no other significant differences, but they are nonetheless often treated differently simply because of their appearance.

High elves prefer light pastel shades over the colors worn by grey elves. Since they rely on hunting and woodsmanship, they often wear cloaks of green for camouflage in forests.

Their preferred weapon is the bow, but they are also adept with long and short swords. In battle, they wear their gleaming elven chain mail beneath cloaks "woven of the essence of the woods," which allows them to move silently through forests, strike quickly, and then retreat. Although they may befriend giant eagles and occasionally use them for transport, they rarely use mounts because horses and the like are too unwieldy in the forest. Only on the long-distance journeys or on the plains will high elves use mounts.

High elf civilization is much like that rumored in children's fairy tales. Elven homes are enchanted, the lands under their jurisdiction places of goodness. The realms of high elves are fabled in the lands of men, and the highest aspiration of many a human is to slip into the arms of death while basking in the serenity of the elf lands.

These elves do not place a great deal of value on society, preferring instead to live as they wish rather than how someone tells them to. Their villages are peaceful places, for the elves all look out for one another. They have a royal bloodline of sorts, but few elves pay it much heed. They do not respect someone purely on the basis of birth.

High elves live in a constant relationship with nature, never taking more than they need and giving back ever more. They replenish the forests and the plains constantly, ensuring that there will always be nature within their world. As such, they are often regarded by other good-aligned races as the highest epitome of goodness. Although those who prefer law over freedom do not always agree, they nearly always have respect for the quality of elven life. There is no doubt that the high elves lead a fine life: Freedom, nature, and the sheer vitality of being alive comprise the daily existence of a high elf.

These elves have few cares or worries, and their lives are often characterized by idyllic splendor. While they face problems from rampaging humanoids or the encroachment of humans, they seem to live free of the cares that so often plague other elves. Because they live so closely in harmony with nature, they have little trouble finding sustenance in the areas near their homes. Game proliferates near high elf communities, and the earth is fertile for them. However, should the high elves roam farther afield, they often discover a different matter entirely. A band of elves on the march must sometimes rely upon the generosity of others.

## Sylvan Elves

Although wood elves (as sylvan elves are often called) are descended from the same stock as the other elves, they are far more primitive than their kin. Their lives are geared toward the simple matter of survival in the woodlands, rather than enjoyment. Yet sylvan elves find that this life, more than anything else, gives them their greatest pleasure. Not for them the sophistication of art and delicate music. They prefer a simpler life. Their music is that of wind through leaves, the howl of wolves, and the cries of birds. Their art—in the form of tattoos—is inspired by the everchanging cycle of seasons.

Wood elves, by their very nature, seem more prone to violence than their civilized cousins. Their muscles are larger, their complexions more florid. They have yellow to coppery-red hair, which contrasts with their lightly tanned skin. Their eyes are generally light brown, although bright green is not uncommon. Hazel or blue eyes are exceptionally rare, cropping up only two to ten times in an entire generation. The superstitious wood elves believe that twins who have blue or hazel eyes are an omen of good fortune for both the twins and wood elves as a whole. Thus far, they have not been disappointed.

Wood elf clothing is much less gaudy than one would normally expect from an elf. The focus of their clothing is to allow the wearer to blend with the woods easily. A typical outfit is dark brown and green, or tan and russet in fall. Winter finds sylvan elves wearing white leather so that they can hide in snow.

About once every five years, these elves indulge in a festival of art and music more material than the ephemera of nature. When the summer solstice arrives, the nomadic tribes gather in the center of the forest. For half a moon, the tribes celebrate the turning of the Seldanqith, wherein the constellations of the Seldarine are obscured by the northern lights. They claim that the gods come to earth during this time to celebrate in the revels of their children. Wood elf celebrations involve oak wine, bonfires, dancing to wooden

drums, and singing. The carousing is primitive, even savage, but fiercely exciting to them. Their every instinct is aroused, taking them back to the roots of nature.

Wood elves are often described as wild and temperamental. This is true to the extent that these elves are a very emotional people. They live with their hearts, not their minds as do the grey elves. Whatever they feel, they know it is the right answer. Logic plays little part in their lives, for logic cannot save one from the charging boar or the falling tree. Intuition and strength are all that counts in the wildwood.

Sylvan elves are an independent folk and do not lightly brook intruders into their forests. Anyone, even another elf, who even draws near to a wood elf encampment (within three miles) will have a constant, unseen escort of at least two wood elves (possibly more) until the intruder leaves the area. Unless the camp is directly threatened, the wood elves will leave the intruder strictly alone. Twenty-five percent of the time wood elves will allow trespassers to know that they are being watched.

If those encroaching the encampment draw too near and evince hostile intent, the wood elves have no compunctions about utterly destroying them. Wood elves are extraordinarily reclusive—even more so than grey elves. They have no wish to let others expose them or their lifestyle to the harsh scrutiny of the civilized world. Therefore, they may even destroy those who bear the wood elves no particular ill will. They feel this is the only way to ensure their lives and privacy.

Although they are of elven descent, wood elves tend toward total neutrality. This is not out of any inherent evil, but only out of a desire to be left alone. They do not care about the proceedings in the outer world; only when such acts impact their realm do the wood elves take interest. Even then, that interest is only in removing the nuisance and in returning to the wildlands as quickly as possible. Only other elves can break their solitude without suffering potential death.

Sylvan elves associate more often with the animals of the forest than with any other beings. They have giant owls guarding their tent homes or, rarely, giant lynxes. Their isolationist tendencies have corrupted the only racial language they know (Elvish); however, some do learn the languages of various creatures of the forest.

Wood elves are probably the least friendly of all the surface elves. They are certainly not as outgoing as high elves, nor are they as adventurous as aquatic elves. While grey elves are quite arrogant, they at least will not casually kill intruders. However, it should be remembered that wood elves are not evil; they simply value their solitude above all else.

## Half-Elves

Although not properly elves, half-elves are included in this book because they do possess elven ancestry. Half-elves have at least half elf in their blood; those half-elves that breed back with elves are always considered half-elven, regardless of how long ago the non-elf blood was introduced. Those half-elves who do not breed with elves (thus diluting the elven strain even further) are considered by elves to be totally non-elven. These crosses have none of the abilities normally associated with either elves or half-elves.

Some half-elves are not readily accepted in either elf or human communities, and they often become introverted, sullen, and embittered. Lucky half-elves gain access to both races, for often elves and humans find half-elves fascinating. Largely, it is a matter of the

half-elf in question and the societies with which he or she deals. Half-elves are never accepted in grey elf society, for half-elves serve as a palpable reminder of all that the grey elves wish to eradicate.

Although there are rare exceptions, halfelves are predominantly also half human; elven genes typically cannot cross with anything other than human genes. Those descended of stock other than human must be specially approved by the DM if they are to be used as a PC race.

Most half-elves are of high elf descent. The reasons for this are simple: Aquatic elves cannot live with humans; grey elves will not knowingly approach humans in such friendly circumstances; wood elves would simply flee or hide; and drow would slaughter the fool who trusted them.

There are always exceptions to these generalizations, of course. Some elves will always break the mold of their kind by doing something unpredictable. A few grey elves consent to speak freely with humans, and it is possible one could consort with a human out of love. Not all wood elves are recluses, nor are all drow ruthless, evil killers. Aquatic elves are not as unreachable as they might seem, for humans have long used magic to visit the underwater realms.

It is entirely possible to encounter half-elves from all the major subraces; they are simply not as common as half-elves of high elf stock. However, few of them have inherited all, if any, of their parents' abilities. This is a matter best left to each DM; it is recommended that half-elves receive only the bonuses delineated in the *Player's Handbook*. Even half-elves descended from aquatic elves should not have the ability to breathe under water unless the campaign is based around seafaring adventures. Even then, it is a matter best considered very carefully.

Since they are human and elven both in demeanor, half-elves are generally easily recognizable as such. They are taller and heavier than the average elf, though their hair and eyes often reflect those of their human parent. However, they also take on some of the features of the elven parent.

The skin of those descended from sea elves is a blend of human and elven flesh, often appearing as a pale green or a very light blue. Their hair echoes that of their human parent, though it can contain a hint of green or blue.

Grey half-elves, while extremely rare, exist only in human society, since they never find homes with grey elves. They are less easy to spot than many other half-elves, for the hair and eyes of grey elves are often close to human standards. The hair and eyes of these half-elves are of a lighter tinge than many humans, but aside from the pointed ears, these half-elves can be confused as smaller humans.

As with grey elves, the descendants of high elves can easily be mistaken for humans for a short while. Since the high elf coloration is nearly identical to that of humans (although the skin is somewhat paler), their half-elf children pass among the shorter-lived races with few problems. As long as they keep their ears covered and perhaps do something to disguise their angular features, they can usually remain unnoticed.

The half-elves of sylvan blood have the easiest time passing through human lands. Since sylvan elves are the largest of their breed and their skin tans, the sylvan half-elves can pass themselves off as humans fairly well. These half-elves take to the forest easily and often become rangers; since they are on the fringes of society anyway, it is only natural that they would take a life that reflects this.

The half-elf children of drow are the most unusual in appearance of all half-elves. Their skin is dusky grey, their hair bleached white. Their ancestry is perfectly obvious to all, and they typically find no solace or sanctuary in either elf or human communities. Even worse, the drow will often seek out the individual in order to expunge the blot on drow honor.

The children of two half-elves generally appear as did their parents. In cases where a half-elf's parents were descended from different subraces of elf, the results are varied. Fifty percent of the time, the child will take on a mixture of the parents' characteristics; 25% of the time the child will resemble the mother, and 25% of the time resemble the father.

Obviously, half-elves do not have an easy time integrating themselves. They are often outsiders, playing out their roles on the borders of society. There is a pervasive racism inherent in many of the societies in which half-elves take part, although not many will admit to it. Such racism exists in both human and elf lands, and it is often hard for half-elves to form attachments to either race.

Instead, many create their own communities, where all are free to live as they will. Unfortunately, many half-elves have allowed their experiences with humans and with elves to sour them toward both races; in half-elf communities, the members of their parents' races are not always welcome.

Humans, despite their fascination with half-elves, hold half-elves in some suspicion. Since many half-elves turn to a life of carefree adventuring or even outright thievery, they cannot be trusted with great responsibility. In addition, they are a mingling of the blood of two disparate races, and no one can ever be sure of what the result of such a union will be. Many half-elves are also the unhappy byproduct of war crimes, and they are feared to echo the circumstances of their conception. Their motives are, for humans at least, suspect.

Elves, on the other hand, typically see these children as inferior mongrels. They may try to tolerate presence of half-elves, but they view them as simply longer-lived humans. Thus, while half-elves are not often driven from elf lands, neither are they made to feel overly welcome, even as children, nor are there tears at their departure.

Neither humans nor elves seems to recognize the unique gifts half-elves have to contribute. As beings longer-lived than humans, they are in a position to understand the elven point of view. Likewise, as creatures who have the weight of impending mortality over their heads, they can comprehend the curious speed at which humans go about their lives. They are thus perfectly suited as ambassadors from one country to the other. They are guaranteed to be impartial, as they have relations on either side. They can become virtually any class and are multifaceted individuals in more ways than can be listed. However, elves and humans cannot forget the fact of parentage, and they lose a valuable opportunity for understanding each other.

Since they have difficulty being totally accepted in either world, half-elves tend to be travelers and loners, alternating between human and elf societies. When life sours in one, they move to the other for a time. They have come to see the best of both worlds.

## Elves of the Worlds

Beyond the elves described above, there are elves of different ilks populating separate

worlds. Offshoots of the nomadic high elves who searched the worlds far and wide, the elves described below settled on worlds that struck their fancy. In time, they became new subraces of elves. (A diagram on page 29 shows the interrelationship of these subraces.) In some lands, the elves are entirely distinct, bearing little resemblance to the original high elf stock. In others, the elves vary mostly in name and attitude, rather than through any physical basis. All of them carry a definite aura that pervades their world, shaping it as surely as they shape history.

One important thing to remember is that not all elves of these areas conform to these descriptions. There are *always* exceptions in every land. Any player characters from these lands may act as they wish.

## AL-QADIM® Campaign World

The elves of Zakhara, the Land of Fate, are the same physically as the elves found just north in the FORGOTTEN REALMS® world. What distinguishes these elves is their attitude toward life, other races, and their creed.

In Zakhara, all races tend to adopt a more cosmopolitan perspective toward other races. It is more important, they feel, to believe in an enlightened god than to be an elf, a dwarf, or a human. *What* one is, inside, is more important than *who* one is outside. They recognize that no one can control the circumstances of their birth, that it is the actions and the beliefs that make a being truly good, rather than the race of that being.

For this reason, there is no separate elf society in Zakhara. There are certainly those bigots who prefer elves over other races, but the truly enlightened individuals make no distinction between elves and other races. In Zakhara, no one is surprised when an elf takes a job many in the other worlds would consider traditionally dwarvish.

Neither is there racial intolerance and antipathy. It is perfectly reasonable for an orc to be good friends with an elf (inasmuch as elves become good friends with anyone). Again, races are judged by their actions and their beliefs. Only in the uncivilized portions of Zakhara will one find evidence of the antipathies so prevalent in other lands.

Indeed, the elves of the Land of Fate are considered valuable members of society. Because of their ability to live to a great age and the fact that even young elves are of an age with the most venerable humans, they are sought after for their wisdom. Many of the *qadi* (judges) are, in fact, elves. Their lifespans give them a unique view of the world and the opportunity to serve for hundreds of years.

Many elves serve as sages for universities. Again, their age gives them an advantage. Any creature that lives hundreds of years can accumulate knowledge of nearly any topic.

None of the elves native to this area worship the gods of the elves. Like the other citizens of Zakhara, they worship the enlightened gods. Any who worship their gods through idols and icons are regarded as savages. Any gods found in Zakhara will be represented only in symbols, for there is no other way to fairly represent a god.

The Zakharan elves consider the northern elves barbarians. The northern elves continue to subscribe to the system of hatred for other races, worship through the idols of their primitive religion, and keep to themselves. It is far more likely that a Zakharan elf would side with a fellow believer against a northern elf than the other way around. They know no racial loyalty; they know only the loyalty to one's brothers and sisters in belief.

## DARK SUN® Campaign World

Athasian elves are entirely different from the high elves that settled Athas eons ago, for they have adapted to a life in the burning world. Understandably, these elves do not dwell in woodlands as do their more typical cousins, for there are few forests on Athas. Instead, they live on the plains and in the barrens, scratching out an existence where few survive. They are runners and raiders, disdaining the transport used by the weaker species in the desert. They, like the other races on Athas, are much more savage than the typical elf.

The elves of Athas are very tall, often reaching heights of 7 feet or more. Their long legs make them excellent runners, and they can cover unbelievable distances in a single day. They are the terror of the deserts, and their hunting bands are widely feared.

Not only do they prey on those foolish enough to pass through their territory, they exploit the gullible in the marketplaces of the city-states. Few of these places do not have some sort of market where the elves sell their ill-gotten or shoddy goods; the elves make an incredible profit from those who pass through because they are the only suppliers.

Although they act ignobly toward members of other races and even other elf tribes, the Athasian elves are not an evil people. They have strong ties to their tribes and are only as harsh as their planet dictates. The bonds that unite them are amazingly strong; elves of a tribe often have no other friends than their tribe members. Their lives depend on their companions, and so they trust only those who have proven they can be trusted.

Like the other inhabitants of Athas, the elves struggle to endure. Under the fires of the Dark Sun, only the strongest survive. The elves plan to be among that number, and if they must crush others . . . well, if such is the path to survival, they will take it.

## DRAGONLANCE® Campaign World

The high elves settled the world of Krynn long ago, and their history on this wondrous world is rich. Although analogous to the history of elves in the AD&D® world, it is not exactly the same. Indeed, some misinformed historians argue that these elves are not related to the elf explorers mentioned earlier in this chapter. This theory seems highly implausible after reading the history of elves on this world.

On Ansalon, the main branch of elves was called the Kagonesti, the source from which other elves sprang. These others quickly abandoned the sylvan role, taking up more civilized pursuits. They eventually formed a realm called Silvanost, after their great leader in the First Dragon Wars. The Silvanesti are reminiscent of the grey elves in their attitude and outlook, for they are haughty and most concerned about racial purity.

The Qualinesti broke from the Silvanesti centuries later, over a dispute of the best way to deal with the non-elven world. The Silvanesti, a xenophobic, caste-ridden batch, nearly drove the Qualinesti from the land for their sympathetic tendencies toward humans.

The Qualinesti, commanded by Kith-Kanan, left Silvanost when it became apparent that the Silvanesti had stagnated as a society. They traveled west until they found a place where they could live in freedom from the structure demanded by the Silvanesti. The relations between these two races are strained, at best. The Qualinesti most resemble high elves, and they are by far the most common elves seen in the DRAGONLANCE® campaign world.

The sylvan elves of Krynn are the Kagonesti. Although they are of the first variety of elves that ever set foot on Krynn, they are disregarded by the other races, shunned as wild and uncivilized. The Kagonesti, however much they dislike this situation, have chosen to reject civilization and its "corrupting" values. They prefer, instead, the wild harmony of nature, the contact with the earth that the other elves seem to have thrown away in their quest for newer and better forms of government. The Kagonesti often wear tatoos or paint their faces to intimidate their enemies or to blend in with their surroundings.

The Dimernesti and Dargonesti are the two races of aquatic elves found on Krynn. Created by the chaotic passage of the Greystone of Gargath, these sea elves possess the ability to transform themselves into otters or dolphins. The relations between the two races of sea elves are much like that of the Qualinesti and the Silvanesti. The Dargonesti are only rarely seen and are very reclusive.

The elves native to the other continent of Krynn tend to resemble the Kagonesti more than any other variety of Krynnish elf. Taladan elves of the Tamire are nomads and raiders, distrustful of outsiders. They identify their clans with totem animals, using these animals as spirit guides and protectors.

The other race of elves on Taladas consists of refugees, elves from a Silvanesti armada driven off course to the new land. They have founded a land called Armach and are trying to build a land reminiscent of Silvanesti.

However, the humans of the region proved too resilient to be driven from their homeland, and they forced the elves to accept them into a confederation. The humans have thus become more elven, and the elves have become more human in outlook. However, the elves have influenced the primitives of Taladas much more than they have been changed.

A fanatical desire to keep themselves purely elven has preserved these elves' culture well. Although they dwell in a loose confederation, they have clearly delineated the license the non-elves of Armach may take with the elves. They guard their new "homeland" fiercely, executing those who cross its borders without consent. Overall, the Armachnesti (as they have come to be called) are much more intolerant than their Silvanesti brothers ever were. Although they must deal with humans, their life has become all the more rigid, and some say their inflexibility is a direct effect of their necessary contact with humans.

Both races of elves on Taladas must confront the League of Minotaurs on occasion, which sits squarely between the two. The Armachnesti currently have a truce negotiated with the League, but both countries know that the truce will be broken when it is convenient for either side. The elves of the Tamire are in more serious danger, for the minotaurs think nothing of raiding their lands to replenish their stock of slaves.

## FORGOTTEN REALMS® Campaign World

The elves of Toril do not follow the standards of most other worlds. What unites almost all the elves of the Realms is their self-bestowed title: Tel'Quessir. This translates to "The people." All non-elves are known as the "N'Tel'Quess," or "Not-People."

While these elves possess the standard elf abilities, their appearance is markedly different. These elves are of human height, though there the resemblance ends. Like their more typical cousins, the elves of the Realms are much more slender and delicate in

appearance. Breaking down the elf nation still further, there are five separate, distinct subraces of elves in the Realms, each of which is viewed differently by the other races.

The first subrace is that of the gold elves. Some also call them sunrise elves or high elves, although they do not closely resemble the standard high elves and, indeed, seem more like grey elves. Gold elves are generally viewed as the most civilized and, at the same time, the most contemptuous of other races. They are the nobility of elves on Toril, leading the other elves in the elven way. They are the equivalent of the Silvanesti on Krynn.

The second subrace is known variously as moon, silver, or grey elves, although again the name is the main similarity to the typical grey elf. They more closely resemble high elves than grey elves, which is not surprising since the nomadic high elves settled Toril. They are the most common of elves on this world, or at least the variety most often seen by non-elves. Because of their higher tolerance for other races, the moon elves are more likely to become adventurers than are the other elves. Likewise, most half-elves in the Realms are descended from moon elves. Although moon elves are considered less noble than gold elves, the Queen of Evermeet is a moon elf.

The third subrace is roughly equivalent to sylvan elves. They are called wild, green, or forest elves. They deal almost exclusively with other elves, keeping any contact with other races to a minimum. Since they try to live far from humankind, they are one of the least-seen races of the elves. Although they do not have a kingdom of their own, they permeate every elf nation.

The sea elves comprise the fourth subrace. They, too, are fairly uncommon, although they aren't as reclusive as wild elves. They swim in two waters: those of the Great Sea and the Sea of Fallen Stars. There is only a slight difference in appearance between the two. One race breathes salt water and the other fresh, but they can survive in either. Water elves make their homes anywhere but are most common near the island retreat of Evermeet.

The final subrace on Toril is that of the dark elves. Like their drow cousins, the dark elves are almost universally shunned for their evil. Cruel creatures living underground, these drow emerge only at night, trying to avenge themselves on their "oppressors," the elves responsible for their underground retreat.

The elves of the Realms are one of the oldest races native to that world. While humans were living in their caves, learning to hunt each other, the elves flourished. Their nations spread across Toril, and they lived in harmony with the land. But as humans became more and more civilized and expanded their holdings, the elves had to retreat.

Since the elves could not react quickly to the constant change humans wrought, they had to devise an alternate plan. From their court in Myth Drannor, the elves began arguing the virtues of a Retreat to a land beyond humans. They argued this matter for many centuries and, after exhausting all the evidence available, came to a consensus.

During their debates, they located a land far beyond human reach. Called Evermeet, an island thousands of miles out in the Trackless Sea, it suited their purpose perfectly. Holding deep and glorious forests as well as many of the other features elves consider essential for a home, there was little doubt that this should be the last home of the Elf Nation.

Only elves are welcome in Evermeet. All others (including drow and half-elves) are turned away. Since there seems no way of magically traveling to Evermeet, it is only by

ship that anyone can journey to there. The Elven Navy, the largest known, protects the sanctity of Evermeet by destroying non-elven ships that come inside Evermeet's jurisdiction. The navy also provides passage for elves seeking Retreat or protection for elves beset by humans. The navy seems to know when their services are needed.

Although they were once the most powerful group of the Realms, the elves are a group in sad decline. They retreat from their world in ever-greater numbers. One day, humans will find the Realms devoid of elves. The greater world will no doubt miss their presence.

## GREYHAWK® Campaign World

The elves of Oerth resemble the standard AD&D® elves in nearly every respect. They are very much the stereotypical elf, concerned with those things most elven. Some contend that Oerth is the elven homeland, the place from which all others sprang.

Contesting this claim, however, are the existence of the grugach and the valley elves. Although these two races may be merely offshoots of sylvan elves and grey elves, respectively, they are found nowhere outside the world of Greyhawk. Were Oerth truly the elven homeland, then these two variants would be found outside it. Perhaps the true birthplace of the elves is lost in the shadows of time, or perhaps it was destroyed during the great Elfwar. Whatever the case, it is likely that Oerth is not the origin planet.

Still, the elves of Oerth tend to be "purer" in form than the elves of many other worlds. Their ideals and their goals are often closer to the AD&D standard than those of other worlds. In almost every regard, they are the average elf, save for the grugach and the valley elves.

The grugach are much like sylvan elves, living like them in the deep, pristine forests of unpopulated areas. Like sylvan elves, grugach tend to be much less civilized than their other cousins. One area in which they differ, however, is in their savagery.

While ordinary sylvan elves are ornery and unfriendly, the grugach are downright vicious. Sylvan elves resent intrusion into their lands, while grugach usually kill those who do so. Grugach cannot stand the company of any other humanoids not naturally of the forest. This includes druids and other elves, although it does not apply to nymphs or dryads.

On the other hand, they possess a close kinship with the animals of the woodlands, often dealing with them more equally than with humanoids. The grugach's attitude of brutality for all outsiders is well known. Their hatred carries far into the realm of violence. The grugach generally use traps and snares to capture outsiders who approach too closely to their camp. These traps become more and more cruel the closer one nears such a camp.

The other subrace of elf in the world of Greyhawk is the valley elf. Their name is derived from their home in the Valley of the Mage. As servants or allies to the Mage, they protect the land in exchange for the Mage's ability to protect them from outside threats.

The Mage has, many believe, set up a network of valley elf spies to protect the land and raid nearby powers. Since valley elves are roughly the same height as humans, they can usually pass in disguise through human lands. Understandably, such infiltration disturbs the neighboring peoples, and they would be happy to see the valley elves

eliminated.

Most other elves despise valley elves. The common elven belief is that these elves have sold out their dignity and their independence for the fleeting protection of a human wizard.

Since the elf lifespan is so much greater than humans', the elves will no doubt outlive their "protector," unless he chooses the option of becoming a lich. If this is the case, the other elves may well come and eliminate their wayward brethren. They won't stand to see more of their kind corrupted by evil. The valley elves already live under a cloud of suspicion for their tendency to follow the orders of the Mage's drow lieutenant, and becoming vassals of an undead beast would be the last straw for any right-thinking elf.

The valley elves have adapted well to the dangerous environment of the Barrier Peaks. Even before the coming of the Mage, they fended well for themselves in the perilous lands nearby. After his arrival, they became a part of the danger in the area by protecting their lord fanatically. Some say there can be few better bodyguards than zealous elves. The Mage of the Valley is well protected indeed.

## RAVENLOFT® Campaign World

There are no known elves native to the dark domains. The majority of elves found in the demiplane live in the domain of Sithicus and are originally from Krynn. Here, they are forced to remind Lord Soth of his crimes, keeping alive the memory of his heinous past. Although they do not consciously perform this service, he cannot but help recall the elves who engineered his downfall. The elves here live a tortured, cheerless existence, never knowing when Soth may choose to avenge himself for this offense.

This domain is not entirely natural, so elves feel no connection with it. The forests do not respond to their merriment, lying lifeless instead beneath their feet. The joy that elves typically feel in the forests of more natural lands is absent from Sithicus, and any happiness they might show is forced. Their lives are tortured; for this reason, elves experiment extensively with methods to escape the clutches of Soth. Thus far, few (if indeed any) have been successful.

In the other domains revealed at the time of this writing, elves and their derivatives tend to be regarded with intense suspicion. The people of Ravenloft are usually very human and inherently superstitious. Anything that does not fit with their carefully structured beliefs is an object of fear and hate. Only warily will elves ever be accepted by these folk, and even then they will be distrusted.

Most undisguised elves in Ravenloft are hunted by frightened citizens. After a few attempted lynchings, any elf worth his bow will understand the need for disguise while traveling in the dark lands. Thus, any elves who might be journeying through these realms will not be readily apparent, although they will typically offer aid to a fellow elf in danger. Since undead radiate no heat, elves can spot imposters easily at night . . . which comes all too frequently in Ravenloft.

## SPELLJAMMER® Campaign World

Those elves who travel through wildspace and the phlogiston consider themselves the quintessential breed of elf, for they are the link between elves throughout known space.

Because elves do not typically attain higher levels in magic, they are not as apt to construct planar travel devices. Thus, they rely on the Elven Imperial Navy to keep contact between the scattered settlements across the worlds. Paradoxically, it may be for lack of magical power that the elves are currently one of the strongest forces in space.

Some say that these descendants of the nomadic high elves have developed cloaking technology for their ships, allowing them to discreetly observe potential trouble spots. Further, rumor holds that there is a sizable fleet located at the Rock of Bral, hidden within the bowels of the asteroid with the consent of Prince Andru. It is well known that the elves have an embassy located on the Rock, for it is an important location in wildspace. Thus, any elf spelljammers can report directly to the Elven Imperial Navy at the Rock.

The Elven Imperial Navy travels to each of the major elf nations on each planet where elves are known to hold power. They carry news from other elf nations and offer assistance to the various rulers. Fortunately, they recognize each monarch as sovereign in their own nation, so there is little friction between spacebound elves and groundlings.

The assistance they offer is usually in the form of advice as the spelljammers do not like to make their presence known to the average inhabitants of a planet. Occasionally, they will offer something a bit more substantial, but this will generally only be in an emergency. In return for this help, they expect that the beneficiary will provide aid for the lesser elf nations in an area.

Some say that the Elven Imperial Navy also protects the elf homeworld. They claim that they are a naturally occurring race throughout the spheres, united in a common bond with the universe. Others point to the obvious similarities between elves on so many different worlds. These folk claim that the elves sprang from one world to spread across the spheres.

If it were true that the elves did originate from one world, it should come as no surprise that they deny it. Having seen what other races have done to their worlds and how many of these worlds are now obliterated, the elves would naturally want to make sure that none of these races would discover and then destroy the elf homeworld.

Conversely, another theory states that elves only learned to live in harmony with their new worlds through the destruction of their original home. This, the critics claim, is the elven shame, and they hide the planet because they don't wish it known that they weren't always as insufferably perfect as they are now.

It is due to the elves that so much of traveled space is relatively safe for good-aligned folk. The elves drove the orcish races from the known spheres in the Inhuman Wars, crushing their fleets almost entirely. Although the goblinoids have vowed revenge, the elves are not overly worried. If they did it once, they can do it again. This sentiment, of course, occurred prior to the Second Inhuman War.

The events leading up to the destruction of the goblinoid fleets stem from another debate, much like the one which prompted the move of the elves of Toril to Evermeet. This debate, too, took several hundred years from beginning to completion but, once decided, the doom of the goblinoids was sealed. With relentless precision and determination, the elves ensured that the goblin races would pose no threat for some time to come.

Because of their power and dominance of many spheres, the elves have grown arrogant. They have appointed themselves the police force of space and often decide to extend their jurisdiction to planet surfaces. Sometimes, it seems, the spelljamming elves

embody all that is *worst* in the elf race. They use their age as power, claiming experience and wisdom beyond that held by others. They are haughty, hardly deigning to speak to "inferiors." They often interact with other races only when they suspect the other race of wrongdoing or conspiracy. The actions of these spelljamming elves contribute to, or even cause, the negative view of elves that many races hold.

Elven spelljamming ships are organically grown, bred for aesthetic beauty and functionality in wildspace. Thus, they are easily recognizable, as are those stolen from the elven gardens. The rejects are often violently colored monstrosities and are visible for long distances.

Elves from all worlds can be found in space, although it is typically only the grey and high elves (or their equivalents) who travel by spelljamming. Aquatic elves cannot leave their watery homes, and wood elves hate to be parted from their forests for even a short while. Drow cannot abide the light of the stars at such close range. (For that matter, drow can easily travel to other places by extraplanar means and so have no need to endure the brightness of space.)

In the middle of the Second Inhuman Wars, elves are finding that they have been too lax too long. Their inability to change at the same rapid pace as other races is leading to their downfall at goblinoid hands. The elves see their "empire" crumbling around their pointy ears. They have become just another spacefaring race rather than the feared power they had been for so long.

## Chapter 3: Physical Attributes

*Well, of course we're different. We live longer, often more than 400 years past the typical Human. We can function easily and comfortably in places where the only light is from the heat radiated by our brothers—and our enemies. Our skill with bow and sword has been called paranormal by some, while others recognize this skill as simply the mastery and artistry it truly is. We do not even need sleep, instead deriving our rest by dwelling within our memories and hopes of the past: the act of Reverie. Some claim this stagnates us and causes us to live in the past. This is not so. We learn for the future by reliving the past.*

*We are the overlords of the forest, and for good reason. We are intimate with the very soil on which we walk, for our souls are tied to the soil. The ground beneath our feet holds us up, never betraying us to the enemy. Our forests embrace us by hiding us in their branches, ensuring that we do not inadvertently betray ourselves.*

*We can adapt to any environment anywhere, and there are members of our race in places most have deemed too inhospitable. Although you may not see our brethren, you may rest assured that they are there watching you . . . making sure you do not do anything to offend them.*

*We are, in short, the guardians and keepers of this world. We do not try to prove that we are naturally better than everyone else. We only know that our abilities far exceed those of most, and our long lives give us the perspective to use these abilities to their fullest extent.*

*This is not to say that the world should sit at our beck and call. To the contrary, we do what we can to ensure that we do not interfere with its workings too greatly. Indeed, we see our mission as one of restoring the world after you others are done with it. Unlike*

*you people, our lives are not devoted to the idea that we must change the world, for we are fully aware that the world will change itself when it must needs.*

-Laranis Callirr, high elf ranger

Elves generally resemble humans physically. Although they tend to be shorter and slimmer, they can often successfully disguise themselves as small humans. Without this disguise, however, their true origins are readily apparent. They are betrayed in this respect by their distinctive countenance. Many elves, however, find this is not a problem; they have no wish to be confused or identified with humans in any way.

Elves have delicate chiseled features that are typically quite angular and beautiful. There is really no such thing as an elf born ugly; those who have low Charisma were either scarred accidentally or marred magically. However, Charisma is not only an indication of outward beauty. The fact that many elves have average Charisma is a testament to the fact that beauty is not, contrary to popular belief, the only important thing about a person.

All elves are very slim, hiding their natural strength under a veil of fragility. Their slight build belies a power seemingly drawn from the earth itself. Looking at them, one would never believe that these creatures were some of the most powerful ever created, or that they very nearly witnessed the birth of the world. Elves saw the rise of other races—the crawl of humanity from the primordial ooze. They are older than many trees and will live to see generations of trees and humans alike. Yet they hide this innate power beneath a delicate exterior; many thus assume they are harmless.

Elven hair and eye color varies by subrace. This is, in fact, how many people identify the separate types of elf at first glance, most especially grey and high elves. With other elves, the differences are often immediately obvious. However, it is still useful for any character to be familiar with the various traits that distinguish the elf subraces.

One interesting elven characteristic that few are aware of is the elves' lack of canine teeth. Since they sprang full-fledged into the form they now occupy, they skipped the evolution process undergone by so many other races. Thus, although they are omnivores and their teeth are all strong, they have no pointed, canine incisors.

Elven skin is usually quite pale. The obvious exceptions are, of course, the drow and the aquatic elves. Even half-elves are rather fair when compared to their human parents.

Of course, all elves have pointed ears. This affords them sensitive hearing, and they can hear sounds unheard by human ears. However, the range is not really great enough to make a significant difference; it is only enough for elves to distinguish certain tones, which enables them to pass messages not meant for human ears.

This chapter discusses the physical aspects of elves, including innate abilities, stages of life they go through, diet, and fertility. It also discusses two uniquely elven qualities: the elven bond and elven music. They are included here rather than in Chapter Four because of the physical ramifications each has on elves.

## Physiology

Elves have certain abilities not accessible to most humans except through powerful

magicks. They are aware that other races do not have these faculties, and they take great pride in knowing that they are the only mortal race blessed with them. However, most elves do not treat other races as inferior simply because they were *born* without these abilities; rather, they rejoice in their own uniqueness. The elves feel truly blessed.

Among the abilities all elves are born with are *communion, elvensight, manifestation, the reverie*, and a limited resistance to heat and cold. Each of these is more fully explained in the following text.

## Communion

All elves have the inborn ability to share their experiences, their feelings, and their lives with those elves they love or trust implicitly. This sharing, called *communion*, can only be undertaken by fully willing elves. It does not work with half-elves, nor does it function when one of those participating has even the slightest reservation. This includes those under the influence of *charm*-related spells, for they hold qualms deep in their hearts, even if told they do not.

Communion requires all elves involved (to a maximum of four) to be in a state of total relaxation. They must be in a place of peace, preferably where the world is not likely to intrude with its troubles and its cares. A natural surrounding works best for this operation.

Communion requires the participating elves to be totally serene, thinking only of the others in this most intimate bond. (Thus, communion is not an effective method of relaying messages of any urgency.) All the elves must free themselves of judgments and prejudices about the others, which may take some time. Indeed, some communions have been known to take a fortnight or more merely in preparation for the bonding.

When the participants have sufficiently calmed and retreated from the rigors of the world, they lightly touch palm to palm, finger to finger. They open their minds to the others, freely and completely joining together; if even a tiny reservation remains, the bond fails. During communion, the elves explore all the facets of the others' personality—the loves, hatreds, hopes, and fears.

While in this trance, communing elves are totally vulnerable to anything that might happen to them physically, for they cannot defend themselves against any attacks while communing. Mentally, they are even more vulnerable to attack, saving at –4 against most mental attacks, for their minds are totally unguarded.

Interestingly enough, the very act of communion offers a protection of sorts. Those in communion are defended against being spied upon, either mentally or physically; this defense takes the form of an invisible barrier surrounding the communing elves. It is speculated that the elves are so enrapt with each other that they project a mental shield that keeps discovery to a minimum. Of course, this offers no protection against an attack from someone who knows of the time and whereabouts of a communion.

The benefit of communion is not only that elves learn the most secret facets of others. Because of the sharing, they also become intimately acquainted with others' habits, fighting styles, and ways of thinking. For the day immediately following communion, the bonded elves can fight in perfect harmony, one's weapon following through where another left an opening. If fighting side by side against common foes, they gain a +2 to attack rolls and a –1 to AC for the next day only, and only if they work together. All the

elves must have at least one partner from the communion at their sides if this bonus is to be brought into play.

Communion can only be effected once a week. Those who try it more often with the same partners find themselves sharing with essences that are essentially themselves, for those who have participated together have shared enough of their spirits that there is little difference between them. Furthermore, communion tends to be somewhat draining even while it invigorates. Bonding so totally is simply too much of a drain on one's psyche to be attempted lightly and frequently. Communion works best when the participants have something to learn or gain from one another.

## Elvensight

Elves have extremely keen eyes. Although they are not as sharp-eyed as most birds of prey, their eyes are still sharper than those of the average human. In addition, their eyes have the ability to see further into the infrared spectrum, allowing them to function in most unlighted places. In most landbound elves, this sight extends only to a range of 60 feet. Aquatic elves, as described below, have an entirely different sort of sight.

Naturally, there must be no other light at all for elvensight, or infravision, to function. If a greater intensity of light than starlight (including moonlight from a half full or fuller moon) is within the elf's line of sight up to 100 feet away, his or her elvensight will not work at all. Although the range of infravision is typically 60 feet, bright light farther away affects them adversely.

Elf eyes must, of course, adjust to a change in light. They can no more immediately use their elvensight any more than a human can immediately adjust to the sunlight after spending a time in darkness. As well, if they are exposed to bright light while using their infravision, they suffer a –2 penalty to all actions for 1d4 rounds while their eyes adjust to the change.

**TABLE 3: ELVENSIGHT INFRAVISION**

| Subrace | Distance | Type of Sight |
|---|---|---|
| Aquatic elves | 360' | Aquatic vision (sonar)* |
| Drow | 120' | Infravision** |
| Grey elves | 60' | Infravision |
| Half-elves | 60' | Infravision |
| High elves | 60' | Infravision |
| Sylvan elves | 60' | Infravision |

* Aquatic elves do not have infravision, per se, above the water; however, they can locate their way or their enemies through dark and even stormy waters by a version of infravision adapted to underwater environments. They do not see heat or cold, but rather the movements of water currents.

** Drow infravision is so intense that their eyes actually radiate heat; someone viewing a drow through infravision sees two burning eyes atop a normally glowing torso.

## Manifestation

Despite the fact that elves are shorter than humans and often appear childlike because of their height, they are usually not discounted as such. There are the rare occasions when they are, however, and it is at such times that they invoke the elven ability *manifestation*.

When elves wish, they have an imposing presence. Suddenly, they can seem far larger, more *there*, than their actual height and weight would indicate. They use this ability to good effect against impressible humans; it keeps the credulous ones at a distance and occasionally attracts necessary attention to the elf.

The manifestation ability is purely a result of the elven connection with the land; the only trick involved is in demonstrating this connection. Naturally, manifestation does not work on planes other than the Prime Material. Furthermore, it functions only when the elf is in a natural environment or in one that the elves have shaped, in which case they generally do not wish to make their presence known. Finally, manifestation works only on an elf's home world or after an elf has lived on a world for more than 50 years, whereupon the elf has grown used to the natural rhythms of the world.

If an elf from Toril were to travel to Oerth, he could not manifest for half a century. After such time, he would have made the planet his home. To do the manifestation back on Toril, he would have to return to that land and become reattuned to the planet.

Any elf away from his home world for 50 years, no matter where he is, loses this ability until he reattunes himself to the land. Note that it takes only five years to readjust to an original home world, unless an elf has attuned himself to another. In this case, he must endure the entire 50-year process, for he has made himself a native of that other land, and must entirely readjust to the cycles of his home world of old.

Manifestation has no real definition in game terminology. It is suggested that this ability allow a +3 on reaction checks (reactions for enemies would be –3), as well as draw attention to the elf in question. This might be useful when trying to distract a band of orcs from an injured party member or when attempting to impress a simple woodsman. Aside from impressing people, the power is largely useless. Elves are immune to this ability and any displays of it. They are aware of its presence when it is used and may admire the timing if particularly noteworthy.

### The Reverie

Yet another difference between elves and the other humanoids of the worlds they share is that elves do not sleep in the typical sense, though they can enter that state if they desire. Instead, they gain their rest through a process known as *the reverie*. The reverie is akin to sleep, yet is very much unlike it. When elves enter this state, they vividly relive past memories, those both pleasant and painful. Like the dreaming of humans, elves have no control over which memories rise to the fore when they relinquish their bodies to the reverie. Occasionally, elves do actually dream, but this is not a frequent occurrence and mostly occurs only when they truly sleep.

Elven dreams, when they happen, are sometimes prophetic. Whether these dreams are an indication of some sort of precognitive ability on the part of the elves or granted by their gods is a matter of debate. However, not all elven dreams are prophetic. Indeed, enough of their dreams are like those of humans that they cannot rely on their dreams for

guidance. Still, all of their dreams are highly symbolic, providing insight into each individual's character.

In a very real way, the reverie accounts for the elven desire to lead happy, joyous lives. Who would look forward to reliving unpleasant memories every night? Very few, though there are some truly noble elves who take on the pain and suffering of others so that they relive the memories with each reverie instead. These elves have accepted this sacrifice for the good of their people, taking upon themselves the burden that could not (or should not) descend to the lives of other, more innocent elves. They perform the unpleasant task of drawing into themselves the suffering of their people.

When they enter reverie, elves do not usually close their eyes unless there is a bright light present. They relax their bodies entirely, each muscle losing its rigidity, until they are absolutely calm. Their faces relax into a dazed and distant look as if they were seeing another land or another time.

During this time, they are aware of their surroundings, but they cannot act to influence them any more than a human can while asleep. Only by an act of will can an elf tear herself from reverie, and she will be confused for a short time, just as a human would be who has torn himself from sleep.

Although the reverie provides rest, it is primarily an important memory tool that helps the elf maintain a strong sense of identity. Since their lifespans are so great, elves must periodically recall the events in those hundreds of years that were integral to the making of their personality.

The fact that elves go into this reverie, rather than enter actual sleep, could help to explain their natural resistance to *sleep* spells. Since sleep is, for the most part, alien to their nature, they can ward off its effects easily. But since the reverie is akin to sleep, they suffer no ill effects when they do fall victim to sleep spells and like magicks.

The combination of reverie and manifestation may also account for the elves' near-immunity to *charm*-related enchantments. The reverie imparts a strong sense of self, giving them a secure identity. They are intimately attuned to their own lives, wants, and needs and are therefore not easily misled about their goals. They allow only themselves to determine their course of action.

Their innate manifestation ability makes them well aware of efforts to influence them through extranatural means. Since they can sway others, they are conscious of attempts to manipulate them and can resist these endeavors with more authority and success than most other races.

### Resistance to Heat and Cold

Elves are keenly attuned to the world and its meteorological cycles. As such, they are less affected by extremities of temperatures than are many other races. The blazing sun of the desert and the chill of the arctic cause elves discomfort, but not nearly as much as such extremes do others.

Elves can withstand up to 100°F with only mild discomfort. Likewise, they can remain clad in their usual clothes to a low of the freezing point of water and be only mildly uncomfortable. Below 32°F, they suffer the same ill effects as anyone else, but until that point they feel little different. Above 100°F, they suffer as do others but exhibit no undue stress until that temperature is surpassed. They lose no body water to sweat, nor

do they need to lighten their clothing.

It has been surmised that this is why elves have pale skin and only rarely tan. Their resistance to the elements prevents much of the skin damage that other races suffer. Only those elves who are constantly exposed to the elements suffer even the slightest amount, and even then they do not tan as deeply as some humans and dwarves.

The elves' immunity to a range of temperatures does not extend to fire or snow, or anything that simulates these conditions. For example, an elf could not stick his hand into a fire and be undamaged, nor could he walk through freezing rain without effect. Neither are elves immune to spells that rely on fire, ice, wind, and other weather-related effects. It is only to natural temperatures that elves have even the slightest resistance. A *cone of cold* or a *fireball* has the usual adverse effect on an elf.

### Other Elven Abilities

Despite their frail appearance and lowered Constitutions, elves have a remarkable resistance to ordinary disease. While it is not on a scale with the paladin's total immunity to nonmagical diseases, elves are only rarely afflicted by disease. Although immunity does not easily translate into game terms, the DM has the option of setting elven resistance to disease. Anywhere from 0% to 50% is acceptable and is unlikely to destroy game balance.

On the negative side, there are some purely elven diseases (which are, thankfully, very rare), to which all other races are immune. These include certain nervous disorders, some poxes, and other equally virulent diseases. Elves, although not necessarily ashamed of their afflicted, do try to keep those who are ill from the prying eyes of the rest of the world. They do not want the other races to think of ways to use these diseases against the elves.

Unless a disease is fatal, the effects usually fade simply with the passing of time, for elves have a strong regenerative ability. Scars (not wounds) on their bodies heal more quickly than they do on other races, eventually disappearing almost entirely. Such scars show up only under intense scrutiny or under harsh lighting conditions. This ability works only on scars; elves do not recover hit points more rapidly than any other PC race.

Their regenerative ability does not extend to regrowing lost limbs or organs, although some contend that the elves are the original creators of the magicks that enable this. Elves are, however, on the pioneering edge of creating *artificial limbs* to replace lost ones (see page 106). In addition, elf crafters are working on ways to replace the more sensitive organs, such as eyes and ears, as well as the heart, stomach, and other internals.

## Stages of Life

Elves have the longest known lifespans in the known worlds. The length of their lives often surpasses even the ancient trees, although the elves typically leave the lands known to humans before reaching 600 years. Some have been known to stay for as long as 750 years, but very few remain after that time. The siren call of the unknown beckons to them, and they leave the world in the capable hands of their successors.

Elves live long enough to see the changes the world has to offer—to see things humans regard as permanent deteriorate into dust. One generation of elves can see the

rise and fall of a mighty human empire, the birth and death of a forest, the gradual eroding of a mountain range. The face of the earth can change dramatically during the time an elf spends on the world. This gives them a far broader range of values than humans are usually capable of understanding.

Elves do not feel the effects of age as humans know them. After an elf has grown to maturity, her features cease to change or, at least, change very slowly. There is very little difference between the way a 100-year old elf and a 400-year old elf appear. The only way to tell between young and old is the degree of exuberance, spontaneity, and enthusiasm each exhibit. Only at venerable age do elves begin to show their years, yet they still appear younger than most humans do at age 50.

Older elves are less likely to charge off to do great deeds rashly, preferring instead to think the matter through a bit more. Younger elves, on the other hand, have not yet discovered the value of patience. They dash hither and yon in an effort to squeeze the most from life, realizing but not quite understanding that they have hundreds more years in which to do so.

Elves go through several stages of life, including *childhood*, *adolescence*, *adulthood*, *middle age*, *old age*, and *venerable age*. Once elves have tired of the world, usually by their 600th year, they pass on to a place called Arvanaith. Because this final rite of life is such an important part of the elven way, Chapter Seven is devoted entirely to Arvanaith and the passing on of elves.

Table 4 below shows the ages at which elf subraces fall into the stages of life categories described in this chapter. The table is also useful to calculate any changes to abilities due to the effects of age. Please note that this table varies slightly from Table 12: Aging Effects (found on page 24 of the *Player's Handbook*) in order to represent the variances between the elf subraces and other races. That table noted that the maximum ability scores an elf could have is 18. New maximums for each subrace are given in Chapter Ten; these are initial maximum ability scores and do not reflect the bonus age bestows on Intelligence and Wisdom. Because all elves live such long lives, they have the opportunity to increase these two attributes to 20, purely by observing life. This adjustment is regardless of subrace.

**TABLE 4: ELF SUBRACES BY CATEGORIES OF AGE**

| Subrace | Childhood Age | Adolescence | Adulthood* | Middle Age** | Venerable Old Age† | Maximum Age‡ |
|---|---|---|---|---|---|---|
| Aquatic | 1–59 | 60–99 | 100–159 | 160–219 | 220–299 | 300+ 300+3d100 |
| Drow | 1–49 | 50–79 | 80–139 | 140–189 | 190–224 | 225+ 225+3d100 |

* Full normal abilities
** –1 Str, –1 Con, +1 Int, +1 Wis
† –1 Str, –1 Con, +1 Wis
‡ –2 Str, –2 Dex, –2 Con; +2 Int, +2 Wis

**Note:** Modifiers to abilities are cumulative per age category. For example, the total ability adjustments to a grey elf of venerable age would be as follows: –4 Str, –2 Dex, –4 Con, +3 Int, and +4 Wis. However, elves' Intelligence and Wisdom abilities can never be increased beyond 20, except by magical means. Likewise, all their abilities can never deteriorate below certain minimums, again except by magical means. Minimum statistics for all elf subraces are as follows: Strength 3, Dexterity 6, Constitution 7, Intelligence 8, Wisdom 3, and Charisma 8.

## Childhood

Elves remain children for approximately 65 to 75 years. They grow slowly throughout these years, achieving a height of 4 feet at most. It is during this stage of life that they learn what it means to be an elf. They learn the basics of archery and swordplay. However, they are still essentially children and continue with their childish ways until they reach adolescence.

## Adolescence

At about age 75, elves enter adolescence. Whether male or female makes no difference; both sexes mature at roughly the same time and at the same rate. This is the time of life when elves begin growing, some to a height of 5½ feet or more, although the norm is often approximately 5 feet.

The end of this period is also the age at which they are inducted fully into elven society—the age when they must bear the responsibilities of adulthood. It is during adolescence that older elves teach younger ones how to continue finding joy in the years to come without succumbing to the crushing boredom that advanced years often bring.

Those elves who were not prepared for the prospect of centuries stretching before them may fail to manage the weight of those years. Indeed, such elves (not to mention other beings given such longevity) often come to a terrible end if forced to live those hundreds of years. The most common example of this misfortune is an elf who grows up in a human community. Such elves do not let the years slide past as do other elves; instead, they try to cram as much living as possible into as short a time as possible—as do their human teachers. These elves don't learn the true value of relaxation and merriment, and these are often the elves who become insane or suicidal.

Of course, this isn't true of all non elf-raised elves, or even many of them. Most elves have an instinctive grasp of the way they should live so that they can enjoy the entirety of their lives.

## Adulthood

When elves reach age 110, they are considered adults. They are allowed to make their own way in society, human or otherwise, and are free to make all personal choices. They are also ready to take responsibility for their actions—whether good or bad. Adult elves can now experience life fully, for they are fully grown and are in the prime of life.

This is the age when many elves begin adventuring. Free of the constraints of childhood and free to follow their own guidance, they relinquish their role in society for a time. They yearn to satisfy their boundless curiosity about the universe.

This is, unfortunately, also the age when many of these adventuring elves die. Having had no true experience of the world outside their homelands, they are usually unprepared for what lies beyond the fields they know.

Less than one-fourth the adult population of elves goes adventuring. Most—although curious about the world—find enough joy and beauty right where they are. Those who take up the sword and the bow to campaign in the outerlands often feel some driving need. They are not ostracized by their fellows for the wish to experience more; indeed, those who stay at home may feel a little wistfulness that they have chosen to remain behind.

### Middle Age

At the age of 175, elves reach middle age. They have slowed somewhat and become slightly more vulnerable to disease and age. In trade, they know much more about the world and its workings, having affirmed their connection to the land countless times. Elves of this age have the wisdom to know what their abilities are and the intelligence to not push themselves beyond their means.

Many elves cease adventuring at this point. More than 60 years of one's life devoted to pursuing fleeting treasure and fame is quite enough for most elves. The priests settle in one community, the wizards retire to perform magical research full time, the warriors train others, and thieves establish their own guilds.

There are a few elves who never cease the campaigning life. They are likely to remain actively adventuring forever—or until their enemies catch up with them. Often, they have some epic quest or some inner need driving them. These are the elves most often spoken of in legends, for they will not retreat from what they perceive as their duty. They do what they must, not always what they want. They are among the most admired beings on whatever world they exist; their most hated enemies hold them in grudging respect. Decades and even centuries have given these elves a reputation of might and power. Even if these elves have no great ability, that reputation is enough to cow most opponents.

### Old Age

Around the age of 250, the elf has entered "old age." He still hasn't become visibly old, but he feels the effects of age. He slows his activities, preferring less strenuous ones. Rather than sprint through the forests as he might have as a young elf, he sits in the rays of sunlight and composes songs. He has tapped into the mystic rhythms of the earth and become ever more attuned to its cycles.

Few elves continue adventuring upon reaching old age. Their bodies and minds evolve into something more suited for a quiet, contemplative life. Still, their bodies do

not appear any different than they did 100 years before, and their skills are still as sharp as they ever were. There is a slight slowing in their limbs, but that is all.

### Venerable Age

Here the elf, at age 350 or older, begins to show signs of age. Wrinkles start mapping her face. Her physical condition deteriorates still further, but her knowledge and her wisdom continue to grow ever greater. Physically, she can still exert herself, but not nearly as much as a younger elf. Fortunately, no one expects her to do so. She has earned the right to be called elder, and other elves defer to her wisdom and vast experience.

Unlike humans, even the very old elves do not lose much vitality—only endurance. Their willpower grows to phenomenal might, and these elves can force themselves to great deeds if need be. As a rule, venerable elves prefer to lead a relaxed lifestyle, playing music and singing, and listening to others do the same. There is no such thing as a naturally senile elf.

## Diet

Elves can subsist on any food palatable to humans, although their tastes are generally more discerning. Their preferences are clearly toward delicate foods and wines, particularly those that possess a great degree of subtlety. Heavier foods, such as beef and coarse bread, distress the elf stomach.

Humans usually find elven food unsatisfying, for the portions are too small. Elves, of course, require less food than do humans. They very rarely hunt for or make more food than they can eat in a day. However small the portions, the food elves do make is such that the finest human chef blushes in shame at his inadequacy. Indeed, many humans who would be gourmet cooks try to procure an apprenticeship among elves. Those who learn the elven techniques have a right to boast of their achievements.

Elves tend to be more vegetarian than humans, for this has less of an impact on their environment. When they do eat meat, it is carefully culled from the excess animal population of their area and done in such a way that it doesn't disrupt the land.

Elves almost never keep herd animals. Not only do these creatures take up space that could more properly be forest, animals require almost constant maintenance and feeding. No elf wants to be saddled with the joyless burden of watching animals eat all day long.

Let the humans rake in the profits to be had from ranching; elves can survive on the fruits of the forest. Besides, elves don't believe in raising animals simply to kill them. That is not nature's way and therefore not the elves' way.

For drink, elves mostly subsist on sparkling waters from cold mountain springs. However, they are not averse to wine and beverages of a similar nature, and many elf cities and towns cultivate the grapes and grains necessary to the making of such refreshments.

Elves enjoy drinking mead, or fermented honey. This delicate drink agrees well with the elven palate and gives them a pleasant feeling. Greater quantities act on elves much as alcohol does on humans. Fortunately, elves feel none of the ill effects humans do when drinking this beverage. However, elves are susceptible to human brews such as ale and beer.

The elves favorite drink, however, is a nectar created from the juice of flowers, mixed with honey and an additional, secret ingredient. This nectar is of ancient origin and is called *feywine*. What its secret ingredient might be has long been a mystery to humans, dwarves, and the demihumans, as well as most elves. Feywine is used liberally at elven festivals. It induces frivolous behavior, lasting for days or even weeks.

Elves can, however, turn off feywine's effects when necessary (for example, when defending against rampaging orc hordes). Humans, dwarves, and other races are not so lucky. The effects of feywine on these races is much greater than it is on elves, and large quantities can make a human lose all sense of self for months. Too much feywine is the cause behind stories of humans waking after reveling with the elves, only to discover that months have passed since their last memory.

Because of this, elves rarely allow humans to consume feywine. The side effects are simply too great, and consumption only increases enmity against the elves. Any human attending an elven festival can expect water, mead, or nectar; only when the elves are particularly mischievous or when their judgment is somehow impaired will they allow a human to sample feywine. Since feywine doesn't keep well, elves never carry it on their travels.

## Elven Interfertility

Elves have been known to produce children with beings of other races. Most of these are the offspring of a union between elves and humans. Elf females sometimes find themselves drawn to human men for a brief while, and human women cannot resist the charms of certain elf males. The child of these unions is usually born and reared in the civilization of its mother; elf males rarely want humans in their lands, and most elf females don't want to bear a child outside the elven realms, nor to abandon it to humans.

While elves may dally with members of other races, there is usually no offspring from such unions. Something in the natures of the races involved makes such a child distinctly improbable. Only with the aid of strong magicks or unforeseen coincidences has there been any result from these dalliances.

Apart from the physical differences, elves find most other races unappealing in appearance. Dwarves have their beards, and halflings have their hairy feet and considerable girths. While elves may get along with these races, they do not, for the most part, seek to grow any closer than good friends would.

Thus, while elves may be physically interfertile with other races, they generally choose not to be. While there are many half-elves in existence, most of those known are of human descent. One or two half-elf/half-dwarves have cropped up in legends, but little remains of what their abilities were like or what the circumstances of their births were.

## The Elven Bond

Very rarely, an elf will form a mystical and unbreakable bond with another being, whether elf, human, dwarf, or otherwise. Some signify this bonding through the giving of gifts designed to demonstrate one's love. Others merely forge the bond quietly, without any outward signs. Whatever the process through which this bond is formed, the elves involved and their chosen can sense the strong emotions of each other. They feel the joys

and sorrows of the other, their triumphs and angers as well. Should distance separate the two in this bond and one pass away, the other can feel the death through the breaking of the bond. This is an even stronger version of the communion ability elves share, for this is a lifelong bond and not lightly broken.

For this one person, elves become truly altruistic. Their lives are focused around making their loved one happy, even to the extent of sacrificing their own life. When this bond is broken, whether through betrayal or death of one of the pair, it is a tremendous shock to the other member of the union. Elves can die from the grief caused by such partings.

Because they can enact this union only once (or twice, in extremely rare cases) in their lives, elves are very careful about those to whom they attach themselves. Many elves go through life without joining their spirits to another, for many find no mates suitable for or deserving of such an important union.

Few elves bestow this gift on humans, for humans are so short-lived that the bond would be all but wasted on them. Still, there are some who consider this a small sacrifice for the love of a particular human. The very number of half-elves attests to this, for although most half-elves aren't children of this union, there are enough who are. The blink of an elf's eye spells an end to these ties, but the love they gain lasts for the rest of their life.

This bond applies, to a lesser extent, to the earth itself. If confined or kept away from the land or the company of other elves for too long a time, an elf can die from grief and loneliness. Even if being held prisoner near nature or with other elves, the elf can lose hope and—without sustaining physical injury—force his or her own death. This is done only in the darkest of times, and only when there is no hope left at all to the elf.

This ability to choose death over life is one that defeats captors and would-be torturers, for they are unable to maintain their grip on their victim for long should the elf choose this method of "escape."

## Elven Music

Song and dance play an important part in everyday elven life. They find that music provides an outlet for their centuries of experience, pain, and joy. The elf that does not have at least some experience with an instrument or some proficiency in dancing is a rare being, and one might suspect that he or she is somehow emotionally stunted.

Elven music is an incredibly complex and beautifully crafted art, although it is not often played around non-elves. Elves have learned that their tunes haunt anyone who has an ear for music, for it leaves these people with a vague, unsatisfied yearning that can never be filled with anything but elven music.

It is for this reason that there are very few traveling elf bards. For one thing, they don't want to destroy the enjoyment humans find in their own music. For another, they know humans would never leave the elf cities alone if they knew of the sublime beauty elves are capable of producing with music.

Those who have been fortunate enough to hear elven music claim that humans learned music from the elves. Although human music is but a poor imitation, the humans continually strive toward the ultimate musical experience that the elves provide. The best human and half-elf bards are those who have learned from elf masters, yet even they can

only echo the elves. This is the reason, some sages surmise, that so many wonderful musicians remain dissatisfied with their work.

Elven songs of grief are often acappella wordless melodies. Those listening to such songs who are non-elves will find themselves in tears before the elves are halfway through, for the anguish expressed in the lilting voices of the elves transcends the human experience of heartfelt pain. Those who hear the elven mourning rituals are never quite the same, returning to the present sadder and somehow wiser. The sorrow that the songs express often haunts the listeners for the rest of their lives.

## Chapter 4: Mental Attributes

*In the not too distant past, a dwarf bounty hunter made a terrible mistake. While pursuing a fleeing half-elf foe, he came upon an elf hamlet. He wrongly assumed it to be the home of the half-elf culprit. Nothing would satisfy him that this was not the case, and he grew ever more enraged that the elves were "hiding" his rightful prey from him.*

*In the dwarf's anger and his lust for the reward money, he cruelly slew a woodsman—using the elf's own axe to cleave the widower in two. The elf's four children, who had been playing nearby, froze in fear. Ignoring the grief-stricken children, the ruthless dwarf turned once more to the woods. There he found old tracks made by the fleeing half-elf, and the dwarf set off after his foe again.*

*Elves being elves, the children were taken in and nurtured as best the hamlet could. Most were eventually fostered away to other villages, for the hamlet couldn't support children whose provider had passed on. Despite being separated, the four children nursed a private longing for vengeance in their hearts. Each trained diligently to understand the ways of the forest and of tracking, learning its subtle nuances that they might avenge their father.*

*Fifty years passed after the death of their father before the young elves deemed they were ready. They reunited and swore a solemn oath not to rest until they found the slayer of their father. The four then split off, each heading in a direction of the compass. Burned in their minds was the image of the dwarf. They questioned all they came across, and some sought certain magical items. Finally, one of them found a lead and left word for her siblings to follow as soon as possible.*

*The old dwarf had retired from bounty hunting to live alone in the mountains. The four elves swooped into his house and stole him from his doze by the fire. None ever saw the dwarf again, but his house still stands. Hacked limbs are left on the doorstep every few years—the hacked limbs of an old dwarf. To date, there have been 17 arms and 12 legs.*

*A* ring of regeneration *can work wonders in vengeance.*

The key to understanding the elven mind is comprehending the years an elf must fill. Most races do not (and cannot) understand the perspective hundreds of years of life lend an elf. This incredible lifespan often gives the elf a terrible, driving ambition. Paradoxically, it can also give elves a lackadaisical attitude.

Above all, elves are patient. They have years to complete any task, and they don't mind the wait. After all, they have created many ways to wile away time. They find impatience to be an especially amusing vice possessed by the other races. If the need for

haste is urgent, however, elves can move faster and more decisively than most of the other races.

Elves tend to be very clever and devious, having had years to practice their skills and hone their minds. Their conversation and their games possess many degrees of subtlety, most of which goes unheeded by non-elves.

Elves delight in paradox and humor, for it is through these attributes that they express themselves most fully. These two qualities allow them to communicate with one another and affords great verbal play as elves try to outwit each other. Although elves are primarily happy folk, they are capable of great emotions of a much darker nature.

An angry elf is a terrible foe. An elf bent on vengeance is even worse. As mentioned, elves have an inexhaustible store of patience. They can wait for years before exacting revenge—after their prey has been lulled into a false sense of security. Or they can hunt their enemies over the years, never faltering or slowing in the pursuit of their quarry.

Occasionally, elves will make a pretense of the hunt and let the person "escape." After the person has taken to flight, the elf is likely to appear at random intervals—a tactic designed to keep fear instilled in the heart of the person. This can make for a life of anxiety for anyone who has earned the wrath of elves, for that person never knows when the elf may strike to claim vengeance. This is one reason that the elves are so feared as foes, for no one wishes to live a paranoid life fearing elven wrath.

## Outlook

Their lifespan gives elves a unique perspective on life than most other races can't share. Elves don't worry about not experiencing enough in their lives; rather, they look for the next new thing to excite their curiosity and enthusiasm.

This lifespan also means that elves develop an attitude and a character that is uniquely their own. No one can tell exactly how their years will affect each individual elf. Typically, elves begin their lives as carefree, fun-loving spirits. As they grow older, most of them become slightly more cautious, yet still retain the warmth and vitality necessary for elves to fully enjoy their lives.

Still, some of them start life with a more serious attitude, believing (despite the advice of their elders) that their time is too short to be spent frittering it away on such foolishness as dancing and singing. As these elves grow older, they often become obsessed with finding a meaning to everything, seeking the fundamental truths of existence. Some few realize that their years are enough for both truth and fun. Most, however, continue on in a somewhat joyless existence, spending their years associating exclusively with sages and elder beings. Eventually, they lock themselves away from true life. In seeking the "truth," they lose the meaning and purpose of that which they value most: their lives.

Most elves, as has been noted, are more interested in living life fully. They can begin several projects within the span of a year, such as writing songs, creating works of art, learning swordplay, and so forth. They think nothing of setting aside each project when something more interesting comes along. After all, with centuries at one's disposal, taking a decade or two on a task is nothing to worry about. If they lose interest in the product in the intervening time, they can always ignite interest by reliving it through the reverie.

Obviously, elves see no need to hurry themselves through anything. If their short-

lived friends legitimately need something quickly, elves will rush to fill that need. If left to their own devices, however, elves will take a much longer time than might otherwise be appreciated by a human. Elf lives simply aren't short enough to worry about haste. But elves are far from lazy. They are almost constantly active during daytime, engaged in some project or another. If they want to spend a day lying on a grassy hillside watching birds or just relaxing, who complains?

Elves do not regard material acquisitions as anything important, instead preferring to cultivate music, art, and poetry that will outlive the years and the treasured possessions of others. Elves do not therefore try to accumulate gold or other treasures, except as a means to acquire the things that they truly treasure. Even the greatest paintings eventually fall to the weathering effects of time, becoming useless and valueless.

On the other hand, elves love to gaze at works of beauty and true craftsmanship. Oddly enough, elves are rather bad portrait artists. Perhaps because they try so hard to capture the inner elf that they haven't mastered the human method of painting, which combines the outer shell with inner beauty. As such, elves have been known to locate masterpieces of human artists, take them to their homes, and then use a secret technique to preserve them through the years. Although this is not a perfect means of preserving these pieces, it does give the art many more years of life.

Elves have developed other magical methods of preserving such works but will not share these with other races; the other races do not have a proper appreciation for the intricacies of art, and thus the preservation would be wasted on them. However, any of these races are free to journey to the elf cities to gaze on the works elves have felt important enough to save from the ravages of time.

Although they place little importance on material possessions, elves do have a clearly defined sense of ownership. Treasured items, such as magic or fine weaponry, sculpture or favored instruments, are definitely the property of their owners. Thievery of such items is highly frowned upon. Most elf thieves take their skills to the cities of humans or to the underground, where they may be put to use by adventuring parties. Elves caught stealing the treasures of other elves are cast away for half a century—preferably to learn proper loyalty to one's race.

Items that aren't important to their owners are usually freely loaned to other elves or to their non-elf friends. As long as the item is available when the original owner needs to use it, there is no problem. Most elves have learned that bickering over small questions of ownership and property are one of the surest ways to lose friends. They do their best to ignore the finer points of ownership and to share the fruits of their labors with others (as well as share the fruits of others' labors).

## Individual Worth

Elves care very little for structured society, preferring instead to focus on the needs of the individual. There is nothing so important to elves as the feelings and the needs of the individual. This doesn't mean that one individual's needs outweigh those of the rest of the elves. Instead, the majority of elven society and law is geared so that the right of each elf is to become as happy as he or she may need to be. Elves don't interfere in the lives of other elves unless there are other elves who would be harmed by inaction. All elves are believed capable of dealing with their own problems. Although other elves may be

curious about a certain elf's choices, they will not intervene in the action. Free will is all-important to the elf mind. Still, there are few atypical elves who are so purely selfish as to reap the love and understanding of their fellows without returning any love. A typical elf in an elf community puts the needs of others before his or hers, recognizing that without these others, life means less.

While elves are strongly individualistic creatures, they also have a strong sense of duty toward their kindred. Just as the human ranger believes in furthering the cause of his people even while avoiding most of them in the wilderness, so too do elves. They know that all their fellows are essential for a balanced life, and so they look out for their people as a whole as well as individually.

## Emotion and Logic

Some consider elves to be totally emotional creatures, driven by the whim of the moment. Others see them only as coldly calculating creatures who do nothing without first considering the benefit to themselves. Neither of these is really true. Elves are often seen as distant and self-serving creatures, probably because of their legendary haughtiness. Once one can get past their exterior, they find that elves are a freely emotional, intuitive people.

On the other hand, elves do not let their emotions rule their lives. They have a finely developed logical system and use it daily. Since it is a logic that is based on their long lives and the elven mindset, it can freely incorporate all aspects of elven life. Logic naturally includes feelings. Humans and dwarves cannot seem to grasp that emotion is an important part of one's life, to be cut off only at risk of losing one's personality. Those who live solely by the word of heartless logic ignore fully half of their lives, to their detriment. Or so say the elves.

Although elves fear very little in this world, those things that they do fear they regard with utmost terror. They conceal their fears from the other races, not wishing to appear weak before them. Also, they wish to appear invincible to such petty things as fear, for to do so might expose a weakness to enemies.

Elves don't really fear death, but if closeted away from nature, that fear is likely to surround them. When they encounter a spirit-destroying creature (such as a tanar'ri or a wraith), they suffer mortality pangs of the worst kind, fearing as desperately for their lives as any human would.

Elves hate and fear undead. They see them not only as perversions of nature, but also as nearly immortal foes to be dreaded and loathed. Since undead can live even longer than elves, these creatures are a serious threat to the elven way of life. Their plans can span centuries, their machinations of purest evil.

Elves therefore often become hunters of the undead. The elves have set themselves as the natural adversaries of undead. The undead are a blemish on the face of the world, an otherworldly perversion of the life force. Elves, embodying the life force, find the undead far more repugnant than most ordinary people do. (To become an undead elf is, to elves, truly a fate worse than death.) Only good- or neutral-aligned liches may even hope to escape elven hatred, and these are feared.

The elves' ability to hunt the undead is impressive, especially in older elves. Many adventuring elves have gained the experience necessary to fight monsters, and they bring

this wealth of knowledge with them when they begin hunting undead. Elves somehow seem able to sense the very foulness in the air when undead are present, and this leads them to their prey. Although this ability is not easily applied in game terms, the DM should be more lenient in allowing elves to find undead. Undead lairs are such rank holes of un-nature that elf senses are acutely aware of the evil aura left by these foul beasts.

Elves are never necromancers (either mage or priest), except for those who have turned to evil. These elves resemble the drow in attitude and, as such, do not mind the foulness and corruption associated with the undead. The only time an elf associates their name with necromancy is when they study necromancers' tomes for clues about those they seek.

## Generational Splits

There are no serious troubles between members of separate generations, as is often the case with humans, but the variations in views held between elf generations are huge. Indeed, because of the unique nonaging physiology of elves, one of the few ways to tell between young and old elves is the difference in personality. Of course, this is still not a clearly defining test, for elves have as varied personalities as humans.

The personality of younger elves is characterized by curiosity, a strong streak of individualism, and a willingness to learn. They are just getting used to their long lives. Young elves are often found wandering into places where few would expect an elf to be. These are the elves who make friends with humans and the short-lived races, for they have not yet realized the speed of years for humans.

Older elves, on the other hand, lean toward isolation and quiet enjoyment of the world. Few, if any, elves of more advanced age leave the elf lands, for they have seen enough of the world to last their lifetime. While they don't become entirely inactive, their activities are of a contemplative nature, rather than the more boisterous activities of young elves.

This difference in outlook creates a generational gap, but the older elves do not attempt to restrict the youths. They remember all too well their wilder, younger days and have no wish to repress that which they valued themselves. Because elves are so closely connected to their own pasts, they never wonder at the motives of youth. The reverie helps older elves remember the excitement and passion of youth and the need to be independent and explore the world.

## Attitudes Toward Other Races

Elves generally do not hate other races. Although they may dislike these races, they still feel a kinship with them as living beings. Humans never understand this, for they have not the time to make a true connection with the life force of the world. Only the true mystics of other races can understand the affinity elves have for all life.

Those races that hate the elves with an all-consuming passion are not worth any such emotion from elves. Irritating as these species may be, the elves regard them with nothing more than strong antipathy. Only those who routinely defile the forest for their own evil ends arouse much anger in elves.

The elves reserve their darkest emotion—hatred—for the drow. The drow have

thrown away all that the elves consider sacred and have instead embraced foulness, corruption, and death. They have betrayed the heritage that was theirs by right and forsaken the light of the sun to live with pure evil: Lolth.

Not only do most of the surface elves fail to comprehend this choice, they don't understand how beings created from the blood of a god could descend to the depths of evil as have the drow. They do understand, however, that the drow mean only to destroy them. The drow dreams of world conquest and domination are secondary to their hatred for surface elves. The elves of sunlight know this hatred well and return it in full measure.

With regard to other races, elves have been accused of being haughty, arrogant, and contemptuous. This accusation is not entirely true. While elves do hold themselves apart from the other races, they do not hold them in contempt. (Granted, dwarves *do* come close.) Most elves, however, don't befriend these other races because of their short lives, not because of any inherent dislike. While the elves believe in living life to its fullest, they don't relish the idea of watching myriad friends grow old and die.

Since elves can live through twenty human generations before leaving for Arvanaith, many see no point in befriending those whom they will only lose immediately. (While dwarves are longer lived, they don't agree well with the elven disposition.) Younger elves are sometimes willing to accept the sure pain of impending death for the joy friendship with these vital beings brings. After a few decades, however, they see that their companions are aging at an absurd rate when compared to elf friends. This is always a shock to the young elves. For the first time, they must come to grips with the concept of mortality and death. This proves more difficult for some than for others, though it comes to almost all finally.

Despite their short lives, each of the other races holds a unique place in the elven heart. Outlined below are typical dynamics between elves and humans and demihumans.

**Dwarves:** Although elves and dwarves both fight on the side of goodness, they often find themselves at odds over everything else. The main point of contention between the two is the definition of a good life. Dwarves strongly believe in the work ethic (elves do not). Dwarves don't feel that happiness is essential to a good life (elves certainly do). Dwarves believe life should be organized and well cared for—not haphazard and spontaneous as elves prefer. These views, so contrary to the elven enjoyment of life, don't allow dwarves to see things on the elven level.

Yet each race secretly appreciates the other, and some of the strongest bonds in the world are between elves and dwarves. The two races are actually a good complement to each other.

**Gnomes:** Elves and gnomes get along well when they meet. Gnomes have an appreciation of humor and a zest for life that appeals to the elves. In elven opinion, gnomes take what is best about the dwarves and combine it with a healthy dose of elvendom. Indeed, some ancient elven legends say that gnomes were created by crossing elves with dwarves.

This is not to say that gnomes are entirely loved by the elves. They take their obsession with digging into the earth a little too seriously, and they seem to regard elves with some suspicion. Elves return that regard. Still, as with dwarves, the two races will

defend each other if necessary.

**Halflings:** Elves genuinely like halflings, although in a somewhat patronizing way. They regard halflings as an amusing race and treat them for the most part as children. The halflings don't have enough curiosity for elven taste; halflings are usually content to remain in their burrows and comfortable little farmsteads without ever experiencing the outside world. Elves are very impressed when a halfling manages to amount to something more than a connoisseur of food and drink.

Halflings sometimes resent the elven view that the halflings are like children, but they are very much in awe of elves and so rarely speak out against them. To associate with an elf is all the excitement a halfling needs in his or her life. To travel a time with elves is more than many halflings can bear.

Elves regard halflings as children and are very protective of them. They don't appreciate attempts to harm halflings in any way and will do their best to avenge any wrongs.

**Humans:** Elves have a difficult time classifying humans. Many humans are friendly and even a little in awe of elves. Others are bigoted and unfriendly, even downright hostile. While other races have variations in their racial makeup and general views, none are as varied as the humans. This means that elves will regard every human they meet with some degree of suspicion until that human has proven him- or herself a friend.

Elves, despite their many accomplishments, are amazed at humans. Humans are prolific producers of children, and many have incredible innate ability. Humans have managed to convert lands elves had once thought unlivable into homes. The elves are impressed—and perhaps a little frightened.

Despite their constant bickering and warlike nature or perhaps because of it, humans now dominate the world. They have accomplished in a few short years what it took elves hundreds of years to achieve. It is because of the humans' soaring population and expansionistic tendencies that elves find themselves retreating to the forests and secluding themselves from the world.

The vast variance of human nature is enough that elves have no set reaction to them. Their variety confuses elves, and they stay away from humans as much as possible.

## Chapter 5: Elven Society

*Of all the festivals I've been to over the years, none compares to the elven Rite of Spring, which celebrates the return of spring. I am a ranger and a lover of the forest, but I am only human. Being human—no matter how close to nature—I did not expect the honor of being invited to witness one of the finest elven festivals known to mortal man. Perhaps my years of service to the good of the forest earned me the goodwill of the elf lords.*

*As I traveled to the designated meeting place, I heard the sounds of elven laughter shimmering through the woods. The light of a huge bonfire shone through the night, guiding revelers to their destination. When I arrived at the feasting site, many of the elves were already well into the celebrations. My host, one Alarrain Mistraveler, guided me to my place and bade me enjoy the festivities. The mead and elfwine, or feywine as they call*

*it, flowed freely even before the meal properly began.*

*I cannot do justice to the food by describing it. Suffice to say that normal human food is forever ruined for me, for I shall never again taste anything as heavenly as that which was served to me those many years ago. Although some elves tried to make conversation with me, I could not return the compliment. I was as dumbstruck as a miser in a gold mine. I had never known that such perfection as was around me could exist.*

*After the meal came the dancing and the singing. Although I admit I was giddy from the elfwine, I can reliably swear that no mortal will ever be able to duplicate the beauty I saw and heard that night. The graceful forms of the elves twisted in a huge celebratory dance around the bonfire to the tune of elf musicians harmonizing with the wind, the sky, and the stars. The last thing I remember is being dragged into the dancing circle and losing myself to the wilderness.*

*I awoke in the morning covered with dew. Although I would swear I was in the same place as the celebrations held the night previous, I found no sign that there was anyone in that clearing that night save me.*

—Eirik Leafwalker,
human ranger

General statements will be made about various elven tendencies in this chapter. Note that these are not absolutes for all elven societies; grey elves and drow in particular do not have the vast range of freedoms available to most other elves. Although grey elves are not evil like the drow, the movement within their society is carefully restricted. Grey elves tend to be more lawful than chaotic in nature and alignment and therefore do not value individual freedoms as much as other elves might. Likewise, while drow are chaotic in nature, they will brutally crush any who seek to show any semblance of free will.

Because of the vastly different world views between these two elf subraces and their kin, many of the descriptions below apply only to aquatic, high, and sylvan elves. There may certainly be exceptions (a city of good drow or a grey elf realm where stratified society is rejected), but these will be of the utmost rarity.

As a rule, most elves are the epitome of all that champions the individual's cause for goodness. They believe a single strong individual, focused on making the world a better place, is far better than an entire weak society determined to do the same thing. Elves seek to be as powerful as they can for the side of goodness.

There is no discrimination based on gender in elven society. Female elves are considered on an equal basis with male elves—in all things and in all ways. As often as not, it is elf women who rise to positions of power, fame, and glory. At least half of elven legends revolve around female heroes, and historically there have been more elf queens than kings. More than any other race, elves recognize the value of women and their full potential.

## The Elven Language

The elven language is melodic and fluid, consisting of musical words that are a joy to hear. There are nuances and lilting intonations, all of which combine to make Elvish a

lovely language. Even Drow Elvish is an attractive language, full of dark mystery and secrets.

When spoken by non-elves, Elvish seems strangely brutalized, although it is hard to define exactly why. Elves know that this is because the subtleties inherent in Elvish only fully translate for them (or for those using magic to communicate). Elves, because of their keen hearing, perceive an additional current in their tongue, one which also conveys emotion should the speaker wish.

Because of this hidden feature, elves can carry on a conversation within a conversation. The subtleties of the language and the nuances available allow elves to pass on the substance of an entirely different topic provided, of course, it is not a difficult or confusing one. This ability also allows elves to pass hidden messages to one another even in front of a human who understands Elvish, which is one reason why elves make such excellent spies. They can speak of inconsequentialities, yet pass along vital information to other elves. No one hearing them without magical aid can discern the additional message that is carried on the wings of the conversation.

The intricate care involved in the structure of the elven language extends to naming children. Elven names, although they often sound somewhat similar, are all individual. No two elves have ever shared the same name, save as a matter of choice, for elves are far too individualistic to stoop to using identical names for their children.

Elves prefer names that flow off the tongue like wind through trees. Sibilants and "th" sounds are common, as are others of the softer consonants. Occasionally, to add interest to a name, elves will include a hard consonant, such as a "k" or a "t." Overall, they prefer to allow the name to remain fluid and melodic, much like their language.

## Livelihood

Elves earn their livelihoods through whatever craft pleases them most. Often, this will be something that is beneficial to the entire community. Sometimes the goods are traded with humans for manmade wares but, more often than not, the items remain within the elf community.

Since elves need not be concerned with money to the extent humans are, their home lives are rarely marked with worry about when the next meal is coming. As long as they produce something of value for their community (and probably even if they did not), the other elves will support them. Giving something as ephemeral as humor or laughter to brighten the days of others would be reward enough for the easygoing elves.

Even in the harshest winters and the driest summers there is plenty of sustenance for all elves. Because they are so closely connected with nature, they know when bad seasons are brewing and thus plan well ahead to meet the demands of such troubling times.

## Rituals

Elves have no end of festivals to lighten the weight of passing years. They create many occasions to celebrate life—so many, in fact, that other races have sometimes concluded that elves do nothing but engage in revelry. Of course, this isn't true, but they do have a disproportionate number of celebrations—particularly when compared to dwarves.

Although elves prefer simple revels to structured rituals, there are times in their lives

when they feel the need for more formal, serious ceremonies. Typically, the priests of the elven gods preside over such ceremonies. They are there to fulfill the function of the ceremony and to instill the proper respect and solemnity required for that ceremony.

Because elves lead such long lives, the ceremonies each village and city celebrates are equally unique. Although different, all are based on certain traditional milestones in elven life and so retain an air of similarity. These events include birth, adulthood, marriage, the journey to Arvanaith (which is covered in Chapter Seven), and blood oath.

## Celebration of Birth

Since elf children are few (or at least far fewer than human children), the birth of an elf is a cause of great celebration. Births are always times of great joy. The village turns out in profusion, setting aside the day's work to celebrate with the infant's parents.

Following a two-year pregnancy, elf women are glad to celebrate the lightening of their burden. They happily join in the festivities honoring their newborn. Such celebrations typically last several days and conclude with the naming of the infant. Children are given a private name by their parents and then given a public name. The secret name is known only to the elf, his or her parents, and the priest presiding over the ceremony. While knowing the name gives no power over an elf, it is a sign of love and respect when an elf reveals his or her true name.

Gifts and wishes are often bestowed upon an elf child at birth by family and close friends of the parents. Such presents usually have a lasting impression on the elf, for favors given to an infant are far from ordinary. One child was given the ability to speak to dragons; she later used this gift to great advantage when she averted a war between her village and a nest of green dragons living nearby. Another child was gifted with always knowing when someone lied to him.

### Passage to Adulthood

Rites of adulthood are common in many cultures, and that of the elves is no exception. When elves reach the age of 110, they are considered young adults, with all the freedoms and responsibilities that entails. They no longer live in the house of their parents, for it is time to make their own way in the world.

Elf families hold a ceremony to formally announce the young elf's passage into adulthood. New adults are given gifts—most often adventuring gear if they are so inclined. The older elves regale the family with tales of their pursuits, and they wish luck upon those who follow their steps.

If the new adult isn't inclined toward the adventuring life, they are given tools of their chosen trade and a house of their own. From this point on, they make their own way in life, working with other elves to make a life full of happiness and joy.

### Celebration of Marriage

Marriage is an occasion for great joy among elves, for the union symbolizes the continuation of the elf race. Those who disrupt this ceremony to kill the betrothed earn the wrath of the elves forevermore, and they will hunt such marauders and their kin for

eternity. Marriage is a rarer occurrence for elves than the short-lived races, and there are few things so dangerous as to profane the sanctity of this ritual. Sometimes weddings occur to seal treaties and for other diplomatic purposes, but more often it is through love that elves achieve a state of marriage.

Marriage between elves lasts until one partner dies. (There has been only one known divorce in the last three thousand years, and that was between two extremely opinionated grey elves.) Elves rarely take a new partner after the death of a mate. Their vows bind more than honor; they bind the spirit and heart of each to the other. By taking this step, many elves give up some measure of their individualism. Often, only the most ardent and devout lovers choose the path of marriage; others prefer a less formal arrangement.

The marriage ceremony itself is typically formal (although it can be as informal as the lovers like) and is presided over by elf priests of Helani Celanil. The priests themselves serve no purpose at the ceremony other than as witnesses, for it is the partners who perform the ritual and the binding vows.

In a true elven marriage of love, vows tie the spirits of the loved ones together, allowing them access to the other's inner self. This is a form of the elven ability communion. Wedded elves become fully aware of their partner's needs and emotions, allowing them to anticipate and fulfill these needs. They are not aware of the other's exact thoughts.

Because elves relive their past through the reverie, the circumstances attracting one elf to another are always fresh. Thus, elves seldom fall out of love. Only the gravest of tragedies and disloyalties can tear an elf couple apart. Although they might have disagreements and even fights, they continue to love each other.

But elves can grow tired of a partner, even when they are joined spiritually and have become more intimate than any non-elf could suspect. Elves reignite the spark of passion and love through absence. For stretches of time, one partner in an elven marriage will live apart; this allows both elves to gain time to themselves so that they might grow as individuals. When the two rejoin, they shower complete love and affection upon the other.

Elves also tend to spend time away from their loved ones in order to make their time together that much more precious. After all, there are fewer sure ways to grow bored of a person than to spend hundreds of years with him or her. Time alone allows them to think on the relationship and to experience new things to share with their mates, thus keeping the marriage fresh and vital.

### The Blood Oath

Elves are not always peaceful folk. If they or their friends have been grievously insulted or injured, they swear the sacred oath of vendetta—a ceremony carried out in the darkest hour before dawn. When they swear this terrible promise, they forsake all other pastimes to seek retribution. Elves understand this oath and will release the avenging elf from his or her tasks.

The avenging elves hunt down the offender to exact some form of vengeance, be it merely a sincere apology for an insult or something more severe. Typically, a time of service given to the injured elf is enough to satisfy this oath. However, there are occasions when nothing less than death will satisfy the demand of the blood oath.

## Elven Holy Days

Every day is a day of celebration for elves; their love of music, poetry, and song imbues their lives with a festive air. However, there are particular days that elves traditionally commemorate. These celebrations, despite their rituals (or perhaps because of them), are the most anticipated days of the year.

Naturally, these days have a special significance attached to them, for they mark events in the hearts of elves. The following is a list of the major festivals elves celebrate each year, although it is by no means complete. Each gathering of elves will have other celebrations in addition to those below, each with its own unique observance. The holy days are presented in chronological order.

**Yeartide:** Yeartide takes place during the winter solstice, marking the end of the death that autumn brings. During this time, the elves believe the earth is purified while she lies underneath her blanket of snow. Even in those regions where the sun doesn't rise and the snow lies eternally across the land, the winter solstice is seen as the changing of the old year into the new.

Elves celebrate Yeartide with quiet meditation on the year past and on things to come. They regard the human practice of ushering in the new year with feasting and drinking senselessly barbaric—the mark of people unable to truly understand the passing of time.

**Faerieluck:** This is a day in early spring when elves celebrate with their cousins—the pixies, leprechauns, and so forth. Too often elves forget their kinship with these other races, and this festival reminds them all of their relationship. It is a day spent in practical jokes and merriment, and participants try to demonstrate their cleverness at the expense of another. The games are never acrimonious; they draw to a close long before any irreparable damage can be done to one's pride.

**Springrite:** Although winter is seen as the turning point of the year, the vernal equinox (spring) represents a time of fertility among the elves, who spend this season engaged in the pursuits of romance and song. Elves spend the week around the equinox dancing and singing, involved in nothing but merriment. All important decisions and actions are postponed until the week is over. This is the time of year when most couples bond in marriage or announce that they are promised.

**Agelong:** Agelong is the celebration of the elven creation, the observance of the legendary battle between Corellon Larethian and Gruumsh One-Eye. This holy day serves to remind the elves of the presence of their enemies. Held at the summer solstice, Agelong is the perfect elven excuse to go orc-hunting. On the night of the hunt, elves nick themselves with obsidian daggers and let their blood flow into the earth, simulating the bloodletting that made their existence possible. They then swoop down from their homes and kill as many orcs as they can find during this night.

**Fallrite:** As Springrite is to birth, so is Fallrite to death. Held during the autumnal equinox, Fallrite is a week long period when elves contemplate the spirits of their

ancestors, the passage to Arvanaith, and the immediacy of death even in a nearly immortal lifetime.

Unlike some races, elves do not hide behind merriment to avoid facing death, because they feel that death is merely a passing on to a different stage of life. The most important duties of the year and the most difficult decisions are reached during Fallrite. The elf kings and queens traditionally sit in judgment at this time of year to hear any capital cases.

# Chapter 6: Elven Myths

### The Legend of Fionna Casilltenirra

*When the Elves all lived in the forests and had not yet spread to the seas or the mountains, there was a beautiful Elf named Fionna Casilltenirra. Barely past 100 years old, she met a Human who intrigued her completely. Shy and retiring at first, she grew more open and let herself be seen when he traveled in the woods.*

*Their elders swore to them that such a match would never work, but Fionna and Killian had eyes only for each other. They wed in secret. Five years of bliss passed before Fionna saw that Killian was aging far more rapidly than she. The lovers searched for some way to avoid the cruel hand fate would one day deal them, but they could find no answer. In abject despair, Fionna went to a Human Vampire of whom she had heard. She begged Vasily for his help, asking that Killian be made a Vampire so the two could share life for the length of her days instead of Killian's.*

*The Vampire was overwhelmed by Fionna's beauty and agreed to her plans, with one stipulation: that she, too, consent to become a Vampire. In her love for Killian, Fionna never thought of the danger to her very spirit—she agreed to Vasily's dastardly request. The Vampire took Fionna in his arms and told her he would bestow upon Killian the "gift" of eternal life. He drained her, then laid her on the floor of his catacomb. He looked at Fionna and marveled at her beauty; desire coursed in him, as did treachery, and he vowed that none but he should possess her. When Vasily found Killian, he snapped the Human's neck instead of making him anew in Vampire form.*

*When Fionna discovered Vasily's treachery, she flew at him in rage. Confident that she was his thrall, Vasily was amused rather than alarmed. That proved a fatal error on his part, for his head was ripped from his shoulders by the grieving Elven Vampiress.*

*Bereft of her love and her life, Fionna wandered the world searching for someone new to take the place of her beloved, but only hatred and fear met her advances. Anger and malice found their way into her heart, and she gave herself wholly to evil.*

Elves, like other races, venerate the names and deeds of their heroes. Frequently, some of the heroes from other races have been fabricated—mostly to illustrate some religious point or another. Not so with the elves. Although their heroes also serve to make a point of some sort, all of them existed in some form or another.

Heroes such as Fistilanthus Woodhelvin and his half-elf brother Gilanthus (both of whom faced the dread pit fiend Marlikora at the cost of their own lives and saved the elf lands) live on in the glorious tales of storytellers. Elven legend tells that they will someday return when the elves most need them and that they will aid certain blessed elves or half-elves in times of gravest need. Their bravery and courage thus inspires those

in mortal peril.

Other heroes, like Feradar Jaralmus, serve as examples of elven life. Although in his life he neither slew terrible beasts nor singlehandedly fought off menaces from the planes beyond, his love and compassion saved the elves from fractioning still further, teaching them the value of life and tolerance. Many other heroes once lived (and, indeed, still live) in the halls of the sages, inspiring and teaching those who hear the tales.

Elven lore is not solely concerned with tales of goodness; there are also tales of dark, twisted evil. Fionna Casilltenirra, the first elf vampire, still haunts the dreams of romantic young elves seeking delight in the arms of humans. And the story of Besathan Ridire, the elf who made a pact with the Spider Queen Lolth and suffered eternal torment at her hands, is told every now and then to show children the questionable value of dealing with evil.

All elven legends make a point of some sort, whether they deal with an inspirational story of heroics and valor or with more humble values such as compassion and simple charity. In both life and deeds, elves strive to teach and to learn. They see their lives as quests for understanding, and they do their best to complete their personal quests; elven legends often help point the way to fulfilling those dreams.

Sometimes there is more to an elven myth than meets the human eye. The moral gem hidden within a tale may be far too subtle for humans to understand completely. This chapter presents but a few of the tales the elves have collected over their millenia of existence.

## Jarsali and the Treant

Following a similar, though ultimately contradictory, view to the tale of Fionna Casilltenirra, the story of Jarsali and the Treant glorifies love of any sort—provided that love is true and good. While some elves refuse to acknowledge the truth of this story, claiming it is truly myth and has no basis in fact, others believe it holds the germ of truth. They cling to it as a justification for the paths they have taken themselves.

*Jarsali Oaklimbs was a sylvan elf of the truest grain—even to the point of shunning others of her race, preferring instead the company of the woodlands well over that of her fellows. How her heart came to be full of suspicion and bitterness at her mortal comrades, no one knew; they only knew that Jarsali was a strange girl, even for an elf.*

*Nothing assuaged the sorrow in her soul save the nearness of the primordial trees. Her wanderings from camp took her deeper and deeper into the virgin forest, to places where even few elves had ever set foot. In the heart of the wood, she found a living tree holding court with his minions. Her shock was great.*

*Remember, this was a time before the elves had spread across the world, and they knew little of all its races. Few had ever heard of a treant, much less seen one. Although her tribe had, Jarsali had never heeded the lessons of her compatriots, for she had no desire to learn from their experiences.*

*Entranced by the sight of the treant, she crept closer to investigate. Suddenly, great bark-covered limbs from a nearby "tree" lifted her from the ground and held her captive. The animated oak brought her before its liege.*

*Jarsali stood prisoner before the treant lord, and something in her heart cracked and*

*was set free. The elf maiden fell instantly in love with the enduring beauty of the craggy wood before her. The treant eyed Jarsali's flushed cheeks and bright eyes. Suthurithidan, the son of Garanahil the First Treant, saw hidden behind the elf's truculent air a spirit of fire that could not be quenched. It was the treant's first true look at an elf, and he was entranced. With a silent flicker of his twiggy finger, he commanded the tree to release the elf maid. The two stared at each other, sunlight filtering through the dappled leaves; then Suthurithidan turned and melted into the forest.*

*Jarsali returned to her camp. Her companions were amazed at her newly softened manner, so changed was it from her usual self. They wondered what could have happened on her latest excursion into the woods, but none said anything, feeling only gratitude and not caring the cause. When Jarsali crept away a week later, unable to forget the treant Suthurithidan, some few smiled, thinking perhaps she had found a lover with a nearby tribe. One elf, however, did not smile—he frowned. Azalarer had thought to wed Jarsali himself, for he lusted after the elf maid. The words of his people were an irritant to his pride.*

*Jarsali found again the treant lord, and this time neither could deny the truth of how well their souls matched the other. The initial exhilaration inspired by their first meeting provided the impetus for the rest of their relationship, and the feelings between two such dissimilar beings deepened. In time, they found that they were truly in love, each unwilling to continue life without the other beside them.*

*But Azalarer grew suspicious of Jarsali's continued change. He and his cohorts followed her into the depths of the forest. Intent only upon meeting her love, Jarsali's ordinarily sharp hearing did not warn her of this pursuit. Azalarer and the others found her then, and they beheld a sight none had ever thought to witness in all their years: An elf maid embraced by a living tree!*

*Azalarer's heart grew black. He taunted Jarsali cruelly and incited the prejudices of his comrades. In righteous wrath, they tore Jarsali from the arms of the surprised tree lord and spirited her back to camp. There Azalarer fanned the flames of xenophobia. The elves had never heard of such a strange coupling; they were outraged that Jarsali's chosen was not even humanoid, much less elven. They locked her behind a stout wood stockade and angrily began debating what to do with her.*

*Jarsali called upon all the elven gods of the forest and of love, and she called upon the gods of Suthurithidan, too. She prayed for both release from the stockade and from her elven form, that she might not have to endure the cruelties the elves inflicted upon her in the name of racial purity. The gods heard her pleas: They gave her the answer to one by granting the other.*

*Inside the stockade, Jarsali's body stiffened. Her hair grew long and turned green, and her limbs became limbs of wood and not flesh. Her feet sought the cracks in the ground, and she extended her new roots into the soil beneath. Shouldering aside the flimsy blockade, she forced her way into the sylvan camp. The elves scattered before her. Some prostrated themselves in abject terror, fearing for their lives.*

*Azalarer, along with those who had been deliberating Jarsali's fate, came forth from the council chambers. The elf's heart turned ever more black and cracked with rage; he grabbed a firebrand but the council restrained him. With utmost respect, they bowed to Jarsali and bade her good speed and clean water, for her transformation showed them that her love was real—that nothing they could say or do would change this simple fact.*

*With only the faintest bow, Jarsali turned to the forest and was reunited with her true love. The elves watched her go with a newfound respect; to this day, the sylvan elves and the treants share the custody of the woods.*

**Moral:** True love transcends race—and sometimes even species.

## Halimath's Pride

The story of Halimath Arnuanna is a cautionary tale relating the dangers of pride and arrogance, even in those who have again and again proven their superiority of skill.

*Halimath was a smith who had transcended all boundaries of metalworking in his craft. A true master with the hammer and tongs, each piece of precious metal commanded his complete attention, each blow of the hammer comprised his entire world. His creations were truly marvelous and inspired such awe in others. With each passing year, his skill grew ever greater. Elves traveled the world over to see his works of art.*

*Centuries passed, and the grey elf decided that his life's work should culminate in the creation of one truly magnificent artifact—preferably a sword—to be wielded in the cause of good. He had no doubts about his skill, and he had the costly metals and gems with which to make and ornament this sword. But the grey elves had banned the making of any more weapons of power. They wanted no reminder of the Elfwar or the Fractioning, and they forbade Halimath to make such a sword. The elf would neither listen nor obey; breaking the laws of his land was but a small price to pay for the glory of the magic he would wrought.*

*Thus commenced Halimath's destruction.*

*The rituals the elf sought to enchant the blade were dark and arcane, their powers hardly more than he could contain. Halimath continued without regard, believing that the creation of the Sword of Justice would atone for any evils he committed while creating it. The first spell he cast almost cost him his life, so strong were the magicks within it. This spell ensured life to the wielder of the blade for as long as the Sword was held. A second spell enchanted the weapon so that it could only be used on the side of goodness, and the third ensured the Sword would strike down the foes of the wielder with but a single blow.*

*Rumors of Halimath's transgressions reached the ears of the grey elf elders. The wisest and most just of them, Andriana, confronted Halimath and demanded the truth. To her folly, she held up the Sword to emphasize her point. The master smith flew into an insane rage at his creation being so touched. His massive fist struck the frail elf woman, and she crumpled to the floor. Blood splattered across the blade in Andriana's hands and stained the carpet beneath her still-breathing form. Halimath stared down at the woman in horror, his senses returning to him in the cold light of what he had done. He knew the other elders would never allow him to finish the Sword of Justice, and that thought alone consumed him. He grabbed the Sword and fled.*

*Shortly after, the grey elf elders discovered Halimath's misdeeds. Though Andriana lived, the elders swore the blood oath against Halimath. They hounded the elf day and night, until they finally cornered him; though bruised in body and spirit, he was still unrepentant.*

*Halimath let out a great cry and raised the Sword of Justice in defiance against the*

*elves who harried him. He leaped to attack, but the blade crumbled to dust in his hands. When the arrows pierced his body, Halimath fell dead.*

**Moral:** Obsession destroys everything.

## Haranavei Koehlanna

Although many human cultures have adapted this familiar story for their own use, the elves claim original credit for it.

*An elf village was destroyed by an orc raiding party—the only survivor an elf woman, great with child. She fled into the burning forest and forded a swollen stream. On the other side, she found refuge in a tiny human village. There, she gave birth to her child, for labor was brought on by her traumas. With her dying breath she named her infant daughter Haranavei Koehlanna, and she bade a woodcutter care for her child. The elf woman perished that night.*

*Under the care of the villager, who was now the mayor, Haranavei grew into a child of amazing beauty. The human women of the household took exception to this beauty, and they did their best to ensure that such loveliness would never show. The mother and her daughters made Haranavei clean the middens, the sties, and the fireplaces every day. The poor elf child worked from before dawn to after dusk. The people whom she called "family" sought always to humiliate her for her pointed ears and thin features, and to belittle her beauty. Their taunts hurt an innocent heart.*

*And so matters went for many years, until one day a prince rode through the now prosperous village. He was an elf prince, this much is true, and he stopped at the human village to water and feed his stallion. The mayor's daughters were smitten with his charm and elegance; in him they praised the very features they taunted in Haranavei.*

*The elf amused himself at the human girls' expense—until he saw the thin figure of Haranavei trudge by, bearing her heavy burden of firewood. The prince grabbed the elf maid by the arms and stared long and hard into her eyes. Then, slowly, he smiled, for his search was over. Drawmij Koehlanna had found his sister. The two wept with joy when the truth was revealed, though Drawmij was saddened at the news of his mother. He disclosed that he had been away at the time of the orc attack; he had returned to discover his home in flames. But there was no sign of his mother, whom he knew to be pregnant, and so Drawmij went in search of her and her child.*

*More truth was revealed at the house of the mayor's, for the elf prince saw that the humans had made a slave of his sister. He retaliated by slaying the mayor's wife and daughters, only just sparing the man's life at the request of Haranavei.*

**Moral:** Suffer not the vanity of others.

## Caelestis

The elven love of creation has extended itself into their stories, as has their unique perspective on the nature of time. Perhaps this story helps to explain why elves are so willing to devote years to a single project—and why they can take years away from a

venture before returning to it with a fresh, new perspective.

*Malissin Ariessus was a high elf architect and artist of exceeding vision, though he had no exceptional skill. His dream was to one day create the perfect tree town, where all elves could live in harmony and peace in a setting of unimaginable splendor—and improbable engineering.*

*Malissin did, indeed, create his city within the trees. Caelestis exceeded even Malissin's dreams, and the city excited all who saw it. Even the gods were filled with wonder at the magnificent tree town. Alas, Malissin forgot to weave the final enchantment on his city.*

*For many years it stood tall and proud, a monument to one elf's dream. Malissin passed on to Arvanaith, happy and secure that his tree city was all that he had hoped it would be. A great storm brewed the night of Malissin's death—a storm so great it tore asunder even the mightiest oak trees. Malissin's city was destroyed for lack of the binding spells that would have made his structures permanent—an oversight in an otherwise flawless creation.*

*Though the architectural principles Malissin employed are long since lost, his dream lives on in all of us. The desire to design perfection that is beloved by the gods burns in the breast of all who create, and the urge for such immortality is often irresistible.*

**Moral:** Love of creation is the element of perfection. Patience and love of creation are the permanence of perfection.

## Chapter 7: The Death of Elves

*After the Godswar, Corellon Larethian walked the world of mortal Elves, hoping to gain knowledge and experience of our lives so that he could give us the aid that a true god should. During his journeys, he came across an Elf woman of such beauty and generosity of soul that he was stricken with love. Elana returned that love. Two years later, a child was born: Eliara Larethian. Corellon's daughter was the most perfect Elf ever born. Men and Elves alike hoped to win her favor.*

*Eliara could not oblige them all with her love—nor could she choose who was worthy of her. For a time she spurned them all and devoted her life to the bow; as the daughter of Corellon, her skill was uncanny. The Men and Elves fought between them to see who could carry her golden quiver, and war threatened to break out between the races. Corellon and Elana turned to their daughter, and she agreed that such squabbling must stop. And so Eliara held a contest to judge her suitors' skills. A hunt there would be to see who could match her ability with the bow; the winner should have her as his bride.*

*During the hunt, a great red dragon was drawn to the noise and bustle of the hunting party. Seeing the Men and Elves, it opened its maw and poured forth a great gout of fire—slaying half the party outright. Eliara drew her bow and let loose an arrow. The shaft entered the beast's eye, killing it instantly. The dragon's body crashed to earth, uprooting trees as it did. The massive limb of a falling oak caught Eliara in the chest and she was crushed beneath its deadly weight.*

*A great funeral was held in Eliara's honor, with all her suitors in attendance. One of these, an Elf master singer named Clain Windsong, threw back his head and let forth a*

*melodic cry of sheer, wordless anguish. As if on a cue, the other Elves took up the cry, their voices mingling and harmonizing in an outpouring of overwhelming grief. The Humans in the party, overcome by the terrible beauty of the music, died of heartbreak.*

*The tradition of the elven mourning song continues to this day, and it is song of such anguish as to break a listener's heart.*

There are those who consider the elves to be virtually immortal. While they can die through accident or violence, no one has ever seen an elf die of "old age." That is because no truly old elves remain in the world known to humans; "old" elves have left the world and journeyed on to a place called Arvanaith. At about age 550 years old, elves feel an irresistible urge to make one last journey. An elf can defy this urge only marginally more than a man can defy death when it comes.

PC elves, with the permission of the DM, can continue adventuring rather than succumbing to the siren call of the beyond. Of course, if they do, they stand the chance that the doors to the otherworld will be forever closed to them. If so, they will never know the delights that await them there in Arvanaith. The DM should stress that few elves make this choice after having experienced all that the world has to offer; change—by way of Arvanaith—is an attractive option at old age.

With the spells available for prolonging one's life, elves do have the choice of temporarily forestalling the inevitable. However, because of their attachment to the natural cycles of the world, most elves feel disdain for those who attempt to avoid the unavoidable. Only those elves who feel no respect for the tuggings of the seasons or those who have crucial tasks yet unfinished take this option. Otherwise, old elves travel to Arvanaith, the hidden elven homeland. No elf who has traveled to Arvanaith has ever willingly left that land, nor has any elf regretted such a journey. The sylvan glory awaiting all elves there is beyond any ever experienced by humans—and is barely conceivable by the elves themselves.

Arvanaith is a place full of natural beauty, hidden away from all but elves. Some human sages have speculated that this pocket is a piece of Arvandor on the Plane of Olympus, but none have ever been able to reach it—save through death. Those sages who have made such a journey and were able to return to their original plane are unable to speak of Arvanaith. The memory of the beauty is too intense for their human minds to bear. It is truly a realm only for the elf.

Those elves who have passed into its wooded glories can experience anything they've ever wanted for as long as they want. Unimaginable happiness lies in this realm, and every elf can expect to enter Arvanaith upon his or her departure from temporal kingdoms.

The only way to return from Arvanaith is through reincarnation, resurrection, or some way of retrieving the spirit from this realm. (The last two methods are always done against the elf's will.) A very few return voluntarily, having spent millenia enjoying the splendor of Arvanaith; they volunteer to be reincarnated, and their souls begin anew. Those who leave seldom regain their original bodies. They find themselves reincarnated in the form of any animal ranging the spectrum of the animal kingdom. Sometimes these elves return as creatures so low on the evolutionary scale that they lose their elven spirit altogether.

Only a legendary few have ever returned through time to their original forms. These

elves have returned to complete quests of epic valor and salvation. More likely, those truly heroic elves who have requested to be reincarnated are reborn as a new elf.

Some elves are ripped from Arvanaith by the spells or prayers of those still on the mortal plane. A very few of these survive the shock of returning to their old bodies; they regain their mortal lives, albeit their spirits are now touched with a strange sorrow. Most elves, however, fight to remain in Arvanaith. Their spirits do not willingly leave the glorious forests of this most ancestral land. Should powerful magicks force them against their will, the elves will return—but at great cost. Such elves usually succumb to madness and despair; a few cannot survive the return and are transformed into banshees.

In Arvanaith, all things are possible. Anything elves might want, including forgetfulness or even oblivion, is available. The winds of Arvanaith are enough to soothe even the most troubled spirit, causing it to set aside his or her fears and torments. Only those few who refuse to give up their sorrows retain the memory of former troubles.

Instead, memories of friends and happy times make up an elf's new life, along with new dreams and challenges. Troubling memories remain largely in the back of an elf's mind, serving only as a reminder and measure for the goodness of existence in Arvanaith. Most elves are happy to relinquish the memories of their suffering, retaining only the knowledge of its passing to more fully appreciate their current happiness.

Of course, no elf is forced to stay in Arvanaith against his or her will. However, only a few elves have chosen to return to the mortal plane—and then only after centuries have been spent in Arvanaith. It is largely inconceivable that any elf would not want to remain in the eternal lands.

It should be noted that elves don't die the way other mortal races do; in fact, elves only rarely suffer true death. Those that do are mourned for months, for their spirits can never return to nourish the earth once again. Their children are cherished in hopes that they will carry on the works of their parents, provided the parents did not die dishonorably.

There are only a few ways that elves can suffer this fate. The attacks of certain undead, suicide, dying in an unnatural place, and other extraordinary circumstances can completely eradicate the existence of an elf. The only way to recover these brave elves is through magicks no less powerful than a wish.

The bodies of those who have died the true death are often burned. This prevents the undead life force from occupying the body. Elf villages have learned from experience that an unwhole spirit is worse than an undead one.

## Accidental or Violent Death

Seemingly unlike many other races in the worlds, elves try to avoid violence. Their actions are typically more cautious, despite the fact that they seem impetuous. This is more true of older elves than younger ones. When embarking on a course of action, elves remind themselves that it could be their last. This has sobering effect on even hotheaded elves.

Elves live long enough that they don't want to risk their lives on an insignificant issue. Only truly earth-shattering events and dire emergencies will stir older elves from their retreats in the forests or mountains. Nothing less will entice them to risk their lives; although they are not cowards, they have no desire to lose a life for something petty.

This is one of the reasons why elves have become legendary for their skill with the bow; it keeps their foes at a safe distance, affording the elves little danger. At closer distances, elven training with the sword is proficient enough that few need worry. Still, elves have no foolish notions about killing an opponent "honorably." The method of least resistance is more likely to preserve precious lives.

Unlike most races, elves have no ingrained fear of death. Their longevity ensures that they have a healthy respect for the cycles of life and—because of their interrelationship with nature—they accept death in nature. Indeed, elves look forward to their "death," for it signifies the journey to Arvanaith and a new way of life rather than the surcease of life. However, elves do fear death by other means.

Elves also fear the violation of their spirits and their free will, for these are essential in entering Arvanaith. Any creature that feeds on the lifeforce of another is zealously avoided (or slain, if the means are available) by elves, for these creatures are among the few who can inflict true oblivion upon an elf. Even those elves who live under the shadow of evil find no kinship in these creatures.

If an elf suffers a fatal accident or is murdered, she cannot re-enter the grand cycle, that mystical rhythm that hurtles the earth through the spheres. Instead, her body lies cold and useless wherever the physical death occurred, her spirit cast out and swallowed by the nameless void surrounding her. If her body is returned to the land of her birth, the story is another matter. Only then can the elf's death once again have meaning, for there her physical form can contribute to the well-being of her world, nourishing the plants and animals of her birthland. Her spirit is free to enter Arvanaith and partake in its glories.

Any elf of good or neutral alignment is allowed in Arvanaith. Even drow so aligned are welcomed and allowed to share in the beauties of spirit found in Arvanaith. In Arvanaith, subrace is not important as long as the soul is good or neutral. Any spirit residing there has earned the right to do so, regardless of what it might have been in life. This is truly a reward for those who lived their lives under a pall of suspicion simply because of the circumstances of their birth.

Aquatic elves, too, are welcome in Arvanaith. Although they probably had no real contact with the surface-dwelling elves in life, they can revel in the company of these elves in the afterlife, for in Arvanaith all things are possible. Aquatic elves and land elves mingle in a world where the air is water and water is air; there is no difference to them.

## Funereal Ceremonies

Since most elves pass on to Arvanaith, their passing is not mourned for long. Although it is unlikely that they will return to the earth in the same form as they had assumed before or even with the same personality, their spirit continues on. As such, death rituals are more often a celebration that the elf has achieved the joys of Arvanaith. While the elf may be missed for a while, others know their companion has passed on to something better.

The ceremony surrounding each elf funeral varies even from village to village. Some gather with great pomp to watch the body be interred in the ground, with speakers expounding on the merits of the deceased. Others bury the body with dispatch; they regard it as a mere husk from which the life force has departed. After ridding the shell, they celebrate the spirit of the elf who once resided there. Still other elves believe that

burning is the only way to truly rid the spirit of its earthly ties; not only does it free the spirit for Arvanaith, it prevents anyone from using the body for nefarious purposes. Each burial is typically related to the nature of the elf, so that the burial is personalized and the point made that the spirit has left the body.

## Chapter 8: Elven Dwellings

*My first glimpse of the grey elf city Celenaress was nothing special: It appeared as a city of exceptional beauty, even under the cloudy night, but certainly no place that I would lose my soul to. I, Master Thief Gerril Haka, have seen a thousand sights of beauty in my life, and this was merely another.*

*I had easily avoided the patrols wandering the nearby mountainside; their wakefulness was obviously a sham, for only I noticed the few admittedly minor mistakes I made in approaching the city. I had no trouble with the sentries when I entered, for my pet mage shielded me from all prying eyes. I crept through the arched marble gates with catlike stealth, hugging the shadows all the way to the base of the towering spire that was my target. The white streets glowed with an inner radiance as they spiraled up the hillside, but my ability to move through the slightest shadow held true, and I encountered no resistance.*

*I climbed the tower as would a spider, hardly pausing to admire the carvings that decorated its entire surface, appreciating them only for their usefulness in ascending to the upper rooms. Once inside the obelisk, I found it ridiculously easy to overcome the magical wards that had been set in place to guard against the incursions of those such as myself. I retrieved the Jewel of Dajarmarak, and I found myself mesmerized by the beauty surrounding me. This was only a momentary pause, however, and I resumed my business.*

*As I climbed out the tower's uppermost window, I cast a glance below to ensure that no prying eyes watched my descent. At that exact moment, gods be cursed, the moon chose to show her face from behind the clouds and illuminate the city. So awestruck was I by the symmetry and form of the city, the exquisite perfection of its design that I must have fallen into a trance.*

*My next memory is of lying on the cobblestones surrounded by the City Guard, my mangled body twitching. My last thought was that I only hope other would-be thieves never enter another grey elf city so unwarned as was I, for the city itself was literally my downfall and may lead to theirs.*

Those who have visited an elf city will often wonder why any elf feels the need, or even an urge, to leave. The peace and beauty of these places is legendary among the younger races, so much so that their ideas of paradise are often modeled on fabled elf cities. Some say that each elf city, tree town, and encampment is a fragment of the elves' Homeland, such is the magnificence of these places.

Whether it is a sylvan elf encampment, a high elf tree town, or one of the grey elves' cities, each of these places radiates a charm and splendor unrivaled anywhere else. While human cities and dwarf strongholds can aspire to the beauty and harmony of the elf homes, they can never truly rival these places.

While elf crafters can still learn from the dwarves regarding strength and durability of masonry, they need no such tutelage in unlocking the beauty from the stones. With their

long familiarity with the earth, the elves seem to know instinctively how best to carve a rock to reveal its beauty. One might think that elves would then be the primary shapers of stone in the world; dwarves have always held that position and always will. While elves do feel an affinity for working in stone, it is that affinity which holds them back. Most elves cannot work with stone that has been ripped from the earth, for it seems to scream under their fingertips. Very few elves will pull apart the earth to pull out a chunk of rock.

When elves work with stone, the rock is almost always a part of the living earth or a piece that has become detached. Thus, elven statues are often subject to the movements of the earth. In general, few elves other than the grey elves devote much time to stoneworking, although all elves keep the craft alive.

Elves far prefer working with living wood than with stone. Wood is more flexible, for it will shape to both the elves' needs and the needs of the tree. Elves do not wish to cause unnecessary stress to any living being in their world, and they try to keep their impact on the trees to a minimum.

Each of the surface-dwelling elves has a different perspective on how the layout of a home should proceed. Following is a brief description of a typical grey elves' city, a high elves' tree town, and a sylvan elves' forest encampment. The descriptions are necessarily brief, allowing the referee to flesh out the dwellings as appropriate for his or her campaign. Bear in mind that the vastness and fullness of life in elf settlements makes them nearly impossible to fully describe.

## The Grey Elves' City

The grey elves have an abiding love for all things permanent. In their mountains, they have found nothing so permanent as stone, and so they make virtually all of their beautifully sculpted buildings from this material. Although their skill is not that of the dwarves, grey elves have learned a trick or two with stoneworking, and they put them to good use in their cities. When the rare dwarf is admitted to these lands, tears have welled up in his eyes at the beauty the grey elves have wrought in granite and shale and the other stones comprising their mountains.

The grey elf cities are strictly divided by caste. Those of lower social level are kept well away from those of higher social class. Still, even those of low social standing have permanent housing. Grey elves know of the importance of a secure home, and they provide it for all who dwell in their cities.

Grey elf cities are also divided into at least five walled concentric rings, with those of higher classes closer toward the secure center. On the outer rings live those of the noncaste, or of extremely low class. As one progresses through the rings, the finery in construction and ornamentation increases as well, until one reaches the palace and government buildings in the center of the city. The few humans and other races who have seen the center of a grey elf city have often sworn that there was no more lovely sight in all the world, and that they must be in the home of the gods. While it is true that the central portion of a grey elf city is elaborate, even the meanest sections of the city are stunningly beautiful—crafters work on these sections in their free time.

Not only does this arrangement keep each social class physically distinct, it allows for tremendous protection of the most important parts of the city. Further, all grey elves are trained in at least the rudiments of weaponry, and the people themselves provide an ideal

defense against any unwanted visitors.

## The High Elves' Tree Town

The high elven philosophy is somewhere between that of the grey and sylvan elves. While they value permanence and works of art, they also try to stay well in touch with nature. Therefore, they do not build many stone edifices. They prefer to stay within the forest, receiving its bounties and creating a pure synthesis between the two other elven perspectives on dwellings.

Instead of the stone cities of the grey elves and the tents of the sylvan elves, many (although not all) high elves create *tree towns*. Using only the mightiest of trees in the ancient forests as a base, they build their homes high above the ground. Although many have thought this might make high elves especially vulnerable to fire, those who have tried to exploit this have found otherwise. The elves always keep liquids and water spells handy to protect their beloved trees, and bows are always near to hand to discipline those who have the audacity to try to burn them.

Tree towns are usually based around the tallest and strongest of the trees in the forest. One must keep in mind that these are virgin woods—forests that have never been logged. Thus, these forests are old beyond measure, and their trees are tall with age. One could fall from the lowest level of a tree town for perhaps 100 feet before hitting the ground.

Ropes and ladders connect the levels. There are pulleys and rising platforms to aid those who aren't as spry on the ropes as the elves, such as the fairly frequent visitors. Rails and balconies surround the houses, keeping one from inadvertently plummeting to the ground.

Although these high elves live in the trees, they are just at home on the ground as they are in the heights. They conduct most of their festivals and meetings on the ground, so that their non-tree-dwelling brethren may attend.

## The Sylvan Elves' Encampment

Sylvan elf encampments are built with both defense and admiration of nature in mind. Low, mottled-green tents are pitched in a circle, with the openings toward the central fires. Occasionally, the elves will engage in shifting the earth about to provide added protection. These encampments represent the only home sylvan elves know. The land readily returns to normal when the elves continue on their nomadic course.

In the winter or when they intend to stay for a year or more, wood elves build semipermanent wood lodges, rather than use tents. Many barbarian human tribes have emulated this practice, for they and the wood elves would rather not endure harsh winters with only a thin canvas separating them from the elements. Still, even the sylvan elves' wood tents are well disguised, and casual travelers passing within 100 yards will not spot the campsite. Even if they did, the wood elf guards would dissuade them from advancing any nearer with some well-placed arrows.

The bivouac is nearly always established in a clearing or on a hill, or both, if possible. The escape routes and battle tactics are thoroughly established at the same time a camp is, so wood elves are never caught unawares. They usually move only twice a year.

Whatever their schedule, the wood elves have as great a love for impermanence and

change as the grey elves have for permanence. While a grey elf city radiates a feeling of timelessness, comforting its citizens with the knowledge that it will never change, a wood elf encampment always gives the impression of constant readiness to change.

## Chapter 9: Optional Rules

*Cylithera Swanflight had but one driving ambition as she grew: She would be the finest swordswoman the world had ever seen. From the tender age of 45 until she was 150 years old, Cylithera practiced obsessively every day, neglecting even her studies of other subjects.*

*"All anyone need know of me is that I have the fastest sword arm," she scoffed. "I do not need to bother with other learning, for the historians would never recount how I knew Orcish. Legends of me will only tell of my genius with the sword—not the dusty facts my elders would have me learn."*

*And so Cylithera continued to sidestep true education. For "variety," she studied under the finest archers in elvendom, honing her archery skills to perfection. Her every waking moment was filled with bow and sword practice; her only purpose to one day become a legend. Already stories were being told of her single-mindedness in pursuing her goal (not all of them complimentary). Her skills surpassed those of her masters, and she knew the day had come.*

*Cylithera traveled to a forest alone, seeking some monster to test her abilities. What she encountered was far different than her expectations. Rounding a bend in a path, she came across an elf sitting atop a rock. He was of amazing beauty, but even to her untutored senses he stank of evil. Drawing her bright sword, Cylithera immediately challenged him to a duel. Smirking, he stepped from his perch, made a mocking obeisance to her, and gestured idly. Suddenly unable to move even her fingers, Cylithera could only watch as the older elf sauntered toward her. He struck the sword from her hand, scrawled a note on a piece of parchment and impaled it on her dagger, then plunged the blade into her back.*

*After Cylithera recovered, she found the courage to look at the parchment. It read: "Ignorance is sometimes bliss, but more often death." From that moment forth, she devoted herself to studying the unknown and eventually became a sorceress of great repute. The stories told now of Cylithera Swanflight praise her for the vast knowledge she came to learn.*

Given what is known about elves, it may seem logical that they be allowed various alternatives not normally granted in the core rules presented in the *DMG* and the *PHB*. Their incredibly long lifespans make a few of these rules seem questionable.

This chapter should address some of these concerns. However, the reader must understand that any changes proposed in this chapter are purely *optional*. The DM may allow or forbid any of these rules as is appropriate to his or her campaign.

Since the rules presented in this chapter expand the abilities of elves with only minor drawbacks (thereby upsetting game balance to potentially unmanageable degrees), each addition of these options must be weighed carefully to determine to what degree the campaign will become imbalanced. The Dungeon Master should either disallow the rule or, if he or she wishes to use the option, compensate for any imbalance it causes. Many of

these optional rules will add spice to a campaign (particularly an all-elf campaign), but—again—the game referee must determine whether the price to be paid is worth the gain.

Naturally, in an all-elf campaign, these rules will not really affect the characters overall. In any other campaign, however, the advantages and disadvantages must be carefully considered to determine the ramifications. Balance must be preserved so that the game remains enjoyable to play any sort of character. That's why the various rules are there.

A good idea when considering the options presented here is to figure out disadvantages to accompany each advantage. This will force the players to decide whether they want the advantage so badly that they will pay for it. If they do, and the DM is willing to include such alternatives, by all means give the optional rule a try. If it doesn't work, retire the ruling.

Options presented in this chapter include expanding level limits, allowing extra proficiencies, modifying combat and archery skills, using bows as weapons, and adjusting arrow breakage.

## Level Limit Expansion

As an option to consider, if the DM permits, elf characters may progress in their levels as far as a human might. This option reflects the fact that elves have many extra years in which to prove themselves. Although a typical elf may become bored with an extended sojourn in any one class and would prefer to retire than continue in his or her vocation, there are always exceptions. PCs are, of course, the most notable exceptions to any rule.

Naturally, given the long life of the standard elf, this could rapidly lead to elves dominating their campaign world. This may or may not be desirable to the DM, depending on the flavor of the campaign. If the elves are the dominant race of a particular world, having built or fostered other civilizations, the Dungeon Master might wish to think about this option. If the other races have developed legends about the skill, wisdom, and sage counsel of the elves, the elves most likely do not have level limitations.

If, on the other hand, the DM prefers the elves to follow the AD&D® game standard as just another PC race, he or she may wish to somehow limit the elves' levels. Please note, however, that this does not mean halting their advancement in their chosen class entirely. Rather, as suggested in the *Dungeon Master's Guide,* simply slow their advancement. Remember that time is a far different matter to elves than to humans; taking longer to achieve something is natural to elves.

Charging elves double the experience points necessary to achieve levels beyond their maximums seems a reasonable compromise. This reflects the enthusiasm elves feel when first entering an enterprise, as well as their subsequent diminishing commitment to their chosen class. Eventually, most elves grow bored with the repetition that adventuring as a fighter (or as a priest, mage, or rogue) provides. Such lack of concentration is indicated in the additional time it requires an elf to advance in levels.

## Extra Proficiencies

This section should only be used if the DM uses the optional proficiency system. If the DM doesn't use that system, players may want to skip this section. Or, they may want to

familiarize themselves with the system and then read this section.

Using the optional proficiency system, all elf PCs get a number of skills they can use to round out a character. Adding extra proficiencies for older elf characters is a natural step in the evolving PC.

Adding positive modifiers to existing proficiencies for older elf characters is also a possibility to consider. A being who has more than 100 years to practice a skill will certainly be one of the better practitioners of that skill to be found anywhere.

However, it's unlikely that elves would spend their youth practicing weapon skills exclusively. Parents would rather these young elves learned more of life's many facets before devoting time to a single pursuit, including weaponry. More likely than not, a young elf's life is dominated by music, dancing, and learning craftsmanship. Few elf parents would ever want their child to grow up to be an adventurer; while they value free will, they would definitely discourage their child from such a path. They would want their child to experiment with all options available in life, and most would prefer that the child concentrate on the gentle, lovely side of existence.

For this reason, elves shouldn't be allowed extra adventuring proficiencies such as blind-fighting or endurance. Only those applicable to an elf's young life should be considered. Even the more rugged proficiencies, such as survival and fire-building, are questionable choices for an elf's early years.

Instead, think about a human child's life. Human children are taught singing, musical instruments, or art. Few of them learn the intricacies of gaming or forgery. Only the most exceptional of children would be allowed proficiencies such as these.

The same is true for elf children. Those whose destinies are in a certain craft (such as blacksmithing, hunting, or study) will learn the skills applicable to their craft as well as those necessary to become a well-rounded elf. If they want to develop other skills (such as those they might need for an adventuring life), they will have to develop them in the future as would anyone else.

Thus, it is suggested that elves be allowed two or possibly three extra nonweapon proficiencies (such as Dancing, Musical Instrument, and Singing), as they begin play. Those elves who start play at a later age might gain one for every 10 years over age 100.

## Combat Modification

Elves are fiercely interested in any art to which they may dedicate themselves for decades or even centuries. This includes the fighting arts. The optional modification described in this section, the bladesong fighting style, reflects that interest.

When an elf has devoted him- or herself to improving prowess in combat, the result can often be a frighteningly efficient individual. The services of elves who have exclusively trained for battle are in high demand in human lands, for the elves' knowledge of tactics, strategy, and swordplay often rivals that of the most accomplished human generals.

### Bladesong Fighting Style

Dedicated elf warriors take their craft seriously enough to have created a uniquely elven fighting style. Unlike the martial arts of other races, the elven fighting style, also known

as the *bladesong*, emphasizes beauty and economy of movement over sheer destructive power. However, the elven bladesong is deceptively dangerous, for all its seeming gentleness and apparent grace.

There are two types of bladesingers: those who learn it as an additional skill (described below), and those who have made it their lives. Those in this second category are known as Bladesingers, and they are described in Chapter Ten.

Bladesong is so named for several reasons. The first and most obvious is because of the whistling of the blade as it slices through the air when this style of fighting is used. The second is for the haunting, wordless tune many of its practitioners sing as they fight.

Those who practice the bladesong appear as if they are dancing when they fight. Their movements seem misleadingly slow and elegant, deflecting opponents' blades while lazily drifting back to score hits themselves. The technique requires, above all, misdirection and subtlety. The bladesingers do not believe in smashing blows or strong and crushing offense, but rather in guiding their opponents to anticipate a different attack entirely, thus overbalancing the foe and making him seem clumsy.

Bladesinging can be done with any Small- or Medium-sized melee weapon, although the majority of practitioners practice their art with the sword. Due to the awkwardness of polearms and two-handed weapons, there are no known students of bladesinging proficient in these weapons.

To take advantage of the bladesinging technical benefits, the character (who must be a member of the warrior, priest, rogue, or warrior/mage classes) must devote at least two weapon proficiency slots to the style. Otherwise, the character can gain no benefits from the technique. This cost does not include the initial slot devoted to learning rudimentary use of the weapon, so the total cost is three weapon slots.

Obviously, rogues and priests cannot pick up this technique until they reach the 4th level or higher, since they start out with only two weapon proficiency slots and don't acquire a third until having progressed in levels. (As noted above, mages cannot learn this style at all.) Even if rogues and priests devote all their initial slots to a weapon and the first half of the bladesong proficiency, they must take a significant amount of time away from adventuring to learn the second half. Unless their companions are remarkably understanding and willing to wait some years, this could cause party friction. Thus, the style is usually practiced only by warriors and warrior/mages.

Please note: Elves *never* teach this style to non-elves, including half-elves and drow (the latter of whom have their own teachers and their own style anyway). Elves make no exceptions to this rule, even for those who have proven themselves eternal friends to the elves or even those who have married into the elven life. Elves have several reasons for not doing so.

The first is that this style could be a terrible weapon against the elves should any non-elf students choose to use it that way. Though they may trust someone with their lives, the teaching of the bladesong is most definitely a racial secret—a secret that will not be revealed even under pain of death. The only conceivable way for a non-elf to gain this knowledge is by using powerful magicks to force it from a practitioner. In such a case, elves would swear the blood oath and doggedly hunt the thief until he or she is destroyed. They would not hesitate to use every trick at their command.

The second is that there are so few teachers of bladesinging that they have no desire to devote the time required to any other than elves. Although this is biased against non-

elves, bladesinging masters are adamant about not teaching any other than elves. While a few other creatures might have the grace necessary for the intricacies of the bladesong, they certainly do not have the judgment and discernment most elves possess.

Finally, and most compellingly, few other beings have the time necessary to properly learn bladesinging. In the years it takes to master even the rudiments of the bladesong, a human could raise a family, build a successful business, and retire a wealthy man. There are numerous other ways to become a fierce fighter, all of which demand less time than learning the bladesong. Even most elves are not willing to take the time necessary to learn this technique. Only the most fiercely devoted will spend the decades required for this fighting style.

## Advantages

Although the cost is rather steep to learn bladesinging, its practitioners swear by it. Its wide versatility often astounds those who are not familiar with its intricacies. The things even an amateur bladesinger can do with one blade echo tricks that accomplished warriors can do with two, or with a weapon and shield.

Those elves willing to devote two slots to learning the rudiments of bladesinging gain the use of the following benefits:

1. They may gain a +1 bonus to their AC or, if they wish to spend an extra slot, may boost this bonus to +2 to their AC. That is the highest bonus those who choose blade-singing as an additional skill can attain. or
2. They may gain a +1 to hit or, if they wish to spend an extra slot, may boost this to a +2 to attack. As with the AC bonus, +2 is the best they can hope for. or
3. They may attack and parry in that same round, without wasting any additional attacks.

Note that these three benefits are not cumulative; that is, practitioners cannot use all three at once. However, they do have the option of varying between these three options during the course of a combat.

**EXAMPLE:** *Amaranth Silversword, a 6th-level fighter fully proficient in the bladesinging weapon style with three slots, encounters a band of 20 orcs while he is walking well ahead of his party. He immediately shifts into a defensive posture, giving himself a +2 bonus to his AC so that he may gauge the orc band's capability.*

*When they fail to hurt him appreciably in the first exchange of attacks, Amaranth places his back to a tree so that fewer of them can approach. He shifts to a slightly offensive stance, going with one attack and one parry. He dispatches an orc, and the rest still have failed to harm him severely.*

*Now that he has fully learned their measure, he goes totally on the offensive and whirls through their midst with deadly capability. When the rest of his party finally catches up with him, hurried by the sound of clashing blades, they find Amaranth standing atop several dead orc bodies, calling elaborate and inventive insults after those who have fled.*

## Disadvantages

The most obvious disadvantage to acquiring the bladesinging weapon style is that a character cannot carry a shield and practice the style at the same time. This technique requires far too much concentration on movement and flow, and the shield gets in the way of the grace and balance necessary to successfully use the style.

A more esoteric disadvantage is that this style is most often used by loners—solitary individuals who have no desire to be part of a group. Rarely, this technique may be practiced by someone whose companions will part company with the PC for a decade. Since bladesinging is a very demanding style, the training is intense, difficult, and, above all, long. Therefore, a PC would be well advised to study this style in his or her early years before joining up with a group of adventurers—or else develop some long-lived and understanding friends.

## Archery Modifications

Elves are, with few exceptions, the undisputed masters of the bow. They have developed their art to a state of true excellence. This section details several techniques elves have devised to hone their archery skills—for fun, profit, and protection. Many other races have seen these tricks, and those that were not on the receiving end of them have diligently tried to practice these arts.

Seven optional techniques for firing a bow are outlined in this section; these modifications are cumulative with any others that a character might have. Also, most of these tricks are usable only with long or short bows (or the composite versions thereof). A few can be used with the crossbow, but because most elves disdain the use of that weapon, its modifiers are not included.

An important note regarding elven archery: Elves may, because of their agility, fire their bow, move, and fire once again. Alternatively, they may choose to move, fire their bow, and then move again.

### The Broken-Charge Shot

One of the most effective weapons of a mounted enemy is the ability to charge. One of the most effective ways to rid foes of this advantage is to take out their mounts from underneath them. Although this isn't a method elves generally employ because the mount usually isn't a threat, they will use the tactic if things are looking grim on the field of battle. Elves will also use this optional maneuver if the mount itself poses a threat.

Unless such animals are well trained in the ways of combat and in dealing with pain, a hit by an arrow will break the charge. Riders must make a Land-Based Riding check to see if they retain their seating atop an injured mount. If they fail this check, they must follow with a Dexterity check. Those who don't have the proficiency may only do the Dexterity check; if this check fails, the rider is hurled to the ground for 1d4 points of damage.

### The Double-Arrow Shot

Another trick that is impressive (though good for little else) is the double-arrow shot. By

adding a +1 penalty to initiative and taking a –1 to attack rolls and damage, the archer may fire two arrows from the bow with one pull of the string.

The arrows can be directed toward a single target or at two separate targets within a 60-degree arc if the attacker is willing to take an additional +1 penalty to initiative and another –1 to attack rolls and damage. This reflects the time the archer takes to adjust the fletching and arrange the arrows on the string.

This shot does not allow more than two arrows on a single string. Lastly, if this option is taken, no more than one additional arrow may be fired in the same round.

**EXAMPLE:** *Kanali, a 3rd-level/3rd-level high elf fighter/mage, faces two ogres. She has exhausted her spells and must rely only on her archery skills. Taking two arrows from her quiver, she rips the fletching a bit, nocks them both on the string (taking a +2 to initiative), and lets loose the arrows. To hit the ogres' AC 4, she rolls a 16 and a 13. Taking all her modifiers into effect (+1 for being an elf, –2 for the difficulty of the shot), her total modifier is –1. Her modified rolls are then 15 and 12. Since she needs 13 to hit AC 4, she hits one of the ogres, inflicting 1d6 –2 points of damage. If she had focused both shots on one ogre, the damage would have been greater. She still has one shot left this round, and she'd better not waste it.*

### The Foot Shot

In some situations, an archer may find one of her arms unable to grip the string or shaft of a bow. Perhaps the other hand is holding onto something to keep the elf from falling, or perhaps the arm has been injured. Or maybe the elf just wants a bit of extra pull on the bow, to inflict just a little more damage.

In a case like this, if a shot is absolutely required, elves have developed the foot shot. The elf must have a secure place to rest her hindside and at least one arm free. Using the feet as a base against which to pull, the elf aims the bow and pulls back the string with the free hand (or both, if possible). Although there is a –1 penalty to attack rolls, the damage is increased by +1 because of the extra pull granted by using her feet.

### The Hanging-Tree Shot

Because elves spend so much time in and around with trees, they obviously have found a need to incorporate trees into their archery. Elf scouts and spies especially have learned to use trees effectively. They drop from branches to land in front of their enemies or use trees as concealment.

One of the tricks elf archers are most proud of is the dangling shot. In this shot, the elf wraps her legs around a sturdy tree branch and drops downward while simultaneously firing right into the faces of her oncoming enemies.

Unfortunately, the disadvantages to this shot are numerous. The most obvious is that anything on the elf that isn't tied down or strapped in (arrows, daggers, loose change, et cetera) will fall to the ground. Another disadvantage is the –3 to attack rolls. Lastly, the elf can't fire her usual two shots.

However, the elf can still take an action, such as swinging back up into the tree or jumping to the ground. Further, the enemy suffers a –6 to his surprise roll! This

advantage alone often outweighs the drawbacks, and the hanging tree shot is a favorite trick of elves ambushing lone outriders.

### The Quick-Draw Shot

Every once in a while, there arises a situation where an archer must fire more than two arrows a round or where the archer must bring a bow to bear very quickly. In response to this need, elves have developed the quick draw shot. Their agility and the near-constant companionship of their bows has helped them achieve that end admirably.

Because of the speed involved in firing from a quick draw, the elf has less time to aim. Therefore, accuracy of the shot is severely affected. The first shot in a round is made at no penalty. From there, penalties add up quickly. The second shot is at –2. The third is at –4. The fourth is at –8. If the elf wishes to attempt a fifth shot, the penalty for it is –16.

The archer gets off two shots on his first attack sequence. When all combatants have finished their first attacks, the archer may take the next two, if so desired. Finally, after everyone has completed second attacks, the archer may take one final shot. Although this shot is almost guaranteed to miss, it may be the last hope of a party, so many try it in moments of desperation.

A sixth shot in a round is virtually impossible unless the elf has been hasted or has otherwise been made exceptionally speedy. In such magically enhanced cases, the first two shots are without penalty. The third and fourth are at –2. The fifth and sixth are at –4. The seventh is at –8. The eighth (and final) shot is at –16.

### The Stapling Shot

When an elf wants to disarm or otherwise incapacitate someone, he can attempt a stapling maneuver. By making a called shot (+1 penalty to initiative, –4 to attack rolls), the character can staple some part of the target's clothing to a nearby object, as long as that object is of a material that is reasonably subject to penetration by an arrow (such as wood or plaster). The target *must* be standing near such an object or the shot is wasted.

If the shot is successful, the target is pinned to that object. The target must spend a round tearing free, although this requires no roll. Pinned targets defend with a –2 to AC and to attacks rolls. After three rounds, if they have not taken the time to free themselves, they break free due to exertion. During these three rounds, the penalties to Armor Class and attack rolls still apply.

The stapling shot is not only good for preventing various actions on the part of a hostile person, it serves to demonstrate that the elves are far from defenseless. Furthermore, many elves like to embarrass targets by affixing them to the nearest piece of "furniture."

### The Trick Shot

Elves do not always choose to nail an offensive person to the nearest tree. Often, they prefer another means to convey their disdain or enmity. Thus, elves have perfected their aim so that they can make a spectacular retaliatory shot that says to an enemy that he is not needed nor, indeed, wanted in the elves' portion of the world.

Trick shots of this sort include knocking off hats, sending an arrow an inch away from an intruder's ear, or placing an arrow in interesting and amusing places (such as the behind of an orc). Deliberate trick shots also include shots intended to be clearly warning shots and not simply missed targets. These trick shots require the elf to take a +1 to initiative and a –4 to attack rolls.

If the attack roll is made, the arrow can do exactly what the elf wanted. Otherwise, it will either fly away harmlessly (informing victims that someone is shooting at them), or it will actually hit the one for whom the warning was intended. If so, the arrow inflicts 1d3 points of damage. If the targets were not previously enemies, they certainly would be by now.

## Using Bows as Weapons

When archers wielding a bow are attacked in melee, they have little choice but to defend themselves with the bow. In the past, this typically spelled the destruction of the bow, but elves have learned how to deflect some of the force of a blow—thus making the bow reparable. Furthermore, elves have developed bows that are more resistant to this sort of damage.

Elves can attempt to turn aside the worst of crushing blows, and their bows are allowed to make a save vs. crushing blow (as thick wood) at +1. Piercing weapons are easily deflected as long as the elf succeeds in the parry, and they cause no damage to the bow. However, a parry against a slashing weapon is a sure way to destroy a wood bow.

More importantly, archers occasionally can't reach their melee weapons when someone engages them in close combat. In these cases, they must resort to using their bows as clubs against their attackers. The damage caused is 1d6 –1 against S or M creatures, 1d4 against L. If used in this way, a wood bow must save vs. crushing blows at –1.

## Arrow Breakage and Loss

Although most fletchers make their wares with great care, the force of bow shots is often enough to induce breakage. And, although most archers will deny it, occasionally they do miss. This section presents an optional rule to cover such situations.

When an arrow or bolt is fired and the missile strikes its target, the missile must make a saving throw vs. crushing blow at +6 with other applicable bonuses (or penalties) to the save. If the save fails, the shaft is broken and cannot be used again. If the save is a success, the missile can be reused.

If the missile misses its target, it travels out to its maximum range (if there are no obstacles to impede its movement), which is 25% greater than long range. It skids across the ground, ricocheting against rocks, gravel, plants, etc. There is a 10% chance to find a lost missile that has reached its maximum range, unless special precautions have been taken with proper modifiers for different terrains at the DM's discretion. Certain types of terrain will, of course, make recovery impossible. Aerial and naval battles are two examples of such terrains. Even if the missile is found, it still must roll a saving throw vs. crushing blow at +3 to be unbroken.

Not only does this optional rule make for more realistic game play, it also allows

characters with the Bowyer/Fletcher proficiency to make use of their skills. Furthermore, this rule will allow characters to spend far less time searching for possibly broken arrows.

# Chapter 10: Character Creation and Kits

## Random Elf Generator

*The Random Elf Generator allows the DM to create believable elf PCs and NPCs quickly and easily. He or she should feel free to adjust the results to suit a campaign and playing style. The Level Compared to PCs Table is only for NPCs.*

**Age (1d100)**

| | |
|---|---|
| 1–30 | 100–200 |
| 31–50 | 201–250 |
| 51–75 | 251–300 |
| 76–95 | 301–350 |
| 96–100 | 350–700 |

**Class (1d8)**

| | |
|---|---|
| 1 | Fighter |
| 2 | Ranger |
| 3 | Mage |
| 4 | Priest |
| 5 | Thief |
| 6 | Fighter/Mage |
| 7 | Fighter/Thief |
| 8 | Fighter/Mage |

**Subrace* (1d6)**

| | |
|---|---|
| 1 | Aquatic elf |
| 2 | Drow |
| 3 | Grey elf |
| 4 | Half-elf |
| 5 | High elf |
| 6 | Sylvan elf |

* Modify as needed for terrain.

**Alignment (1d20)**

| | |
|---|---|
| 1–7 | Chaotic good |
| 8–10 | Neutral good |
| 11–12 | Lawful good |
| 13 | Chaotic evil |
| 14 | Neutral evil |
| 15 | Lawful evil |
| 16–17 | Chaotic neutral |
| 18–19 | True neutral |
| 20 | Lawful neutral |

**Sex (1d6)**

| | |
|---|---|
| 1–3 | Female |
| 4–6 | Male |

**Personality (1d6)**

| | |
|---|---|
| 1 | Compassionate |
| 2 | Cruel |
| 3 | Haughty |
| 4 | Frivolous |
| 5 | Proud |
| 6 | Obsessed |

**Level Compared to PCs (1d3)**

| | |
|---|---|
| 1 | Lower (3 or fewer) |
| 2 | Equal (within 2) |
| 3 | Higher (3 or more) |

If characters may be warriors, wizards, priests, thieves, or multiclass combinations. If

they are multiclassed, they may select from fighter/mage, fighter/thief, mage/thief, or fighter/mage/thief kits. If a player chooses a multiclass kit, he or she should be familiar with the abilities and limitations of the classes in the *Player's Handbook*. The character's abilities will be further modified by subrace, as noted in this chapter**. Note:** Elf PCs may become bards *only* if they adopt the Elven Minstrel Kit.

## Standard Elf Abilities

Unless otherwise stated, each elf has the following abilities:

- Elves are 90% resistant to *sleep*- and *charm*-related spells. Even if they fail a check, they get the save usual for such spells.
- Elves gain a special bonus to find secret or concealed doors. Passing within 10 feet of a secret door, elves will detect it on a roll of 1 on a 1d6. If they search a 10-foot–square area, elves can find a secret door on a roll of 1 or 2 on a 1d6. Elves find concealed doors on a roll of 1, 2, or 3 on a 1d6.
- Elves gain a special bonus with bows, excluding crossbows. When firing a bow, an elf gains a +1 to attack rolls. This does not apply to damage unless a specially made bow is used that takes advantage of a Strength bonus.
- Elves are especially good with short and long swords. Like their abilities with bows, they gain a +1 to attack rolls (but not on damage) when using one of these weapons. This is in addition to any bonuses of the weapon itself.
- Elves move through forests and other natural terrain silently and almost invisibly. As long as elves are not attacking, they can only be spotted by someone who can spy invisible objects. When elves move through the woods, if they are careful, they will appear only as shadows of the leaves of trees, dancing in the undergrowth. This is of immense value to elves, who can thus gather information about their enemies—enemies who often do not even suspect an elven presence.
- Finally, elves have the ability to give their enemies a –4 penalty to a surprise roll if the elf is: 1) moving alone, 2) is 90 feet away from the rest of their party, or 3) is with other elves or halflings and all are in nonmetal armor. If the elf must open a door or screen to get to the enemy, the penalty is reduced to –2.

## The Elf Subraces

Each elf subrace has different talents and hindrances in an adventuring career. Each achieves levels differently and at a different rate than the others.

Some, such as the drow, have a large number of benefits while suffering few disadvantages. (Of course, the major disadvantage to being a drow is being a drow.) Subraces that have more advantages require more experience points to advance to the next level than those with few advantages.

A player character created from a specific elf subrace will have a number of adjustments to the standard character abilities. These are defined as follows:

- **Ability Score Adjustments.** Adjustments to be added to, or subtracted from, the base ability scores when creating characters in a subrace.
- **Ability Scores.** The minimum and maximum scores characters of a subrace may have after the initial adjustments have been made. A character who does not meet

the minimum requirements of a subrace cannot be a member of that subrace. Scores over the maximum must be reduced.

- **Languages.** The languages members of a subrace typically know. Elves may speak either a specific form of Elvish or "Elvish common," depending on the campaign. Even if they are speaking a specific form of Elvish, elves can usually understand most of what is being said in another dialect; pronunciation and usage of some of the words may be different, but Elvish is basically Elvish.
- **Infravision.** The range of the subrace's infravision.
- **Special Advantages.** Abilities of a given subrace that set them apart from others.
- **Special Disadvantages.** The disadvantages of a subrace that offset its advantages.
- **Additional Experience Cost.** The penalty for playing a naturally powerful subrace. Because certain subraces have a number of advantages that other subraces do not, they must work harder to become better in their chosen professions. Experience adjustments for high ability scores cannot be taken by races with additional experience costs.

A +10% experience cost means that a character of that subrace must earn an additional 10% of experience points normally required to increase in levels. Multiclass characters must gain the necessary points per level plus an additional 10% for each class. As with any multiclassed PCs, they may advance in one level while remaining fixed in another.

### Aquatic Elf

**Ability Score Adjustments:** Aquatic elves, because they need the ability to move quickly underwater, gain +1 to their Dexterity. However, since their undersea world is fundamentally one-dimensional, they suffer a –1 penalty to Intelligence.

**TABLE 5: AQUATIC ELF ABILITY SCORES**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 18 |
| Dexterity | 6 | 19 |
| Constitution | 8 | 18 |
| Intelligence | 7 | 17 |
| Wisdom | 3 | 18 |
| Charisma | 8 | 18 |

**Languages:** Aquatic Elvish, kuo-toa, sahuagin, dolphin, merman, abovesea common, undersea common.

**Infravision:** 360 feet.

**Special Advantages:** Aquatic elves have gill slits that enable them to filter air from water. Impure water, like fouled air for surface dwellers, is difficult for them to breathe.

**Special Disadvantages:** These elves cannot be out of water for extended periods because their gill slits close when exposed to air. This offsets their underwater breathing ability.

They do not gain a +1 to attack rolls with bows. Since bows are ineffective underwater, they have had no chance to learn the intricacies of these weapons. Only an elf who has traveled to the upper lands may learn the use of the bow, and even then this does not gain the bonus conferred by a lifetime of practice.

**Additional Experience Cost:** None.

## Drow

Ability Score Adjustments: Drow are extraordinarily dexterous and intelligent. They gain a bonus of +2 to Dexterity and a +1 to Intelligence. However, their personalities can be described as grating at best (although not usually to their faces), and they have the typical elf Constitution. Thus, they have a –2 penalty to Charisma and a –1 to their initial Constitution scores.

**TABLE 6: DROW ABILITY SCORES**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 18 |
| Dexterity | 8 | 20 |
| Constitution | 7 | 17 |
| Intelligence | 9 | 19 |
| Wisdom | 3 | 18 |
| Charisma | 6 | 16 |

**Languages:** Drow Elvish, Elvish, duergar, svirfneblin, deep dwarf, illithid, undercommon, sign language, kuo-toa, bugbear, orcish.

**Infravision:** 90 feet.

**Special Advantages:** Once per day, all drow can use the spells *dancing lights, faerie fire,* and *darkness.* They achieve this through force of will, rather than spell components. A 4th-level drow can cast *levitate, know alignment,* and *detect magic* once per day. In addition, drow priests can cast *clairvoyance, detect lie, suggestion,* and *dispel magic* once a day.

At the start, drow are 50% magic resistant, and every level they rise increases the resistance by 2% (to a maximum of 80%). Multiclassed drow use the higher level to determine this bonus.

In addition to their high magic resistance, drow also receive a +2 bonus on all saves involving magic. This includes those devices that emit magical effects or are powered by magic. This magic resistance does not hamper their ability to use magic themselves, however.

**Special Disadvantages:** The major disadvantage of the drow is their inability to see in bright light. Any light greater than that of torches or *continual light* spells (including bright sunlight) will blind them and severely affect their ability to fight. Wan light, like that of a *light* spell, does not trigger this disadvantage.

Bright light causes the drow to suffer, temporarily, –2 to Dexterity. Attack rolls are made at a –2 penalty, and opponents gain a +2 save against drow spells if they are within the light. When a drow is in darkness and his opponents are in the light, he retains his

Dexterity and surprise advantages but still suffers a penalty on attack rolls.

If the drow spends more than two weeks away from the subterranean caverns of the Underdark, the special advantages fade at the rate of one power a day. This starts from the most innate spellcasting and works down to the least powerful. Thus, a drow priest would first lose *dispel magic*, followed by *suggestion, clairvoyance,* and *detect lie*. Drow magic resistance is lost at a rate of 10% per day. This process can be halted and the powers regained if the drow returns to the Underdark and spends one day there for each week spent aboveground.

Finally, all other elves hate the drow, and reactions to them are with at *least* a –4 penalty. This modifier is cumulative to any kits the drow player might be using. Only after a particular elf comes to accept a particular drow as a friend, does this penalty disappear.

**Additional Experience Cost:** 20%.

## Grey Elf

**Ability Score Adjustments:** Grey elves are the most intelligent of all the elves and are more dexterous than most. They receive a +2 bonus to Intelligence and a +1 to Dexterity. However, because they spend so much time studying, their physique is frail. They have a penalty of –2 to Constitution and a –1 to Strength.

**TABLE 7: GREY ELF ABILITY SCORES**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 17 |
| Dexterity | 7 | 19 |
| Constitution | 5 | 16 |
| Intelligence | 8 | 20 |
| Wisdom | 3 | 18 |
| Charisma | 8 | 18 |

**Languages:** Grey Elvish and all other languages requiring speech or gestures. Since grey elves spend so much time in their libraries and with their sages, they can learn virtually any language they desire.

**Infravision:** 60 feet.

**Special Advantages:** Grey elves have unlimited access to their own libraries and sages. Any information the grey elf council determines to be good for the elf race may be furnished to grey elf PCs for a cheaper price than they would find elsewhere. This is purely discretionary on the part of the DM and should be played accordingly.

**Special Disadvantages:** Because of their haughtiness and arrogance, grey elves receive a –3 on all reaction adjustments when dealing with non-elves. Their disdain, whether intentional or not, communicates itself to others and leads to very poor relations.

With other elves, grey elves suffer a –1 on reaction adjustments. This adjustment reflects their irritating and condescending attitude, even toward other elves. With other grey elves, of course, there is no reaction adjustment.

**Additional Experience Cost:** 15%.

## Half-Elf

Half-elves, as noted earlier, are not truly a subrace of elves. They have no adjustments or advantages and disadvantages to note here, although a DM may wish to make an exception in special cases.

## High Elf

**Ability Score Adjustments:** The most common type of elf, the high elf has only the standard ability adjustments, which are a +1 to Dexterity and a –1 to Constitution.

**TABLE 8: HIGH ELF ABILITY SCORES**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 18 |
| Dexterity | 6 | 19 |
| Constitution | 7 | 17 |
| Intelligence | 8 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 8 | 18 |

**Languages:** High Elvish, other forms of Elvish, dwarvish, gnomish, halfling, common, orcish, hobgoblin, and goblin.
**Infravision:** 60 feet.
**Special Advantages:** None.
**Special Disadvantages:** None.
**Additional Experience Cost:** None.

## Sylvan Elf

**Ability Score Adjustments:** Because their lives are spent in constant exertion, wood elves are stronger than other elves. However, they are less sociable because of their upbringing. They have bonuses of +1 to Strength and Dexterity and penalties of –1 to Constitution and Charisma.

**TABLE 9: SYLVAN ELF ABILITY SCORES**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 19 |
| Dexterity | 6 | 19 |
| Constitution | 7 | 17 |
| Intelligence | 8 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 7 | 17 |

**Languages:** Sylvan Elvish, High Elvish, centaur, pixie, dryad, treant, and other woodland creatures. Wood elves only rarely learn common; they are trying to keep humans and others away from their woods, and they think learning those languages would just encourage visitors to their realm.

**Infravision:** 60 feet.

**Special Advantages:** Sylvan elves have an instinctive, natural connection to the land. Their skills in dealing with the woodland are surpassed only by rangers, whose bonds with the forests are legendary.

Sylvan elves easily befriend natural woodland creatures. Unlike rangers, however, wood elves can only perform this trick with woodland creatures; against a desert lion, they must be as careful as any other being.

With the natural creatures of the woodlands, the wood elves' power is especially useful. Unless the animal is already hostile, sylvan elves can automatically shift its reaction by two categories. This ability applies *only* to natural forest creatures. It is not a *charm* spell and cannot be used to enthrall creatures of the forest. Creatures friendly to the elf will not accompany him unless persuaded somehow. The ability does not work on monsters.

**Special Disadvantages:** Because of their primitive lifestyle, wood elves have no special abilities with secret doors. They have no experience with this sort of door and do not gain the typical bonus for finding them.

Above all, wood elves never try to leave their forests. They withdrew into the woods to escape the outer world, and whenever they leave they rediscover why they withdrew in the first place. Wood elves take a dim view of those who try to forcibly remove them.

In general, wood elves are unfriendly and unhelpful. Any wood elf PC who is friendly to people he or she has just met (within the past five years or so) should be docked experience points for bad role-playing.

Finally, wood elves have an aversion to most settings that are not of the woods. They hate the sea (although they can travel on lakes) and will not willingly board a seagoing ship. They hate the underground and become claustrophobic beneath the soil.

These elves are even worse in the cities and lands of other races, including those of other elves. Sylvan elves regard cities as a perversion. They cannot deal with technology and civilization, for it was civilization that drove the wood elves into their isolation.

**Additional Experience Cost:** None.

## Elf PC Kits

Kits are optional additions to the campaign, allowing a player to add detail to his or her PC. These kits are collections of various abilities and disadvantages that can help a player better define his or her character.

Most of these kits are uniquely elven; although other races may have similar kits, the kits in this book are for elves only. The kits in the other *Complete Player's Handbook* series are also available for elves to take, unless explicitly stated otherwise.

Before using one of these kits, a player must first generate the character's initial statistics. First, roll ability scores and choose an elf subrace, an alignment, and a class. Then, choose the kit that's most appealing and assign proficiencies, money, equipment, and other details.

Once a player has chosen a particular kit for a PC, he or she cannot exchange it for a new one. Neither can a character have two kits. It is only possible to have one kit at a time.

If characters want to abandon a kit for any reason, they cannot select a new one, for the kit describes their development and growth. These PCs can abandon the kit's hindrances, but they also loses any benefits as well.

Characters can only use a kit that is specific to their class. That is, warriors may take one of the warrior kits, but cannot use the warrior/mage kits. Multiclass characters choose kits that are part of their class. For example, a mage/thief can use a mage kit, a thief kit, or a mage/thief kit. A warrior or a warrior/thief kit could not be selected, however, because they contain elements that are totally foreign to that character.

In addition, although a player might want a multiclass character to specialize in a weapon, this is not possible. While some of the kits may echo weapon specialization, no one who is not a pure fighter can have a weapon specialization—including rangers.

Each kit presented in this chapter is made up of twelve different parts. The first is a general description of the kit and the requirements of entry into that kit. Any who do not meet the requirements cannot take the kit for their character—*No Exceptions!* The remaining eleven parts are as follows:

- **Role.** This is the role of the PC in general and in elven society in particular. Note that the exclusion of either male or female pronouns does not mean the kit is restricted to gender. All kits are available to both sexes.
- **Secondary Skills.** If a campaign does not use the proficiency rules, the character must take his secondary skills from this section rather than randomly rolling for them.
- **Weapon Proficiencies.** These are the weapon proficiencies required of the elf to fill the slots available. Usually, not all of these slots will be filled by the required weapons, leaving some degree of choice. Please note that weapon proficiencies are not bonus proficiencies unless specified as such. Most are simply required, not actual bonuses.
- **Bonus Nonweapon Proficiencies.** Most kits provide some nonweapon proficiencies. These are free—even if they belong to other character classes. Note: All *civilized* elves know Reading/Writing.
- **Recommended Nonweapon Proficiencies.** These nonweapon proficiencies are recommended, but are not bonus slots. If an elf character wishes to take one of these proficiencies, he must pay the full cost of the proficiency. Again, these are recommended to maintain kit flavor, but are not required.
- **Equipment.** This is a list of equipment that the kit typically uses. Some kits use special equipment, while others require that their users refrain from using certain items.
- **Distinctive Appearance.** As if elves were not distinctive enough, certain kits accentuate appearance. They make the character easily recognizable as a certain type.
- **Special Benefits.** Most of the kits allow certain privileges to their users.
- **Special Hindrances.** To counterbalance the benefits received from these kits, most kits also have some specific hindrances.
- **Wealth Options.** This is the limit on how much money a PC receives when

created and how wealth gained must be spent.

- **Suggested Elf Subraces.** Although any elf subrace can take any of the kits listed below, certain elf subraces are more likely to take some kits than others. This provides clues for the selection of kits by the various subraces.

## Priest Kit

Although all races claim a special connection with their gods, the elven claim has, perhaps, the greatest truth. They sprang from the blood of Corellon Larethian, united with the tears of Sehanine Moonbow, and mingled with the soil of the very earth. The specialty priests of the elven gods hold special powers and even ordinary elven priests are foes to be feared.

### HERBALIST

Even when these priests have run out of healing spells, they are not useless as healers. The elf Herbalist can soothe fevers and mend wounds with the utmost ability and speed.

- **Role.** Each Herbalist must choose a terrain in which to be proficient. His or her abilities are not nearly as effective outside this terrain.
- **Secondary Skills.** Farmer, Forester.
- **Weapon Proficiencies.** *Bonus:* Sickle. *Recommended:* Blunt instruments, long bow, lasso, net.
- **Bonus Nonweapon Proficiencies.** Healing and Herbalism.
- **Recommended Nonweapon Proficiencies.** Fire-Building, Religion, Rope Use, Weaving.
- **Equipment.** Aside from vials and preservatives, the Herbalist carries the same equipment as anyone else.
- **Distinctive Appearance**. Herbalists are notable only for their lack of a distinctive appearance. They seem to be unassuming and scholarly fellows, unprepossessing in nature and dedicated to their art.
- **Special Benefits.** If in their chosen terrain, Herbalists function nearly perfectly. They can restore 1d4 points of damage to a wounded creature if they can reach it within four rounds after being wounded. Under the Herbalist's ministrations, the creature will recover twice as fast than it normally would (see the *Player's Handbook*, p. 59).

Herbalists are very knowledgeable about the various herbs found in their domains. They can locate even the hard-to-find ones, although that might take some searching. Their herb lore is unsurpassed, except by druids.

A Herbalist can, at 5th level, identify plants and pure water without error, so long as the items are within his chosen terrain. This makes the Herbalist's task much easier and means that there is little chance of inadvertently poisoning a friend.

Finally, Herbalists can add a new terrain every five levels. That is, if they have traveled far enough outside their own terrains that the DM feels they warrant an additional terrain, they may take one. The new terrain confers all the abilities mentioned above, although they must again work through five levels before they can identify its plants without error.

- **Special Hindrances.** Herbalists are highly trained within their own field. Unfortunately, when they venture beyond that field, they may make mistakes. When outside their chosen terrain and attempting to heal a friend nonmagically, Herbalists must make an Herbalism proficiency check at –2. Failure indicates the possibility of having picked a poisonous plant (25% chance).

Herbalists may never brew poison. Although they have the knowledge necessary to do so, they feel that their skills are better suited for healing than for killing. The only time they will experiment with poison is to test antidotes against it. Any Herbalist who brews poisons for use against others loses all the abilities in this kit.

- **Wealth Options.** The Herbalist begins with 30 to 180 (3d6x10) gp. There are no restrictions on how the money may be spent.
- **Suggested Elf Subraces.** Aquatic elf, high elf, sylvan elf.

## Warrior Kits

Many of the less scholastically inclined elves lean toward the warrior way of life. They are the protectors and guardians of elven society, and play a vital role advancing elven interests.

### ARCHER

The Archer is the epitome of elven skill with the bow. If there is a difficult shot to make, she will make it. Whether the target can only be reached by firing through high winds or is totally concealed, the Archer is confident of her ability to make the shot.

- **Role.** The Archer easily fits in as a border guard for elf towns. She's also excellent for making her own way as an adventurer. Her skill with a bow is highly prized anywhere.
- **Secondary Skills.** Bowyer/Fletcher.
- **Weapon Proficiencies.** *Bonus:* Two proficiency slots with long or short bow. *Recommended:* Continued specialization with weapon, proficiency with another type of bow.
- **Bonus Nonweapon Proficiencies.** Bowyer/Fletcher, Hunting.
- **Recommended Nonweapon Proficiencies.** Animal Lore, Endurance, Fire-Building, Jumping, Running, Survival, Tracking.
- **Equipment.** The Archer carries whatever other equipment she deems necessary.
- **Distinctive Appearance.** Archers have no distinctive appearance, aside from their trademark bows, which gleam with polish and loving care.
- **Special Benefits.** The Archer is an expert with her style of bow. In combat, the Archer may elect to do one of two things. She may either fire faster than most are able to, or she may use a bonus on trick shots.

If she elects to fire faster, she may take an extra shot every two rounds. That means the rate of fire becomes 5/2, rather than the usual 2/1. This still includes her movement. If she chooses to stand still and fire, she may increase her rate of fire to 3/1; however, this enables enemy archers to target her more easily.

If she elects to go with trick shots, she not only gains the usual bonus for specialization and high Dexterity, she also gains a +1 to each shot for every four experience levels.

If the Archer keeps and cares for a bow for more than a month and keeps her arrows sharpened to a keen edge, she may cause 1 hp of additional damage when using these items. If using a different bow or new arrows, she does not gain the bonus. It can only be used with familiar, well-cared-for equipment.

- **Special Hindrances.** The Archer is limited in her choice of melee weapons, since she disdains them so much. She may choose only a long sword, short sword, and dagger. Even then, the Archer has a –1 penalty to attack rolls when using one of these weapons because she is unfamiliar with anything but the flight of an arrow.

Later weapon proficiencies may be devoted to other weapons, but the Archer will never gain a bonus to attack rolls with these weapons, despite any Strength or proficiency bonus. This includes losing the normal elven +1 to attack rolls with the long or short sword.

The Archer must always be concerned about the quality of her bow and arrows. If any are faulty, she must repair them or replace them with equipment of higher quality. She can never use missile equipment of inferior quality—except when in mortal danger or when necessary for the success of a mission.

- **Wealth Options.** The Archer starts with 50 to 200 (5d4x10) gp and must buy her bow at 150% of the normal cost. This reflects the high quality and fine workmanship of the bow. She may use the rest of the money as she wishes to outfit herself.
- **Suggested Elf Subraces.** Grey elf, high elf, sylvan elf.

**WILDERNESS RUNNER**

There are rangers, and then there are rangers. Elves are uniquely connected with the rhythms of the forests, some more deeply than others. Only those who have chosen to become rangers may elect to become more fully part of the forest. They are called Wilderness Runners.

- **Role.** Wilderness Runners have cast aside the trappings of even elven society to serve the needs of the wood. Although they still respect and serve their own society, they take no part in its functions. They may serve as scouts or advance guards for elf cities, but they will not willingly enter civilization.

If the Wilderness Runner is a high elf, he is far less civilized than his brethren and demonstrates the tendencies of sylvan elves.

- **Secondary Skills.** Trapper/Furrier.
- **Weapon Proficiencies.** *Bonus:* Quarterstaff, long bow. *Recommended:* Two-handed style, dagger, organic weapons.
- **Bonus Nonweapon Proficiencies.** Endurance, Running, Set Snares.
- **Recommended Nonweapon Proficiencies.** Fire-Building, Fishing, Hunting, Mountaineering, Survival, Swimming.
- **Equipment.** The Wilderness Runner is notable for his lack of encumbrance. He travels light whenever possible, preferring to own distance rather than material goods.
- **Distinctive Appearance.** Wilderness Runners never wear "civilized" clothes, preferring instead to dress in leather. They also tend to bathe only while swimming or if caught in a downpour. They do not care for the petty habits and concerns of city folk.

- **Special Benefits.** Wilderness Runners, like all rangers, gain the Tracking proficiency. However, because of their proximity to the land, they gain a +2 bonus and are usually far better trackers than their cousins.

Because of their constant exposure to the elements, they have inured themselves to all but the most extreme temperatures. Unless the air is below 32 degrees F or above 100 degrees F, Wilderness Runners feel nothing. The variation in temperature is merely a pleasant change.

Runners can use the Set Snares proficiency to entrap people as can thieves. Their understanding of the ways to lure people and animals into these traps is rarely exceeded.

Wilderness Runners never run out of equipment. Although they carry very little and need even less, they can fashion weapons and other working gear from organic materials with astounding speed. While their work may seem crude, it is functional and works as well as, or better than, much of the equipment manufactured by civilized folk.

- **Special Hindrances.** Wilderness Runners are acutely uncomfortable in civilization. Their need for fresh air and the freedom of the forest overwhelms them within one day unless they can make a Wisdom check at –4. Past the second day, they cannot remain within walls and must wait outside for their companions.

Likewise, they find it difficult to remain within dungeons, crypts, or other unnatural caverns for long. If a cave is natural, Wilderness Runners will be able to remain inside without having to make a Wisdom check. Even then, they do retain their claustrophobia and long for the open air.

Wilderness Runners never use mounts. For one thing, mounts cannot move through the forests quickly enough for them. For another, the Runners respect animals too much to abuse them in such a fashion.

Wilderness Runners are greeted with some contempt by civilized elves who, although they respect the abilities of the Wilderness Runners, sneer at their "backward" ways. Most civilized elves react at a –2 to Wilderness Runners. They will not be overtly hostile, but they will be unfriendly to any unwashed elves. Sylvan elves and their allies, however, will react to their unwashed Wilderness Runner cousins at a +2.

- **Wealth Options.** Wilderness Runners start with 3 to 30 (3d10) gp. They must create the rest of their gear from natural sources. They scoff at material wealth and are unlikely to have more than 10 or 20 gp at any time.
- **Suggested Elf Subraces.** High elf, sylvan elf.

**WINDRIDER**

Few mounted cavalry are as glamorous and exciting as the Windriders. The elite of the elf forces, they are greatly envied by common elves and greatly feared by foes.

- **Role.** The Windrider is the knight of the air, defending elf lands against aerial attacks. In times of war, they are both shock troops and scouts.

The DM may not wish to allow Windriders in a campaign, for they vastly increase the scope of a PC's operations. Then, too, the Windrider's mount may very well make a low-level PC far more powerful than he or she ought to be. It is recommended that DMs thoroughly familiarize themselves with Windriders before allowing them into a

campaign.

- **Secondary Skills.** Groom.
- **Weapon Proficiencies.** *Bonus:* Lance (Light, Medium, or Heavy—one only). *Recommended:* Short bow, flail, long sword.
- **Bonus Nonweapon Proficiencies.** Air-Based Riding, Animal Handling (for mount's species only), Animal Training (for mount's species only).
- **Recommended Nonweapon Proficiencies.** Astrology, Navigation, Direction Sense, Weather Sense.
- **Equipment.** Windriders must, of course, keep saddles and food for their mounts. Otherwise, Windriders are free to carry what they will if their mount can bear the burden.
- **Distinctive Appearance.** When separated from their beloved mounts, Windriders do not appear much different from ordinary elves. They may be more haughty, but otherwise they appear as normal elves.
- **Special Benefits.** The Windrider is one of the few kits where players receive no benefits until reaching high levels. Likewise, they do not suffer the hindrances until they have reached this level, which is typically 4th to 6th level, although it can be later (or earlier, if the character is especially worthy). Those aspiring to be Windriders must prove themselves worthy of this kit before actually being allowed entrance. They may not have a kit before becoming a Windrider.

Although they do not gain many benefits, the quality of their benefits is enough for the Windrider. First is the reaction bonus they receive from members of the higher classes in both elven and human society. When they are traveling with their mounts, Windriders gain a +2 reaction bonus when dealing with them.

A more important benefit, however, is the mount. When admitted to the ranks of the Windriders, characters receive intensive training with a mount of the species available. They are effectively out of commission for one year while learning to be a Windrider. After that time they are full Windriders, and they gain a winged mount from one of the following races: griffon, hippogriff, or pegasus.

Their choice of mount confers no other special ability except the ability to communicate, in a very basic fashion, with the members of the mount's species. They also gain the mobility of flight and a companion who is prepared to defend them with its life.

- **Special Hindrances.** While they are respected by the higher social classes in elven society, Windriders are the object of great jealousy—sometimes even hatred—from the lower classes. Their arrogant manner and disregard for beings of a lower social status earn them the enmity of the lower classes. They suffer a –3 penalty to their reaction rolls when dealing with these folk.

Though able to strike awe into their hearts, Windriders can also earn the enmity of humans. After the initial awe has worn away, Windriders suffer a –3 penalty for reactions from lower-class humans.

If his animal dies, the Windrider is temporarily without the benefits of this kit. Although he may eventually regain a mount, the loss is such that it causes him to suffer all of the hindrances without gaining any of the benefits of this kit.

The major hindrance of the kit is also the major benefit. The Windrider must

always be concerned with the welfare of his mount, for he would not be a Windrider without it. Constantly worrying about one's mount is the chief occupational hazard of the Windrider.

- **Wealth Options.** The Windrider begins with 60 to 240 (6d4x10) gp and can spend these as he pleases. However, he must ensure the care of his mount by finding it food and shelter or else lose the benefits of the kit when the animal flees its master to take care of itself.
- **Suggested Elf Subraces.** Grey elf, high elf, sylvan elf.

## Mage/Thief Kits

Although they are not exactly common, elf mage/thieves have their own niche in elven society. Their magical abilities allow them to enter places normally denied to mere thieves, and their skills with physical objects can often spell the difference between life and death for many who depend on them.

### ELVEN MINSTREL

Although not actually a mage/thief, the elven minstrel kit that originally appeared in *The Complete Bard's Handbook* has characteristics of both classes. In the interest of conserving space, it is not reprinted here. This elf version of the bard does exist for those who have been yearning to play just such a character.

### SPELLFILCHER

This mage/thief is adept at breaking into wizard's domiciles to purloin magical goods, particularly spellbooks and rare spell components. Through a strange inner talent, the spellfilcher has an amazing ability.

- **Role**. When there is a magical trap to be disarmed or magical treasure to be gotten, the Spellfilcher is the one to do it. Trained from her early years, the Spellfilcher uses an innate magical ability to locate and disarm traps that would victimize another.
- **Secondary Skills.** Jeweler, Scribe.
- **Weapon Proficiencies.** *Bonus:* None. *Recommended:* Short bow, dagger, darts, short sword.
- **Bonus Nonweapon Proficiencies.** Appraising, Spellcraft, Tightrope Walking.
- **Recommended Nonweapon Proficiencies.** Disguise, Gaming, Gem Cutting, Jumping, Rope Use, Tumbling.
- **Equipment.** The Spellfilcher always carries at least a minimal set of lockpicks and usually a full housebreaker's harness.
- **Distinctive Appearance.** Spellfilchers, by their very nature, do not want a distinctive appearance. They go out of their way to make themselves look like average elves, deliberately ridding themselves of any identifying habits.
- **Special Benefits.** The Spellfilcher is a special breed, selected from birth to be a mage/thief because of an exceptional inborn talent. This talent, *which can only be nurtured by the Spellfilcher Guilds*, allows the Spellfilcher to detect magic once per day, per experience level. Infant elves are tested for their latent sensitivity to magic, something which only the masters of the Spellfilching Guilds can

determine. If the infant shows promise, she is taken from her parents (with their permission) and the talent is nurtured into a usable skill.

The Spellfilcher learns to identify and circumvent magical traps. Although they cannot remove these traps without a *dispel magic* spell or similar item, they can often get around them long enough to remove the items these wards were protecting. Thus, Spellfilchers gain a +5% chance to Find/Remove Traps of a magical nature. This chance increases by +5% every four levels. They do not actually remove the traps but disarm them for 1d4 rounds, +1 round per three levels, which should be enough for them to retrieve the item they seek.

- **Special Hindrances.** The Spellfilcher's first loyalty must always be to her guild. The guild demands total compliance with its rules, for it serves the elf race in its own way and demands that its members do so as well. Unfortunately, this service occasionally requires that the Spellfilcher be called away from whatever she may wish to do. If the Spellfilcher fails to heed the call, the wrath of the powerful guild descends upon her head.

The Spellfilcher's Guild will not, on the other hand, call a Spellfilcher away from a mission of dire importance to the elf race or a mission that the Spellfilcher claims is of extreme importance. Since Spellfilchers operate on an honor system, they trust her. If, however, too many excuses keep her from her duties, the Guild has a right to demand cooperation and will not tolerate excuses.

To help keep discipline, the Spellfilcher must ask permission of the guildmaster before leaving on adventures. Depending on the Spellfilcher's past record and loyalty to the guild, the guildmaster may agree or disagree.

The Spellfilcher character has a hard time dealing with non-elf mages. Once they discover who she is and what she does for a living, they simply do not trust her near their precious spellbooks and valued items. Elf mages trust Spellfilchers, for they know that the Spellfilcher does it for the good of the race and would not harm an elf wizard. Other wizards, however, are not so sure of this. For this reason, Spellfilchers take great pains to disguise themselves and their intentions.

Spellfilchers also take great pains to disguise themselves because they are hunted by both vengeful wizards and greedy thieves. The wizards desire the return of their property and perhaps revenge on the one audacious enough to steal from them.

Conniving thieves wish to find a Spellfilcher to either recruit her into their guild or to get her to work for them. Failing that, they want to discover the secret to the Spellfilcher's success and to exploit that secret. They will not accept the fact that hers is an inborn talent. Thieves can make a Spellfilcher's life chaos if she is discovered by their guild.

- **Wealth Options.** Spellfilchers receive 30 to 90 (2d4+1x10) gp, which can be spent as the Spellfilcher desires. There are no limits, but it is suggested that they purchase thieves' tools.
- **Suggested Elven Subraces.** Aquatic elf, drow, grey elf, high elf.

## Fighter/Mage Kits

Combining the offensive physical power of the warrior and the intelligence and magical abilities of the mage, these are truly fearsome fighters. They have knowledge—not only of strategy and tactics—but of magical theory and offense. They are vital to the elves.

It is important to note that fighter/mages can cast spells only when unarmored or clad in elvenmade or magical armor. All other armor is too unresponsive to the ways of magic for magic to flow through it properly.

**BLADESINGER**

Of the roving elves, there are few as deadly as the Bladesinger. They are masters of their weapons and have spent their lives in the study of their chosen weapons. They have also learned to cast spells while engaged in combat, and thus they double their might.

To be a Bladesinger, a character needs at least a 13 Strength and Constitution, as well as a 15 Dexterity and Intelligence.

- **Role.** While some characters may stay at home to defend the elven way, Bladesingers go out and actively promote it. They do this by seeking out their race's foes and eliminating them, either through words or actions. Acting as both diplomats and one-elf armies, they insure the safety of the elf race.
- **Secondary Skills.** Hunter, Trader/Barterer, Trapper/Furrier.
- **Weapon Proficiencies.** *Bonus:* None. *Recommended:* One-weapon style for use in combat and spells; two-handed style for use when spells run out.
- **Bonus Nonweapon Proficiencies.** Blind-Fighting, Dancing.
- **Recommended Nonweapon Proficiencies.** Etiquette, Juggling, Singing, Tumbling, Weaponsmithing.
- **Equipment.** The Bladesinger is always identifiable by his weapon of choice. Such an item is always ornate and beautiful, enhancing the Bladesinger's appearance in battle.
- **Distinctive Appearance.** Not only are they easily identifiable by their weapon of choice and catlike grace, Bladesingers are decorated with their weapon guild's distinctive tattoo. Each guild has a separate and unique tattoo depicting its style of weapon through an animal representation. Long swords are often represented by great cats such as lions or panthers, a whip would be shown as a striking snake, and so forth.
- **Special Benefits.** There are four special benefits to the Bladesinger kit, as follows:

**1.** The Bladesinger chooses one weapon and practices with it extensively, to the exclusion of most other weapons. If practice makes perfect, the Bladesingers are very well practiced in their weapon of choice—for they are virtually perfect.

The poised steps of the bladesong (the act of attack by a Bladesinger) not only reveals the Bladesinger to be a creature of beauty even during battle, but the steps also carry him into advantageous positions for either offense or defense. He can instinctively grasp the flow of the battle around him, and his feet will carry him through the intricate maneuvers necessary to optimize his attack.

Such is the intensive training of the Bladesinger that he gains an automatic +1 to attack rolls as well as a +1 for damage. This is in addition to the normal elven +1 for use of the long or short sword (if applicable). Despite any additional, further training, this is as high as the bonus can be.

**2.** Bladesingers receive a special bonus when they wish to try an unusual maneuver with their blade. This bonus is equal to +1 for every four levels the Bladesinger has attained. The bonus only serves to cancel the penalties normally applied for such a maneuver. All other penalties and bonuses still apply.

**EXAMPLE:** *Vilana Pyreen, a 5th-level Bladesinger proficient in the long sword, attempts to disarm her opponent (a special maneuver). Normally, this gives her a +1 to initiative and a –4 to attack rolls. Since she is a 5th-level Bladesinger, however, her bladesinging ability gains her a +1 on her disarm maneuver. Since she is an elf, she gains an additional +1 because she is using her sword. Finally, she gains a +1 for her blade-singing ability with her sword. Her total is only a –1 to disarm her foe. If she were 12th level, she would have a +1 on her disarming attack.*

**3.** Bladesingers have been taught from an early age to grasp the flow of magic around them and to turn it to their advantage. They can cast spells even while in the front lines. Although they cannot actually attack while casting their spells, they may defend themselves against incoming melee attacks.

Their defense is equal to their level divided by 2, plus 1. All fractions are rounded down. Thus, a 6th-level Bladesinger gains a +4 to AC (6th level/2=3+1=+4 AC). The same goes for 7th-level Bladesingers (7/2=3.5 –.5=3+1=+4 AC). This does not apply to rear or missile attacks, for it is nearly impossible to defend against those while casting a spell.

Bladesingers have practiced the somatic portion of their spells well enough that they may cast their spells one-handed, suffering only a slight penalty. It adds +2 to their casting times, making it easier to disrupt their spells. Like any other spellcaster, if they are hit they lose the concentration necessary for maintaining their spells; they lose the spell. Their spells are, therefore, usually of an offensive nature with very short casting times.

**4.** The training is hard enough that only a 3rd-level Bladesinger can begin to teach even the rudiments of the bladesong. If another elf wishes to learn the bladesong, he must seek one of the masters of the blade. Bladesingers charge a high price for sharing their skills.

- **Special Hindrances.** To offset their abilities, Bladesingers suffer some severe penalties. Not only must they attempt to advance the cause of elvendom somehow at all times, they must also lend aid to any elf in need. Unless the elf is proven to be an enemy of the elven way of life, the Bladesinger must sacrifice life and limb to save that elf's life.

Of course, the Bladesinger is free to determine whether there is, in fact, an elf in danger. Too many times other races have tried to eliminate the Bladesinger menace through illusion and trickery. The Bladesingers have grown wary and have, unfortunately, allowed fellow elves to perish while trying to determine the truth of the threat. Thus, most Bladesingers carry at least one *detect magic* spell in order to avoid possible errors.

Bladesingers are so devoted to their chosen weapon that they can never learn another one. Unlike other elves, they do not gain a +1 to attack rolls with a bow. With all other weapons, they suffer a –1 penalty to attack rolls, even if they

have taken it as a proficiency. If they have not devoted the slot to learn the weapon, the Bladesinger suffers the ordinary nonproficiency in addition to the –1 penalty.

If the player is using *The Complete Fighter's Handbook*, he may not allow his character to specialize in weapon groups. The Bladesinger focuses on a single weapon only.

Bladesingers may wear no armor heavier than elven chain or studded leather. Bulkier armor restricts the Bladesingers' movement enough that they have at least a –2 penalty to attacks if they try to use their bladesinging ability while wearing such armor. The penalty is greater for heavier armor, although this is at the DM's discretion.

Bladesingers rarely use weapons other than swords. With only rare exceptions, they never learn two-handed fighting styles. They may not use shields or two-handed weapons, for these interfere with the bladesong. Even when they have run out of spells, Bladesingers will fight one-handed or with both hands on their single-handed weapon. To do otherwise negates all bladesinging bonuses.

- **Wealth Options.** Bladesingers start their adventuring lives with 30 to 180 gp (3d6x10), and only one restriction: They must purchase their weapon of choice. Any monies left after buying their initial equipment must be returned to the Bladesinger's Guild. Later in their adventures, they must take opportunities to upgrade their weapons. Other than these restrictions, they are free to do as they wish with their money.
- **Suggested Elf Subraces.** Grey elf, high elf.

**WAR WIZARD**

Although elves do not desire war, preferring instead to live their lives in peace and idyllic happiness, they recognize that the world is full of races hostile to elves, all of whom would love to see them driven into the dirt. A War Wizard is one who has devoted her life to defending against such attacks.

- **Role.** The War Wizard is usually the person in charge of defense for any given elf town. When there is a problem with an enemy, the War Wizard is the one to call.

Even if not associated with a town, the War Wizard is an invaluable asset to any group that expects to face trouble. Simple strategic knowledge is her bread and butter, but her expertise does not end there. She can work offensive marvels physically, and her spellcasting skills are excellent.

- **Secondary Skills.** Scribe, Tactician.
- **Weapon Proficiencies.** *Bonus:* Long bow, long sword. *Recommended:* Short bow, short sword, weapon style specialization (from *The Complete Fighter's Handbook*).
- **Bonus Nonweapon Proficiencies.** Spellcraft, plus Engineering or Survival.
- **Recommended Nonweapon Proficiencies.** Blind-Fighting, Heraldry, Land-Based Riding, Languages (Ancient or Modern), Set Snares, Weather Sense.
- **Equipment.** A War Wizard can carry whatever equipment she likes.
- **Distinctive Appearance.** War Wizards have no distinctive appearance. They may dress as they please on their own time. However, they often have a military aura. When in a military capacity, they must wear a uniform.

- **Special Benefits.** The War Wizard, because of her knowledge of strategy, can enable her side to add +1 to their attack rolls for the duration of a battle. This bonus applies only if all the following conditions are met: 1) The War Wizard has had a chance to survey the area and map it. 2) The War Wizard holds a strategy meeting with all who gain the +1 bonus. 3) All members of the War Wizard's side who are to gain the bonus successfully make an Intelligence check that has been modified by the difficulty of the instructions and changes in the terrain. Those who fail do not gain the bonus, and they run the risk of destroying another team member's bonus during battle. If these conditions are met, the War Wizard's side gains the bonus. If any part is left out or ignored, the bonus is negated.

The War Wizard is allowed a weapon of choice. She gains a +1 to attack rolls with this weapon, cumulative with all other applicable bonuses.

She also gains a "spell of choice," once every four levels. This spell is usually a large-scale, offensive spell or it may be a handy defensive spell. Only rarely are they personal in scope and, even then, it must have some applicability to a larger party. The spell can be of any level the War Wizard can cast at the time she chooses the spell. Thus, at the 4th level, a War Wizard can choose spells of the 1st or 2nd level. At the 8th level, she can choose spells of up to the 4th level.

The chosen spell is not a bonus spell for the War Wizard. It must still be memorized as would a normal spell. However, the spell can be either cast more quickly, firing at a +1 to initiative, or force the opponent to take a –1 on his save. For every four levels the War Wizard has practiced this spell, she gains a +1 bonus to either side. For example, if a 12th-level War Wizard had chosen *sleep* as her spell at the 4th level, she would now gain either +2 to initiative when casting it or would cause her opponents to save at –2.

- **Special Hindrances.** The War Wizard is limited in her choice of weapons. Although a warrior/mage ordinarily receives the full gamut of weapons, a War Wizard may only take certain weapons. Any of the normal wizard's weapons, any blade, any bow, or a lance may be chosen. The selection cannot extend beyond these, however.

War Wizards have a Code of Conduct that they must abide by at all times. Even when they are apart from their units, the code may never be broken. If it is and they are discovered, they will be drummed from the unit. It is up to the DM and the player to determine what the Code is for each unit, but it should fierce, demanding, and restrictive.

Finally, there are demands the unit will place on the War Wizard. She must comply with these demands or lose her benefits. The unit will typically take up about one month per year of the War Wizard's time.

- **Wealth Options.** The War Wizard has 30 to 180 (3d6x10) gp initially, which can be spent however she likes.
- **Suggested Elf Subraces.** Drow, grey elf, high elf.

### Fighter/Thief Kit

These are the toughest elves around (and the most quintessentially elven), for they rely on skill rather than muscle. Although warrior/thieves may not be truly adept with any

weapon, their thief skills more than make up for that. Fighter/thieves are very useful in a campaign based more on subtlety than force.

**HUNTSMAN**

Although some call them bounty hunters, the Huntsmen know better. Their chief joy in life is the hunt, and they have trained themselves in the ways of life: fighting and stealth.

- **Role.** A Huntsman is at home in both the city and the wilderness. His job is to track down errant wrongdoers and bring them to justice. He can be good, evil, or neutral; he may ethically bring criminals to face the law or hunt them just for money. Whether he is good or not good, his motivation is more the thrill of the hunt than material gain.
- **Secondary Skills.** Trapper/Furrier.
- **Weapon Proficiencies.** *Bonus:* Net. *Recommended:* Blowgun, long bow, lasso, long sword.
- **Bonus Nonweapon Proficiencies.** Hunting, Tracking.
- **Recommended Nonweapon Proficiencies.** Blind-Fighting, Disguise, Endurance, Intimidation, Juggling, Jumping, Running, Set Snares, Tumbling.
- **Equipment.** The Huntsman, like the ranger, does not like being heavily encumbered. He carries only those things he cannot quickly and cheaply replace and is usually prepared to make the things that cannot be easily replaced. His most valuable piece of equipment is his mind.
- **Distinctive Appearance.** The Huntsman has no distinctive appearance.
- **Special Benefits.** The Huntsman gains an automatic +10% to both his Move Silently and Hide in Shadows skills; this applies to both city and wilderness settings. Because he has spent so much time learning stealth, this is in addition to his regular modifiers for high Dexterity and race.

  The Huntsman also takes a smaller penalty to his Tracking proficiency than other nonrangers. His life has been spent in the hunt, and he therefore is more familiar with the signs of the forest than many others.
- **Special Hindrances.** Although the Huntsman fetches those who need fetching, he is not regarded well. His trade is in flesh, and people dislike his company. He receives a –2 reaction penalty when dealing with good-aligned people. In evil society, they hate him, even if he is evil, because he and his kind are responsible for the capture of friends and allies. He receives a –2 penalty there as well.

  The Huntsman may never take the Read Languages ability available to most thieves. His style of life does not require learning new languages and, indeed, forces him to be constantly on the move. He has not the time.
- **Wealth Options.** The Huntsman begins play with 30 to 180 (3d6x10) gp. He can spend this money however he wishes.
- **Suggested Elf Subraces.** All.

## Fighter/Mage/Thief Kits

The most eclectic of elf PCs, the warrior/mage/thief class is both the most free and the most limited. While options are nearly limitless for these kits, it takes a lot of doing to get there. But elves have much time on their hands, and they don't mind the "short" wait

required to reach these goals.

**COLLECTOR**

Occasionally, humans will come into possession of items that either aren't theirs or are too dangerous for these short-lived beings to have. The Collector is there to make sure these things return to elf hands.

The Collector must have a 13 Intelligence and 15 Charisma, for she must deal with both esoteric knowledge and people.

- **Role.** The Collector's role in life is to retrieve things from dangerous places. Whether this item is a stolen suit of elven plate armor or an ancient, unearthed artifact, the Collector will get it back. When humans seem in danger of destroying things of beauty or of historical power, the Collector makes sure those objects are spirited away to safety.

The Collector is not only a thief, but an archaeologist as well. She uses all her classes' skills to retrieve the items from wherever they lie, even deep beneath the earth, then keeps them from the hands of the elves' enemies.

- **Secondary Skills.** Any. Artist, Jeweler, and Historian/Sage are especially appropriate.
- **Weapon Proficiencies.** *Bonus:* None. *Recommended:* Short bow, dagger, short sword, whip, and small weapons that can fit into the tight places into which a Collector must sometimes venture.
- **Bonus Nonweapon Proficiencies.** Ancient History, Engineering.
- **Recommended Nonweapon Proficiencies.** Appraising, Artistic Ability, Gem Cutting, Jumping, Modern Languages, Musical Instrument, Rope Use, Stonemasonry, Tightrope Walking.
- **Equipment.** The Collector is never far from her archaeological tools and burglary equipment. She is prepared to dig in the earth, venture into a fortress, or swing between two tall towers. She is ready for nearly any eventuality in the quest of her prize.
- **Distinctive Appearance.** Although they might imagine they are sharply dressed, Collectors are often rumpled and disheveled, more than likely covered with the dust and muck of their most recent adventure. Though they may wear fashionable clothing, Collectors simply cannot keep clothing neat and clean. There are always exceptions but, for the most part, Collectors appear musty and dirty.
- **Special Benefits.** The Collector, because of her research into the histories of artifacts and ancient civilizations, has a chance to know something about nearly every important magic item on her world. If she can lay her hands on an object and study it, she can attempt to identify it, much like the bard's ability.

Collectors have a 5% chance per two levels (that is, 5% at 1st to 2nd level, 10% at 3rd to 4th level, and so forth) to identify an item's history, purpose, and alignment (if it has one). The only idea a Collector has of an item's power lies within the pages of the histories the Collector has read.

This chance increases (at the DM's discretion) if the Collector has access to a research facility with an extensive collection of books on magical items and artifacts. If not, there is no bonus. The Collector spends 1d3 days finding the pertinent information.

Likewise, the Collector can find information leading to the discovery of such magical items, which is the main part of her job. If she spends a week or more in research, depending on the rarity of the item and the difficulty of finding it, she can discover the general area in which to begin her search.

The Collector is an expert at rumor gathering. By spending 10d100 gp and making a successful Intelligence and Charisma check, the Collector can usually get a lead on where an item lies. Sometimes the information received is as vague as a general location; sometimes it is as specific as the exact hiding place. Now all the Collector needs to do is to find a way past all the protections. . . .

Fortunately, Collectors gain a +10% bonus to their Find/Remove Traps skill. It is important to remember that finding a trap and removing a trap requires two separate rolls. Because so many of the old places are fraught with peril, the Collectors have found this benefit to be of inestimable value.

Finally, Collectors are rather lucky elves. Once a day, they may +1 or –1 from one of their rolls, if they desire. The modification may be to any roll, including attack rolls, damage rolls, saving throws, and so forth. It cannot be used in character creation, nor can it be saved from day to day! The player must declare that a modification is being used before the roll is actually made or the roll is void.

- **Special Hindrances.** Although Collectors are, for the most part, decent people, they receive a –2 reaction penalty. The penalty reflects their tendency to lecture, forgetting that others do not share their passion for digging in the earth.

Far more hindering is the fact that Collectors will *never* knowingly use a magically charged item. They are afraid that the use of such items might deplete its last charge; their purpose is to ensure the preservation of such items. They are cautious around all other magical items unless certain they are not charged or are heavily charged.

Furthermore, Collectors will never perform an action that is potentially destructive to a magical item unless it is the only way to save their own lives and the lives of their companions. Even then, they will hesitate, agonizing over the loss to the world.

Collectors even have a difficult time destroying sentient, earth-shaking artifacts of utter evil. Although they know the artifact is irredeemably evil, they can barely bring themselves to destroy an item that has plagued the history of the world.

If she has been persuaded to eliminate an item or after she has destroyed an item to save a life, the Collector will go into a state of deep unhappiness, lasting for at least a week. During this time, she is not capable of intelligent discussion and her saves and attack rolls are all at –2. Note that this depression has a basis: If the Collector destroys more than five items during her career or simply allows five such items to be destroyed, she will lose all of the benefits of this kit.

- **Wealth Options.** The Collector begins with 30 to 240 (3d8x10) gp. At least half of this money must be spent on house-and lock-breaking equipment and on excavating tools such as shovels and picks. The rest of the money can be spent as the character desires.
- **Suggested Elf Subraces.** Aquatic elf, grey elf, high elf.

**INFILTRATOR**

The Infiltrator is the very model of an elf scout. Whether in urban or wilderness situations, the Infiltrator is the master of stealth and disguise.

- **Role.** When elves need quick and reliable information with a minimum of fuss, they call on an Infiltrator. The Infiltrators' motto is "If it's a secret, it's not." Sometimes, the Infiltrator will gain information simply for the sheer joy of knowing it. Although this is a typically elven trait, only the Infiltrators go to such an extent to learn a secret.
- **Secondary Skills.** Any.
- **Weapon Proficiencies.** There are no bonus weapon proficiencies for this kit.
- **Bonus Nonweapon Proficiencies.** Disguise, Forgery, Information Gathering, Observation, Tightrope Walking.
- **Recommended Nonweapon Proficiencies.** Ancient History, Etiquette, Modern Language, Reading Lips.
- **Equipment.** Every Infiltrator must have a good disguise kit. Otherwise, they are free to choose whatever equipment they like.
- **Distinctive Appearance.** The only thing distinctive about the appearance of an Infiltrator is that he has no distinctive appearance. Elves can, by word of mouth, sometimes find out who the Infiltrators are, but only if the Infiltrator wishes to be found.
- **Special Benefits.** One of the special benefits the Infiltrator receives is the large number of bonus nonweapon proficiencies. Please note that some of these appear *in The Complete Thief's Handbook*. These all enable him to carry out his job more effectively, and he is so practiced in these proficiencies that he gains a +1 bonus when he uses one of them.

When an Infiltrator wishes to appear as a member of another race, he can usually pass himself off as a tall dwarf or a short human with only a –4 penalty. This bonus increases by +1 for every four levels the Infiltrator obtains in his most expensive class. That is, it increases when he reaches 10,000 experience points in all three classes, making the Infiltrator a 4th-level fighter/4th-level mage/5th-level thief. Note that this applies only to the bonus proficiencies given by the kit; it doesn't apply to either the recommended or the character-chosen proficiencies.

The Infiltrator also gains a +10% bonus to the two thief skills of his choice. This is a one-time only bonus and cannot be changed later in the Infiltrator's career.

- **Special Hindrances.** The Infiltrator spends so much time taking on the roles of other people that he may begin to lose his own sense of identity. Even the reverie, which ordinarily reinforces an elf's identity, may not help prevent his sense of self slipping away.

Therefore, for each level an Infiltrator acquires, he loses 10% from his ordinary resistance to *charm*-related and *sleep* spells. This decreases his 90% resistance downward, to a minimum of 30%. Thus, until the point when the 8th level is achieved, Infiltrators will lose 10% of their resistance at each level.

Such loss of self means that the Infiltrator will never be as sure of himself as an ordinary elf, although his sense of self will still be stronger than that of a human. Unless he is acting a role, the Infiltrator will be somewhat unsure of himself and may question his own motives.

- **Wealth Options.** The Infiltrator begins play with 40 to 140 (2d6+2´10) gp. This

money can be spent however desired.

- **Suggested Elf Subraces.** Drow, high elf, sylvan elf.

## A Kit for Any Class

Every elf has the capability to achieve some of the same ends, although in different ways. The following is a classwide kit that any elf can take, regardless of profession, class, or multiclass combination.

### UNDEAD SLAYER

As elves loathe the undead, it is only logical that they develop methods to combat the undead menace. Whether they stay behind to protect elf homes from ravening undead hordes or actively seek out the unliving to destroy them in their foul nests, the Undead Slayers learn all they can about their wretched foes.

- **Role.** The Undead Slayers are schooled in the ways of the undead, seeking to destroy undead monsters wherever they can find them.
- **Secondary Skills.** Any. Undead Slayers are drawn from all lots in life.
- **Weapon Proficiencies.** *Bonus:* One bludgeoning weapon of Medium size, as long as it is allowed by the initial class. *Recommended:* A piercing or slashing weapon to complement the bludgeoning weapon.
- **Bonus Nonweapon Proficiencies.** Blind-fighting.
- **Recommended Nonweapon Proficiencies.** Healing, Herbalism, Ancient History, Local History, Ancient Languages, Survival.
- **Equipment.** Every Undead Slayer carries the common items necessary for this trade. Most of them carry backpacks containing at least a mirror, two vials of holy water (if not more), several sharpened stakes, holy symbols, tinder for torches, and so forth. For weapons, if their class allows, they carry at least two silver weapons, one each of piercing and bludgeoning type, as well as ordinary weapons.
- **Distinctive Appearance.** Most Undead Slayers have a grim, determined look—the result of the grisly nature of their work. These elves have lost the typical elven enjoyment of life, for they have become obsessed with death and the undead.
- **Special Benefits.** Undead Slayers have chosen a particular form of undead to combat and have researched it thoroughly. They know every nuance and variation between the various members of that species. For this reason, Undead Slayers, if properly prepared, gain a +2 to attack rolls and to damage against their chosen undead foes.

Undead Slayers hunt the undead more easily than most. They know the signs of undead infestations and can trace them back to their sources. Their keen elven senses are honed to detect the unnatural rhythms of undead, and they can therefore find their lairs.

This does not mean that they can find a distant vampire's secret lair. Instead, by listening to rumors and observing the local phenomena, they can find the general area where the lair might be. Then they may search for the creature more personally.

- **Special Hindrances.** Although they can fight other foes, the Slayers will never turn down a chance to eliminate an undead enemy. While this does not mean charging blindly into battle, they will not hesitate to sacrifice their lives if it means the undead will perish. They will never back away from the opportunity to rid the world of these blasphemous creations, regardless of the cost to themselves.

Mindless undead are rather low on their list of priorities for destruction. Skeletons and zombies do not arouse the hatred and loathing of the Undead Slayer as much as sentient undead do. Anything with a mind raises the hackles and the anger of the Undead Slayer.

Such is the Undead Slayers' devotion to their cause that they will plan ways to destroy even those undead who have proved themselves friendly. Dealing with a good or neutral lich, for example, is impossible for an Undead Slayer. Simply knowing of the existence of such an abomination is enough for this character to seek ways to annihilate it.

- **Wealth Options.** Undead Slayers start out with the same amount of wealth as any other players within their class.

Undead Slayers must purchase at least two vials of holy water and a silver mirror before buying any other equipment. For weapons, they usually carry an edged weapon (if allowed) as well as a bludgeoning weapon. After they have

satisfied this minimum requirement, they may spend their money as they wish. However, it is recommended that at least half of their funds be spent on equipment for locating and holding undead at bay.

- **Suggested Elf Subraces.** All.

## Chapter 11: Elven Equipment

*How and why feywine—that elixir to gladden the heart and encourage the soul of every Elf—came to be is a tale ancient in age. Some of you say it is merely mead, that Human drink. You say it is nothing more than flowers and honey, left to ferment and age in oak barrels. You are, in part, correct, but you know not the full story. Let me recount for you the truth of feywine's origin.*

*The First Elves roamed the land, well pleased with all they saw and all that the gods gave them. They had no need for sustenance then, those First Elves—no need for bread, and meat, and fruits and vegetables that we now so much enjoy. These Elves had the blood of gods burning bright in their veins. The tears of the Moon and the soil of the land also coursed through their blood.*

*Little remains of those early years of our existence. Certainly there are no remnants of the original vessels made by the Seldarine, which they created to house our spirits. Those First Elves existed solely through the life-giving form provided by the Seldarine. Then they joined with one another, and they begat children.*

*Although still nourished by the earth and the stars, these children were a step removed from the gods. They had needs that could not wholly be satisfied by their fathers and mothers. And the First Elves beseeched the gods, crying out as their children lay dying, for they did not understand why. The Seldarine saw their creations' sorrow, and they were moved to act.*

*They asked the Moon to bless the land with her tears a second time, as she had when*

*Corellon Larethian fought in the Godswar, and she did. The tears fed the children of the First Elves, and the children lived.*

*In time, the Elves learned to take nourishment from other sources, and they can now survive without the gods' gift. But an Elf who is routinely deprived of feywine turns into but a pale imitation of his or her self . . . an Elf who has lost the soul of the gods.*

—Firiel Anani'Mahs, Keeper of Feywine

Most of this equipment is available only to elves, for they are not willing to sell the best of their stock to humans or dwarves. There are countless more items that the elves have invented; the following list is only a sample of what they are capable.

The chapter contains beverages, weapons, and other items elves find useful. Most items have multiple uses, for the elves hate to restrict anything to but one purpose.

Finally, please note that few of these items are forged or constructed in great quantities. Elves believe in the unique qualities of each item and, unlike dwarves, do not enjoy mass-producing anything, no matter how good it is.

## Feywine

This is a fermented mixture of crushed flowers, honey, and an ingredient that some claim is distilled moonbeams. It is available only through elves, and most elves will not allow members of other races to drink it. The sole exception to this rule is the race of halflings, who appreciate all good things in life. Humans become far too stuporous, and dwarves do not appreciate the subtleties inherent in the taste, preferring instead to swill it. It simply does not affect them. Gnomes have their own variant, which they prefer, and they rarely ask for feywine.

Although feywine lasts only two days when bottled away from fresh air, some elves carry it with them for such a period to use as a secret weapon against unsuspecting foes. While their enemies are sleeping off the effects, the elves can make good their escape. Otherwise, elves drink it only when they are celebrating some victory or festival.

**Cost:** Unavailable
**Weight:** As water

## Elven Harp

These masterworks are highly prized in the musical communities of any culture. The elven harp produces a clear, dulcet tone, unheard of in any non-elven crafted instrument.

Not only does it produce a sound rivaled only by the gods of music, the elven harp is a beauty to behold as well. Intricately carved, with attention paid to the smallest detail, the elven harp is almost as beautiful to look at as it is to hear it.

There are several different sizes of elven harp. Some can be carried by adventuring elves, while others are clearly intended only for stationary use. Whatever the size, they are well worth their cost.

**Cost:** 500–2,500 gp
**Weight:** 10–100 lbs.

## Honey Leather

Honey leather is really a light canvas used as protection against rain and dampness. Elves use it for tents and to protect camping gear. Unfortunately, it doesn't offer much protection against snags, and it tears easily. However, as long as it is used only in camp, it is a fairly durable canvas. It is also completely waterproof, and it is highly valued because of that.

**Cost:** 50 gp/sq. yard
**Weight:** 1 sq. yard=1/10 lb.

## Sashling

This broad, billowing sash was the precursor and the inspiration for the *girdle of many pouches*, for its seemingly small exterior hides a great many interior pockets. Ten pockets are sewn into the folds of the sashling, each capable of holding about a fourth of a pound.

The nature of the sashling is such that, unless the item inside is too bulky, it will conceal most of what the elf is carrying. It is thus ideal for carrying hidden coins, spell components, or other easily concealable items.

For those who need to carry more supplies, many sashlings are made with hooks on the outer side. This enables the wearer to hang pouches and other things from the outside of the sashling as well.

**Cost:** 10 gp
**Weight:** 1 lb.

## Thistledown

This is the grayish material from which *cloaks of elvenkind* are made. It is a light, downy material that does not snag on branches. Since it is a fine quality material, it can easily be enchanted with the spells that enable the elves to produce their woodswear.

**Cost:** 100 gp/sq. yard
**Weight:** 1 sq. yard=1/10 lb.

## Elven Bow

During their years of experience, elves have found that often archers are attacked without much chance to defend themselves. They have therefore created the elven bow. It is designed to fire with the same rate of fire and accuracy, and yet the elves can use it to fend off attacks until they can defend themselves with a better weapon or spell.

The elven bow is a beautiful piece of work, carved mostly from wood, and is highly decorated and polished. To fully fulfill its function, the elf crafters have also given it metal inlays. These enable the bow to be used as a parrying weapon until the elf can draw a more suitable weapon. Meanwhile, the elf's bow has not been damaged by the attack and can be used again.

If used as an offensive weapon, the elven bow acts as a club, causing 1d6 points to S- or M-sized creatures, 1d3 to L-sized or larger creatures.

**Cost:** 150 gp
**Weight:** 8 lbs.

### Arrows (Useful)

As with their bows, elves have found that the initial, simple designs are not always what is needed in a given situation. Sometimes, an arrow must be able to do more than simply damage a foe. Therefore, they have designed the following arrows, each with a specific purpose. These are certainly not the limit of the specific arrows that they have designed; they are but a small sample of specialties. The list here is merely a representation.

**Cost:** Variable
**Weight:** Variable

### Flare Arrow

Designed so that the archer may be more easily found or so that a distraction for enemies can be created, the flare arrow produces an intensely bright light in the skies, visible for long distances on clear nights.

The arrowhead is a special detachable piece. It houses a small air-catching device that slows the arrow on its descent, allowing it to drift to the earth instead of plummeting. The interior of the arrow is filled with a slow-burning, elven powder that flares brightly when ignited. This powder is a closely guarded secret of the elf crafters.

To send a flare arrow, one simply touches a flame to the fuse trailing behind the fletching and shoots the arrow into the sky. The head detaches when the arrow reaches the top of its flight, releasing the parachute, which ignites the powder. The arrow burns merrily all the way to the ground. Naturally, flare arrows can only be used once. Unfortunately, they are somewhat fragile, and they break rather easily.

If fired at an enemy, a flare arrow shatters, causing 1d4 points of damage and spreading its load of powder all over the target's body. There is a 50% chance that the arrow's fuse will light the powder on this enemy, causing 1d4 points of damage per round for three rounds. It can only be extinguished by immersing one's entire body in water. Simply beating at the flames or throwing water on them will not extinguish them.

The flare arrow's range is S: 5, M: 10, and L: 15. If fired straight up, it can go as high as 120 yards.

**Cost:** 10 gp each
**Weight:** 1/5 lb.

### Message Arrow

Sometimes, one needs to get an urgent message to a distant compatriot in a hurry. The elves developed message arrows for just this purpose. They resemble normal arrows outwardly, although the head is rather more rounded than most other arrows. It is the interior that makes the message arrow special. The shaft is hollow, enabling the archer to fit a tightly rolled scroll inside. The arrow can accommodate no more than one sheet of papyrus or paper.

If used as a weapon, the message arrow will cause 1d6 points of subdural damage,

only a quarter of which is permanent. Because of its fragility, it will most likely break if it is used offensively. In such cases, it must make a save vs. crushing blow as thin wood or be permanently splintered. Its ranges are S: 6, M: 13, and L: 20.

**Cost:** 2 sp
**Weight:** 1/10 lb.

### Elven Plate Armor

While dwarves and humans certainly have the edge on constructing various types of plate armor, it is hardly a forbidden science to the elves. Although there are even fewer suits of elven plate than there are of elven chain, intrepid explorers have turned up several variations. The DM should keep in mind that elven plate is rare enough that few PCs will run across it and, if they do, it will likely belong to an elf warrior.

Elven plate is mostly used as ceremonial armor, for elves do not like the lack of mobility plate affords. This means that virtually every suit of elven plate is ornately decorated; it is not often that elf armorers are given a chance to combine such utility with beauty.

Still, despite its decorative appearance, elven plate provides as much protection as any human suit of plate armor. And because of the skill of elf armorers, it is lighter than most plate armor, weighing only as much as typical human chain mail. Unfortunately, elven plate does not allow the silent movement that elven chain does, and it cannot be worn by any but fighters, clerics, and their multiclass variations.

Multiclassed spellcasters find elven plate to be a special boon for, like elven chain, it allows its user to cast spells and still wear armor. However, as mentioned before, elves do not wear this armor as often as they do elven chain, for it hampers the freedom of movement they relish.

Elf cavaliers are the main users of elven plate. It inspires humans, they find, and they savor the impressions made on these people. Other races also tend to be impressed by elves wearing elven plate; for what reason the elves fail to fathom. Many elves capitalize on this effect, however.

Elven plate, of whatever variety, is extraordinarily rare. In reality, perhaps 5% (if even that) of elven chain found is actually elven plate. Each suit is personalized, and the owner would not be hard to ascertain by the decorations on the armor. Rest assured that the owner or any heirs would be very happy to see the armor returned; likewise, they would take serious offense if another being had stolen it or was wearing it.

If it is difficult for a human to earn elven chain, it is impossible to earn elven plate. Only elves can wear it, for each suit is custom-made and unique. Unless a human is exceptionally slight, there is no chance of fitting into a suit of elven plate. Halflings, dwarves, and gnomes cannot wear it either, unless they are especially tall and slender. Only half-elves can reasonably expect a suit to fit them, and even they can squeeze in only with discomfort. In most cases, it is far easier simply to return elven plate to its rightful owners and hope for a token of appreciation.

## Chapter 12: The Magic of Elves

*The First Elves rejoiced in the goodness of their life. The Seldarine showed the First*

*Elves the ways of the world that had been created for them. The vessels that had been created for them—their bodies—were strong. They knew each thought and emotion of the world around them, for they were as intimately connected with the land as if they were a part of it.*

*These Elves explored their world, rejoicing in the trees and flowers, in the rocks and the earth, and in the wind. They bore their children and fed them nectar and moondrops. They crafted their pieces of silver and gold, encasing the gems of the earth to display their beauty. They played with magic and wrought many a wondrous, whimsical item. The Elves laughed, for life was good.*

*Then came the stirring of Lolth.*

*The Elves' thoughts grew dark, and they mistrusted their brother. Many turned to the sanctuaries of home and hill, seeking to understand what was happening. Whispers spread, promising dark power should some follow the Spider Queen's tenets.*

*Some Elves were wise and foresaw the terrible war to come. They quietly began to gather their people to forge items of might: armor, to protect the heroes they must send to battle; helmets, to inspire faith and trust in all who see them; and swords, to smite their foes. They constructed, too, other weapons of force: subtle arrows of defense and attack, not-so-subtle rings of power, and awesome spells of destruction designed to fight the coming of the Drow.*

*The Elfwar began, and brother fought brother, daughter against mother. Mages from all sides unleashed their powers. Sparks lit each clash of sword against plate, pointing the way for arrows to seek and wound—hoping to kill.*

*Long and bloody was the Elfwar. In the end, the True Elves won. The Dark Ones retreated to the underground. Disheartened, sick with shame at the parting of their people, the Elves abandoned their weapons, their armor, their rings and staves of might. They left them littering the battlefields, for they could bear no more the taste of war.*

*Some say those items are still there.*

Magic is an integral part of the elven lifestyle. Elves' very lives are inherently magical; the blood of a god flowing through one's veins tends to give that person a much different perspective on the workings of magic.

Magic fascinates elves—no one particular spell, certainly, but magic as a whole. Although they are limited by their very nature as to how much power they can attain via magic, elves find the whole process absolutely mesmerizing. No other race, aside from humans, can attain as much magical power. And humans, while they can grow more powerful, understand magic less perfectly than elves.

Some sages theorize that elves are naturally less powerful magicians than humans are simply because their frailer frames cannot channel as much energy. To protect their own best interests, the high levels of spellcasting are denied to them. However, this does not mean that the elves' insight into such magic is any the less. Indeed, the understanding of those elves who have devoted their lives to the study of magical theory surpasses that of the greatest of human enchanters. Elves' weapons and magical items are certainly among the most powerful in any world, and humans who seek power in the magical arts often turn to elves for tutelage.

Elves have an aversion to nonmagical technology, however, for they have no real inclination toward invention. One would think that with the long lives available to elves,

they would research and create technologically advanced items. Yet they avoid doing so in all areas save that of prostheses.

The reason for this is lost in times long since past, recollected only by elf sages and historians. Apparently, during the time of the Elfwar, elf inventors were fairly common. However, most of them joined ranks with the Spider Queen, seeing in her the one to take the elves into a new age. Since then, most elves have been somewhat leery of both inventors and inventions.

This chapter details a few specific spells and magical items that elves have developed over the years; they zealously guard this magic, and they will not trade the secrets of these spells or the whereabouts of these items to other races under any circumstances. This magic is meant for elves alone.

## New Elf Spells

**Camouflage** (Alteration)
Level: Wiz or Pr 2
Range: 20' radius
Components: M, S
Duration: 1 turn/level
Casting Time: 2
Area of Effect: One person/level
Saving Throw: Neg.

The elves jealously guard this spell. It allows the mage to instantly and completely hide the number of people allowed by the spell, concealing them against even thorough searches. This spell functions only in the wilderness, however, for it changes the appearance of the affected characters into a facsimile of natural surroundings. It is effective even against infravision and is therefore perfect for use by spies and infiltrators. Characters in this form still have all their faculties and abilities, and they can emerge from this cover at any time they desire.

It is even possible for characters to move while within this form. Those affected may move up to 10 feet in a single round, creeping more closely to their targets. If they travel faster than this, the spell dissipates. As long as the movement is surreptitious and stealthy ("Look, Thrag! That bush *moving*!"), they should be safe. As with the *invisibility* spell, if the enspelled characters attack they gain the initiative and a +4 bonus to attack rolls because of total surprise, yet lose the benefits of the spell.

The characters cannot be detected except by magic or by moving stupidly. Until the spell wears off, the characters can enjoy near-total invisibility and gain much-needed information. The material component for the spell is a mistletoe berry.

**Conduit** (Enchantment, Invocation)

Level: Wiz 5
Range: Touch
Components: V, S,M
Duration: Special

Casting Time: 5
Area of Effect: 5 missiles
Saving Throw: None

Using this spell, the caster can temporarily enchant five missiles with another spell of a level no higher than 4th. This spell combines the best aspects of fighters and mages, for they can work in harmony to maximize both the effects of the spell and the damage of the missile.

The *conduit* spell effectively extends the range of the second spell, casting that spell out to its full range *from the target point* when the missile hits the target. Unless otherwise specified when the spell is cast, the effects of the spell radiate forward from the point the arrowhead strikes.

Missiles affected by this spell must begin to be fired within one turn after the last is enchanted, and they will not hold the spells for longer than an hour. Since the missiles are not specially prepared to hold enchantments for longer, the spells tend to bleed off with the passage of time.

The spells cast on the missiles must be separate ones that the caster has memorized that day. For example, if a sorceress has memorized *conduit* and a single *fireball*, she can place a *fireball* only on one of her arrows, not on all five.

The loaded spells are triggered when the head of the missile strikes something, whether that be the target, the ground, a tree, a rock, or whatever. This is good for radius attacks, such as a *fireball,* although it does no good for spells such as *burning hands* or *shocking grasp*.

Targets are allowed normal saves against these spells, as if the wizard were right there casting the spell. However, if the missile carries the enspelled arrow beyond the spell's normal range, the wizard has no more control over the spell.

For example, *web* and *dimension door* spells require the caster to manipulate the spell, and casters cannot do so unless the range of their spell can reach back to them. Unless such wizards want to make the necessary calculations before casting the spell into the missile, these spells usually won't work. If a caster wishes to do so, fine, but this is assuming a lot of faith in the ability of whoever fires the bow, for the archer must make a successful attack roll against AC 6 (including modifiers for range) to hit the area.

The casting time does not include the casting time of the loaded spells. The material component is a copper wire twisted into the shape of an arrow.

**Seeking** (Enchantment, Invocation)

Level: Wiz or Pr 2
Range: 100 yards
Components: V, S
Duration: 1 turn
Casting Time: 2
Area of Effect: 1 missile/3 levels of the caster, up to a maximum of five
Saving Throw: None

The *seeking* spell takes the normal laws of momentum and gravity, and then twists them

slightly in a way that is favorable to the caster of the spell.

The caster can ensorcel a number of normal, nonenchanted missiles no larger than a javelin, equal to one-third his level, to a maximum of five missiles. When they have been enchanted, the caster may either use them or distribute them to his or her companions.

When shot or hurled at a target, the missiles unerringly seek the target. They will hit nothing else but that target. The missiles can go around objects of corners if the target was visible when the spell was cast, but the missiles cannot pass through solid obstructions. For example, if the target closes a door, the missiles slam into the door and cannot be removed until the spell wears off.

The normal range can be extended to the distance of the target creature as long as the opponent uses only ordinary methods of escape. If the target *plane shifts, teleports, blinks,* or uses some other means of instantaneous transport, the missile can no longer home in on its target. It falls to the ground, useless.

This spell is not an automatic guarantee of success. Rather, it ensures that archers and slingers, when firing into melee, will not accidentally hit those who are on their side. This spell is especially useful for battles or shots in narrow corridors. If the person firing the arrow or bullet can see the target, he can fire for normal damage without fear of damaging comrades.

## Magical Items

Most of the magical items listed in this chapter are rare and will not be found lying around in just any hoard. Instead, they can be incorporated into a campaign (preferably with elven overtones) to suit the Dungeon Master's purposes. These items should never be just random treasure. If they are going to be used in a campaign, there must definitely be a reason for their inclusion.

### Swords and Armor

Despite being relatively peaceful folk, elves have a tremendous knowledge of war and warfare. But even in war, the elves find time to be artistic—as evidenced by the stunning beauty of their weaponry and protection.

Elven swords are often legendary, especially those produced by the crafters of the early millenia. These were originally created to battle titanic beings of old, creatures who could be slain only if powerful magicks were cast upon a blade and armor given mighty protections.

Because of the threat these beings posed to the world, elf crafters rose to the challenge, creating artifacts of wondrous power. Even though the monsters they were created to destroy have long since passed from the world, the blades themselves are rumored to have survived the toll of the ages. Even now, some find their way into the hands of humans.

Some races have spread the rumor that, because of superior elven craftsmanship, these blades continue to *grow* in power through the ages, rather than decrease as so many magical items do. If this is indeed true, then a weapon from the long-ago Elfwar would have since become a weapon of awesome might. In the right hands, such a weapon could work wondrous good. And in the wrong hands? . . . Untold devastation.

## Helms of Valor

This item appears as a typical elven winged helm, but will radiate *enchantment/charm* if a *detect magic* spell is used on it. Originally inspired by those battle leaders who walked unflinching through hails of enemy arrow fire, a *helm of valor* enables its wearer to ignore missile fire. However, in order to do so, the users of such helms must have implicit trust in both themselves and their *helm*.

When a wearer first tries to use a particular *helm*, he or she must make a successful Wisdom check to attune with it. In unsuccessful, that *helm* will not function for the user until the individual's Wisdom score has changed for either better or worse (thus allowing another check).

A user who succeeds at the Wisdom check may then attempt to harness the *helm's* powers. The next time someone successfully attacks the wearer with a missile weapon, he or she may make another Wisdom check to avoid all but 1 point of damage, no matter the usual damage of the missile.

If this second Wisdom check fails, the wearer suffers the *maximum* damage the missile can inflict. This check is made for every missile fired at the wearer during this combat, and the modifiers listed below do not apply until the next combat.

If this second Wisdom check is successful, the wearer gains a +1 to the Wisdom check for the next combat. **Note:** *This applies only to the next combat in which enemies attempt to harm the user.* The helm does not work during sparring practice or training. A user who fails a Wisdom check picks up a –1 penalty for the next three combats, while he or she learns to trust in the powers of the helm again. No matter how often the user succeeds in the Wisdom check, the bonus can never exceed 19; a roll of 20 always fails.

*Helms of valor* provide no defense against melee weapons (although hurled daggers, axes, and other propelled melee weapons count as missile weapons), nor do they offer any protection against spells such as magic missile. Magical missiles, including enchanted arrows, affect the Wisdom check by –1 per +1 of the enchantment.

The *helm* is usable by warriors, priests, and psionically empowered individuals. As with all helms, it is not usable by either wizards or thieves who wish to practice their crafts.

## Arrows (Enspelled)

For untold centuries, the elves have used or modified various priest and mage spells for use with arrows—spells for which they have found quite interesting alternative uses. By placing a simple spell on the arrow, they are able to significantly increase that spell's range, effectiveness, and efficiency. This is not to speak of the *conduit* spell; these are spells that can be cast on the arrows themselves.

Indeed, any type of spell that requires a special focal point can be cast on an arrow in order to deliver the spell to a great distance away. The permanent spells make these arrows far better foci for magic, but that is not always feasible.

Although such enspelled arrows are not, in the main, permanent magical items, they are included here to give some additional ideas to the players for experiments they might like to try. Some examples of enspelled arrows include the following:

- **Avoidance/Attraction.** This 5th-level wizard spell is an especially nasty one to place on an arrow, especially when the reversed version, *attraction*, is used. *Attracted arrows,* if they hit, cannot be removed from the victim's body until a *dispel magic* is cast upon that person. Meanwhile, the arrow begins to fester within the wound, causing infection and even death to the unfortunate.
- **Darkness or Light.** These are among the most permanent and most used of enspelled arrows. If a *continual light* or a *continual darkness* spell is cast upon the shaft of an arrow, it can then be used to either spotlight or blind an enemy. These arrows are common among elf scouts, who carry them sheathed until there is a use for them.
- **Fire Seeds.** Like the *fire trap* arrow (below), this one requires a special hollow pottery tip, wherein the fire seeds are placed. When the arrow strikes the target, the seeds detonate, inflicting 2d8 points of damage to all within 10 feet of where the arrow falls. If the arrow actually hits someone, that person suffers 1d4 points of damage, as well as the 2d8 points from the *fire seed*; the victim doesn't even get a saving throw to take only half damage.
- **Fire Trap**. By casting a *fire trap* spell on a tiny and delicate box, then sealing this box inside a special, fragile arrowhead, an elf priest can create an effective flame arrow. In theory, when the arrow hits a firm enough target (anything harder than water), it triggers the spell, engulfing its target in a sudden blaze of flame. In game terms, the head and box must make a single saving throw against crushing blow (as pottery) in order for the *fire trap* to detonate. Otherwise, the arrow is a dud, though it could possibly be reused against the archer.

The damage caused by this arrow is 1d4+1 plus the variable damage caused by the *fire trap*. Even if the arrow misses its target, it will still create a conflagration in the area if the head cracks open.

## Arrows (Magical)

By far the most common of magical elven weapons, magical arrows are still fairly rare for campaign purposes. Workmanship on elven magical arrows is such that the missiles are not always destroyed when they hit their target. Furthermore, if they miss their target, these arrows break only 25% of the time. If a magical elven arrow hits its target, it will be destroyed 75% of the time. Otherwise, it can be used repeatedly until it is finally destroyed.

Ancient elf arrowsmiths have created some amazing combinations of the following arrows, but they are extremely rare. Legends tell of *wooden arrows of seeking* and—rarest of all—a *wooden arrow of seeking and extended range*. If these could be found, they would make the owner a most happy individual.

Some examples of elven magical arrows include the following:

- **Arrow of Extended Range.** There are three versions of this arrow, which allow the user to double, triple, or even quadruple the normal ranges for any type of bow. The first version, which allows double range, is encountered about 60% of the time. The triple-range version is found about 30% of the time, and the quadruple-range arrow is chanced upon only 10% of the time.

Although these arrows do not have an attack bonus, they are effective against

creatures who are immune to all but magical weapons (up to +1). In addition, these arrows cancel out the normal range modifiers of the bow being used, using instead the modified, multiplied range for purposes of figuring modifiers.

These arrows are usually found in bunches of 2d10.

- **Arrow of Seeking.** This is a more powerful version of an arrow imbued with the *seeking* spell. Not only does it round corners in pursuit of its prey, it also gains a bonus of +2 damage. These arrows are usually found in groups of 1d10, although sometimes as many as 2d8 can be found.
- **Wooden Arrow.** This is a totally organic arrow. Made completely from wood and carved with ornate runes, it appears as nothing more than a novelty, or perhaps a woodcarver's doodle. In reality, this arrow is a most dangerous weapon, and it radiates strong enchantment magic.

This weapon completely ignores all nonorganic armor. Thus, metal armor offers no protection against this missile, while leather, hide, and scale mail made from a creature's skin offer their normal bonus. Studded leather protects only as leather armor.

Those wearing metal armor are considered to be AC 10 against this arrow. Magical protection still applies; thus, *plate mail +4*, although normally AC –1, would instead be only AC 6 against the wooden arrow.

These arrows are never found in bunches. If encountered, there will be but a single shaft. Furthermore, the *wooden arrow* is an exception to elven arrows in that it will *always* be destroyed when fired, regardless of whether it hits. The wood necessary to the enchantment is such that it can function no other way.

## Artificial Limbs

With such incredibly long lifespans, one thing elves fear more than nearly anything is permanent maiming. Even some magicks are not powerful enough to restore limbs to those who have lost an arm or a leg through accident or misadventure. Thus, the surface elves, like the drow, nurture a number of crafters who work replacing lost limbs. There are very few of the elves who comprehend this extraordinary technology of theirs, for the design of artificial limbs is something beyond that of magic. Most elves do not understand invention or even the desire to create something not inherently magical, but the existence of these limbs proves that some few do, and do so very well.

Nevertheless, artificial limbs are exceptionally rare. Since they must be individualized and their creation often takes years, they are not typically found lying about a dungeon. More likely, they will be discovered on the skeletons of elf warriors, or in those places where warrior elves once fought. Regardless of whether their skeletons have turned to dust over the ages, their magical limbs remain.

With extensive (and expensive) retooling, these devices can be worked so that they fit other races who have lost limbs. Likewise, if a PC can somehow convince the elves that it would be in their best interest to forge a limb for the PC, he or she might gain one. Otherwise, the chances of finding a device such as these are practically nonexistent.

Made of mithril or an especially strong alloy, artificial limbs can duplicate nearly any action the original flesh-and-blood limb could perform. They are more versatile, however, for they can be fitted with special attachments that enable their owner to execute myriad functions.

Artificial feet, for example, could have the toes replaced with spikes for ease in climbing or use as a secret weapon during combat. Fingers can be replaced with a variety of tools and picks for locks, or they can be combined to form a single, deadly blade. Possibilities are limited only by the imaginations of the crafter and the character, by the application of good sense, and by the realities of engineering the devices. Finally, if they are of particularly fine make, they can hold an enchantment.

While nearly any limb can be replaced if lost, elves have not yet been able to develop internal organs of any sort. However, they can rebuild a person if his or her vitals remain intact.

Lest any PCs think that a body given over to such technology would be a good idea, let them consider the following hindrances: First, the character *must* be an elf, for elves will not perform this service for any but an elf. Second, elves neither revere nor respect those who have lost many limbs. Their generals and those of the warrior Houses may wear up to two artificial limbs without shame; anyone injured beyond that point must, to the elven mind, be a total incompetent. Such a person's bungling and sheer stupidity has obviously led to that state, and that person commands no respect from the elves. Such individuals are actively avoided, for their mere presence is viewed as bad luck.

Finally, and perhaps most importantly, elves are not proud of their scars as members of the lesser races so often are. Elves who have these limbs take pains to hide them, for they are ashamed that their lives have not followed the elven way. These individuals wear long gloves, heavy tunics, or thick breeches to hide the fact that their bodies are not perfect.

Those whose bodies have been totally altered go to even greater lengths to hide their restructuring. Their bodies have become something that are not natural, and so the much-vaunted elven connection to the earth seems a hollow mockery of the way they once were. Indeed, most elves are far too proud to allow themselves to be "preserved" in such a way, preferring instead what they perceive as the sanctity of death.

This is not to say that elves refuse these limbs outright. Rather, the artificial limbs are a convenience, a last resort when regeneration and other natural methods of replacement are exhausted.

For the sake of play balance, the damage-causing potential of these limbs should not exceed 1d6, plus Strength bonuses. Although other types of abilities might be slightly enhanced (such as the thief's Pick Locks ability), these bonuses should not exceed +10%. Player and DM alike should keep in mind that good tools are no substitute for sheer talent, expertise, and experience.

## Chapter 13: Elven Campaigns

*Hidden in the leafy undergrowth, Garanahil and her five companions watched the orcs fell yet another dryad's tree. The dryad's scream of agony echoed bitterly in their ears.*

*The orcs were intent on savaging this land of trees and green. This was the tenth dryad home they had destroyed this week; the orcs laughed wickedly, heedless of any who might hear them. Who would attack the thirty of them?*

*The elves were slowly being crushed under the orcish boot. They were too few and too far apart to countermand the fast-breeding orcs. Attacks such as this were now*

*common. Garanahil and her comrades were all that remained of a village of more than 50 elves.*

*As the tree crashed to the ground, Garanahil gritted her teeth in anger. They had harried the orcs for days, unleashing arrows at stragglers and slitting the throats of those few who wandered too far from their encampment. Now the elves were out of arrows, and none of the trees nearby were of suitable quality. If the tiny band paused to make more, they would surely lose the remaining orcs to the open plains less than a day's travel away.*

*The answer was simple for the maddened elves. They followed the orcs through the rest of the day, planning to catch the humanoids when they least expected an attack. The elves' hand was forced but hours later, when the orcs found another dryad tree and slew the dryad before she could protest. Unable to contain their rage, the elves rushed to attack.*

*The battle was short but fierce. The elves eliminated all save four of the orcs before they breathed their last of the autumn air. Garanahil fell near the dryad's body.*

*Then Garanahil's blood joined with the dryad's and seeped into the ground. Their blood infused the tree with mad despair, and a sudden, primal groan oozed through the soil and into the surrounding air. The sound of snapping roots filled the forest as the tree lifted its ponderous bulk from the earth and moved. The remaining orcs stood, full of fear, unable to move. Garanahil the Treant crushed the orcs instantly and went in search of more.*

This chapter is for referees who plan to run elven campaigns. Whether these campaigns are all elven, mostly elven, or even just based around elvenkind, this chapter should give the DM a few ideas for creating a setting.

First, the DM must consider the importance of the history of the world. What is it? Why? What happened to make it the way it is? How do the elves interact with the other races of the world if, indeed, there are other races? If not, why not? Did something happen to them?

Next, the DM must decide on the type of campaign that he or she will be running. After all, not all campaigns are the standard adventuring scenario. Some focus on political intrigue, while others focus purely on combat. Others rely on problem-solving, while still others focus on epic quests instead of simple dungeon crawls.

The referee can consolidate all of these or can run one single type. The important thing, though, is that the DM decides on the type of campaign he or she is going to run. This will determine much of what follows hereafter.

## The World

First, the DM must create the world in which the campaign is to be played. Its geography, its seas, and its oddities are all things that must be taken into account. How was the world created? Was it spun from the very fabric of reality by the gods, or was it simply a blob hurled forth from primal matter? Perhaps it was a combination between the two, where the birth of the world spawned the gods.

Whatever the cause of creation, it has shaped the events that will become the planet's history and perhaps produced some of the most important artifacts. It is vital for the DM

to create a believable story of creation for the world. For added interest, the DM can have the major religions and races of the world disagree on its origins, leading to vast internecine conflicts that have shaped the face of the world still further.

## The History

Now that the world has been created, the DM must create the world's history. What are the important events in the world's past, and what caused them? Most importantly, where do elves fit in the picture?

Maybe they were created as the Story of Creation in Chapter One suggests, from the blood of Corellon Larethian as he battled the evil orc god Gruumsh. Maybe the elves simply sprang from the world and are the true children of the earth. Whatever the truth, the DM must explain the existence of the elves and how they have come to be as they are and where they are today.

## The World's Races

Next, the referee must decide from whence the various other races sprang, the order in which they were born, where they were born, where they moved, and what they did. A timeline is useful here, as the referee must create each race's history, its notable achievements, and its wars. What have they invented? Have there been any tragedies in their pasts that they as a race keep locked away in shame or sorrow?

What is the role of elves in this world? Is there a difference between the elves of this campaign and the standard AD&D® game elves? If so, what is it? Perhaps these elves are taller, or shorter-lived, or longer-lived, or have some important distinction that makes them vastly different. Although it is not necessary to give each elf race from world to world a difference, it does add to the flavor of game play and can therefore enhance everyone's enjoyment.

More important, what are the dominant races of the world? What are the elf characters most likely to be? What are their beliefs? The gods will play some part in this, but if they are not important to the elves, their divine influence is greatly undercut. Also, a Dungeon Master simply *must* determine what all the civilizations are like in the world and who has the grandest.

## Possible Conflicts

In a standard AD&D® game campaign, the various races of the world do not always live in peace. Indeed, circumstances in fantasy worlds are usually such that there is almost always warfare between at least two groups, and often far more than that. The possibilities and variations of anger erupting into armed conflict between different groups are nearly endless.

There are several conflicts that spring immediately to mind involving elves. There are so many philosophical and physical differences between elves and other races that conflict seems almost predestined. Not all of these need be used in a campaign nor, indeed, must any of them. However, such conflicts are certain to add spice to a campaign or at least provide interesting diversions for the players.

For example, in elf against elf scenarios, players could take the role of characters at the dawn of time, before the great Elfwar, seeking to avert the catastrophe of the drow sundering. As an alternative, they could play more modern elves, trying to unite all the races of the world despite the utter stubbornness of the grey elves.

PCs could also be involved in one of the greatest rivalries in fantasy: the dwarf/elf antagonism. Although it is true that both sides serve the cause of good, their radically different views on life often lead to serious, sometimes violent disagreements. Taking this one step further, the two races could each so despise the other for its philosophy that they clash on a regular basis.

There is also the possibility of elves against humans. Suppose that humans began destroying the elven forests and killing the elves they met. The elves, sick of the wanton annihilation the humans insist on continuing, finally decide to strike back. Elves begin killing wayward humans, and the humans retaliate by razing elven villages. The escalations continue, and the player characters can either take part in the war itself or attempt to talk some sense into the heads of their leaders.

There is also the scenario wherein the elves are against everyone but themselves. Because of the natural elven predilection for arrogance, they have managed to inadvertently unite everyone against them. This is a campaign of struggling where the PCs must attempt to placate all sides before whole civilizations are swept away by the tides of war.

Finally, there is the old elf vs. orc conflict. Although they are the hereditary enemies of the AD&D game, there are ways to make the conflict more interesting. After all, not all orcs are the smelly kind that live in caves. Orcs could have a bustling culture of evil and perversion, right next to an elven paradise of sylvan beauty. Naturally, the orcs would want to despoil this beauty, not to mention capture some slaves and sacrifices for their gods. At first, the two sides maintain guerilla tactics, not willing to commit to a full-scale war. Meanwhile, the player characters could have the unenviable task of having to infiltrate the orc settlements in order to free their captured comrades.

Naturally, the possibilities for adventure and excitement are nearly endless. They are limited only by the imaginations of the DM and the players.

## Campaign Worlds

Most of the published AD&D campaigns have a fairly even mix of the various races, although they tend to allow humans to predominate more often than any other race. Since humans have the most drive and ambition of any of the established humanoid races, it is only natural that their power always be taken into account when considering who controls the world.

However, it's possible to create a campaign world wherein humans are *not* the dominant race. What follows is an outline of possibilities for other races' dominance and how such changes would affect the lives of elves on these worlds.

### The Elf Campaign

On this world, elves are clearly the dominant race. Their world-spanning civilization has control of the portions of the world the elves find desirable. The race is fairly

isolationistic, preferring to let the rest of the world run its course, rather than interfering with it in any way . . . usually. If something comes along that would disrupt the normal flow of nature, the elves will certainly be quick to step in to make sure it doesn't become too glaring a problem.

Most of the elves here have little contact with other races because their scouts and border guards keep the other races away from the elf sanctums. The elves will allow a rare few to journey unmolested past the borders of the elf lands, but usually only invited guests are allowed inside. The perimeter system is very thorough, with few living or unliving beings getting through unobserved.

Because they do not have to worry about other races threatening their power, the elves of this world spend quite a bit of time in magical research; the magical content of the world is thus very high. Most of elven civilization has become very much like that of the familiar grey elves, although their intolerance for others has not reached those proportions.

Indeed, the elves are faintly amused by the antics of the other races, and they enjoy watching the others' rapid ascents and declines in fortune. Elves are guaranteed to live in comfort (if not outright luxury) on this world and would take up adventuring only to provide themselves with excitement or to quell the incursions of other races. Most of the quests would be along the nature of epic adventures, for there would simply not be anything else that would rouse elf interest enough for the elves to take part.

The time period of this campaign world would probably be near the time of creation, before humans became too populous. If not then, it would probably be after some world-wide war, wherein the populations of the other races were decimated, while the elves repelled the worst of the catastrophe from their forests and survived.

These elves might very well see humans to be as threatening as orcs; both are prolific breeders, both are expansionistic, and both encroach into the elf lands readily. While the elves hate neither of these races, they will hunt them to keep them away from the elf lands.

### The Human Campaign

On this world, because of the human propensity for rapid growth and their expansionist tendencies, the once mighty elven civilization has been driven into decline. The elves have abandoned their fabled homes in the hearts of the ancestral forests, seeking refuge in lands untouched by human taint. Although the elves do not hate the humans at this point, they pity them for their total misunderstanding of nature's forces and for their short lives.

The elves here have either mostly retreated from the world or have set secure strongholds past which no other races may pass. While their intolerance is no more than usual, they do not admit outsiders to their lands, which they consider inviolate. In short, the elves of this world are similar to standard sylvan elves, although there may be exceptions (as there always are).

### The Dwarf Campaign

In this sample world, the elves have been nearly exterminated by the orcs and their humanoid allies. They fought a good fight, struggling mightily and nearly holding the

orcs back. In the end, however, the sheer numbers of the orc hordes spelled disaster for the elves.

However, the elf resistance managed to severely weaken the evil humanoids, making them easy pickings for the dwarves from the mountains, who finally marched a little too late to aid the elves. However, they banished the last of the orc hordes from the elf woods and offered assistance to help the elves rebuild their cities.

Although the elves accepted the dwarves' generous offer, they remained suspicious of the dwarves' timing. When the dwarves began lumbering operations in the forests, cutting down the very trees the elves had once protected against orc hordes, they felt their worst suspicions regarding the dwarves were confirmed. These elves watched in shocked outrage as the dwarves grew wealthy off the trees, living lives of luxury once paid for by the blood of elves.

There were other elves beyond those who had survived the Battle of the Woods. Those who were off adventuring or acting as merchants returned home now to find the forests devastated and the dwarves lumbering the remains, with little regard for the sacred and valued places of the elves.

The elves joined together and swore an oath that they would not rest until they had repaid the dwarves for their monstrous deed.

These elves began harrying dwarf loggers, firing arrows at the miscreants and disrupting dwarven trade in general. The dwarves retaliated against these "ungrateful elves" by increasing their logging efforts and killing the renegade elves who were killing precious dwarves. They also rounded up the few remaining elf villagers and enclosed them in closely guarded camps, using the threat of violence against the innocents as a cold-hearted means of quelling the elf rebels' actions.

The PCs have the option of trying to discover who was responsible for the delay in the march of the dwarf army and who is ultimately responsible for the rape of the forests. Since dwarves are essentially good beings, there should be some mystery and intrigue involved in this campaign as well as the expected out-and-out fighting against the oppressive dwarf forces.

Perhaps the fault lies in the messenger system that ran between the elven and dwarven civilizations, or maybe a corrupt dwarf general accepted bribes from an oily extortionist to begin the dwarf army's march so late. If the player characters discover the mystery behind the late arrival of the army and manage to restore relations between the elves and the dwarves, they will still have their hands full trying to rebuild the elf race to its former glory. Considering the years of culture destroyed by the battles, it would not be an easy task.

This world, too, is probably either without humans (set at some point before the time when they came into power) or has very few humans (perhaps set sometime after their influence had waned). Remaining humans could be either on the dwarves' side, on the side of the elves, or hanging on the brink of extinction themselves. Whatever their role, they will need some clearly defined relationship to the elves.

This is not, of course, the only scenario that could be played in this world. The dwarves could simply be the dominant race because the world is situated so that every forest is ringed by mountains. The dwarves thus keep the elf population from growing too large, although they may not be entirely conscious of this fact. Regardless of the circumstances, the elves are likely to be resentful that the dwarves prosper while the elves

suffer. Although they will not necessarily be filled with venom when dwarves are mentioned, they will certainly not go out of their way to befriend the little runts.

## The Evil World Campaign

In this campaign, the forces of evil have somehow taken control of the world. As a result, the forces of good have been driven underground. The evil ones, who might be orcs or some other humanoids, may have been dominant right from the beginning of the world's history, or they may have seized power only as recently as twenty years ago, perhaps with the aid of some powerful magical artifact.

The PCs play elf characters from the Wild Lands, where the good folk have been captured. Their job, naturally, is to restore the world to the side of good. They harry travelers and fight the heroes of the orcs. Eventually they undertake earth-spanning quests in search of the power that will enable their side to overthrow the orc empire's brutal regime.

The tone of the campaign is, naturally, rather dark. The situation might seem somewhat hopeless initially, as the orcs are breeding the sort of adventurers the players are used to playing themselves. But in this campaign, the players get to see what the orcs and goblins must routinely experience in other worlds—that is, when PCs trounce *them* in search of adventure. This should give the players a better perspective on the adventuring life and the effects of their rampaging through the lands of humanoids.

An interesting variation on this theme would be to have the elves and humans in the Wild Lands revert to a savage bestiality, while the orcs and their allies come to flourish in the cities. Consequently, the orcs grow ever more civilized, learning the value of cooperation, while humans and elves begin a descent into savage evil, fighting among themselves only for their own individual benefit.

## The Aquatic World Campaign

Not all campaigns have to take place on dry land. Since landbound elves have their aquatic cousins, they find it easier than most to receive a welcome beneath the waves and to gain a base from which to operate. The players need not necessarily play landbound elves, either, for they have the option of playing aquatic elf characters.

There are at least two viable options for the underwater campaign. In one, the players take the part of landbased elves who have gone beneath the waves to combat a menace to the upper world. While there, they can learn to understand the undersea lands and fight the creatures that pose threats to their allies, the aquatic elves. If or when they defeat the threat to the upper world's peace, they have the option of remaining below the waves with the aquatic elves or of returning to their sunlit lands above the waves.

The second campaign has the characters playing aquatic elves themselves, giving them more mobility underwater. This campaign, naturally, has little chance of going to places beyond the sea, but that is quite all right. There is enough that is unknown about the sea that the players should constantly be amazed by what is going on around them. If the DM throws in fantastic monsters, the undersea life will be doubly interesting.

## The Outcast Campaign

Everyone knows how most elves feel about half-elves. But how do they feel about the parents of half-elves, especially those who willingly created their children? What about those elves who disregard the few elven laws, preferring to make their own way in life?

There are numerous other possibilities for characters in the outcast campaign, most of whom have been exiled from the elf lands. They wander the world, seeking either to atone for their crimes or to make the elf nations pay for the indignity of exile.

This is a good campaign to play for both role-playing and the tone of the epic quest, for the outcasts will constantly be trying to prove themselves to the realms that rejected them. They will always seek to be bigger and better than their peers thought they could be, whether to prove them wrong or to seek readmittance to their ancestral homes.

But the campaign is also, unfortunately, somewhat limited, for there are only so many role-playing opportunities with outcasts. Certainly, they have as much opportunity for adventure as other characters, but their attitudes all tend to be rather similar. Still, an outcast campaign could be used to introduce a player to a gaming group, a person who has chosen to play a half-elf.

Whatever campaign world a DM chooses to design, he or she should keep in mind the simple need for plausibility. A world can be as fantastic and as original as a referee desires, provided it works for the players. This, after all, is what gaming is all about.

## Avariel (Winged Elf)

**CLIMATE/TERRAIN:** Temperate to subtropical mountains, forests
**FREQUENCY:** Rare
**ORGANIZATION:** Bands
**ACTIVITY CYCLE:** Any

**DIET:** Omnivore
**INTELLIGENCE:** High to Supra- (14–20)
**TREASURE:** N (G, S, T)
**ALIGNMENT:** Neutral or chaotic good
**NO. APPEARING:** 5–20
**ARMOR CLASS:** 8 (10)
**MOVEMENT:** 9, Fl 18 (C)
**HIT DICE:** 1+1
**THAC0:** 19
**NO. OF ATTACKS:** 1
**DAMAGE/ATTACK:** By weapon
**SPECIAL ATTACKS:** +1 with lasso, bolo, or sword, wing buffet
**SPECIAL DEFENSES:** See below
**MAGIC RESISTANCE:** Nil
**SIZE:** M (5'+ tall)
**MORALE:** Champion (15)
**XP VALUE:** 650

The avariel, or winged elves, is a rare race of reclusive elves that dwells high in the mountains or forests away from other civilizations. They appear even more delicate than their landbound brethren, their facial features even more chiseled and angular. The characteristic of the avariel that is most stunning, however, is their beautiful, soft wings. Although these wings are generally white, avariel have been seen with wings whose colors range to black. The wings are their pride and joy, and an avariel who has lost his wings is intensely pitied by the other avariel. Since elves do not generally accept the pity of others, a wingless avariel often leaves the community to find a life elsewhere.

Avariel eyes tend to be a little larger than most elves', although they are the same color that most grey and high elves possess. Their hair is most often white or black, but there have been numerous exceptions. The avariel have a tendency to adopt a far-off look in their eyes when their immediate attention is not required. They are very much at home in the outdoors, and they appear out of place indoors or underground.

Avariel clothing is most reminiscent of togas, for other types of clothing often snag on their wings. Togas and their like wrap easily around the avariel's body and wings.

**Combat:** To those not bred to aerial combat, the avariel are a confusing opponent. While most humanoids tend to think two-dimensionally in combat, the avariel think in a third dimension, which they utilize to devastating effect.

They have incredible eyesight. Not only do they have the standard elven infravision, when flying or outdoors they can focus their vision to notice details at over a mile away or those obscured by underlying forest. They use this incredible perception to maximum advantage and thus are excellent scouts.

From a distance, avariel in flight appear as large birds. Thus, while opponents may notice their silhouettes, they usually disregard them. This has, more than once, resulted in the nearly total elimination of enemy forces. Since the avariel are efficient hunters, they ruthlessly stalk those who have escaped the battlefield, more often than not finding and destroying those who would report their presence.

In combat, avariel prefer to use light weapons, for heavier ones inhibit their flight. The lasso, bola, and sword are their weapons of choice, and they gain a +1 to attack rolls and damage when using these weapons. Note that the momentum generated by any sword longer than a long sword interferes with flying. For this reason, they use bastard swords and two-handed swords only in foot combat; they do not gain the +1 bonus. Avariel, unlike other elves, have a difficult time using ordinary bows. Their wings interfere with the smooth movements required to fire a bow, and they therefore do not gain the +1 bonus other elves have when using bows.

The strength of the avariel is also their downfall. If they lose more than 50% of their hit points in damage, they become too weak to fly and must continue their battle on ground. Until they lose 75% of their hit points, however, they can still glide for short distances. They can also jump to a height of 10 feet.

Their wings are susceptible to fire, and they burn quickly once set ablaze. Only several weeks of recuperation will restore wings to flying condition. A favorite tactic of their enemies is to launch a *fireball* into the midst of a group of high-flying avariel and watch them plummet to their deaths. Because of this, avariel are highly suspicious of fire-using mages. The winged elves will never fully trust these individuals, even if they are elves.

Another weakness avariel have is claustrophobia. They cannot bear to be in closed places, most especially under the earth. If confined in such a place, avariel must make a Wisdom check every day they are so confined. Failure spells temporary insanity, and the avariel will become violent, catatonic, or panicked. Such insanity lasts until the avariel reaches open air. If the winged elf failed more than four Wisdom checks, he or she has gone permanently insane. This can only be cured by a *heal* or *remove disease* spell.

Winged elves can carry a mass equal to their own body weight before their wings will not support them. Each half of their body weight that they carry reduces their maneuverability class by 1; if they carry more than light encumbrance, their maneuverability becomes Class D.

Avariel can become fighters (not rangers or paladins), mages, and clerics, as well as the multiclass combinations available to these three. There are no recorded instances of avariel rogues. For every five avariel in a group, there will be at least one fighter of at least 3rd level. For every 10, there will be a mage of equal level to the fighter. Groups of 20 have a 7th-level warrior/7th-level mage leading them, as well as a 6th-level fighter, a 5th-level mage, and a 6th-level cleric. This roster also includes the four groups of 5 and the two groups of 10.

**Habitat/Society:** In some areas, the avariel are known as "Al Karak Elam," and non-elf races have built mythologies around glimpses of these reclusive beings. To propagate this foolishness, certain mischievous avariel have contacted humans, pretending to be agents of a higher power. The older avariel object to this because it leads the humans to search for them, but this ban has not yet stopped any of the younger winged elves. However, as the avariel become more common, the instances of this activity have lessened dramatically.

As among the other elves, the avariel have adapted themselves and their communities to their environments. There is no exclusion based on gender; females often hold as many, if not more, positions of power within an avariel community.

There are two types of avariel society that are especially common no matter what the environment. Both have drawn on aspects of their elven heritage, to the exclusion of others. However, these two types of society are never found far from one another, so that they may more easily communicate.

It seems that many of the avariel have bred themselves for combat. Much of avariel society is based on a warrior code of honor, seeking greater glory for themselves and their allies. Their lives are geared around war and battle, and they answer to their war chiefs. These are the avariel that are feared by the humanoid nations, for they are a deadly foe. They have little of the respect for lives of others that landbound elves have; instead, the avariel live for the fight and the destruction of their opponents. They are a proud, hearty group, and they form eternal friendships with those who earn their trust. Though they care little for the lives of their enemies, they try to live theirs to the fullest.

The other half of avariel society knows little of war. These avariel have focused mainly on the arts and the intellectual aspects of life rather than the warlike facets. Where the other avariel make much of war and manhood ritual, these avariel rely solely on their brains and diplomatic ability to get by. They are a population of artists and philosophers, creating for the sheer joy of creation.

The relations between the two halves of avariel community are perfectly harmonious, and they stay in constant communication. Both respect the other greatly, often trading their youths in cultural exchange programs. Since their children are often curious about the other aspect of their culture, they are given the chance to participate in that feature for a time, leading to a well-balanced elf. Strangely, after experiencing the other side of life for a few decades, most avariel are eager to return to their original homes and lead the lives to which they were born.

Of course, there are more than just these two avariel societies; these are just the most common. There are others that have a more equal footing between the aspects of their societies, others that are better balanced. However, none of these seems to have flourished so well as the warrior/thinker combination. These two have somehow achieved a harmony that makes their civilizations greater than others. The creative and destructive impulses, when paired, make the avariel a formidable opponent.

The avariel are a particularly religious sect of elves, although they are not fanatical about promoting their beliefs. They worship Aerdrie Faenya, the elven goddess of air and weather, almost exclusively. They believe that it is due to her intervention that they are able to survive at all, and they make their obeisance to her accordingly. They also believe that she takes a more direct involvement in their lives than the gods of other elves. It is due to worship of her that the warrior avariel do not become enamored of law and thus remain elves at heart.

The weapons crafted by avariel are usually of glass or obsidian. The open forges used by other races to shape metal can singe their wingfeathers; the avariel tend to avoid these. Thus, they use furnaces to shape glass into workable, durable weapons. Avariel glassmiths are master crafters. Any metal weapons that the avariel have are the result of trade with other races or other elves. Glass weapons designed by avariel may occasionally break in combat. (On a natural roll of 1, roll 1d6; the weapon shatters on a roll of 1–3.)

**Ecology:** No one knows whether the avariel are a natural offshoot of the elven line or the

result of powerful magicks. There are those who claim that the avariel are the original elves and that the other elves have fallen from this high state. Most, however, maintain that the avariel are the result of magic that combined elves with their beloved giant eagles. Some few think the avariel are simply the offspring of elves who had *wings of flying* permanently attached to their backs.

The avariel keep in contact with other elves, but the winged elves tend to be somewhat above the affairs of the world. Nothing concerns them overmuch, unless it impinges upon them. They usually try to avoid contact with other races, despite the fact that some insist on seeing the world.

Avariel do not lay eggs, contrary to popular speculation. However, like birds they do have hollow bones, making them more fragile than a typical elf. This is the price they pay for their wings for, without hollow bones, they could not fly. Even flying causes some discomfort because it is strenuous exercise to keep so much weight aloft. However, they find the pain a minor inconvenience, for the sheer joy of flight is so intoxicating. Each hour of flight, the avariel must make a successful Constitution check. If they fail, they cannot continue to fly for at least half an hour for each two hours of flight previous to the check.

Avariel wings are sought after by mages and evil giants. The mages prefer to use these wings in creating potions and *wings of flying*, and they will pay huge amounts for any brought to them. The giants, on the other hand, use the avariel's wings as decorations for headgear. They think it looks particularly fine to have a beautiful pair of wings on their war helmets.

Avariel do not remain in the world as long as most elves. Their typical lifespan is only 300 years because they feel the call of the unknown so much more clearly than other elves. Thus, they tend to act more human than other elves because they know that they have less time than other elves. They take things more seriously and try to fit as much living in as possible. This is not to say that they are as frantic as humans, but they do try to accomplish many things before their departure.

With the DM's permission, the avariel may be used as a PC race. Their ability adjustments are -2 Con, due to their hollow bones, and +2 Dex for their speed.

*The Avariel originally appeared in* DRAGON® *Magazine, issue #51, as "The Winged Folk." The race has been modified here.*

## Cooshee

**CLIMATE/TERRAIN:** Elven Lands
**FREQUENCY:** Rare
**ORGANIZATION:** Pack or Solitary
**ACTIVITY CYCLE:** Any
**DIET:** Carnivore
**INTELLIGENCE:** Semi-(4)
**TREASURE:** Nil
**ALIGNMENT:** Neutral (good tendencies)
**NO. APPEARING:** 1–8
**ARMOR CLASS:** 5
**MOVEMENT:** 18, Sprint 24

**HIT DICE:** 3+3
**THAC0:** 17
**NO. OF ATTACKS:** 3 (claw/claw/bite)
**DAMAGE/ATTACK:** 1–4/1–4/2–8
**SPECIAL ATTACKS:** Overbearing
**SPECIAL DEFENSES:** Camouflage
**MAGIC RESISTANCE:** Nil
**SIZE:** M (4' at shoulder)
**MORALE:** Steady (12)
**XP VALUE:** 270

The cooshee, or elven hound, is a huge, long-lived dog. It is most commonly found in the company of sylvan elves, who use it for both hunting and guard duties. Occasionally, high or grey elves will keep kennels of these dogs, but these are generally few and far between.

The cooshee has a thick greenish coat, often spotted with large brown spots or patches. This coat allows it to conceal itself in the forests and fields near its home with a 75% efficiency. Where most dogs crash through the forest, the cooshee moves as silently as its elf masters, gaining a +4 bonus on surprise rolls.

Cooshee weigh more than 160 pounds and often weigh as much as 300 pounds. Their huge paws house equally huge claws, which are curved to ensure better traction in the soft loam of the forestlands. Their tails generally arc over their backs, though they hang between their legs when they are being scolded. Their ears come to a point on top of their heads, giving the cooshee an attentive, intelligent look.

**Combat:** In combat, the cooshee is a fearsome opponent. Its powerful jaws are enough to frighten any normal person; coupled with its fierce claws and demeanor, the cooshee is a very effective fighting machine. With a party of elves providing distraction with their arrows, the cooshee can become a creature from a nightmare for its prey. Elves say that one cooshee is worth five orcs.

Although cooshee can go head-to-head with many creatures, their strength lies in the chase. When they are pursuing an opponent, whether it be game or humanoid, the cooshee can begin an all-out sprint, increasing its speed to 24" for five rounds. At the end of this time, if it didn't catch its prey, it slows down to 15" for at least five additional rounds while it catches its breath.

When they draw within range of their foe, cooshee may attempt to overbear their enemy. If this opponent is fleeing, the cooshee gains a one-round size bonus. That is, it becomes Size L for the purpose of the overbearing attack roll and thus gains +4 to attack rolls (see "Overbearing" in the *Player's Handbook*, p. 98). If it rolls a successful attack roll, the cooshee has successfully dragged or knocked its opponent to the ground.

If it attempts to overbear, it must forfeit all its other attacks during that round. In the round following, it automatically pins the quarry and may make its ferocious bite attack on the helpless prey. The victim may attempt to break the pin by making a successful Strength check. If it fails, the victim loses any Dexterity bonus to his or her Armor Class. Further, the cooshee gains a +4 to attack targets so pinned. They tend to favor the throat of the creature over any other target. If the cooshee have been ordered to subdue their

target, they simply close their jaws over the quarry's throat, resting their teeth against its skin. This tends to be an effective method of forcing surrender.

**Habitat/Society:** Cooshee mate for life. If one of the pair is killed, the other generally wastes away. Cooshee puppies bond strongly to their parents, and the parents are highly protective of their offspring. Only a fool comes between an adult cooshee and its children.

Cooshee tend to avoid other "normal" dogs, seeming to find them inferior. In this regard, the cooshee echo their elf masters, refraining from much contact with other races.

The cooshee have an incredibly loud bark that can be heard more than a mile away. However, they only bark to warn their masters or packmates. In almost no other circumstances will a cooshee emit noise.

Cooshee often live to be more than 100 years old.

**Ecology:** No one seems to know whether cooshee are a naturally occurring creature or if they are a creation of the elves. The cooshee seem almost too perfectly designed for their tasks to be anything but created beasts. However, their affinity with nature, closely mirroring that of the elves, leads one to believe that they are, in fact, entirely natural.

Although elves have had much success in gaining the trust of the cooshee, few other races have been able to establish a rapport with the hound. Even experienced animal handlers of other races find it incredibly difficult to approach one of these magnificent creatures. Thus, unless the cooshee has been magically *charmed* (it saves at +3 vs. any *charm* spell), it will only be found in the company of elves.

**Appendix: Adventure Suggestions for Gnome and Halfling Campaigns**

# Introduction: The Small Folk

Why a book for the small folk? And what do gnomes and halflings have in common that warrants their inclusion in a tome together? The answer to the second question lies in the first, for it is the diminutive size of both these popular races that is the most significant factor in the way they cope with their environment.

The worlds of the AD&D® game can be frightening and overpowering even to characters broad of girth, potent of magic, and possessing strength great enough to face many of those worlds' challenges. Imagine how much greater the danger to beings of small stature, limited strength, and little or no magic.

This is the environment faced by the gnome and the halfling. It is a world teeming with larger races, each of whom claims its niche and jealously guards its prerogatives: prolific humanity, with its potent wizards and powerful clerics; dour dwarves, with their mighty fortresses and their doughty fighters; enchanted elves, masters of the woods; not to mention the monsters--giants, trolls, goblins, ghosts, and dragons--that lurk every where.

To counter these inherent disadvantages, and to make and keep a place for themselves in a hard world, gnomes and halflings long ago developed several traits that allow them not only to survive, but to flourish. Common to both races is an instinct for avoiding direct conflict when possible. Just as valuable is a gift for being unobtrusive. But most important of all, perhaps, is the open-mindedness both halflings and gnomes show in their dealings with members of other racial groups.

Despite the many traits they share, gnomes are not halflings and halflings are not gnomes: each race remains distinct unto itself. Consequently, this book is divided into two major sections--one about gnomes and the other about halflings. These sections contain all a player or DM needs to know about the society, character, subraces, and kits of these diminutive demihumans.

Still, it's worth thinking about a few considerations that apply to both gnomes and halflings, especially those that relate to their size (which is small not just in comparison with humans but most of the other intelligent creatures with which they share their world). These are the traits of the races that are most useful to players, as well as important hallmarks of any all-gnome or all-halfling campaign.

## Cooperation

Gnomes and halflings both have learned the value of cooperating with members of other, larger races. Halflings typically carry this interaction farther than do their bearded cousins, but gnomes, too, understand that alliances and friendship make for more prosperous neighbors than do feuding and war. Members of both races are not inherently adverse to making business deals with dwarves, humans, and elves--or even humanoid

monsters, provided there is no inherent racial antipathy. Even where such enmity exists, as between gnomes and kobolds or goblins, it is usually the result of competition for living space; in settings where this traditional bone of contention is absent (as in the AL-QADIM® setting of Zakhara), gnomes find it easy to befriend even these traditional enemies. Naturally, halflings and gnomes alike will be cautious regarding offers of mutual cooperation from those who have been active enemies in the recent past, but at least they will give such offers a fair hearing.

**Alliances:** The value of a military pact with a strong neighbor is an obvious one to any race. The trick, however, is to avoid the smaller partner being dominated or swallowed up by the larger. The small folk have developed diplomacy into an art and are adept at being able to negotiate mutually-beneficial pacts with a variety of their neighbors. For example, elves and dwarves might ally themselves with different groups of humans but not with each other, while the humans probably will have trouble getting along even among themselves. Halfling or gnome communities in the same area are quite likely to have mutual assistance agreements worked out with the above mentioned dwarves, elves, and several of the human nations. Of course, these pacts will apply to outside threats only, as the small folk have no desire to get involved in the internal power struggles of their neighbors.

Even in cases where no military alliance is formed, a community of the small folk will strive mightily to maintain peace with its neighbors. Halflings and gnomes will readily suggest or agree to negotiation over points of contention, and they are capable of carrying on these talks for a very long period of time. If a group of humans decides to resolve an issue by force, the small folk will probably agree to the terms without violent resistance unless a matter of strong principle is at stake. However, even in acquiescence the halflings or gnomes might find a way to make the human victory a hollow one.

Say, for example, that a small patch of forest forms a common border between a human town and a halfling village. The halflings will strive to see that the woods is preserved and shared, even to the point of bestowing upon their neighbors gifts of game, mushrooms, and nuts from the woods. If the humans suddenly claim the woods as their exclusive property, the halflings will spend a long time trying to talk them out of this selfish notion--and they'll continue to use the woods as they always have for so long as the talks last.

If, however, the local human ruler issues an order barring halflings from the forest and sets guards around it to see that he or she is obeyed, the halflings will probably resort to discreet poaching, using their skills at moving silently to evade the guards. Ironically, without the tending of Forestwalkers and Leaftenders (see the halfling kits), the forest will produce much less--and the humans probably can't even *find* the mushrooms! Within a short time, the woods will become a wilder, more desolate place. Thus, both sides suffer from the humans' greed, and--if the friendship between the communities is maintained--the halflings will hope that in a few years the human policy can be reversed.

In an extreme case, where the human ruler decides that the woods should be cut down and the lumber used to build him or her a new summer palace, the halflings might be driven to more dire resistance. If the forest is really important to the community's survival and identity they may feel compelled to fight for it. Rather than declaring war on their neighbor, they will sabotage logging operations, waylay small parties of loggers, and generally make the project too time consuming and expensive for the humans to continue.

In all cases of possible conflict, halflings will first try affability, progressing from there to passive resistance, and only resorting to guerrilla warfare if all else fails. Gnomes (especially Rock Gnomes) are somewhat more quick to anger under mistreatment, but they too will never be the aggressors and will gladly end hostilities at the very first opportunity. It's easy to underestimate the small folk, but they make tenacious foes to those who insist on becoming their enemies.

**Intermingling:** To varying degrees both kinds of small folk are open to the cultures of other races, whether this means individual gnomes and halflings living amongst humans, dwarves, and elves or accepting members of the "Big Folk" into their own communities. Between gnome and halfling, a member of one group will be warmly welcomed and feel quite comfortable living among or visiting the other.

When gnomes or halflings live among another race, say in a populous city, they are adept at retaining their old customs while adapting them to the traits and peculiarities of the people around them. The hearth, so essential to the halfling, or the fire without which no gnome dwelling would be complete, will be found any  where a member of the respective race calls home--even if "home" is a corner in a crowded tenement and the hearth a mere candle or a tiny flame nourished within an oilpot.

At the same time, the small folk will venture forth, sampling the city's wonders, exploring its corners bright and dark, and as likely as not making a few friends in the process. Within a short time after their arrival, chances are that they will be productive and popular members of the urban community.

## The Invisibility Factor

There isn't any magical vanishing act (with the exception of certain gnome illusionists), but both gnomes and halflings have inherent talents at "blending into the woodwork," so to speak--at least, in situations where they desire not to be noticed. This is not so much a matter of size as it is of skill; a skill they take time to cultivate (it's significant that the favorite game of both gnome and halfling children is "Hide and Seek"!).

In woodland settings, this trait is illustrated most effectively by the halfling's ability to literally disappear among the underbrush. While gnomes aren't quite so adept at this, their keen sense of hearing and ever"present diligence generally allows them to hear someone approaching and take shelter before they are discovered.

In more social circumstances, the small folk are adept at directing attention away from themselves, whether in a city street, crowded tavern, or elegant dinner party. By moving quickly and smoothly, the diminutive characters will often cause a human or elf to react with "I could have sworn there was a gnome there! Where'd he go?" And when others are asked, it turns out that no one saw him leave or arrive, but they all have some vague memory of his presence! Under most circumstances, it's possible for a gnome or halfling to slip away with little or no warning.

One skill developed by both of these races is the art of diversion, often in very subtle forms. With a quick glance off to the side, a slight widening of the eyes, or sharp intake of breath, many a halfling or gnome has successfully diverted the attention of another character. Halflings use the time thus gained for some quick picking of pockets or other sleight of hand and to escape from potentially sticky situations, while gnomes use it to

buy time and to set up elaborate practical jokes.

### Fighting Small

When courtesy and elusiveness both fail and the small folk are forced into combat, they are adept at using their size to their own advantage. Whenever possible, halflings and gnomes will choose to fight in an area where larger creatures are hindered by overgrowth, low ceilings, or narrow constricting passages. Gnomes are particularly skilled at fighting giant-class creatures, using their small size and nimbleness to gain the -4 bonus to Armor Class against them; halflings employ their Dexterity in other ways and have mastered the use of small missile weapons so that they can do battle with larger creatures before those hulking brutes get close enough to grapple.

In their homes, villages, burrows, and warrens, the small folk will often prepare an escape route that is only large enough to let a gnome or halfling squeeze through. If these crawlways are framed with sturdy stone entrances, they can effectively block pursuit by larger creatures--and even if they're merely dirt, the time and effort needed to expand the tunnels often allows the fleeing gnome or halfling family time to escape.

In any conflict, the rules the small folk rely on to survive are easily summed up: never lose your head, take advantage of the Big Folk's bulk and clumsiness where possible, and, when all else fails, run away.

## Gnomes

*The full moon cast its pure illumination across a region of rocky hills, etching each knob in coral light or black shadow. Fringes of forest clustered among the stone of cliff and pinnacle, like shaggy hair trailing from the scalp and shoulders of granite-faced giants. Higher and higher the moon climbed into the night sky, bringing more of the landscape into brilliant relief.*

*Yet even that brilliance did not penetrate the shadowy realms of forest in the valley bottoms, where dank cliffs glowered overhead and narrow tracks wound their way through inky shadow.*

*It was here, on these invisible trails, that small figures moved in steady progression. They came from every where, emerging from narrow cave mouths in the rocky cliffs, or dark ravines in the depths of the forest glen--and even from gaps in craggy stumps, where the hollowed shells of ancient trees provided this small folk with access to their well concealed abodes.*

*They remained in the shadows as they followed the secret tracks. Each figure was short, no more than half the height of a man, but these little folk walked with a confidant and steady march, as if they knew that nothing would stand in their way on this night. Small beards, neatly trimmed around the chin, distinguished the faces of the males, while the rounded cheeks of the females were framed by long, unbound locks of curling hair.*

*Finally the marching columns came to a gathering of the trails, and here the path entered a narrow slot between two sheer and craggy cliffs. One after the other these small folk marched into the crack, following the twists and turns that would have blocked the passage of a creature any taller or any wider.*

*Eventually the enclosing walls spread away, letting the glory of the moonlight reveal*

*a rock-walled valley. A pond of cool water reflected the light in wind-rippled sparkles, while a narrow waterfall spumed like a column of ivory down the face of a towering cliff.*

*The file of figures marched steadily and silently into the vale, gathering by village and clan into its corners, settling themselves in grassy clearings or atop rocky outcrops. More than a thousand were already here, and thousands more had yet to come.*

*But enter they did, as the moon neared its zenith. Now the entire floor of the valley was washed by the cool illumination, as the last of the little fellows entered via the narrow crack. They settled themselves comfortably, and though the vale teemed with upraised faces, no sound disturbed the still, midnight air.*

*And then the moon began to fade.*

The sturdy but diminutive gnome is perhaps the most misunderstood of the traditional AD&D® game character races. They're kind of like dwarves, of course . . . but isn't there's more to it than that?

Indeed there is. Gnomes do share some traits with their longer bearded cousins: they are exceptional miners, comfortable underground, and resistant to magic. Yet, to the shorter nosed dwarves, gnomes seem excessively frivolous, sometimes even weaklings. Gnomes are quite comfortable out of doors, well at home in a forest. The major rituals of gnomish life all occur beneath the stars, and no cosmic symbol is as important to them as an eclipse, in contrast to the dwarves, who prefer nothing so much as solid rock overhead and care little for cosmic occurrences of any kind.

Gnomes are also cheerful and social creatures, of good-tempered and tolerant disposition. They regard rudeness as a major fault--a characteristic which in itself is enough to mark them as very different from most dwarves! Gnomes relish the company of other gnomes and will eagerly compete in the telling of tales. Their calendar is marked by many festivals, each of which is an occasion of great feasting, drinking, singing, and dancing.

Although gnomes are friendly, they are also reticent; it is possible to know a gnome for many years without learning much about him (or her). When a gnome does become friends with a member of another race, that person is adopted by the gnome's whole family as someone they like and trust. Gnomes have much to fear from the larger creatures of the world, but they have not allowed this caution to become a compelling paranoia.

Very fond of good food, gnomes show little imagination in their recipes. They are skilled with fire, and quite uncomfortable--even forlorn--if circumstances prevent them from having an evening blaze.

Finally, the gnomes have raised the art of the illusionist to a cultural heritage that permeates many aspects of gnomish life and society. The steadfast loyalty and useful skills of a gnome character can provide fine additions to any group of adventurers.

## Gnomes in AD&D® 2nd Edition

Gnomes as a player character race are introduced in the *Player's Handbook* and the *DUNGEON MASTER® Guide* .

In addition, as NPCs they have been covered with an entry in the *Monstrous Compendium*, Volume One. Two of the gnomish subraces are also covered in *Monstrous*

*Compendium* entries--the Svirfneblin in the FORGOTTEN REALMS® Appendix (MC3) and the Tinker Gnomes (Minoi) in the DRAGONLANCE® Appendix (MC4).

### New Stuff About Gnomes

This section of *The Complete Book of Gnomes and Halflings* will attempt to flesh out the gnome and his or her society. The way these little people live and interact, the things that motivate them to be brave, cautious, or shy, and the kind of world they desire for themselves and their offspring are all treated in some detail.

In addition, the various subraces of gnomes are distinguished--including the Rock Gnomes, who are the typical gnomes of the campaign world, as well as the Deep Gnomes (Svirfneblin) and the Tinkers. A new subrace, the Forest Gnome, is also introduced here. Close to Rock Gnomes in many ways, they are nevertheless a distinct group, preferring the habitat of wooded glades and deep meadows to the rock-and-dirt-walled underground lairs of their more common kin.

The section also includes a selection of player character kits for gnomes, each of which entails specific advantages and liabilities, allowing players to tailor their characters toward the specific desires of the PC's campaign and background.

The final chapter in this section briefly describes a typical gnomish village, designed so it will easily fit in any AD&D® campaign world. This warren can serve as a suitable "home base" from which to launch an all-gnomish campaign. Finally, the Appendix at the end of the book contains several adventure suggestions for gnomish PCs.

## Chapter One: Myth of the Gnomes

*The moon faded as the shadow of the world slipped across its surface, until the natural amphitheater--recently so brilliantly illuminated under the full circle of white glare--slipped into darker, deeper shadow. Finally, in nearly complete blackness, the masters stepped from their niches onto the stages of honor set around the gathering. Each of these stages was a pinnacle of rock, rising several dozen feet above the heads of assembled gnomedom.*

*One of these masters raised his hands and muttered an incantation. Immediately the midnight air around him flared into a blossom of red light, light that spilled like a shower of liquid onto the floor of the valley. Another master spoke, and green illumination grew in a spurting fountain around her. Soon other showers of light, in blues and whites and pale yellows, spread across the darkened vale. The rock walls reflected the magical flares until the whole of the bowl-shaped vale brightened under the illusionary magic.*

*Then the circle of lights faded again, as a file of stunted figures moved into the smooth clearing beside the lake. Abruptly, these gnomes raised their hands--and the tale of the gods began . . .*

Unlike most other civilized races, the gnomes do not have a creation myth. Instead, they view the world--and their place in it--as a constant within the flow of time, changing only in small and insignificant ways. In the big picture, they assume that things will remain very much as they always have been. Good and evil, chaos and law, exist in

equilibrium, and the preservation of this balancing act is the primary purpose of time.

*A great wall of white light flickered into the sky. A fountain of golden sparks appeared in the midst of the pale illumination, and the whiteness encircled the gold like a mantle wrapping royal shoulders. Slowly a figure grew distinct--gnomish of form but enormous in size, covered with rippling golden, his eyes gleaming like twin diamonds of incomprehensible size and value.*

*Murmurs of appreciation and comprehension rippled through the assembled gnomes. They knew that this was the image of Garl Glittergold, the patriarch of the gnomish pantheon of deities from time immemorial. In mute confirmation, the gleaming shape of a huge, silver-bladed axe materialized in the god's hands. This, they knew, was Arumdina the Justifier, the great battleaxe that would cleave the enemies of gnomedom as easily as she might slice through water.*

*Other fountains of color spurted upward, and within them grew the shapes of additional gods--the mischievous and merry face of Baervan Wildwanderer; the calm, stoney features of Calladuran Smoothhands; the vibrant metal-faced visage of Flandal Steelskin; Segojan Earthcaller's benign features--until the whole cosmic family was represented in the bright vale.*

*Only then came the creeping white shadow, reaching forward with steel-shod claws, its shape like that of a blunt and blinded beast. It glowed like a corpse-candle, its illumination swallowing up all other light, its pale glare unmistakably pure evil.*

*The gnomes gasped collectively, and little ones instinctively shrank beside their mothers, for they all knew that this was Urdlen--the dark center of evil that remained, even within gnomedom, always ready to flourish in the world.*

The gnomish outlook on life requires a very balanced view of the universe. Thus, while gnomes consider themselves and their race to be generally good, the force of evil in the world--and even within the gnomes themselves--cannot be denied. Indeed, only by acknowledging evil, by recognizing it as the counterpoint of goodness, can the balance of all things be maintained.

Like the gnomes themselves and the other gods, Urdlen the Evil One is assumed to have always been there, and to remain for all time to come. Yet only in the steady struggle against the creature and what it represents can the truly happy and vital nature of these people be insured.

*The colors flowed and flamed. In their towering pillars they told of the great battles of life, as darkness ever strives to swallow light but always the brightness breaks through.*

*Thousands of gnomish throats first howled with laughter, then groaned in collective grief, as the images of the gods cavorted across the epic stage. They watched in awe as Garl Glittergold raised his axe, chopping at imaginary stantions of stone to bring a thunderous collapse--this was the tale of Garl's triumph over Kurtulmak the kobold god, in which Garl brings down the cavern that Kurtulmak would have made his prison upon his captor's head.*

*Next the images of a thousand gnomes, arrayed for war, marched from the cliff walls, striving toward each other with braying trumpets and drums that pounded like thunder. But again came Garl Glittergold, the goldenskinned giant of a gnome, and with a swipe*

*of his axe he cast glittering sparks of light all across the ground. Immediately the gnomish host threw down their arms, and the audience roared with amusement as they scuttled about to collect the gems that their deity had scattered. By the time the gathering was done, the weapons were lost and the trivial argument that had once propelled them to war had been forgotten.*

Central to the mythology and self awareness of the gnomes is a sense of the race's togetherness--even among the different subraces that make up the whole (see Chapter 2). Indeed, one of Garl Glittergold's main tasks in the world is to intercede in potential gnome-to-gnome conflicts, usually by humor and diversion. It is this awareness that makes conflicts among these folk--whether they be marital arguments, property disputes, disrespectful youth, bitter clan rivalries, or warfare--so extremely rare.

When they do occur, the practicers of violence (on both sides) are likely to face complete ostracism until the conflict is resolved. It is interesting to note that, once resolution is achieved, the gnomes are usually quick to forgive and to welcome transgressors back into the fold. Their patience is not limitless, however, and blatant aggressors or bullies who repeatedly hector others are not likely to be easily forgiven. Fortunately, such malefactors are quite rare.

*The image of the goldenskinned gnome, surrounded by his entourage of lesser gods, cavorted from mountaintop to hillcrest, scampering around the vale that held so many of his people. They laughed and roared at his antics, cheering as he and Baervan sat together at a table and alternately stole a succulent haunch of roast back and forth from each other. The illusionary roast, which was the size of a small house, sizzled and sputtered, casting the warmth of steam and the scent of its juices enticingly across the gathering.*

*But then the crowd drew breath in hushed anticipation as they saw, lurking in the hollow below Garl's golden image, the hideous bulk of Urdlen, The Crawler Below. Reaching upward with steely claws, the hairless, blind beast groped for the higher gods, seeking to strike and injure them in its spite and hate. Small gnomish children, not yet initiated in the scope of the tale, shouted warnings, their squeaking voices rising above the hush and stillness of the vale.*

*Garl took no notice, however, instead choosing that moment to perch on one foot and do a wild, spinning dance for the edification of the crowd. Ever upward crept the monstrous mole, until those steel talons reached almost to the great god's golden boot.*

*Suddenly, just as Urdlen prepared to lunge at its apparently unsuspecting victim, Garl leapt into the air and did a double somersault backwards over the creeping beast, finally coming to rest on a hilltop a full quarter-mile away. Hissing in hate and spite, the evil mole reared up to make a last desperate swipe at its escaping prey, only to overbalance in its haste and fall backward, rolling over and over like a runaway snowball as it slid down the slippery slope, not stopping until it hit the bottom of the shaded vale between the two summits. A moment later an avalanche of gems it had dislodged in its fall buried it from sight.*

*And then, to the echo of Garl's laughter and the relieved cheers of ten thousand gnomes, the shadow slipped from the face of the moon. As brightness again filled the vale, the performance of the illusions faded . . . and the celebration began.*

The task of the gnome, as he or she views his or her place in the world, is a mixture of important work and equally important play. Whatever the nature of the job at hand, a gnome will apply himself or herself to it with great good humor, even carrying his or her joking wit and humorous outlook into the subterranean depths of a mine or down the forest trail.

But it is when the work is done that the true nature of gnomehood becomes apparent. No one could mistake a boisterous gathering of singing, dancing gnomes for a hard-working bunch of dwarves. Indeed, the humor that possesses them comes to the fore in these days of celebration. For example, the festival of the Lunar Eclipse described in this chapter runs until the next full moon. For a full month, the gnomes set their cares and chores aside, using the cosmic occasion as an excuse to gather from far and wide, spending their days and nights in a loud and boisterous celebration of themselves and their role in life.

## Gods Of Gnomedom

Gnomes are not a tremendously devout folk, but they do have a well-developed pantheon of deities, and they like to honor their gods with frequent "observances"--rites that tend to be performed, naturally, as wild and raucous festivals. The major gods listed below are described in more details on pages 33-37 and 71 of DMGR4, *Monster Mythology* .

**Garl Glittergold (Greater God)** is the patriarch of the hierarchy and probably the most approachable of all the Greater Gods. He often travels the worlds looking for mischief to get into. He appears as a gold-skinned gnome with gemstone eyes that shift from sapphire to emerald to ruby.

A master of pranks, Garl is a good-humored jokester who is nevertheless proud and protective of his diminutive followers. His chief concerns are twofold: to see that gnomes every where cooperate and work together and to remind them that while life may sometimes be hard, it's important to always keep a sense of humor.

Garl carries his intelligent two-headed axe, Arumdina, every where he goes; she is more a companion than a possession. Although he is a capable fighter, he prefers to use trickery and illusions to accomplish his goals, and encourages his followers to do the same.

**Baervan Wildwanderer (Intermediate God)** is the most popular member of the pantheon after his friend Garl, for he is the protecter of the forests and glades that are so important to gnomish well-being. Even the Svirfneblin honor him as the "Father of Fish and Fungus." Baervan is also the patron of gnomish thieves and a mischief-maker to rival Garl himself. He is pictured as a spry old gnome with nut-brown skin and a jaunty beard. His friend and constant companion in his escapades is a giant raccoon named Chiktikka Fastpaws.

**Callarduran Smoothhands (Greater God)** is the master of stone, worshipped primarily by Svirfneblin. The Deep Gnomes consider him equal in might to Garl Glittergold,

though he is largely ignored by the other subraces. It was Calladuran who taught Svirfneblin how to summon and befriend earth elementals. He will often send his avatar to aid his people; his appearance is that of a wiry Svirfneblin miner, indistinguishable from virtually any other Deep Gnome except for a golden ring with a star insignia he always wears.

**Flandal Steelskin (Intermediate God)**, with his skin of mithril steel, eyes like flaming coals, and beard of silver-blue, is the patron of gnomish smiths--not just blacksmiths but also goldsmiths, silversmiths, and all other workers in metal. He is physically the strongest of the gnomish gods, and his uncanny ability to sniff of the veins of metal that thread through the earth makes him a patron of miners.

**Segojan Earthcaller (Intermediate God)** is a nature deity whose province is the creatures who burrow through the earth; he taught the gnomes how to befriend moles, badgers, and other subterranean animals. He appears as a grey-skinned gnome clad in armor made from grass and roots, accompanied by an intelligent stone golem.

**Urdlen (Intermediate God)**'s form is that of a white mole, hairless, sexless, and blind but with wicked claws of steel. A mindless force of malicious evil and destruction, Urdlen serves as a warning to every gnome to beware the taint of greed that lies within the gnomish delight in gems and jewelry. In keeping with the importance of a balance of forces, Urdlen's place in the pantheon is unquestioned, though the god is greatly feared and secretly reviled. Its few worshippers destroy gems and works of art to propitiate the god and thus are regarded as immoral villains by the bulk of gnomish society.

## Chapter Two: Gnome Subraces

The gnome subraces are very distinct groups of these diminutive demihumans. Two of them, the typical gnome (also known as the Rock Gnome) and the Deep Gnome, or Svirfneblin, have been introduced and used in a number of AD&D® products. Hence, both have long been known to players and DMs.

The third type, the Tinker Gnome or Minoi, is a native of Krynn, encountered primarily in DRAGONLANCE® campaigns (though, distressingly, they have been known to spread to other realms through the use of Spelljammers). These beings are very much like typical gnomes in appearance, but their personality and outlook, and especially their overzealous love of technology, makes them very distinct as a subrace (and an extreme menace to themselves and their companions).

A fourth gnomish subrace, the Forest Gnome, is introduced here. These shy folk are relatives of the Rock Gnome, though they do not share their cousins' love of mining and excavation. The rarest of gnome subraces, the Forest Gnomes is most likely to be encountered in pristine woodlands and undisturbed wilderness. They tend this habitat with surprisingly fierce determination.

In keeping with the gnomes' lack of a creation myth, they have no folklore to describe the origin of the different subraces--the different branches of the racial family are assumed to have always been there. While there's no hostility between the subraces (unlike the High Elves and the Drow, or the Hill Dwarves and the Duergar), there is also

little contact. Each subrace keeps mostly to itself, and it is *very* rare to find mixed communities of Rock Gnomes with Svirfneblin, Forest Gnomes, or (Garl forbid!) Tinker Gnomes.

## Rock Gnomes

Big of nose, quick with a laugh, cheerful, visionary, and industrious in their approach to life, the Rock Gnomes form the picture of the gnomish race as it is viewed by most of the larger folk who know them.

*"I've had some experience with the little fellows, if I do say so myself . . . matter of fact, I had a whole team of 'em apprenticing in my smithy a while back. They were good workers, too--though not quite serious enough for my taste. Too many jokes and pranks, not a good idea around a hot forge! And those illusions! Never did know if it was a real fire I was lookin' at or just one of them bright spells.*

*"Still, they caught on quick to everything I tried to teach 'em. They could shovel coal good as any dwarf--well, good as some dwarves--and they showed a real gift for wielding the hammer and shaping the steel. 'Course, they don't have the patience to make a real quality sword or axeblade, but they had the technique down okay. They'd batter at it awhile, then one of 'em would make a joke and the next thing you know the bellows'd be idle and the metal would be gettin' cool.*

*"Another thing, too--when it came to making the hilt, that's where they really shined! I've never seen gemwork like those gnomes could do, working any kind of stone into a leather hilt, wrapping it onto the steel butt with scarcely a waver or imperfection. You know, as long as they let a dwarf do the finishing of the edge and the tempering of the blade, those gnomes could put the finishing touches on a weapon like you've never seen before!*

*"When they were done with work--now that's another story. Showed no proper respect for their teachers or elders. Sat around and drank like fish, far as I could tell. And those songs ! Many's the time I got up out of a sound sleep and had to kick 'em out of the place, just so I could get a little rest (I had to get the fire going before dawn, you know--that's another thing you couldn't count on the gnomes to do!).*

*"Still, you know, I kind of miss 'em. Would have been glad to keep 'em on, too. A couple were skilled enough to be journeymen--might have even made the mastership! But that weren't for them. Nope, instead they learned what they could and then, all in a pack, just up and left one day. I heard tell they went back to their grotto, but of course I've never been up there to check."*

--Gwintroc Fanish, dwarf and master weaponsmith, on his experiences in working with Rock Gnomes

Rock Gnomes are the most common type of gnome among the known worlds, and indeed, when one speaks of a "gnome," chances are he or she means a Rock Gnome. While not a populous race in comparison to humans or other demihumans, they are encountered in a wide variety of environments, showing no particular preference for any one type of climate. They do, however, tend to make their homes in areas with an

abundance of natural rock (even if it's invisible under a layer of loam and forest).

All gnomes have a fondness for gemstones of all kinds, and in fact each subrace has a stone that it reveres above all others. No other gnomish race, however, is as adept at cutting and shaping these precious baubles as are the Rock Gnomes. The gem symbol of this subrace is, appropriately, the diamond. Diamonds are used as symbols of status and accomplishment, and wealthy and highly regarded clans will often have dishes, candelabras, and other elegant possessions encrusted with these hard and precious stones.

The most distinctive physical characteristic of the Rock Gnome is an enormous nose--a proboscis that is larger than that of any dwarf or human, despite the gnome's diminutive size. Indeed, the size of one's nose is a matter of some status among Rock Gnomes, and more than one good-natured debate has resulted in actual comparisons being made. The true test of a mighty nose is the ability to poke it into your opponent's eye without having his nose do more than tickle the fringe of your beard (the use of the male pronoun is not generic here; females pride themselves on big noses too, but in addition to lacking beards they are less prone to such boisterous comparisons).

Rock Gnomes average about 3 1/2 ' in height. Unlike the burly dwarves, who tend to weigh as much or more than the average human, Rock Gnomes are lightly-built. Their small frame is deceptive, however, for despite their size these gnomes are as strong as most humans.

The eye color of a Rock Gnome is predominantly blue, though shades of green and, rarely, yellow or brown are not unknown. Such unusual eye colors are apparent from birth and is considered to signify either very good fortune or very dire omens, depending on the traditions of that particular gnomish community.

The brownish color of the Rock Gnomes' skin can be encountered in many shades, ranging from a light tan to nearly black. While the race does not avoid the sun, they suffer no effects from exposure--they don't sunburn or tan, so the shade of a gnome's skin has nothing to do with the proportion of his or her life spent outdoors or underground. In mature adults, the hair and beard are almost universally white or pale gray, but in youngsters and adolescents one will find as wide a variety of hair color as among humankind. Only the males are bearded, with facial hair growing in near the beginning of the gnome's second century of life. Unlike dwarves, however, gnome males keep their beards neatly brushed and trimmed, with a maximum length of only about six inches. Sometimes the beard will be trimmed into fashionable shapes such as a goatee, or brushed into a long, curling point (or pair of points, in a *real* statement of high fashion).

While the average lifespan of a Rock Gnome is in the area of four centuries, it is not uncommon to find an elder patriarch or matriarch who has been around for more than 600 years. The oldest of them have been known to approach the venerable age of 750 years.

The first half-century of a gnome's life is generally spent in a carefree childhood. Youngsters are indulged and benignly guided by their elders, with rarely a harsh word or punishment employed against them. The children learn by example and strive to please the adults around them. Sages attribute the fact that all gnomes respond better to praise and encouragement than threats to this upbringing.

By the time he or she has reached 50 years of age, a gnome is expected to begin applying himself or herself to the development of a useful skill and to learn the basics of self-defense and weaponcraft. However, during this half-century-long adolescence, gnomes are still not subjected to an array of responsibilities--instead, they are encouraged

to experiment with a variety of trades and activities until they find those best suited to their own talents and personality.

The occasion of his or her hundredth birthday is of great significance to a Rock Gnome, for it indicates that he or she has reached adulthood. It is customary for his or her family to host a large party, with a gathering of any clans within traveling distance to celebrate the coming of age. Since the party itself is likely to run for a month or more, it is not uncommon for gnomes to travel hundreds of miles for such a get-together! Each clan will bring a practical gift for the newly anointed adult, and it is a cause for great pride if the present is judged to be the finest among the array of gifts. However, the practical nature of these tokens is inviolate--boots, a shield, a sturdy tunic, even a weapon or tool are all appropriate. Gem-encrusted baubles, works of art, or simple decorations, although highly valued by gnomes, will not be given as coming-of-age gifts.

The industrious nature of gnomes is well-documented, and probably represents their closest similarity to dwarves. Like dwarves, gnomes will organize for a task, with each individual lending his or her talents where they will be most useful. When digging a tunnel, for example, the strongest gnomes will work with picks to break up the rock in their path, while others--more nimble, if not so powerful--scamper among the flailing picks, scooping up the debris with shovels and pails. A third group of gnomes, those who are very hardy and capable of great endurance, will carry the crushed rock (often in wheelbarrows, but sometimes in leather sacks slung over the shoulder) out of the tunnel to the dumping grounds.

In their pursuit of mining, gnomes are not so speedy to excavate as dwarves, but they are more careful with what they find. Indeed, many a vein of ore that has been "played out" by dwarven standards has been taken over by gnomes and continued to yield its riches to the more meticulous gnomish miners.

Even while they work, however, these gnomes will pursue their tasks with high good humor, bawdy stories, and a succession of jokes of all types. Only rarely, however, will this frivolity interfere with the effectiveness of the group's work.

Nowhere is Rock Gnome precision more in evidence than in their stonecutting and gemwork. Their skill at cutting, polishing, and mounting gemstones is unsurpassed by any other race. They are also skilled enough metalworkers to make elaborate frames and mounts for jewelry. Indeed, gnomish metal-smiths work better with soft metals such as silver and gold than they do with iron and steel--another significant difference between them and their larger cousins, the dwarves. Gold chain belts, silver necklaces, and shining buttons are all proudly displayed by the well-accoutred gnome.

This is not to say that gnomes cannot become fine blacksmiths when they are so inclined. Indeed, every community will have at least one well-muscled resident who is in charge of toolmaking and of crafting other objects such as dishes and weapons out of iron and steel. Gnomes generally purchase steel from dwarves or humans, however, rather than smelting it themselves. The finest weapons in a gnomish community are generally of outside (dwarven or elven) manufacture, often purchased in trade with the gem and jewelry work that they do so well.

Rock Gnomes also can become skilled carpenters and (perhaps not surprisingly, given their dextrous and artistic nature) exceptional woodcarvers. Though most gnomes do not devote a lot of attention to fabrics, those that do are skilled tailors and embroiderers as well.

In the area of culinary skills gnomes are not so elaborate. In fact, their standards when compared to halflings are downright plain. Their ideal meal is boiled or roasted meat, unspiced, accompanied by potatoes and mushrooms. Also unlike halflings, Rock Gnomes rarely keep cows, so they have little milk, butter, or cheese. Their bread is unleavened and relatively unpalatable to others with more refined tastes.

In the area of brewing, Rock Gnomes believe themselves to be every bit the match of halflings and humans and insist that they make a much tastier beverage than the heavy mead favored by dwarves; some gnomes even champion their wares above the famed elvish wines. Impartial judges pronounce gnomish brews a distinctive but acquired taste. Gnomish brewers make a variety of ales and are ingenious at finding ways to chill these beverages even in the height of summer. They will employ underground storage caverns, often sealed in ice which is brought down during colder months. In fact, many gnome communities will have wooden piping systems installed from these subterranean coolers so that the amber fluid can be pumped to spigots on the surface. Any gnomish innkeeper worth his or her salt (high praise indeed for a gnome!) will have such an arrangement in the cellar, and as a general rule, the better the chill on the beverage, the higher the perceived quality of the establishment.

Rock Gnomes typically make abysmal farmers, but they can be capable hunters and are excellent at gathering the bounty of their native woodlands, including nuts, fruits, grubs, mushrooms, and wild greens. A community will typically tend a small field of grain, which is used in about equal proportions to make bread and ale.

In one area Rock Gnomes most closely resemble elves among all the other demi-humans--in the category of music and dancing. Unlike dwarves, gnomes are very musical, and have designed and perfected a wide variety of instruments including flutes and horns, stringed instruments such as lutes and mandolins, and a great assortment of percussion. The latter range from concave rocks, rattles, cymbals, and gongs to standard drums made of hide stretched over a base of wood or metal. The most talented gnomish musicians are famed for their skill and highly sought as entertainers, and nearly every adult can play some sort of instrument; family gatherings often climax in a cacophony of music-making and merriment. Unfortunately (for non-gnomish listeners, at any rate) their vocal skills in no way come close to their instrument-playing abilities, and since they insist on singing along to most every kind of music, the resulting melodies are not necessarily pleasant to the non-gnomish ear.

A Rock Gnome's idea of an ideal setting for a home is an area of wooded hills with an underlying bedrock of limestone that can be transformed into a complicated network of lairs, tunnels, and stairways. Rock Gnomes are not so comfortable in the deep and dank recesses of the Underdark as, say, dwarves--or their own gnomish cousins, the Svirfneblin. Therefore, their settlements will almost always be found near the surface, where the steep faces of hillside or cliff can provide a number of entrances and airholes to a many-layered dwelling. Often these entrances must be reached along narrow and precarious trails--easily traveled by gnome-sized creatures but perilous to larger would-be intruders--taking one far above steep slopes of jagged rocks, or along the edge of a deep gorge, with a rolling torrent of icy water plunging below.

Rock Gnomes are very social creatures, and generally live in thriving, active communities. Such communities are organized into up to a dozen clans, and all permanent residents are member of one or another of these families. Smaller outposts

may consist of a single tight-knit family, with a patriarch, matriarch, or pair of elders providing benign leadership over three or four dozen gnomes. The typical upper limit of any one community is 400-500 gnomes, mainly due to limitations in the surrounding food supply--not due to any desire for isolation from their neighbors.

Whatever the size of a Rock Gnome settlement, the chain of status will always culminate in one unquestioned leader. To this chief (who is usually, but not always, male) come all crucial decisions on matters of defense and trade, as well as the arbitration of the rare instances of discord within the community. When this chief makes a ruling or command, he or she is obeyed immediately, with a discipline that can instantly transform a pastoral community into a determined work force or warlike army at need.

Most communities of Rock Gnomes will be found within a few days' or weeks' travel of each other, with grand gatherings of the clans--often including four or five thousand gnomes--held every decade or so. These festivals can last for a fortnight or more and generally climax in frenzied musical performances, nose-measuring contests, tournaments to determine who is best at drinking, snoring, and other things, and feasting.

The individual burrows of the Rock Gnomes are small and tidy. Generally a married couple will have a small chamber to themselves, with all children (cousins as well as siblings) sharing a common room. Adolescents are segregated by sex, with a large burrow having two separate chambers for its young males and females respectively. Most of these private chambers will be connected via tunnels to a central family chamber, where the fire is kept, food is prepared and eaten, and the family members meet for the talk and socialization that occupies virtually all their nonworking waking hours. The common room will always have a chimney vented to the outside (often through a very long passage). Ideally, it will have some other access to fresh air and light as well--chambers with no window are considered oppressive and tomb-like by many Rock Gnomes.

The family quarters will also connect (usually via an underground passage) to the other families that make up the clan; and similarly each clan in the community will be connected to the others. At every place junctures occur, there are large chambers. In the bigger towns these areas contain inns and shops, as well as open commons where impromptu parties (as well as many scheduled festivals) can take place.

Gnomes travel frequently among their communities, and many of them will venture into human or demihuman cities out of curiosity. They mix well with halflings and find life in a halfling village quite pleasant. Unlike halflings, they have no particular compulsion that holds them to their own homes or locales, and their long lifespans afford them the time to indulge their curiosity about how other races live.

While Rock Gnomes can survive and even flourish in a community of humans, dwarves, elves, or halflings, few would care to leave their fellow gnomes permanently. It's far more common for a gnome to live among other races for a few decades, perhaps even a century or more, before returning home to his or her own clan. Perhaps a quarter of all Rock Gnomes spend at least part of their second century "seeing the world" before returning to take up his or her role in clan affairs.

Rock Gnomes will sometimes welcome members of other races into their communities. However, humans and especially elves tend to find gnome cities claustrophobic, while the furniture and passageways between rooms are usually too cramped for the average dwarf. Halflings sometimes exchange extended visits to their

gnome neighbors but it's a rare halfling who leave his or her own burrow behind forever.

**Table 1: Rock Gnome Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 18 |
| Dexterity | 3 | 18 |
| Constitution | 8 | 18 |
| Intelligence | 7 | 19 |
| Wisdom | 3 | 17 |
| Charisma | 3 | 18 |

Ability Score Adjustments:
+1 to Intelligence; -1 to Wisdom
Languages: Gnome, Common, Dwarf, Halfling, Kobold, Goblin, and Burrowing Animal (the latter is a language of signs, grunts, and
snorts that allows minimal communication with moles, badgers, weasels, and similar creatures, including giant versions).
Infravision: Yes (60')
Special Features: Rock Gnomes have a number of special abilities. These are described on page 22 of the *Player's Handbook* and are summarized here for easy reference:
*Detect Underground Features* --Like dwarves, Rock Gnomes can locate sloping passages (1-5 on
1d6), flawed stonework (1-7 on 1d10), and approximate depth (1-4 on 1d6) and direction (1-3 on 1d6) underground.
*Saving Throw Bonus* --The Rock Gnome gains a +1 bonus to his or her saving throws versus spell for every 3.5 points of Constitution.
*Combat Bonuses* --Rock Gnomes add +1 to all melee attack rolls against kobolds or goblins, their traditional racial enemies. They receive a -4 bonus to their Armor Class when attacked by giant class creatures (gnolls, trolls, bugbears, ogres, ogre magi, trolls, titans, and giants).

## Svirfneblin (Deep Gnomes)

To most surface dwellers the gnomes of this race are mysterious denizens of the Underdark about whom little is known. Those who judge by appearance see them as stunted and gnarled creatures and believe them to be the Rock Gnomes' evil counterparts, the gnomish equivalent to the Drow and Duergar. In truth, they are no more evil than their more numerous cousins; their sinister reputation is merely the result of ignorance. The Deep Gnomes are the most reticent of all the gnomish subraces, surviving in an extremely hostile environment entirely by their own wiles.

*"Svirfneblin? I loathe them--they are fit only to die on the tip of a Dark Elf's sword! They scurry about the sunless realms with tenacity. We kill them wherever we find them, and still they return! They show no fear of our Drow mages, even when dozens of them perish at a time. Even the priestesses of Lolth, while they slay the sniveling gnomes in mass, do not inspire enough terror to stop their malicious intrusion!*

*"And why do they come? The answer is gems. They thirst for precious baubles with a*

*ferocity I have never seen. They will drive their tunnels into the farthest corners of the Underdark, and this is what makes them a threat to me and my people.*

*"I give you a tale of Desselderekathe, a great cavern network not so very far from my own home. Its mere existence was naturally a threat to us, and thus--more than a century ago--we sent an army to destroy it. I myself commanded a company of lizardriders in the assault.*

*"Our Drow forces struck them from all sides. My own cavalry entered through the cavern ceiling and rode down the walls, striking into the heart of Desselderekathe before the foe knew they were attacked. Our mages cast clouds of poison gas that settled into the city's low places, and into these we drove the screaming little pests.*

*"Within a few hours it was over--not a single Deep Gnome remained alive within the walls of Desselderekathe! We withdrew in triumph, and I myself was decorated by the matron mother of our city's greatest house! Yet within a decade we heard reports that renegade Deep Gnomes had moved into the abandoned ruins. We set a garrison in the place, but they suffered ambush and other treachery--and it proved too expensive to station a full army in what was otherwise a worthless shell. Though there were in fact some gem-bearing rock formations in the region, the excavation proved too troublesome to warrant the return. Seventy years ago we abandoned Desselderekathe, and now I hear that the place is again full of Svirfneblin! I suppose we'll have to do it all again, and I know these runts will not allow us to simply repeat our first attack. We shall have to devise a new tactic, one which may well be more costly in terms of Drow lives. And for what? Simply to insure our destiny, and our right to live in peace.*

*"You see now, I trust, why the Svirfneblin are fit only to be hated, loathed, and despised?"*

--Fassyth Yssarial, Secondboy of House Twylleenimor, Imperial Drow City of Qaucium.

These diminutive inhabitants of the Underdark are as tenacious at survival as the just-cited opinion by their mortal enemies indicates. Unlike their Rock Gnome cousins, they have no friendly neighbors to ally themselves with, forcing them to become entirely self-reliant. Only the few who have won their trust know that they are in many ways as social and artistic as other gnomes.

Why do they endure this frankly hostile environment? The answer is simple: they are drawn by the lure of gemstones, which is more pronounced in the Deep Gnomes than in any other subrace.

The gem that most draws the interest and devotion of the Svirfneblin is the ruby, which is the predominant symbol of the race. The Deep Gnomes view these crimson stones with reverence approaching awe--so much so that they are never used for mundane practices such as ornamentation of garments, weapons, or armor. Rubies are reserved for sacred purposes and are often employed to decorate artifacts that are dedicated to the Svirfneblin gods. They are also favored by Deep Gnome monarchs, so much so that a Svirfneblin king or queen might have a full ring of rubies around his or her crown, with others of the precious stone set in the throne and sceptre.

Svirfneblin average between 3 and 3 1/2 ' in height, rarely exceeding this norm by more than an inch or two. They are creatures of wiry muscle and tough bones, slightly

thinner than their surface cousins but possessing as much strength as any other gnome.

Like their cousins of the other gnomish subraces, Svirfneblin have prominent noses. Otherwise their faces are much narrower. Many males have completely hairless bodies; most females have only thin and stringy hair, which they wear no longer than shoulder length. A Deep Gnome's skin is rock-colored, predominantly brown or gray. Eye color is always a shade of gray, sometimes so dark as to be almost black.

The Svirfneblin are not so long-lived as their surface-dwelling kin, living to an average old age of only about 250 years; a good number meet a violent demise before this time is up. They mature relatively quickly, however, with the first quarter century of life considered childhood and the next two decades as a period of disciplined adolescence. A Svirfneblin is assumed to reach adulthood somewhere around the age of 45 or 50, though this milestone is not marked by any grand ceremony such as is performed by the Rock Gnomes. Indeed, the Deep Gnomes don't even keep track of the passage of days, so there is no way to record one's actual "birthday."

The most valued common skill among the Svirfneblin is that of the miner, with perhaps 75% of any given community's adult males devoting themselves to that pursuit. Svirfneblin miners are exceptionally able with pick and shovel, capable of chiseling a passage through solid stone more quickly than Rock Gnomes or even dwarves. While mining is broken into specializations, such as choppers (who do the actual pickaxe work), scouts (who locate promising veins for excavation), and haulers (who carry the tailings away from the scene), a Deep Gnome miner will be reasonably proficient at all aspects of his trade. The most alluring target of the Svirfneblin miner is, naturally, gems. However, these diligent diggers will also pursue veins of metal, including gold and silver, and they also occasionally gather a stockpile of coal or iron ore--from which they make a very passable steel.

A smaller percentage of the Svirfneblin work force (perhaps 10%) is engaged in the processing and finishing of the gemstone material excavated by the miners. These include polishers, smelters, carvers, and smiths. Though they lack a bit of the exceptional detail skill of the Rock Gnomes, in the other areas they are at least as proficient as their surface-dwelling cousins. Indeed (and unlike Rock Gnomes), Svirfneblin blacksmiths can possess exceptional skill. Their weapons and tools are generally made by Deep Gnome artisans, and these are nearly the equal of the products of the highest level of dwarven craftsmanship or Drow weaponsmiths.

Perhaps because suitable habitat is harder to find in the Underdark than on the surface, Deep Gnome communities tend to be larger than those of the Rock Gnomes. Generally the Svirfneblin live in thriving cities located in deep cavern networks, often with more than a thousand residents. However, these communities are generally separated by great distances from any others of the same subrace, and thus they tend to be more insular than the towns of the gnomes who dwell on or near the surface. Indeed, most Deep Gnomes live out their lives without ever seeing another Svirfneblin community beyond the one in which they were born.

Still, festivals and celebrations are as common among these gnomes as they are on the surface--it's just that the Svirfneblin don't travel from far distances for the gatherings. Instead, each community tends to have its own special observances, and though the whole city will turn out for many of them it is rare that any outside guest would be admitted. Also, these celebrations are not tied to recurring cosmic events, such as

solstices or eclipses; instead, they occur when the city's priests declare that they are due. These instigations occur more for political and psychological reasons than by any regular passage of time.

In fact, it's worth noting that Svirfneblin don't even measure the passage of their lives in years--after all, the cycle of seasons has little meaning amid the eternal chill of the Underdark. However, if the priests notice that the production of the workers has begun to lag, or tempers are growing short among the chieftains and warriors, they will act hastily to initiate a grand festival full of pomp and song, good food and potent (one hesitates to say 'good') beverage.

Svirfneblin festivals are often invoked to recall great events of the past, though again these recollections bear no calendar relationship to the occurrence being commemorated. However, if teams of miners are preparing to embark on one of the periodic quests for new gems that propel so much of Svirfneblin activity, then the priests and illusionists will recall stories of grand expeditions in the past, even trotting out sacred objects encrusted with the jewelry made from the proceeds of these previous missions. Similarly, if a war is being contemplated, or a raid against some marauding monster becomes necessary, the warriors will be sent off with tales of great military campaigns in the past. It's interesting to note that these war stories are not all tales of victory--the Svirfneblin, perhaps because of the many defeats they have suffered over the years, have a keen interest in doomed causes and will draw considerable emotional support from the story of a dramatic last stand made by their forefathers. Even cautionary tales, such as the obliteration of a city by treacherous Drow attack, are related at these celebrations and used as a warning against future lapses of vigilance.

Another unique aspect of Deep Gnome society is that roles are far more rigidly determined by sex than in any other gnomish culture. Males perform all of the mining and warrior work that occurs beyond the borders of the community cavern, as well as most types of jobs within the city as well. Females concern themselves almost exclusively to the vital tasks of raising and preparing food (in the great mushroom farms that are a part of every Deep Gnome city) and the care of the young. In fact, females venture out of their cities so rarely that even the Drow have never encountered any in the neutral territory of the Underdark. Both sexes wear nondescript clothing which, with their ability to stand absolutely motionless, helps them avoid being spotted by enemies.

Besides the many types of fungi that are the staples of the Svirfneblin diet, Deep Gnomes sometimes maintain a small herd of rothe or other underground mammals. They are also fond of fish, and each city is likely to have several shallow lakes where blind trout and other subterranean delicacies are bred and captured. Deep Gnome women are responsible for tending of all these food sources and serve as the fishers and cooks as well as the farmers and herders. Also, salt is an important part of every Deep Gnome meal and is one of the most valued commodities in the trading of the Underdark. In fact, most Svirfneblin food is so heavily salted that a typical surface dweller would find it quite unpalatable.

As a beverage the Svirfneblin prefer for daily use a pungent brew made (naturally) from fungi, fermented by a unique process that involves great amounts of salt and not a little fish protein. It is highly intoxicating, tasting somewhat like an oversalted and watery fish chowder. It has been tasted by a few courageous non-Svirfneblins who (when they finally regain their voices) tend to decline a second serving.

The Svirfneblin also distill a strange drink known as Gogondy about which little is known other than it is deep red in color, kept in wrought iron bottles, and potent beyond belief. It has been called the finest wine in the world and is said to grant strange visions to those who drink it, but more than one human who drank it has promptly fallen asleep for decades or died after the first glass with horrified looks on their faces. The Deep Gnomes prize Gogondy almost as much as rubies and will only give or trade it to their most trusted friends, making it rare indeed.

The Svirfneblin survive in domains that are populated by many implacable enemies. The two most dire among these are the kuo-toa and the Dark Elves, who continually seek to drive these gnomes from territory they consider rightfully theirs. Illithids (mind flayers) often attack individual Deep Gnomes, considering them something of a delicacy, but never in such numbers as might drive away such tasty prey. Svirfneblin rarely encounter surface-dwelling gnomes, and the latter find them little less puzzling than do those of other races.

The cities of the Deep Gnomes are vast and complex places. Many layers of caverns, tunnels, and buildings are connected by narrow corridors and spiraling staircases. Generally, however, at least the central part of the city will occupy a single large cavern, with narrow streets winding among tall stone buildings. If large stalagmites are present, high-ranking Svirfneblin will claim these and excavate the interiors for the private homes; most residences, however, are carved into the natural bedrock of the earth.

Because of the confined nature of the environment, the home of the typical Svirfneblin family is more crowded than that of their surface-dwelling cousins. Parents and children will likely be crowded into a single, rather small, chamber. Families tend to be small, however, so this is rarely more than a half-dozen individuals. They are not so clannish as the Rock Gnomes, so that the population of a city is generally an amalgamated mass of Deep Gnomes, with overriding clan structure dividing the city.

However, they also tend to be rather quick-tempered and fractious (again, by comparison to other gnomish subraces). Every Deep Gnome city is ruled by both a king and a queen, each independent of the other yet equally powerful. The king's province is mining and protecting the community; the queen controls the food supply and is responsible for the day-to-day lives of the citizens. Both posts are determined by popular choice: when a monarch dies, a contest is held to select the best possible replacement, with the winner becoming the new ruler.

Svirfneblin worship the same pantheon as their Rock Gnomes cousins (although they conceive of these beings as Deep Gnomes). Urdlen plays a large role in Deep Gnome mythology, with cautionary tales of how he snared many an unwary Deep Gnome being a staple of any Svirfneblin's upbringing.

**Table 2: Deep Gnome Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 18 |
| Dexterity | 6 | 19 |
| Constitution | 6 | 18 |
| Intelligence | 3 | 17 |
| Wisdom | 4 | 18 |
| Charisma | 3 | 16 |

Ability Score Adjustments:
+1 to Wisdom; +1 to Dexterity;
-1 to Intelligence; -2 to Charisma
Languages: Deep Gnome; Gnome Common; Underworld Common; Drow; Kuo-toan; earth elemental language (a curious "language" without words consisting solely of vibrations; each different pitch conveys a different message).
Infravision: Yes (120')
Special Features: Deep Gnomes have a number of special abilities detailed fully under the entry for Svirfneblin in the FORGOTTEN REALMS® appendix to the MONSTROUS COMPENDIUM® accessory (MC3):
*Detect Underground Features*-- Svirfneblin are very good at determining slopes (1-5 on 1d6), depth (1-4 on 1d6) and direction (1-3 on 1d6) underground, and unsafe stonework (1-7 on 1d10).
*Magic Resistance* --Deep Gnomes have a base magic resistance of 20% and gain an extra 5% for every level beyond the 3rd.
*Saving Throw Bonuses*-- Svirfneblin gain a +3 bonus to all saving throws except those against poison (for which they receive a +2 bonus instead).
*Inherent Illusionist Powers* --All Deep Gnomes radiate *non-detection*. In addition, all have the innate ability to cast *blindness, blur*, and *change self* once per day.
*Freeze in Place* --Svirfneblin can remain absolutely still for long periods, giving them a 60% chance to remain undetected by any observer, even one with infravision.
*Surprise Bonuses* --Deep Gnomes are only surprised on a roll of 1 on 1d10; they surprise opponents 90% of the time.
*Defense Bonus* --The typical Svirfneblin warrior has a Armor Class of 2. Deep Gnomes become harder to hit as they gain experience in dodging in combat, causing their Armor Class to improve by one point for every level beyond 3rd, to a maximum of AC -6.
*Combat Bonuses* --Svirfneblin make and wield *stun darts*, throwing them to a range of 40 feet, with a +2 bonus to hit. Each dart releases a small puff of gas when it strikes; any creature inhaling the gas must save versus poison or be stunned for 1 round and *slowed* for the four following rounds. Elite warriors (3rd-level and above) also often carry hollow darts with acid inside (+2d4 to damage) and crystal caltrops which, when stepped on, release a powerful sleep gas.

## Tinker Gnomes (Minoi)

These unique creatures, native to the DRAGONLANCE® world of Krynn, are among the most technologically . . . er, perhaps we should say 'innovative' creatures among the known worlds. Unfortunately, their keen and inventive motivation is not matched by any particular talent--thus, a Tinker invention is at least as likely to cause harmful or fatal damage (probably to its creator) as it is to do what it's supposed to do. In spite of this, Tinkers are a thriving subrace that have even managed to spread beyond their native world.

*"They're not real gnomes, of course--don't know how anyone could think that they are! 'Course, they might look like us, and sound like us--but that's as far as it goes. There's not an illusionist among 'em, nor anyone else who's got a useful skill to his name,*

*far as I can tell. Fact is, they're a menace!*

*"As for getting into space, that must have been luck. One of 'em invented something that actually worked--a fluke, I assure you--and launched 'em into the stars. The only reason they're still up here is they haven't figured out how to get back down again.*

*"And if you ever see one of those ships of theirs, you'd know what I mean. It's got catapults that shoot nothing but air, gears and propellers that spin to no good purpose, and if you get close to it a blast of steam is liable to shoot out and barbecue you before you can say 'get me outta here!'"*

--Kappelheim Gladdensnoot, famed Rock Gnome explorer and Spelljammer extraordinaire

The Tinkers are a very courageous and curious bunch of gnomes, and Gladdensnoot is no doubt exaggerating when he suggests that their attainment of Spelljamming travel is accidental. Nevertheless, he provides a good example of the attitude held by those few other gnomes who've encountered the Tinkers. Of course, it's not likely that the Tinker would stop and take notice--he or she is probably too busy working on the finishing touches of his or her newest invention (in fact, many Tinkers spend the bulk of their lives working on a few such 'finishing touches')!

In one respect the Tinkers resemble the rest of gnomedom--in the fact that they do value various types of stones, attributing to them great and supernatural powers. However, whereas the other subraces seek gems, the Tinkers hold a different substance as the grandest rock of all: coal. The Tinkers hold that coal (also known as the "Father of Steam") is the most valuable substance of the world, and those places where it can be mined quickly become Tinker Gnome warrens.

In size and stature, the Tinkers resemble Rock Gnomes--so much so that the difference is not immediately apparent, at least when based only upon appearance. Perhaps because their numbers are fewer, there is not such a variety of hair and skin color among Tinkers as is found in their more common cousins: their hair is almost always white or a slightly colored shade that is nearly white. Their skin tends toward brown, in ruddy and earthen shades. Their eyes are blue or, less frequently, violet, but the noses are every bit as prominent as those of any other gnomish subrace.

The clothing of a Tinker is likely to be representative of his or her travels and background--i.e., it will have parts of all kinds of things somehow attached together and providing a modicum of covering. As a rule, the more exotic the better, though the Tinker Gnomes tend to be fastidious about cleanliness.

Tinkers who live out their lives can attain an age of 250 or 300 years, but it must be noted that this is a rare occurrence among the members of this subrace. If one of his or her own inventions doesn't do a Tinker in, chances are good that one of his or her neighbor's gadgets will.

Even in childhood, Tinkers are encouraged to experiment with gadgets and gimmicks, trying different means of making things to perform tasks that could otherwise be easily done by hand. The Tinker reaches adulthood at about the age of fifty (by which time perhaps 10-15% of them have already succumbed to the common fate of their kind). Despite this high attrition, it's not until maturity that a Tinker Gnome's activities begin to get *really* dangerous.

Upon reaching adulthood, the Tinker Gnome must select a guild for himself or herself. The number of guilds available varies by location, but in Mount Nevermind on Krynn--which is the center of Tinker civilization and by far the largest community of these inventive creatures anywhere--there are more than 150 active guilds. These include virtually all areas of practical endeavor, and quite a few impractical ones as well: Weaponry, Steam Power, Hydraulics, Mathematics, Agriculture, Warmaking, Animal Taming, Brewing, Carpentry, Astronomy, Ceramics (Rockmaking), Air Utilization, Historians, Coalmining, Rockcarving, Vehicle Design, and Music.

These guilds are not like the guilds common in many human and dwarven societies, however; in the latter cases, the guild's purpose is generally to impart the knowledge of the masters to a steadily growing crop of apprentices and journeymen. The Tinker guilds have a different philosophy dedicated to a righteously-held belief, to wit: whatever has been done before can be done better with a new and improved invention. Consequently, a Tinker Gnome who enters the Music Guild, for example, will spend the bulk of his or her life trying to design a musical instrument with at least one more moving part than the last instrument designed by a guildmaster (it is not advisable to ask the guild for a performance--whole audiences have been scalded by ruptured steam pipes or deafened by ultrasonic waves of crushing sound).

A good example of the Tinker Gnome tendency of not knowing when to stop is the infamous Giant Space Hamster. Not content with this remarkable achievement, the Animal Breeders' Guild that created the creature promptly began working on developing new strains. The result include such monstrosities as the sabre-toothed giant space hamster, the carnivorous flying giant space hamster ("a regrettable if understandable line of inquiry"), the fire-breathing phase doppleganger giant space hamster, and the miniature giant space hamster (a dwarf variant the exact same size as the ordinary rodent).

However, Tinkers are nothing if not tenacious. After selecting a guild, each member of the subrace settles upon a Life-quest. The actual choice of the quest may take several decades, but once it has been decided, it becomes the reason behind that Tinker's existence. The Lifequest is an attempt to reach a perfect understanding of some device (anything from a spelljamming helm to a screw), a task at which the Tinker very rarely succeeds. Indeed, the best estimate is that less than 1% of these gnomes ever do fully grasp the nature of the object that has occupied their attention for so much of their adult lives; the rest of these easily-distracted gnomes get hopelessly sidetracked somewhere along the way.

Despite the vagaries of their existence, the Tinkers are a fun-loving and generally sociable race. Their speech is unique in both its speed and complexity. Two Tinkers can rattle off information and opinion to each other in a succession of thousand-word sentences, speaking simultaneously and yet listening and understanding (as much as is possible, given the esoteric nature of many discussions) each other even as they voice their own points of view. Those Tinkers who have had some experience interacting with other races have learned to slow the pace of their communication but never quite overcome their frustration with those who can't talk and listen at the same time.

Despite the chaotic impression given by an initial encounter with the Tinkers, these gnomes have a highly-organized societal structure. Their culture is unusual, for gnomes, in that guilds are more important to most Tinkers than their clans; the typical Tinker

identifies himself or herself not by the family he or she was born into but the guild he or she joined upon reaching adulthood. The community is ruled by a council made up of the masters of the various guilds and the patriarchs of the various clans. The result is a paralyzed bureaucracy that nevertheless keeps itself going with debate, argument, near resolution, and subsequent disagreement. Following long and careful consideration (sometimes lasting for years, even decades) the various concerned parties go off and do whatever they wanted to from the beginning.

However, the debates themselves can be well-reasoned, extremely polite, and quite extensive. Just the recital of names at the beginning of a presentation can often take weeks, since the full and formal title of each gnome involved is used--and remember, this is despite the fact that Tinker Gnomes speak very rapidly indeed! For those Tinkers who come from extensive and well-documented ancestry and have themselves lived long and eventful lives, the formal introduction can last the better part of two days. Because of this inconvenience, an abbreviated form of a gnome's name (usually taking less than a minute to recite) is used in daily life.

Tinker Gnomes have the least involved family life of any of the subraces, since all adults are too involved with their Lifequests to devote much time to the raising of their children. The youngsters learn mostly by example, and of course are possessed of that insatiable curiosity that seems to take the place of so many other emotions in the lives of a Tinker. Tinker males and females accept their Lifequests with equal obsession; there is no difference between the sexes in level of recognition and attainment. For example, guildmasters and clan leaders are as likely to be female as male.

Their communities are located underground, but always close to the surface, with plenty of access to fresh air. Their penchant for burning coal to achieve steam makes good ventilation necessary--we needn't dwell on the unfortunate results of those experiments in deep subterranean quarters amid caverns warmed by vast, oxygen-devouring furnaces.

The various chambers of a Tinker community will be connected by various means of transport, powered by steam, spring-power, wind, water, gravity, and any other means available. Types include cars that run along rails or are suspended from cables and pulleys, soaring gliders, `gnomeflingers' (i.e., catapults), elevators that run up and down through shafts bored through rock, and independently-steered carts and cycles propelled by various means. Needless to say, there is a high rate of attrition on gnomish transport--generally a character stands about a 3% chance per trip of suffering grievous injury (usually about 1-12 hit points of damage).

For private living quarters, Tinkers are inclined to settle for any old niche in the wall that can be closed off for a little privacy. They like to sleep in absolute darkness but have absolutely no trouble slumbering amid a thunderous cacophony of noise.

Far more important than his or her bedroom, to a Tinker, is his or her workshop. This area will be a private chamber, if the gnome is influential enough to warrant such a luxury, or if he or she inherits it from a deceased parent (for obvious reasons, Tinkers tend to gain their inheritance at a far younger age than do any other gnomish subrace). The shop should ideally be well-lit, by candle, coal-oil lantern, or natural light. One of the more successful gnome inventions is a network of mirrors aligned to reflect sunlight through long tunnels so that it reaches caverns far underground. Despite its utility, this invention is considered an abysmal failure by most Tinkers, due to its utter lack of

moving parts.

Tinker Gnomes do not worship the usual gnomish pantheon, instead venerating the Krynnish god Reorx, patron of blacksmiths, crafters, and inventors. One of the oft-repeated pieces of evidence Rock Gnomes are wont to put forward in their neverending attempts to prove that Tinkers aren't "real" gnomes is that *"they haven't even heard of Garl Glittergold!*"

Additional details on the Tinker Gnomes can be found under the entry for "Gnome" in the DRAGONLANCE® appendix to the MONSTROUS COMPENDIUM® accessory (MC4).

### Table 3: Tinker Gnome Ability Scores

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 18 |
| Dexterity | 8 | 18 |
| Constitution | 8 | 18 |
| Intelligence | 8 | 18 |
| Wisdom | 3 | 12 |
| Charisma | 3 | 18 |

Ability Score Adjustments: +2 to Dexterity;
-1 to Strength; -1 to Wisdom
Languages: Tinker Gnome, Gnome Common, various human tongues
Infravision: Yes (60')
*Special Features:* Tinker Gnomes share many of the same special abilities as their Rock Gnome cousins, a fact which has led some sages to argue that Tinker Gnomedom is a culture rather than a true subrace. Whatever the truth, all Tinkers have the following innate abilities.
*Detect Underground Features* --Tinker Gnomes can identify sloping passages (1-5 on 1d6), flawed stonework (1-7 on 1d10), and approximate depth (1-4 on 1d6) and direction (1-3 on 1d6) underground.
*Magic Resistance* --The Tinker Gnome gains a +1 bonus to his or her saving throws versus spell for every 3.5 points of Constitution.
*Combat Bonuses* --Tinker Gnomes receive a -4 bonus to their Armor Class when attacked by giant class creatures.

## Forest Gnomes

This subrace is not so common as are the others, but its members fill an important niche in their environment. Forest Gnomes are shy and reclusive, and often the mere arrival of human settlers within their wooded domain is enough to send them migrating to a new, unspoiled home. Nevertheless, they have been known to aid adventurers from other races and are particularly friendly with elves.

*"For the longest time--and I speak of many centuries--we didn't even know they were there. Of course, the Wyndhome Wood is a vast place, full of sheltered ravines and wide, hidden grottos . . . but we elves had always prided ourselves on knowing every inch of the place.*

*"Then came the years of the Troll Tide, and we thought that the forest was lost. All of the elven clans banded together, and we fought for each tree--indeed, not a blade of grass or meadow blossom was surrendered to that horde without a fight--but it seemed that our defeat would be inevitable. There were too many of the brutes, too few of us.*

*"But then, when the situation had grown most dire, they came from those ravines, from the shaded grottos and the darkest thickets, and they lent their arrows and their courage to our cause. Short and frail we judged them--harshly, I admit. But they're smaller even than halflings, and so shy that it was painful even to speak with them!*

*"Yet they fought--and died, in great numbers--for Wyndhome, and their bravery was unsurpassed, their deadly skill decisive. At last, after many lives lost, many villages burned, the Troll Tide was turned away.*

*"In its wake the forest was left in ruins, with smoldering trunks stretching to the far horizons. Yet these shy gnomes--these tiny creatures whose aid had turned the balance of battle--joined with us for the task at hand. It was an effort that took years, but during those years we forged a lasting friendship.*

*"My people were stunned to learn that the Forest Gnomes had dwelled as our neighbors since the very time of our arrival in the wood--and never had we so much as suspected their existence! Sadly, it took a war to breach the wall of their privacy.*

*"But now that struggle is in the past, and for both our peoples we rest secure in the knowledge that, whatever challenges the future holds, we shall face them with our allies at our side."*

-- Kasseryth Daltine, Elven Captainrider and hero

The Forest Gnomes prefer a life in which no one knows who they are or where they live. They dwell in large swaths of woodland, and--unlike the other gnomish subraces--prefer to dwell in houses that are at least partially above ground. They are creatures of nature far more than any of their cousins, and to those rare folks who meet them (and pass through the walls of initial shyness) they can prove to be steadfast allies and delightful companions.

However, this subrace has not totally abandoned the love of gemstones that is so inherent to all gnomes. The emerald is the favored gem of the Forest Gnomes, no doubt because it most accurately reflects the healthy colors of their verdant homelands. While these gnomes can make excellent gemsmiths and jewelers, their work tends to be reverent images of the flowers, leaves, butterflies, and birds that are such a key part of the Forest Gnome's environment.

These are the smallest of the gnomish subraces, averaging from 2' to 2 1/2 ' and peaking out at a few inches under three feet. They share the stocky physique of the Rock and Tinker Gnome and the bulbous nose which is so characteristic of the race in general. They are the only gnomes inclined to wear beards and hair very long, and an older male is likely to have a beard that extends to within a few inches of the ground, and hair that, when unbound, falls all the way to his waist. These beards are a source of great pride to the venerable males, and they often trim them to a fine point or curl them into hornlike spikes that extend to either side.

The skin of a Forest Gnome tends toward a greenish cast of tan rather like bark, although often darkened and ruddy from exposure to weather. Their eyes are generally

brown or blue, but green eyes are not unheard of and are considered very attractive and the omen of a good life for their owner. Their hair color is brown or black, often becoming gray or white in old age.

The Forest Gnomes are a very long-lived people, with an average life expectancy approaching 500 years. Childhood and adolescence blend together in the growing process. Since these gnomes do not generally embark upon a craft or apprenticeship as a life speciality, there is no need to differentiate a carefree youngster from an equally happy-go-lucky youth. Adulthood is granted upon the hundredth birthday, and this anniversary is a cause for great celebration.

Shy and timid when it comes to relations with other intelligent races, Forest Gnomes are very determined caretakers of their wooded domains. They are viewed with friendship by the animals of the forest and have developed a limited language of signs and sounds (similar to the Rock Gnome's 'speech' with burrowing mammals) that allows them to communicate with these creatures, though without a great deal of detail. Thus a squirrel might chatter something about an intruder in the forest and even indicate the general direction of the trespasser, but it can provide no information as to the nature, size, or numbers of the possible enemy (as a rule of thumb, consider all such communications to consist of a single word only; i.e. "danger!" "food," "happy," and the like).

Forest Gnomes are also very adept at protecting and caring for the plant life of their woods. They gather the nuts, fruit, and other bounty of the woods for sustenance, taking meat only infrequently--and always with a reverent ceremony to the spirit of the animal slain by the gnomish hunter. They despise the use of traps, never employing snares, pitfalls, or such traps themselves. When they encounter such devices set by humans or others, the Forest Gnomes have been known to rig the traps so that they capture (with a snare) or injure (as with a deadfall or pit trap) the trapper when he or she comes along to check for game. Generally, the trapper receives the same effect that his or her trap would have inflicted upon an animal.

Aside from meat, Forest Gnomes eat their food raw, though with a great deal of ceremony and politeness. Even a nut or a berry is only consumed after the tree or bush that gave it life has been properly, albeit silently, thanked. Needless to say, meals among the Forest Gnomes are very long, quiet affairs.

These diminutive beings are exceptional woodcarvers, far more skilled than any other subrace at the working of this natural material. They can also be skilled carpenters, and their skills lean heavily toward natural-looking renditions of their structures. A storage shed, for example, might be built to resemble a clump of tightly-clustered pine trees, concealing the fact that there is any kind of structure there at all.

Priests have a higher status in this society than in any other gnomish culture. Baervan Wildwanderer is the patron deity of most of these clerics and has blessed them with a number of duties and tasks, most of which involved the protection and preservation of the forests and the wild creatures found there.

The most hated enemies of the Forest Gnomes are orcs, with troglodytes and lizard-men close behind. These creatures will be ruthlessly attacked and ambushed whenever they are encountered. Despite their shyness, Forest Gnomes have made friends with elves and halflings, though they tend to distrust humans and dwarves, who in their experience all-too-often view trees only as so much firewood. Occasionally, with great courage, one of these smallest of gnomes will venture out of his or her forest domain in a quest to see

the world, though he or she will usually try to return after a few years and will never be entirely comfortable in a place that has no trees.

The gnomes of this subrace tend to live in smaller communities than do their kin, largely because their numbers are so much fewer. A Forest Gnome village will average less than a hundred residents, and the family homes that make up the "village" may be hundreds of feet apart. They are always located in a dense woods and are virtually invisible to anyone who happens to wander through--even a veteran woodsman might stroll down the main street of a Forest Gnome village without knowing he or she was in anything other than trackless wood. In part, this is because the forest gnomes disdain the use of tracks and trails--they are adept at moving through the underbrush while leaving no sign of their passage. Also, their dwellings tend to be concealed within the trunks of large, hollow trees and, sometimes, into burrows that extend below the surface of the ground.

The preferred house of a Forest Gnome, however, is above the ground and within the comfortable wooden enclosure of a tree trunk. These creatures prefer lairs of many different levels since, even to these small gnomes, most hollow trees don't provide a lot of floor space. Instead, the house will be a network of cylindrical rooms, usually no more than four feet from floor to ceiling, connected to the floors above and below by tiny trapdoors and rope ladders or, sometimes, spiraling stairways carved into the wood of the tree. Each floor will have a few windows opening to the outside, but these will be so cleverly camouflaged on the outside by bark or limbs as to be virtually invisible.

Excavated chambers are used for the commons areas of the Forest Gnomes, so that when a whole community gathers (as they do many times a year, to observe this or that celebration) they can do so in large, earthen caverns concealed underground. These chambers are connected by dirt tunnels and are often quite large, with ceilings reinforced by timber and brace. Forest Gnomes have no interest in excavating through stone, and though they will occupy a natural cave if they find one conveniently located, they will never dig into bedrock to expand or shape their surroundings.

A village of Forest Gnomes is organized very much like a large family, with the oldest patriarch or matriarch in the community generally revered as the venerable leader. As far as actual societal organization, there is very little--when Forest Gnomes act as a group (for example, to defend their woodland or migrate to a new homeland) they do so because the necessity of action is obvious to every member of the clans.

Forest Gnomes are sometimes mistaken for brownies by those humans who catch a rare glimpse of them, but the two races are not related. For one thing, brownies prefer rural settings--farms and small human or halfling villages; the very environments Forest Gnomes go out of their way to avoid--to the forest. Despite their size, brownies are more closely related to elves than any of the other demihuman races. Also, brownies are highly magical, while Forest Gnomes distrust magic and make less use of it in their daily lives than any other gnomish subrace. The two races are friendly, but their paths seldom cross.

**Table 4: Forest Gnome Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 17 |
| Dexterity | 8 | 19 |
| Constitution | 8 | 18 |

| | | |
|---|---|---|
| Intelligence | 3 | 17 |
| Wisdom | 6 | 18 |
| Charisma | 3 | 18 |

Ability Score Adjustments:
+1 to Dexterity; +1 to Wisdom;
-1 to Strength; -1 to Intelligence
Languages: Forest Gnome; Gnome Common; Elf; Treant; forest mammal
Infravision: No
Special Features: The Forest Gnomes have several characteristics in common with their racial cousins, as well as several unique abilities:
*Pass without Trace* --A Forest Gnome can pass through any kind of wooded terrain without leaving a sign of his or her passage.
*Saving Throw Bonus* --The Forest Gnome gains a +1 bonus to his or her saving throws versus spell for every 3.5 points of Constitution.
*Hide in Woods* --Like the halfling, a Forest Gnome can make himself or herself virtually invisible in wooded surroundings.
*Combat Bonus* --Due to size and quickness, Forest Gnomes receive a -4 bonus to their Armor Class whenever they fight man-sized or larger creatures. Also, they get +1 bonuses on all attack and damage rolls when fighting orcs, lizard men, or troglodytes, or any creature which they have directly observed damaging woodlands (e.g., a woodman chopping down a tree full of birds' nests).

# Chapter 3: Gnomish Culture

*Soon the cool wash of moonlight illuminated the vale, the disk of shadow passing across the lunar face. Brilliant in the glory of the summer solstice, the silvery orb outlined the thousands of gnomes in white light and shadow.*

*Then the bonfires flared into life, dozens of them flickering into the sky, silhouetting rings of small, dancing figures. Soon the rugged cadence of chant and song, accompanied by the wail of pipes and the strident beat of the drums, echoed from the looming cliffs.*

*Finally, the full brightness of the moon was restored; in the stark outline of light and dark, the festival commemorating the moon's rebirth began.*

Living for the most part isolated from the other cultures of their worlds, the gnomes thrive and prosper. Their labors go unnoticed by mankind, their mines undiscovered by the dwarves. The Forest Gnomes, in their dense and tangled thickets, remain unseen even by their sylvan neighbors, the elves.

Who are these reclusive folk? How do they live, and what lure draws some of them from their pastoral homes and onto the road leading to adventure and peril?

This chapter looks at several aspects of gnomish life and culture. It addresses those traits that all gnomes have in common, since the previous chapter was devoted to the differences between the subraces. Where exceptions exist, these are noted where possible.

## Festivals

All gnomes enjoy festivals. These celebrations typically involve much music, dancing, feasting, storytelling, illusionary magic shows, drinking, and contests of strength and wit. While the actual festival observances vary somewhat by subrace, a given community will generally gather for no less than 12 to 15 big celebrations every year.

These will be for many different occasions, including celebrations of harvests, seasonal occurrences like the solstice and equinox, and anniversaries--of birthdays, famous victories or discoveries, and even weather phenomena. Rock Gnomes have been known to hold celebrations to commemorate the date of a horrendous cyclone that once ravished their realm, the eruption of a volcano, or even a notable blizzard; anything which might serve as a good excuse for a party. The patterns can vary by subrace, since Svirfneblin don't keep track of dates and the Tinkers often forget what year it is, yet gnomes of all types seem to have a communal sense of when a gathering is needed. When the time is right, they'll get together.

The truly major festivals, however, are often years apart. The festival commemorating the total eclipse of the moon, for example, only takes place about once per century. For Rock and Forest Gnomes, this is the most significant occasion of all, and as such it calls for the grandest festival. Svirfneblin reserve similar festivities for the coronation of a new king or queen, while Tinkers celebrate the successful design and completion of an invention--now *that's* rare! Likewise, a gnome's most significant birthday in most subraces is considered his or her one hundredth.

Another trademark of the gnomish gala is that they go on for a long time--the bigger the occasion, the longer the celebration. Even the smaller festivals are generally two-day affairs, with the first day devoted to preparations (such as rehearsals of performances and cooking the wide variety of food necessary for the feast). The second day, beginning at dawn, is likely to be a sequence of songs and performances, mixed with appropriate rituals and remembrances, and liberally spiced with many opportunities to eat and drink. Ale and wine, together with the music and revelry, flows freely from dawn to dusk and throughout the following night.

The greater festivals last many days or several weeks, with the most significant lasting a full month or more. However long the celebration, the gnomes are generally quite ready to pitch back in to work as soon as the festivities are concluded. In the case of the longer celebrations this is an especially good thing, since a month of extreme partying can pretty much exhaust the food and drink reserves of a community!

## Fires

Gnomes have a peculiar fascination with flame and the light it brings into the darkness in which they would otherwise dwell. One well-known gnomish nursery tale relates the story of Verpoolisch Popplepip, a typical gnomish hero:

A master illusionist and thief, Verpoolisch crept into the halls of the gods and watched the deities labor at their forges. Becoming intrigued by the shower of sparks falling from their great hammers, he substituted an illusionary brightness for a real spark and stole the actual flame. By the time the gods realized the deception, Popplepip had made it safely back to the world. There he nourished his spark, and it became the father of fire. With typical generosity, the gnomes shared this blessing with the rest of the world.

Every gnome has a place in his or her home for a small fire, and in pensive moments he or she will be inclined to sit before the flame and meditate.

## Marriage and Family

Weddings, perhaps surprisingly, are not big social occasions. Instead, they are private ceremonies attended by the immediate families of the young couple--and even these guests soon depart to leave the newlyweds with a chance to get to know each other privately.

Bride and groom have generally been friends since childhood and have made the match of their own free will. Marriage commonly occurs during the decades immediately following the coming of age period for mem-bers of that specific subrace, though gnomes who choose not to wed are not ostracized or even considered odd. Gnomes marry for com-panionship as much as procreation, and a couple will almost always remain happily married until one or the other of them passes away. Remarriage is rare, although it has been known to occur; divorce is unknown.

Gnomish couples rarely have the numerous broods familiar to halflings and humans. A family with three children is considered large, and only sizable clans will have five or six youngsters dwelling in the warren at any one time. Even in adulthood, gnomes retain deep bonds of friendship with their siblings and parents. It is very common for brothers and sisters to join together in business endeavors, for example.

## The Nose Knows

The big schnozzola is an important status symbol among all of the gnome subraces. Parents proudly point out the size of their children's noses and make enthusiastic prognostications about future growth. While the practical applications of such a facial feature are admittedly limited, gnomes will frequently embark on size contests, with heavy wagers, between members of rival clans. Svirfneblin go so far as to make this a primary determinant in the selection of a new king or queen!

## Food and Drink

Gnomes enjoy feasting and drinking, but their diet and beverage selection reflects far less variety than does that of the halfling or even most communities of humankind. No gnomish subrace, for example, uses yeast in the baking of bread nor in its brewing. They don't keep cows or make cheese or butter. Sugar is unknown in their diet, and gnomes tend to avoid sweets even when they travel to places where cakes or candies are available. Also, spices and sauces are rarely employed in the preparation of gnomish cuisine.

However, those foods that gnomes do cook they cook well. They are excellent at preparing wild game and in using the natural products of their surrounding areas for salads and hot dishes. All gnomes like salt, although the Deep Gnomes carry this to the greatest extremes. They cook their meat until it's very well done. This tendency, coupled with the liberal use of salt, insures that the food keeps for a long time without spoiling.

The brewing skills of the gnomes are effective, even if the results are not exactly

tempting to humans and other demihumans. Heavy meads and ales are favored. In areas where fruit can be readily harvested (apples and cherries are preferred) gnomes make passable, if somewhat astringent, cordials.

## Gems

More than a medium of wealth, gems are cherished to a degree difficult for non-gnomes to comprehend. Every gnome has a small gem he or she will carry at all times, often feeling or stroking it when thoughtful or troubled. Every gnomish village will have a few particularly splendid stones that belong to the community as a whole, each with an accompanying legend, and enchanted gems are the favorite magical items of gnomish spellcasters.

## Craftsmanship

The single most artistic endeavor of the gnomish craftsman (excluding Tinker Gnomes) is, of course, the carving and mounting of precious gems. These little folk are adept at every aspect of the jeweler's trade, including the smelting and finishing of precious metals. While each subrace has a special affinity to a certain type of stone (diamond, ruby, and emerald respectively for the Rock, Deep, and Forest Gnomes; coal for the Tinkers), their gemcarvers are capable of working with virtually any type of stone.

This artisanship goes beyond mere rote skill. Gnomish jewelers are capable of very creative designs in jewelry and have developed the most elegant royal crowns, sceptres, and decorative sculptures known to demihuman-kind. Stonecarving is another skill at which gnomes excel, and in those caverns where they have dwelt for many centuries intricate patterns have been scrolled into many of the walls and ceilings, enhancing the natural beauty of the rock.

Their special affinity to stone makes gnomes exceptional excavators, miners, and tunnelers. Those gnomes who seek employment among other cultures might work as gemsmiths if sufficiently skilled but are far more likely to find work in the mines of humankind. Even dwarves, grudgingly, admit that gnomes are almost as good at digging as themselves. This is, in fact, an ungenerous assessment--Rock Gnomes in particular are every bit the equal of dwarves in this profession!

Beyond the working of stone, however, the gnomes are somewhat limited in the tooling of materials into useful products. As a general rule, gnomes find it hard to produce raw materials but easy to shape it. For example, they do not weave, so all their clothing is either made of leather or of materials bartered from other folk. However, given the right fabrics, a gnomish tailor can create almost any kind of garment, often with elaborate stitching and similar attention to detail characteristic of all gnomish work.

Carpentry is another skill that demonstrates the gnomish penchant for elaboration. Whereas dwarves will hew timbers to shore up a mine shaft and at need can make rough tables, beds, and chairs for their own use, gnomes have a compulsion to cover every available inch with decoration which goes far beyond utility. Thus gnome miners will often use their breaks to carve delicate designs into the support timbers (taking care not to weaken the beams!), often having friendly contests between different shifts as each continues the other's work. Gnomish furniture is a marvel of fine woodcarving, with a

multitude of baroque detail.

## Trade

The primary stock-in-trade of the gnomish folk, whether on the surface or under the ground, is naturally the gemwork that is such a trademark of the race. The urge to create is so strong (in Tinker Gnomes, it has run amuck) that gnomes regularly trade finished jewelry for uncut gems, and gnomish gem traders will sometimes travel great distances in the course of their labors.

However, gems aren't the only thing gnome communities seek in trade. Salt is a necessity to the gnomish diet, and if there is no natural source available gnomish traders will go to great lengths to acquire it. Weapons, fabric, and raw steel are generally not made by gnomes but needed by the community. Delicacies, such as tender meat, dark flour, and strong liquor, are other items sometimes gained by trade.

Since these folk have little interest or capability in freight-hauling, those who would sell such bulk goods to them generally have to take responsibility for delivery as well. Human and demihuman traders know this, and many a human and halfling merchant has gotten rich simply by carting loads of textiles or steel to the vicinity of a gnomish village. Often, the trader will sell cart and pony at the same time--after all, he or she doesn't need much space to haul away a fortune in finely-cut gems!

## Taboos

*"Did you hear about Kasselwort Biddlestumpf? He brought some of that dwarvish black brandy to the Acorn Festival--and after he drank it, it went straight to his tongue!*

*"First he insulted his old grandfather, Wigglefount Biddlestumpf, who tried to rebuke him for his behavior. Kassel was betting on all the contests, showing around these little bloodstones as if they were rubies!*

*"Then he got into a fight with Nucklereet Shtoomiss--he called old Nuck' a "Shortnose Blowhard," and of course the poor fellow couldn't let that pass (we all know Shtoomiss' nose leaves a little to be desired, but Kass' had no call to be making fun of it)!*

*"But that's not the worst of it! Finally, when they came down to the nut-eating contest, Kass' bet on Graybeard Friggleheit to win, but the old fellow choked on a husk and had to quit the contest. And when it came time to pay up--believe it or not!--Kasselwort Biddlestumpf refused to pay!*
*"It'll be a long time before he can show his nose in* this *village again!"*

--Lillyllotta Glindlehome, gnomish matriarch (and self-admitted gossip)

Gnomes are a fun-loving society, with a great emphasis on personal freedom. However, a cornerstone of this freedom is a respect for the rights of others--and those who tromp on those rights are considered to have committed a grave breach of gnomish etiquette. This cornerstone of individual responsibility is the key to understanding the gnomish culture.

Some of the worst infractions of this personal code that a gnome can commit involve the performance of his or her work. It is, however, a rare circumstance for a gnome to

shirk a duty or to perform it at anything less than his or her highest level of ability. Those few gnomes who refuse to work are generally, after many chances to reform, cast out from their communities. They don't usually live too long on their own.

It is a little more common for offending behavior to occur in social settings, often accompanied by the consumption of alcohol. Virtually all gnomes enjoy drinking, and ale and mead are important features of gnomish festivals and clan gatherings. In most cases, gnomes become quite jolly and carefree when they drink, singing, laughing, and joking--the "mean drunk" is not a familiar character in gnomish society.

However, strong liquor is not a customary drink among gnomes--their ales and fruit wines, while strong-tasting by human standards, are not the match of brandy or whiskey in potency (Svirfneblin fish beer and Gogondy excepted). When a gnome gets hold of something stronger, trouble has been known to result. When it does, the malefactor is subjected to stern criticism from the bulk of the community--usually when he or she is in the throes of the worst hangover of his or her life. One such experience is generally enough to bring about a lifelong reform.

The contests that are an integral part of every gnomish festival are another source of pride to these small demihumans, and the honor of the participants is accepted and, for the most part, taken for granted. Wagering is a common practice, but one is not expected to bet more than he or she is prepared to lose. Welching on a bet is a gross affront to a gnomish sense of right and wrong. Similarly, a trader who cheats gnomish clients by substituting inferior goods for those promised will be marked for life; no gnome will ever trade with that individual again.

Finally, while friendly insults are commonly and frequently exchanged among gnomes, one is expected *never* to criticize lack of nose size. Those gnomes who have been cursed with small noses (those that stick out less than, say, three or four inches from the face) are assumed to suffer the curse of their shame inwardly. It is nothing more than needless cruelty to ridicule this unfortunate lack of endowment.

## Emotions

Gnomes are very emotional creatures, given to laughter and joy, weeping and sorrow, in loud and affecting displays. This applies to both work and play. Despite their physical resemblance to dwarves, a group of gnomish miners can easily be distinguished not only by their smaller size but by the laughter and song that accompanies them on their task.

When given cause for sorrow, such as the death of a friend or relative, gnomes grieve openly and loudly. Natural disasters or malicious acts from enemies are likewise cause for wailing and crying--so much so that an observer might assume that an entire community has just received a sentence of painful doom. However, these moods pass quickly (perhaps *because* of the effusiveness of their grief) and many a boisterous party has resulted from what began as a funeral observance.

Very unlike dwarves (or elves, for that matter), gnomes are quite open in displays of affection and love. Hugs are frequent whenever friends, spouses, and relations meet. Parents cuddle children, and the youngsters accept the attention with no self-consciousness. While romantic couples are private with their intimacy, husbands and wives will loudly and publicly profess their affection and love.

## Humor

Gnomes are famous, or perhaps infamous, for their sardonic sense of humor. All gnomes love practical jokes, the more elaborate the better. This can be very disconcerting when a gnome decides to express friendship or affection to a non-gnome by making that individual a special target for a string of practical jokes. As a rule, it's considered bad form to devise a joke which actually hurts somebody; the art comes from surprising the victim and making him or her look ridiculous.

In a way, practical joking takes the place filled by violence in many human cultures; two gnomes who have a heated argument are more likely to launch a feud of booby-traps to prove who is the cleverest than come to blows. Taking their cue from Garl Glittergold himself, gnomes extend this attitude to their military endeavors; it's considered a more courageous act to make an enemy look foolish in the eyes of his or her allies or followers than it is to kill the same enemy.

## Animal Friends

A warren of gnomes will typically be guarded by several watchful mammals. In the case of Forest Gnomes or Rock Gnomes, these will be woods-dwelling or burrowing creatures. Among the most popular companions are badgers, wolverines, and weasels--in mundane as well as giant size. Svirfneblin sometimes gain similar companionship from moles, shrews, bats, and giant rats. In return for kind treatment from the gnomes, these creatures often take up residence nearby gnome dwellings.

These creatures are not domesticated as humans understand the word; they are allies, not pets. Still, they provide useful service as sentinels, quickly bringing word of any strangers in the area, and if the community is attacked the animal guardians will always fight savagely in defense of their friends. Many villages have tales of youngsters who have fallen into a stream only to be plucked forth and saved by the jaws of a giant weasel, for example, or of young climbers who have gotten into trouble on the steep and rocky slopes so common in gnomish habitat only to be carried to safety on the sturdy back of a climbing badger.

## Warfare

*"Dey come from da rocks of da ground, everywhere attackin' and killin', what wit dem bolts and dat majick! We din't see where dey wuz or where dey went, but when dey wuz gone all my pals wuz kilt.*

*"We had deez goblyns what wuz suzpozed to watch dat side--but dey run away! Da lucky ones ran, dat iz. Lots a dem wuz kilt too. Dem nomes, dey really whomped da goblyns--din't like 'em too much at all, I cud tell. Da goblyns wuz gonna turn to meet 'em, but da nomes come on too fast. Dey din't let 'em make da line or get off a shot. 'Course, dat's what you espect a' goblyns.*

*"Den I tought we ogres would stomp 'em, stomp 'em good. But dey wudn't fight fair, wudn't come out and let uz stomp 'em! Dey sat dere and shot wit' dem dang bolts, what poked out eyes and did all sorts a' nasties. We run at dem but dey hid--we din't know where dey went, 'till dey come up behind us and whomped us pretty good dat way too.*

*"Nope, sir, you kin tell me ta go but I ain't goin'--I ain't gonna fight no nomes no more!"*

--from the battle diary of Barkan Delsuutor, Ogre veteran and brigade commander

Like halflings, gnomes are slow to anger and reluctant to wage war. However, also like their diminutive cousins, they become savage and tenacious fighters when fully motivated into battle.

Because of their small size, gnomes try to avoid combat situations that place them in open terrain where they must meet the head-on onslaught of much larger attackers. They prefer instead to fight in rough terrain, sheltered by rocks or trees, where their size can actually work to their advantage. In underground combat situations where they have sufficient time to prepare, gnomes like to excavate numerous low-ceilinged tunnels for mobility of attack and retreat.

They are not so adept with missiles as are halflings, but gnomish troops can nevertheless deliver a furious barrage of arrows and sling stones when such a tactic is needed. Firing in an undisciplined fusillade, they continue to pepper their targets with this painful attacks for as long as possible. They launch their arrows from sturdy shortbows or solid, albeit small, crossbows.

Though many of them wield spears, they prefer to use these as melee rather than missile weapons. Gnomes are adept (and very courageous) at setting these spears to meet the charge of much larger attackers. They will also use their quickness to strike from ambush, and when a force of gnomes can mingle among the troops of a larger enemy, their small size allows them to inflict a lot of damage. A favorite tactic, useable only when gnomes gain complete surprise (such as that provided by *a mass invisibility* spell), is to fearlessly dart among enemy horsemen, using their sharp daggers to cut the straps holding the riders' saddles onto their mounts. Such a tactic, when successful, can go a long way toward evening the odds of an unbalanced engagement.

When marching to battle, most gnomes will carry a missile weapon as well as a hammer, spear, or short sword, with a dagger reserved for the final line of defense.

Gnomes are also skilled at using deception, diversion, camouflage, and disguise as battle tactics. Their natural talents at illusionary magic help a great deal--gnomish illusionists will frequently create the appearance of the force in some unimportant area, while other spellcasters conceal the actual presence of the gnomes from enemy discovery. The sudden appearance of a gnomish force, virtually in the midst of the enemy, can be enough to throw the most veteran army into confusion.

They are also good at using these spells to conceal the true nature of the battlefield--either to create the appearance of obstacles where there are none or to conceal the location of hazards such as ravines, thickets, bogs, and streams. Many a thunderous charge has been broken when the howling attackers suddenly find out that what looked like solid ground is actually intersected by a twenty-foot deep gully, its bottom lined with sharp stakes.

Other uses of illusionary magic have stretched the creative bounds of military imagination. In one famous battle, gnomish illusionists concealed the actual location of the sun and replace it with a duplicate, causing the enemies' reinforcements to march five miles to the east when they were supposed to be going west! They have also used images

of dragons, giants, beholders, and other horrors to distract the attention of their foes and keep them guessing as to the true nature of their opponents.

Another asset that gnomes carry into battle is the lack of the hubris that can so often be the downfall of human or dwarven command-ers. Gnomes show no hesitation when it comes to abandoning a lost cause; when things start to go bad, the gnomes will run away, preferring this pragmatic tactic to a doomed stand motivated mainly by pride. The retreating gnomes quickly scatter and (if possible) disappear down holes into the ground or vanish among the enclosing underbrush of a forest. Even if the victorious opponents pursue ruthlessly, they are unlikely to kill or capture more than a handful of the gnomish survivors. Of course, this scattering means that it takes longer to reassemble the force and prepare to fight again, but that is a drawback that any gnomish commander willingly accepts rather than see his or her forces annihilated.

## Magic

The primary sorcery of the gnomes, of course, is illusionary magic. This is far more than a practical application of arcane powers, however--in gnome society, the casting of illusions affects all aspects of life from art to romance to celebration to war. A lover might woo his sweetheart with a message borne by a *whispering wind* spell, for example. For gnomes, illusionary magic is a way of life, not something they use just to make life easier.

Illusions are also constantly employed for practical jokes among these fun-loving folk. Of course, gnomes are more adept at recognizing illusions than are most other creatures, so those illusionary pranks targeted against them must be subtly crafted and strategically planned in order for them to succeed. *Invisibility , illusionary script*, and *wraithform* spells are popular choices for this purpose.

Illusionary magic is often used to comple-ment the finest efforts of gnomish craftsmen. A fine piece of jewelry, for example, might be enhanced with a shower of light caused by a *phantasmal force*, or even a *hypnotic pattern*, in order to create a truly stunning work of art.

On the practical side, illusionary magic is not usually employed to screen the location or nature of a gnomish community. Though such arcane devices might prove effective at concealing them against mundane detection, the emanation of magical power actually serves as a beacon to those who use spells such as *detect magic*. The latter enemies are judged, rightly, to be far more dangerous to a gnomish community than the former.

However, on the battlefield or in other contests of might and skill, gnomes will pull out all the stops. *Hallucinatory terrain*, the various applications of *invisibility*, and *illusionary walls* will be used to disguise the true nature of the battlefield, while spells such *as phantasmal force, fear, phantasmal killer*, and *shadow monster* will be employed directly against the enemy troops.

## Wandering

Unlike the other short folk, the halflings, gnomes are often possessed by a strong desire to wander. Their natural curiosity leads them to constantly wonder about what's beyond the next hill, or across that sea . . . or even down that dark hole in the

mountainside.

A major compulsion for this wandering among all gnomes is the desire to find the perfect gem. Tales of rich veins of rubies, or a wealth of diamonds or emeralds, will often draw an entire party of gnomes onto a long and dangerous quest. Whether or not they've seen evidence of the find, their belief in its existence will be strong, even unshakable, and determined gnomes will brook no diversion in their pursuit of this ultimate treasure.

Despite their reticent nature and the care with which they conceal their communities' exact locations, gnomes are quite willing to make friends with those visitors who prove themselves worthy of that friendship. Many a wide-eyed gnomish youngster has listened to a human knight tell of great castles or a merchant describe the wonders of a large city market. These gnomes typically grow up with the desire to see these places, and no one thinks it odd when, after reaching adulthood, they pack up their belongings and head down the road.

Another strain of this honest friendliness is a deep-running loyalty to those the gnomes consider friends. The suggestion that one of these kindred spirits is in trouble will also prove a strong motivation to bring a gnome onto the adventuring road.

Finally, gnomes keep a close eye on their surroundings and are very familiar with the world in their general vicinity. If they notice things changing (for example, a village crop-ping up on what used to be a wilderness stream) they will be irresistibly drawn to the scene to find out what's going on.

## Chapter 4: Gnome Character Kits

The kits introduced in this chapter allow players to define their characters with more detail and precision than are determined simply by race and character class. The gnome kits provide a selection of specialized PCs and NPCs, each designed for a specific character class or multi-class combination. Each kit has its own strengths and weaknesses, and each is tailored to illustrate some important aspect of gnomish life.

The kits are purely optional--no gnome must use one. They can be incorporated into characters already existing in the campaign, as long as the PC's background makes sense given the nature of the kit. Once a character has been assigned a kit, that selection remains for the life of the character.

These kits are specifically designed for gnomes and should not be employed by characters of other races. Gnomish characters who don't wish to use a kit from this book can select a kit from another handbook that is applicable to their character class: *The Complete Fighter's Handbook, The Complete Thief's Handbook, The Complete Priest's Handbook, The Complete Wizard's Handbook*, and *The Complete Bard's Handbook* all have kits that are available to gnomish characters of the appropriate class.

Gnomes can become clerics of up to 9th level, fighters of up to 11th level, thieves of up to 13th level, and illusionists of up to 15th level; exceptionally talented gnomes (those with high scores in their prime requisites) can exceed these maximums by up to 4 additional levels. Multi-class combinations are also allowed between any two classes available to gnomes, with illusionist/thief being a favorite. Priests are not terribly common among gnomes--the Svirfneblin have the most, Tinker Gnomes none at all--and multi-classed combinations including them are the rarest of all gnome character classes (and hence have no kits devoted to them).

Players and DMs may cooperate in the creation of original kits, as long as care is taken to balance the advantages and disadvantages with those presented here.

## Structure of the Kits

Each kit begins with a general description of that character type, along with any background and ability score requirements that are necessary to qualify for the kit. Further information on the kits is broken down into these categories:

Role: The specific functions of this character type within gnomish society.

Secondary Skills: In campaigns using the secondary skills rules from the AD&D® 2nd Edition game, a character might be required to take a specific secondary skill.

Weapon Proficiencies: The character must take the proficiencies listed. Unless it is specifically stated otherwise, these required proficiencies do not increase the number of slots the character has available.

Bonus Nonweapon Proficiencies: A gnomish character using a kit gains these proficiencies for free--he or she is not required to spend a slot for any of them.

Recommended Nonweapon Proficiencies: These proficiencies are not required of the character, but they do match up well with the kit. They require a normal nonweapon proficiency slot(s) to be used for each one.

Thieving Skill Emphasis (thief, thief/illusionist, and thief/fighter classes only; there are no thief/priest kits): The AD&D® 2nd Edition rules allow considerable flexibility in a thief character's selection of thieving abilities. Characters wishing become Stalkers or Mouseburglars usually choose to specialize in stealth-related skills such as Move Silently and Hide in Shadows. A gnomish thief who needs to survive on city streets might prefer to focus on Pick Pockets and Open Locks. Each kit comes with suggested areas of skill concentration for that character type. These are not mandatory, nor do they grant any special bonuses or confer any penalties.

Equipment: Any special equipment needs of the character are listed.

Special Benefits: These are things a character can do, or perhaps protections he or she gains, because of the kit.

Special Hindrances: These are requirements or limitations placed upon the character by the kit.

## Fighter Kits

### Breachgnome

This burly gnome takes a "heads up and face front" view to battle. Armed to the teeth and armored to the eyeballs, he or she hoists weapon, fully prepared to stand toe-to-toe with any attacker menacing home or ally. In some senses, this is the gnomish equivalent of the knight, mixed with a stubbornness and tenacity suggestive of the most determined dwarven heroes.

A Breachgnome devotes all his or her life to the fighter's art, from wrestling as a child to mastering an assortment of weapons as the character grows to adulthood. Often he or she will be taught by fighters of other races (human and dwarf, in particular) as well as accepting the tutelage of a gnomish master.

The Breachgnome must have a Strength of at least 16.

Role: This character is the one who steps out of the crowd of gnomes to confront the bullying ogre. Breachgnomes excel in defensive fighting; if his or her warren is invaded by enemies, the Breachgnome will stand in a corridor and hold the creatures at bay until the rest of the villagers can escape. Only after all have fled will the valiant defender (possibly) begin to think about his or her own safety.

The classic Breachgnome is an epic figure in gnomish battle lore. The tale of Maddi Gaddlroot is typical: Maddi supposedly held off a whole army of ogres for an entire day, standing before a cave mouth between two trees, where only one of the enemy could get at her at a time. Behind her, her city of a thousand gnomes stood threatened, and during the course of that day the young and infirm (together with most of the treasure) were hustled through narrow tunnels into the depths of the earth.

Only after she had slain dozens of the brutes did Maddi fall before the superior might of her attackers. Then the ogres lunged into the lair, only to be met by a clever network of ambushes and illusionary traps--defenses which the Breachgnome's heroic sacrifice had given her fellow gnomes time to create. In the end, the attack was defeated, the city saved, and the hero elevated to legendary status among her people. Interestingly enough, virtually every gnome settlement considers itself to be the one Maddi Gaddlroot died defending and will often point out to visitors the site of her last stand!

Secondary Skills: The Armorer or Weaponsmith secondary skills are useful to the Breachgnome.

Weapon Proficiencies: The Breachgnome must have a proficiency in the use of the short sword and either the hammer or axe.

Bonus Nonweapon Proficiencies: None

Recommended Nonweapon Proficiencies: The Breachgnome should consider the Armorer, Weaponsmith, Endurance, and Blacksmithing proficiencies.

Equipment: The Breachgnome will typically carry at least two melee weapons, a shield, metal armor, and some type of missile weapon (crossbow and sling being preferred).

Special Benefits: Because of their short size and gusty determination, all Breachgnomes gain bonuses to their Armor Class when they can fight in a position with one or both flanks protected by solid objects such as trees, walls, or support beams. If the gnome has such an object within 3' of either side, he or she receives a -1 bonus to AC; if both sides are protected, the bonus is -2. Assume the gnome is 2' wide to determine if both sides are protected--i.e., the Breachgnome can gain the double bonus when standing between walls no more than 8' apart. This bonus is cumulative with any applicable size and Dexterity bonuses.

Because of their single-mindedness in weapon training, Breachgnomes gain weapon proficiency slots at the rate of one every two levels (with the first extra proficiency slot becoming available at third level).

Special Hindrances: When faced with a battle that he or she *might* be able to win--but companions or common sense that urge a withdrawal--the Breachgnome must make a Wisdom check. He or she can repeat the check every round, but the character cannot retreat until it succeeds.

## Goblinsticker

These gnomes are considered eccentric, if not downright mad, by their more normal kin--Goblinstickers actually seem to enjoy battle and will go so far as to seek out enemies for the purpose of wiping them out. The two most common foes of the Goblinsticker are, naturally, goblins and kobolds.

Often a Goblinsticker is propelled by some dark event or tragedy in his or her past--a wrong which cannot be righted but which he or she feels compelled to try and atone for or avenge for the rest of his or her days. A Goblinsticker is especially effective at fighting the particular foe which caused this tragedy (often, but not always, goblins), often forgoing treasure and other incentives to pursue his or her revenge. "Goblinsticker" is a generic term for this kit; there are also koboldstickers, skeletonstickers, ogrestickers, et cetera, who differ only in the focus of their animosity.

A character must have a Strength or Constitution score of at least 15 in order to choose this kit.

Role: Because they are virtually fearless, these characters form the shock troops of any gnomish assault against their chosen enemy. They are likely to choose a life of adventure, one that will put them on a collision course with their hated foe.

Teams of Goblinstickers have been known to work together, for adventure or pay. In areas of monster infestation, Goblinstickers can frequently find employment as "exterminators"--especially in cases where the monsters are small, such as goblins or kobold, and live in dens where the size of human attackers would prove a drawback.

Secondary Skills: The Weaponsmith and Armorer are appropriate secondary skills for this character.

Weapon Proficiencies: The Goblinsticker must have a missile weapon proficiency and two melee weapon proficiencies.

Bonus Nonweapon Proficiencies: The Goblinsticker gains no bonus proficiencies.

Recommended Nonweapon Proficiencies: This character will find the Rope Use, Direction Sense, Blindfighting, Armorer, and Weaponsmith proficiencies useful.

Equipment: Together with his or her weapons and armor, the Goblinsticker traditionally carries the tools of the dungeon-crawler--i.e., ropes, hammer and spikes, oil, and several days' rations.

Special Benefits: At first level the Goblinsticker character must declare the hated foe of his or her life. When engaged in battle against this type of creature, the character receives a +1 bonus on all rolls to hit and to determine damage inflicted. This bonus applies to both melee and missile weapons and is cumulative with other gnome benefits, including the Rock Gnome's standard +1 attack bonus versus goblins and kobolds.

Special Hindrances: When confronted with an opportunity to attack or continue to fight his or her hated foe, the Goblinsticker must make a successful Wisdom check or be unable to decline the battle. The check can, however, be modified or ignored based on circumstances. For example, no Goblinsticker will break cover and blow an ambush to tromp on the first goblin to appear when he or she knows that a little patience will mean the chance to bop a lot more of them.

## Thief Kits

### Mouseburglar

These stealthy characters are consummate spies and sneak thieves who in some ways

behave more like halflings than the average gnome thief. Striving to be as quiet as mice, they infiltrate lairs, mansions, or enemy camps. They rely upon secrecy, disguise, and silence in order to conceal their presence. Preferring very much to flee rather than fight, they consider a truly successful mission one which is concluded before the victim even learns that the gnome has been there.

A Mouseburglar must have both Dexterity and Intelligence scores of 13 or better.

Role: Mouseburglars, like other gnomish thieves, rarely prey upon victims of their same race. They will be much more inclined to look for targets among the settlements of clan enemies, especially humanoids, or in anonymous settings like large cities.

In addition to their larcenous activities, Mouseburglars also serve as scouts and spies, should there be a need for such reconnoissance. Their emphasis on stealth and concealment--together with their generally high Intelligence--makes them excellent eavesdroppers. Many a gnomish military campaign has been laid over the carefully gathered reports of a Mouseburglar.

These characters also find great application as adventurers, lending a lot of advantage to a party of mixed races and classes. Their small size coupled with their skills (and the fact that most have infravision) allow them to get into places that larger thieves can't.

Secondary Skills: Any secondary skill can be appropriate to this kit.

Weapon Proficiencies: The Mouseburglar always chooses to specialize in weapons that can be wielded silently, preferring the sling or bow over the crossbow and the dagger or short sword over the hammer and axe.

Bonus Nonweapon Proficiencies: Mouseburglars receive either Disguise or Rope Use as a bonus nonweapon proficiency.

Recommended Nonweapon Proficiencies: This character can benefit by knowing additional languages (very important for one who intends to spy or eavesdrop!), as well as Forgery, Reading Lips, and Tightrope Walking.

Thief Skill Emphasis: The Mouseburglar is likely to find the Move Silently, Hide in Shadows, and Open Locks skills to be particularly useful. At first level he or she must divide the 60 discretionary points between these three abilities.

Equipment: The Mouseburglar will be sure to maintain a complete set of lockpicks. He or she prefers to wear dark clothes and soft boots when on a job and will often have the materials for one or two effective disguises concealed somewhere on his or her person.

Special Benefits: A Mouseburglar gains an additional 5% chance of success to both Open Locks and Move Silently at first level. For each additional level he or she advances, the character receives another 5% bonus that can be applied to any one of the following scores: Open Locks, Move Silently, Find/Remove Traps, or Read Languages.

Special Hindrances: The Mouseburglar so prefers stealth to combat that the character's fighting skills suffer as a result. Specifically, the Mouseburglar receives a -1 penalty on all attack rolls made in melee combat (except those delivered with the backstab benefit). This does not affect damage inflicted.

### Tumbler

Tumblers employ size and energy as the main assets of a thieving career. Quick and nimble, they are able to use escape routes that larger and clumsier pursuers find quite

unmanageable. Tumblers are part entertainer, part con artist, and part acrobat.

Coming from a variety of backgrounds, Tumblers usually have been exposed to a number of different races and often perfect their trade in some kind of urban environment. Often they will find work in a circus or carnival, moonlighting after show hours to augment their honest income.

The Tumbler must have a Dexterity score of at least 14.

Role: The Tumbler is a gnome who employs creative and vigorous means to get into places, meanwhile performing tricks and feats for the edification of his or her fellow villagers. Adept at climbing and falling, the Tumbler can walk a rope stretched between two high points, scale a sheer surface, and bob and evade his or her way through deadly combat--often rolling right between a larger opponent's legs!

Secondary Skills: Any of the secondary skills can be used by this character.

Weapon Proficiencies: The Tumbler is eligible to use any weapon available to gnomish thieves.

Bonus Nonweapon Proficiencies: The Tumbler character receives Tumbling as a free proficiency when first selecting this kit.

Recommended Nonweapon Proficiencies: The Tumbler must take Jumping, Juggling, and Tightrope Walking in order to practice his or her trade.

Thief Skill Emphasis: The Tumbler can find particular use in the Pick Pockets, Move Silently, and Climb Walls thieving skills. The kit places no restriction on how he or she allocates the discretionary points, however.

Equipment: The Tumbler will always be found with a coil of strong, lightweight rope--generally at least a 60' length.

Special Benefits: Gnomish Tumblers receive all the normal benefits of the Tumbling proficiency. Tumbling ability and small size combine to give Tumblers a -6 bonus to AC in rounds in which the Tumbler wins initiative and elects to forgo all other actions than evading enemy attacks.

Against larger than human-sized creatures, the gnomish Tumbler can try a special maneuver: rolling between the creature's legs. A successful Dexterity check means the Tumbler dives between the opponent's legs, rolls to safety, and bounces to his or her feet behind the enemy. If the Dexterity check fails, however, the gnome can be attacked with no special bonus to Armor Class. If the Tumbler successfully performs this maneuver and wins initiative on the next round, he or she can backstab that opponent.

At first level, Tumblers also receive a +10% bonus to their chances to successfully Climb Walls; this bonus increases by +2% per level thereafter.

Special Hindrances: Because of the boisterous nature of this specialty, Tumblers are limited in some of the other areas of thieving skills. Specifically, their base scores to Open Locks and Detect Noise begin at 0, not at the levels (10% and 15%, respectively) listed on Table 26 on page 39 of the *Player's Handbook*. The bonuses and penalties specified on Tables 27-29 are not affected by this provision.

## Illusionist Kits

### Imagemaker

This is the maestro of the gnomish world. His or her services are in demand at every gnomish festival; his or her skills known far and wide, sought by humans, dwarves, and

others beyond the ken of gnome society. The Imagemaker is an artist in the art of illusion who can create spectacles and is capable of drawing audiences to the edge of awe and beyond with soaring images, thunderous sound effects, and realistic creations.

Any gnomish illusionist can elect to be an Imagemaker.

Role: The Imagemaker's role in gnomish society extends far beyond his or her ability to tell tales and create pictures. On the battlefield, Imagemakers are the primary source of the diversionary illusions that gnomish forces use so well to balance the odds against them. Since they specialize in the creation and manipulation of very realistic illusions, they can be very useful to adventuring parties--for example, by creating duplicate images of the party to distract a powerful enemy. And, of course, no gnomish ceremony would be complete without the sound and spectacle of the Imagemaker's art.

Secondary Skills: Any will work, though the Gambler and Scribe secondary skills can have particularly useful applications.

Bonus Nonweapon Proficiencies: The Imagemaker gains the Ventriloquism proficiency (normally available only to rogues) as a free proficiency as soon as this kit is selected.

Recommended Nonweapon Proficiencies: Artistic Ability is a useful accompaniment to the Imagemaker's skill, as are proficiencies in Ancient History, Astrology, and Singing.

Equipment: An Imagemaker likes to have several mechanical tools available to augment his or her spellwork, including smokepots, flashballs, and probably a musical instrument. Smokepots must be lit by a fuse, which can be set for 1-10 rounds; upon igniting they belch out a 10' diameter cloud of colored smoke, blocking all visibility. The cloud disperses in one round out of doors or in a large enclosed space; in more constricting quarters it lasts for 2-5 rounds. Flashballs erupt with a bright flash of flame when they are thrown (or dropped) and strike a solid object such as stone or metal. When used in darkness they will effectively *blind* (for 1-6 rounds) a character who witnesses the flash.

Special Benefits: The Imagemaker has perfected the use of specific kinds of illusions--specifically, those that create the image of something from nothing. The various *phantasmal force* spells, *minor creation*, the *shadow monster* spells, *programmed illusion*, and shades are examples of spells that fall within this specialty; *invisibility*, *vacancy*, and *seeming* are spells that do not.

The pictures, sounds, and smells created by the Imagemaker are especially realistic. Therefore, any player attempting *disbelieve* them does so with a -2 penalty. In addition, *all* creatures--even those not normally susceptible to illusion--can be taken in by the creations of the Imagemaker. However, creatures that would not normally be fooled by illusions do not suffer the -2 penalty when they attempt to disbelieve.

In addition, the Imagemaker's skill is such that the images he or she creates last longer than those cast by a non-specializing illusionist. Illusions that do not require concentration have their duration doubled when cast by an Imagemaker. Illusions requiring concentration last for 2-12 rounds after the caster ceases concentrating. In the latter case, of course, the object will not be able to respond to specific events, but it can continue to repeat movements or patterns established when the caster was concentrating.

Special Hindrances: Because of intense specialization, the Imagemaker suffers additional restrictions on spells he or she can learn; specifically, Imagemakers cannot

learn spells from the greater divination or conjuring/ summoning schools of magic.

### Vanisher

The Vanisher is an illusionist with the specialization of making things disappear--in that sense, he or she is the opposite of the Imagemaker. Invisibility is stock-in-trade, but the Vanisher is also adept at spells that alter and disguise the appearance of something, equally ready to replace the vanished object or creature with an alternate as to make it disappear entirely.

Any gnomish illusionist can elect to be a Vanisher.

Role: The Vanisher is the valued counterpart to the Imagemaker, whether on the battlefield or in a dungeon. By concealing the existence of a party he or she can insure them the advantage of surprise, which is always useful. His or her skills can also benefit reconnoissance or retrieval missions.

Secondary Skills: Any can be useful, though Scribe and Navigator skills preferred.

Weapon Proficiencies: The Vanisher has no restriction on weapon proficiencies.

Bonus Nonweapon Proficiencies: The Vanisher receives Reading/Writing skill without expending a slot.

Recommended Nonweapon Proficiencies: These include Spellcraft, Heraldry, Blindfighting, Direction Sense, Weather Sense, and Navigation.

Equipment: The Vanisher likes to keep a vial of *dust of disappearance* handy; see Special Benefits, below.

Special Benefits: The Vanisher gains extra skills with any spell involving *invisibility*, as well as other spells of the illusion/phantasm school that allow the caster to alter the appearance of a creature or object or to impair the sense of an observer. Some of the latter include *blindness* and *deafness* spells; spells which alter appearances include *blur, change self, fool's gold, illusionary script, Leomund's trap, Nystul's magic aura*, and *vacancy*.

When casting one of these specialty spells, the Vanisher gains several benefits. The duration of the spell is doubled. Saving throws against the effects of these spells suffer a -2 penalty. Characters or creatures that could normally see invisible objects must make a successful Intelligence check, with a -4 penalty to the roll, before they can see objects screened by a Vanisher.

Also, at the second level of experience the Vanisher gains the ability to make a simple form of *dust of disappearance* from flour and a modicum (100 gp worth) of crushed diamond. It takes the Vanisher a full hour and a successful Intelligence check to perform this task, which can be attempted once per day. This homemade *dust of disappearance* retains its potency for two weeks.

Special Hindrances: Like the Imagemaker, the Vanisher's devotion to mastering illusions is such that it precludes his or her learning any spells from the greater divination or conjuring/summoning schools of magic.

## Multiclass Kits

### Buffoon (Thief/Illusionist)

The name of this character kit is in no way a reflection on the intelligence of the

character who plays the role. It does, however, reflect the way the non-gnomish world views him or her--it is a gentle deception that can consistently cause enemies and other NPCs to underestimate or even ignore the character. Indeed, the Buffoon carefully cultivates this role, often even to the point of concealing the fact that he or she possesses illusionist skills.

In order to use this kit, a character must have an Intelligence score of at least 15.

Role: Buffoons are travelers, entertainers, gossips, pranksters, and gadflies. They make friends everywhere they go and enjoy using their skills to aid those friends in a multitude of causes. Buffoons make themselves figures of fun and then use this as a means of making fun of others--usually with just the right element of sharpness in their wit. An empress, for example, will not be subjected to the ridicule that, say, a city guard might merit--at least not in her presence! Buffoons are alert and observant, quick to discern who are safe targets, currently out of favor with the powers that be; such unfortunates often become the butt of a Buffoon's jests.

Favorite Buffoon tactics include comical imitations of the character being lampooned and questions designed to trap the unfortunate victim in a no-win quandary--e.g., "Have you stopped overtaxing the peasants yet?" Every Buffoon is adept at keeping the crowd on his or her side, but it is said that every good Buffoon keeps one eye on the exit, ready to beat a hasty retreat should the mood of the onlookers suddenly turn nasty.

The Buffoon is an avaricious but capable adventurer, always on the lookout for gems of any shape, color, and size. He or she doesn't keep these in a horde, instead preferring to barter them for goods (or goodwill) whenever passing through a gnomish community. The Buffoon is quite likely to find good friends in any gnomish village along his or her trail and also among the gnomish citizens of larger cities and towns.

Secondary Skills: Jeweler is a popular secondary skill for the Buffoon, as are Navigator and Gambler.

Weapon Proficiencies: The Buffoon likes to keep several daggers concealed about his or her person and will be adept at using them both as missile weapons and hand-to-hand.

Bonus Nonweapon Proficiencies: All Buffoons gain a knowledge of Etiquette as a bonus proficiency--not that they practice it, but their natural sensitivity helps them judge what is and is not considered appropriate in a given situations (and tailor their barbs accordingly).

Recommended Nonweapon Proficiencies: History and Disguise, as well as Juggling, Lip Reading, Tumbling, and Ventriloquism are all useful complements to the Buffoon's art.

Thief Skill Emphasis: The Buffoon may wish to emphasize Hide in Shadows, Detect Noise, and Find/Remove Traps; the kit places no restrictions on his or her choices.

Equipment: The Buffoon generally travels with a variety of comical gimmicks, including horns and bells, whistles and juggling balls, and a full makeup kit that often includes wigs and false beards.

Special Benefits: The Buffoon benefits from an ability to distract and entertain. Often a Buffoon can break the concentration of a spellcaster with a rude jibe or irritating pun. The gnomish character must speak a language in common with the spellcaster and must win initiative on the round. If both of these are met, he or she can say something (DMs are encouraged to require roleplaying of the remark) clever and distracting to the spellcaster. The caster is allowed a Wisdom check to ignore the distraction; failure means

his or her concentration has broken and the spell is wasted. The DM may, at his or her option, allow the difference between the Buffoon's and spellcaster's levels to be used as a modifier (+ or -) to the Wisdom check.

The Buffoon also has two bard-like abilities: First, he or she can entertain NPCs with juggling, jibes, and buffoonery. This has the same effect as the bard's ability to *influence reactions* (explained on page 42 of the *Player's Handbook* ). Second, he or she can counter the effects of songs and poetry used as magical attacks (see page 44 of the *Player's Handbook* ).

Special Hindrances: He or she has to walk around looking ridiculous.

### Stalker (Fighter/Thief)

Whether in woodland meadow or dungeon pit, the Stalker is a specialist in quiet movement and stealthy pursuit followed by sharp and deadly combat--on whatever terms the foe demands.

The Stalker must have Strength and Dexterity scores of at least 13.

Role: The Stalker is adept at hunting and tracking, both above and below ground. He or she is a skilled fighter but prefers to reach his or her objectives by quickness and stealth wherever possible. Stalkers wear light, quiet armor and have a keen eye with a missile weapon but don't shirk from a toe-to-toe sword fight when circumstances require.

Secondary Skills: Any.

Weapon Proficiencies: The Stalker must be proficient in both a missile and a melee weapon.

Bonus Nonweapon Proficiencies: Because of a lifelong interest in wild places, the Stalker gains a bonus proficiency in either Tracking or Set Snares (not both).

Recommended Nonweapon Proficiencies: Useful proficiencies for this character include Fire Building, Fishing, Hunting, Survival, and Disguise.

Thief Skill Emphasis: Move Silently and Detect Noise are the two skills which receive most of the Stalker's emphasis; at first level he or she must divide his or her discretionary points between these two.

Equipment: In addition to his or her weapons, the Stalker prefers leather armor and disdains the use of a shield. Most Stalkers possess a climbing rope; some carry a set of thief's lockpicks.

Special Benefits: When using a missile weapon, the Stalker gains a +1 on all attack and damage rolls.

In addition, the Stalker can blend into underbrush, disappearing as effectively as a halfling when out of doors. In an underground setting, nonSvirfneblin Stalkers can *freeze in place* exactly like Svirfneblin (see page 25); a Deep Gnome stalker's chance of success with this tactic is 80% (not 60%).

Special Hindrances: The Stalker cannot use a shield or wear any type of metal armor (not even elven chain).

## Priest Kits

### Rocktender

This underground-dwelling gnomish priest is a specialist in understanding and relating to the fundamental powers of stone and rock. Most Rocktenders are Svirfneblin; a few may be found among Rock Gnomes. They venerate not the deities of earth and stone but the very rock itself, which they conceive of as a beneficent, living entity. Rocktenders are not averse to mining and excavation but strive to ensure that such activities are carried out with appropriate reverence.

Role: The Rocktender is a priest literally in touch with the world around him or her. While active in the community, a Rocktender spends much of his or her time alone, inspecting, studying, and meditating upon the strong bedrock of the world. He or she is keenly in tune with that rock, even to the point of being able to predict earthquakes and volcanic eruptions, and becomes a master at the working of stone into useful or beautiful shapes.

Secondary Skills: Mason or Miner are appropriate.

Weapon Proficiencies: The Rocktender will never use metallic weapons, preferring hammers and clubs with stone heads, slings with stone bullets, and spears or arrows with flint or obsidian tips.

Bonus Nonweapon Proficiencies: None.

Equipment: The Rocktender will only bear weapons of stone. He or she can use a wooden shield and leather or padded armor but will not wear metal armor nor carry a metallic shield.

Special Benefits: The Rocktender can detect underground features with perfect accuracy (sloping passages, faulty stonework, and the like) in most cases. Where the flaws or features are very subtle, the DM can allow up to a 1 in 10 chance of failure, but no greater.

Because of his or her intuitive link with the surrounding stone, a Rocktender can become aware of impending rock-based convulsions before they occur. These include rockfalls, earthquakes, and volcanic eruptions. The character is allowed a Wisdom check to see if premonitions of the disaster force their way into his or her consciousness; success will provide 1-12 hours of warning for quakes and eruptions or 1-6 hours of warning before a rockslide or collapse of stonework.

In addition, these characters have a special affinity to creatures from the elemental plane of earth. If a Rocktender summons an earth elemental, he or she will always get the largest possible type, and the elemental will be exceptionally loyal to the Rocktender.

Special Hindrances: A Rocktender can only cast spells or use one of his or her special abilities when he or she is in direct contact with unhewn rock.

## Treetender

Dwelling in the woods, often knowing each stump and mossy bole with careful precision, the Treetender declines the companionship of his or her fellow gnomes in favor of a nearly hermit-like existence in the woods.

Role: Although they rarely interact with other gnomes on a daily basis, these nature priests are highly respected for helping to preserve the environment in which their fellows live. Like the druid of humankind, the Treetender takes a fierce interest in his or her domain and will vigorously strive to protect it against all threats. He or she is not a complete recluse, however, and will usually make it to a local village for all the major

festivals, as well as helping gnomes (and, sometimes, halflings) who pass through his or her woods.

Secondary Skills: Forester is the secondary skill of choice; Navigator is also good.

Weapon Proficiencies: Treetenders specialize in weapons made of wood, though they are not averse to using stone heads on long wooden shafts. Unlike most priests, Treetenders can use bows.

Bonus Nonweapon Proficiencies: The Treetender gains an innate Set Snares skill.

Recommended Nonweapon Proficiencies: Fire Building, Weather Sense, Direction Sense, and Healing are all useful skills in woodland environments.

Equipment: In addition to weapons, a Treetender carries a selection of herbs and roots which he or she can use to make a *potion of healing*. Making the potion requires 6-12 turns, and it must be consumed immediately.

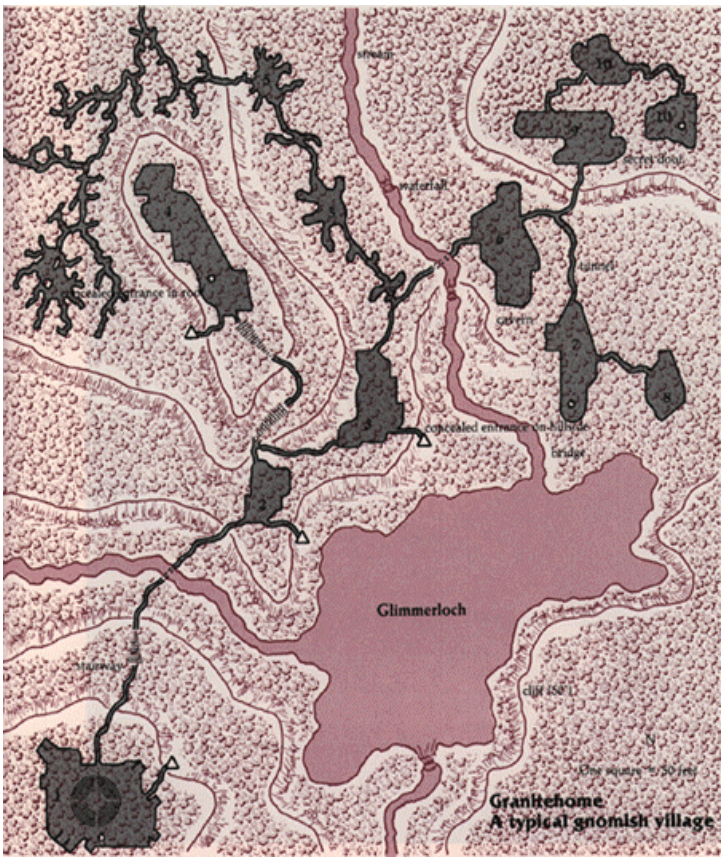
Special Benefits: All Treetenders have the abilities to identify plants, animals, and pure water and to pass through overgrown areas without leaving a trace. At third level he or she gains immunity to *charm* spells cast by woodland creatures. Also starting at third level, the Treetender gains one additional woodland language per level (i.e., one a 3rd level, two at 4th level, three at 5th, c).

Special Hindrances: The Treetender cannot wear metal armor or wield weapons where more than 10% of the weight is metal.

## Chapter 5: Granitehome-- A Typical Gnomish Village

Located among a series of heavily forested ridges, this community of some three hundred and fifty gnomes is organized into seven clans, each with its own large underground warren. Though it is typical of a Rock Gnome abode, a Forest Gnome community would be very similar (although much more spread out and less densely populated)--and if it was much farther underground, the general layout is not unlike a portion of a Deep Gnome city.

On the surface, nothing of the community is visible--even the entrances leading into the warrens are well-camouflaged, screened by brush, disguised in the trunks of large trees, or hidden beneath flat boulders hinged from below.



## 1. High Warren

This series of excavated chambers serves as a gathering place for the community. Several stone-walled inns and gemshops line the walls of a vast cavern. The central chamber--a popular setting for festivals--is bowl-shaped, with rings of seats that can hold nearly a thousand gnomes. Atop the knoll, through an entrance reached by a high, spiraling stair, is a large clearing where the gnomes hold out-of-doors gatherings.

## 2. Kappelkourt Clanhold

These chambers are the homes and workshops of the major gemcutting clan in the town. The clan has some thirty members.

## 3. Lafftalligon Clanhold

This clan specializes in stonecarving; it has some forty members.

## 4. Astrolacyll Clanhold

The seventy-five members of this family do a great deal of foodgathering and patrolling of the forest. Traditionally, most of the village's priests have been from this clan.

### 5. Mines

These connecting tunnels and caverns hold the currently-worked veins of gemstones in the Granitehome area. The entrance to the tunnel is hidden in an innocuous room with a secret door to help conceal the mines from any intruders into the village.

### 6. Pipwhistlion Clanhold

These family of eighty provides the bulk of the community's miners.

### 7. Kwilliticutti Clanhold

This prosperous clan specializes in hunting and herding; they tend a small herd of sheep and rothe in their caverns. There are some sixty well-fed, plump Kwilliticuttis.

### 8. Mastacalatl Clanhold

The twenty-five members of this small but wealthy clan specialize in fishing. This family has also produced the most famous adventurers in village history, several of whom have come home to retire.

### 9. Barackathal Clanhold

This clan of forty souls have small noses (for gnomes) but great courage; they are responsible for defense of the warren.

### 10. Warehouse and Secret Exit

These chambers, concealed by secret doors and many traps, are kept stocked with plentiful supplies of food and drink; in a desperate situation, they will serve as a last bastion of the village's defense.

## Halflings

*"Sit with me for a while, young sprouts, while these coals soothe my aged bones."*

*"Your bones aren't old, Grandmother!" piped up the youngest of the brood--Kepli, a tiny cherub not two feet tall. He glared at his mother's mother's mother, as if challenging the venerable halfling to dispute her scion's faith.*

*"Oh, you're right about that, Little Kep--I could still dance a step or two! Why, I remember the night of the Twenty Year Festival, a dozen years back . . ."*

*"Tell us, Grandmother--please!" implored a chorus of voices.*

*But instead, the oldster held up her hand and shook her white head, hair tied in a neat bun at the back of her neck. Ample jowls jostled amiably as she chuckled at the*

*youngsters' enthusiasm. "Another time, sprouts . . . you'll hear about that, all right. But tonight, you'll have a different tale."*

*The old halfling settled into her soft chair, adjusting her well-padded form amid the worn cushions, pulling back the comforter on her left, where she faced the fire.*

*"You see, the story I'll tell you now is one I had from my own grandmother, when I was not much older than Pedderee here." She ruffled the coppery curls of a beaming little girl. Pedderee turned proudly to her siblings and cousins, but their attention remained riveted on the seated figure of the matriarch.*

*"And it's my true hope," she continued, "that when one of you sits in this chair here--many, many years from now--you'll remember, and share it with your own little sprouts."*

*"We will, Grandmother! We promise!" Eyes wide, faces serious, the young halflings pledged their attention. They already understood that, tonight, it was no ordinary story they would hear.*

The diminutive halfling has become as archetypical a character in heroic fantasy as the stalwart knight in shining armor or the robed wizard fumbling with his spellbooks. Perhaps it is because, in stature and appearance, halflings is so *un*heroic that they have won their way into our hearts and our adventuring consciousness.

Of course, for most halflings, the life of adventure seems a slightly mad choice of lifestyle--a road one takes out of dire necessity or because of profound misfortune. Sometimes simple eccentricity or mental imbalance is attributed as the reason for a friend or relative's leaving his or her hearth behind, with the townsfolk quietly clucking their tongues and sympathetically agreeing that the adventurer was "never quite right in the head, that one."

The halfling race, by and large, cherishes a pastoral existence full of comfort. As a people, they are remarkably lacking in ambition, content to dwell in a snug, well-furnished burrow, enjoying a pipe of rich tobacco and a filling, multi-course meal at dinner. The typical halfling would look askance at the meager trail fare of the average party of adventurers. Our well-padded Stout or Tallfellow, likewise, would be horrified by the rude, chill, and drafty sleeping accomodations available on a rocky forest floor or in the sheltered recesses of dim caverns and dungeons!

Yet, for a wide variety of reasons, a few members of this quiet race do choose to embark on the path of danger, adventure, and possible wealth. Indeed, it is the latter consideration that brings many halflings onto the adventure road--the comforts of life that make living so enjoyable are not always cheap or easily attained! Also, halflings all have a strong sense of duty, and a just cause in the name of a friend will often pry a reluctant halfling from his or her burrow when nothing else would.

Despite their short stature, halflings who choose the life of adventure can be splendid assets to a party. For one thing, the generally cheerful outlook of halflings, together with their ability to make friends with members of a wide variety of different races, can be powerful, if intangible, assets to the group's morale. Faithful and trustworthy to their friends, one of the Small Folk can often provide a focal point of trust and even leadership within a party of much larger characters.

On the more practical side, halflings' nimble fingers are famed for a dexterity that is the envy of many a human thief--and don't make the mistake of confusing small size with physical frailty or weakness. Though they admittedly weigh much less than most of their

likely opponents, halflings have found that their speed and their wits are more than ample replacements for brute size. An unaggressive race, halflings have never been known to war with others of their kind, and they resort to organized warfare against other races only in cases of dire need. At such times, their tactics lean toward ambuscade and the use of screening terrain, rather than frontal clashes where the greater weight of any opponent's troops would likely prove decisive; given the choice, they would rather drive a foe away than slaughter it.

The small size of the halfling has proven to be a lifesaver on more than one occasion. Indeed, a party consisting entirely of halflings can investigate dens, caverns, and burrows where humans, elves, and dwarves would be fatally constricted by space.

Halfling society, too, is a flexible and forgiving structure, easily capable of allowing individuality and freedom. A halfling who leaves his or her home in search of fortune and fame will almost certainly be sure of a warm welcome on that perhaps distant day when he or she at last returns. At the very least, such a traveler is likely to return with interesting stories . . .

But to all halflings, travelers and homebodies alike, there is something compelling and desirable about the solid stone hearth of his or her own burrow. Even the most well-traveled halflings are likely to eventually return to the place of their birth when they are ready to settle down and remember.

## Halflings in AD&D® 2nd Edition

Halflings are briefly described in the ADVANCED DUNGEONS & DRAGONS® 2nd Edition *Player's Handbook*. The three most common subraces (Hairfoot, Tallfellow, and Stout) are detailed in the *Monstrous Compendium*, Volume One, while the feral halflings of Athas are described in the DARK SUN® Rule Book as well as in the DARK SUN MONSTROUS COMPENDIUM appendix (MC12). Finally, players of campaigns set in the DRAGONLANCE® world of Krynn will find that the ubiquitous Kender has finally been ranked (for better or worse) among the official halfling subraces.

## New Stuff About Halflings

The following chapters provide much greater detail on halflings than any previously published rulebook. This information is intended for players who enjoy running halfling PCs and for DMs who wish to create more interesting NPCs to employ in their campaigns.

The primary halfling character in a typical AD&D campaign is the Hairfoot; this book includes additional detail on not just the Hairfeet but all the halfling subraces--including a nearly unknown variety, the Furchin (hitherto featured only in a single SPELLJAMMER® adventure). Each subrace is differentiated not just by background but by special abilities and characteristics. Halfling society, too, is detailed in all its facets. A variety of halfling character kits are included to allow players to tailor their individual halfling PCs into specialists, each with its own strengths and weaknesses. A typical halfling village, suitable for any AD&D® campaign world, is given in some detail to provide a starting place for an all-halfling campaign, and the Appendix contains several adventure suggestions aimed at halfling PCs.

# Chapter 1: Myths of the Halflings

Halflings can be found on almost all the worlds inhabited by demihumans and human-kind--and, in at least one case, have settled a world without any human or elven inhabitants. Though they resemble their larger human cousins in physical characteristics as well as geographic locale, the halfling race differs significantly in the common tale of its origin.

Whereas humans throughout the known worlds have countless legends, tales, and myths to explain their arrival and presence there, halfling cultures all share a common story: the Story of Littleman. Of course, the common tale is inevitably flavored with local custom--for example, the role of the goddess Yondalla varies depending on who's telling the story. Yet its core is always the same: the story of a small person wandering in the midst of chaotic, populous lands, facing a thousand difficulties and triumphing over them all through luck, courage, wits, and persistence.

## The Story of Littleman

*"There, Petrilly--be a dear child and fill my teacup. Surely thanks. Oh, and just a wee splash from the bottle to give it some character. Well done, lass."*

*"The story, Grandmother--tell us the story!" Eyes wide, the youngsters waited impatiently until the old halfling's tea was properly mixed. She sipped, and smacked her lips, and then began.*

*"Yes... the story of Littleman. But it's not just a story of the first halfling--it's a story of the gods, as well. The gods of the Big Folk and the Bad Folk, humans and goblins, who dwell up in the Seven Heavens and look out over the worlds and watch out for their followers."*

*"And Yondalla, Grandmother? She's there too, isn't she?"*

*"Mercy, child! Where else would she be? All you little ones know she's the great Protector of all halflings. Of course she lives there! In fact, the tale's not just about Littleman, but about Yondalla as well. But in those days, when our story begins, she was not yet our protector. Indeed, back then Yondalla was held by most of her fellows to be an unimportant goddess and was little heeded by the great lords of Human and Elf, Dwarf and Monster.*

*"Not that she was weak, or meek, mind you--quite the contrary. Yondalla was bold and brave, and quick to speak her mind when the gods met together in one of their great councils. But alas, since she had no faithful worshippers, her wise words were often ignored by the other gods, deities who boasted of their multitude of followers like peacocks showing off their pretty tailfeathers. Then, too, there was the matter of her size--gods are like too many people I could mention and are quicker to give respect to the huge and awesome than the small and clever, and Yondalla barely reached to the knee of many of the mightier lords."*

*"But, but, Grandmother...?" Kepli spoke tentatively. "Yondalla's a mighty goddess--isn't she?"*

*"Aye, Sprout--that she is. But even in those days, many other gods already had the weight of worshipping legions to support them and cause others to listen to their words.*

*Yondalla had none, and thus many of the greater lords ignored her, especially after she was banned from their councils for a time . . ."*

*"But why would they do that to someone as nice as Yondalla?" Petrilly wanted to know.*

*"Simple, lass. She'd often heard various of the gods boast that they were the wisest, or strongest, or most popular deity of them all. One time when all the gods were gathered in council, she asked 'Which of you is the greatest?' Quickly the responses grew heated, and the argument that followed lasted for a long, long time; by the time it was over just about everybody was mad at just about everybody else. And they decided to blame it all on poor Yondalla for bringing it up in the first place--isn't that just like Big Folks?*

*"But it wasn't just that; her questions had gotten her in the soup before, and not listening to the big gods making long speeches and trying to impress one another was hardly punishment in her mind. I think it was more that she was tired of being ignored. It seemed to her that even those gods and goddesses who were her friends often treated her with condescension, as if her size meant she had no more sense than a child! Humph!*

*"Also, Yondalla is a kind and tolerant goddess. She admires kindness and generosity--not traits that the other gods held in abundance. But remember, my little ones, Yondalla is also a clever god. She saw the power that followers gave to the other gods, and she determined that she would have followers of her own. Finally, the goddess decided there was nothing for it but to find some worshippers of her own."*

*"Kepli, the fire needs another log--Ah! there's a good lad.*

*"Yondalla left the Seven Heavens and came to the Worlds Below, where she searched for a long time, looking for the perfect worshipper. But it was a long, hard search: most of the folks she came across already had gods of their own. She could have tried to steal away the other gods' worshippers, of course, but that would have meant trouble, and it was never Yondalla's way to stir up trouble when there was an easy way of avoiding it. Other folk had no gods, but watching them Yondalla saw that they were cruel and savage, hurting one another for no reason. She wanted followers she wouldn't have to scold every ten minutes, and decided to continue her search.*

*"I don't know how long she searched--my old grandmother used to say it was 'a day and a year and a year and a day'--but surely it was a long weary time. Then one day she saw Littleman sitting on a riverbank, fishing, and at that moment her search was over."*

*The old matriarch stopped. There was a long, thoughtful pause as her audience considered the story. Unnoticed, Pedderee refilled the venerable halfling's empty cup. Finally Kepli broke the silence: "Grandmother? Where did Littleman come from? What was he doing before Yondalla found him?"*

*"Ah, child, who knows? Remember, this was in the Bad Old Days, before our folk had farms, and villages, and shires of our own. Back then we were scattered like mice when the owls are out. Each family kept to itself and had its own hidden burrow. It was a hard life: sneaking, and hiding, and getting by on gleanings and scraps, always listening for enemies at the door.*

*"But Littleman, he wasn't afraid like the rest. He used to boast there wasn't a monster in the whole forest he couldn't outsmart, and he proved time and again that his quick wits were more than a match for brute strength by leading enemies into trap after trap as they chased him, until finally they'd given up and decided to leave him alone. Thanks to his carrying on so, his folk were safer than they had been in a long day, for none of the Bad*

*Folk wanted to mess with any halfling they came across, in case it turned out to be Littleman.*

*"Yondalla watched Littleman for a long time and decided she liked what she saw. Here was a potential worshipper who was clever, brave, kind-hearted, and full of mischief. Best of all, he was just the right size. So one day she revealed herself to him and made him a bargain: if Littleman would gather all his scattered people into villages and communities, in return for their worship Yondalla would protect them from all their many enemies and give them a life of plenty and peace.*

*"Now, Littleman thought this over and decided it sounded fair, so he said 'Done!' And from that day to this, Yondalla has watched over our folk and guarded our prosperity, and we have been her people."*

*"And Littleman, Grandmother? What became of him?" Pedderee asked.*

*"Why, child, she sent him on his wanderings, to all the worlds where any of the small folk lived," chuckled the white-haired matriarch. "But that's a tale for another night."*

## A General History of the Halfling Race

The myth of Littleman is repeated in virtually all halfling cultures of the mortal realms. However, the details of the story differ with every teller. In some versions of the tale, Yondalla creates Littleman out of essences she has stolen from the humans, gnomes, dwarves, and elves. In others, she said to have created halflings long before Littleman's time but then left them alone for an age to see how they'd turn out, like a farmer who plants seeds and then leaves them be until the young plants have sprouted. Others give no explanation of how halflings came into the world but simply start with Yondalla's meeting with Littleman.

All versions agree, however, that before recorded history began, halflings were a shy and fugitive people living as hunter-gatherers on the edges of civilization, hiding in isolated burrows from the humanoids and monsters that preyed upon them. The civilized races--elves, humans, dwarves, and gnomes--took little if any notice of them, while to the humanoids they were merely tasty, if elusive, meals. Then, for reasons which these races have never fully understood, the small folk suddenly came out of hiding, gathered together, and created small agricultural settlements for themselves across the face of the known worlds (the halflings themselves attribute the impetus to their mythical cultural hero, Littleman, and the goddess Yondalla). At any rate, it is clear that halflings arrived on the scene after humans and well behind the longer-lived dwarves, elves, and gnomes. The halflings seem to have made a point of not competing with the brawnier neighbors, instead selecting regions of lowland or dense thicket which they industriously drained and cleared, forming the pastoral shires inherited by their descendants.

Halfling societies have developed among most of the lands that have seen significant human settlement. Sometimes the small folk live among the humans, sharing their cities (though many will be gathered in a well-defined "Halfling Quarter") or farming beside their larger cousins. More often, however, halflings will live in small enclaves on the fringes of human realms. As a rule, halflings do not display the urge to expand their frontiers that so characterizes humanity; they are on the whole an easy-going and unambitious people. Once every dozen generations or so some restless halfling will gather a group of like-minded souls and forge into wilderness to clear new lands, but like

their ancestors they will avoid areas already inhabited by others (whether human, demihuman, or humanoid). There is no record of halflings ever invading an area for the purpose of driving its inhabitants out and settling there themselves, although they are adept at mingling with whatever inhabitants they find already there.

Halflings strive to form the most neighborly of societies wherever they live. The race has a gift for getting along with dwarves, elves, humans, and gnomes in all climes and environments. Lack of prejudice is a noted halfling characteristic--one which allows them to welcome all types of strangers into their communities and to mingle comfortably in the cities and towns of larger races. Typically, halflings will cooperate with their neighbors for the defense of a larger area. Thus they gain an alliance with larger troops, and the ally welcomes companies of superb missile troops.

## The Gods of the Halflings

Like the universal story of Littleman, halflings have a common pantheon which undergoes a great deal of local variation. Community individualism runs rampant among halfling populations; thus, every village will honor the same gods but probably call them by a different name. Among the halflings of the Moonshae Islands in the Forgotten Realms, for example, Yondalla is known as Perissa and is held to have made Littleman on one of those faerie isles. Those halflings who live along the Sword Coast to the south of Waterdeep (not terribly far from the Moonshaes) refer to Yondalla as Dallillia and hold that her origins are as the village goddess of a small woodland community. The halflings of Lurien far to the south insist in turn that their land is Littleman's original home. And of course each halfling pictures Yondalla as belonging to his or her own subrace (unlike Littleman, who is conceived of as sharing characteristics of all the subraces rather than belonging to any single one).

It's important to remember that this distinction extends farther than simply among the subraces. Halfling villages scarcely two dozen miles apart might each have a different name for Yondalla, and the citizens of each might believe that this goddess is a local deity, concerned far more with the single village than with the race of halflings as a whole.

This reflects an important fact of halfling mentality: the only really important things are those that happen close to home. They're far more interested in worshipping an immediate and beneficent deity--one whose responsibilities are to *them*, and no one else--rather than an abstract goddess who is presumed to overlook the entire race. The remoteness of most human deities bewilders many halflings, as does the deference human worshippers show to their deities. It's not that halflings are irreligious; it's just that while they treat Yondalla and her companions with respect, they're far less in awe of her than is the norm between god or goddess and follower.

As halflings see it, they have a bargain with the gods: in return for their worship, the gods promised to take care of them. Halfling clerics exist to see that both sides of the bargain are kept--to remind halflings to give the gods their due and to remind the gods that they are responsible for the safety and comfort of their loyal followers. Although this sounds like a cold-blooded business arrangement, it is not: stories of the "Bad Old Days" remind all halflings of how much they owe Yondalla, and the average halfling feels both gratitude and affection toward her for her gifts.

In addition, halflings will worship a vast number of very specialized minor deities, variously called "the small gods" and "the thousand home gods." Each house commonly has a protector of its own hearth, often inspired by some matriarch or patriarch in the clan's history. The Homesteader who starts a small community might well be accorded a similar status in later years--that is, his or her spirit might be invoked on matters relating to the health and prosperity of the village. Littleman is widely viewed (by nonhalflings) as a composite of a multitude of these forgotten cultural heroes into one archetypical figure.

Halflings are inclined to see evidence of these small local gods in many aspects of their surroundings. A patron deity of baking might be credited for the way a particularly good batch of bread comes out, for example; if the game is plentiful, the god of the neighboring woods (often pictured as a hare or fox) will be thanked with small offerings. Halflings who fish commonly revere venerable river denizens, such as an ancient and battle-scarred trout. In the latter case, a halfling who hooks or nets the great one will almost certainly let him go--you don't see mounted fish or animal heads on the wall of a halfling burrow!

A full detailing of the most common halfling pantheon is detailed in DMGR4, *Monster Mythology*. The listing here is intended as an introduction, summary, and quick reference.

The small folk have a very matriarchal view of religion: all their primary deities are female. The goddesses are all concerned with the most important aspects of halfling life; the male gods are viewed almost as sidekicks, ruling over peripheral (if necessary) aspects of life.

The avatar listed for each deity is a temporary incarnation, the form in which that goddess or god is most likely to be encountered during play. Of course, these avatars are not intended as NPCs to be commonly encountered by the player characters--rather, they can be used as beings of more or less normal appearance but great, almost unlimited, power. Perhaps they appear to offer the PCs a warning or to suggest a course of action. Littleman has no avatar, being not a god but a legendary (and possibly mythical) folk hero.

The following are the great halfling gods, universal to the race (though under many guises and names). The real force of daily worship, however, is much more likely to be directed to one of the "small gods," a locally famous deity who can influence the success or failure of mundane tasks and simple, creature comforts.

### Yondalla the Provider (Greater Goddess)

Yondalla is a goddess of nature, plants, and growth. She is viewed as the chief matriarch in the halfling pantheon, responsible for the race's creation and for blessing them with peace, comfort, and plenty. She is also viewed as the race's chief protector; although benign and gentle in most of her incarnations, with a wave of her hand she can age or *wither* any who have wronged her faithful children. Her symbol is a shield bearing a cornucopia, representing her dual roles as Provider and Protector.

Avatar: Yondalla appears as a proud, vibrantly attractive halfling with long golden hair, a skirt of forest green, and a stout wooden shield.

### Sheela Peryroyl (Intermediate Goddess)

The goddess of agriculture, nature, and weather, the image of Sheela is often mixed, almost interchangeably, with Yondalla herself; some hold that Sheela and Yondalla are different aspects of the same goddess. Just as concerned with preserving wilderness as tilling fields, she guards the balance between the two. Sheela is also held responsible for feasting and celebration and, perhaps most importantly, romance; her major festivals are held at harvest time.

Avatar: Appearing as a pretty young halfling maiden with brilliant flowers in her hair, Sheela is usually laughing and just generally delighted by life. Though she appears naive, even simple, she can wield great powers of nature magic.

### Cyrrollalee (Intermediate Goddess)

This goddess is the overseer of many of the mundane and day-to-day aspects of halfling life, chiefly concerned with the burrow and the hearth; again, some believe her to be a persona of Yondalla rather than a separate entity. Friendship among her worshippers is considered the highest praise one can raise to her name; she is most displeased with those who fail to display proper hospitality and good fellowship.

Avatar: Cyrrollalee often takes the form of a stooped halfling of indeterminate years, worn by poverty and work into a frail shell. In this guise, she often visits halfling burrows to see if the inhabitants are truly hospitable; woe to the family that turns her away!

### Arvoreen the Defender (Intermediate God)

A god of stern defense and aggressive watchfulness, Arvoreen is the patron of watchful diligence, not war. He is more serious than the typical halfling (or halfling deity) and serves as a reminder that the safety they currently enjoy was hard-won and can be easily lost.

Avatar: Arvoreen appears as a handsome young halfling warrior, muscular of build and generally very lightly clothed. He commonly carries a short sword and often a gleaming metal shield.

### Brandobaris (Lesser God)

This is the god of adventure (and misadventure), a favorite among halfling adventurers (especially thieves). He has a bawdy sense of humor and little sense of propriety. Brandobaris is always ready with a joke or a jug, yet he is such a friendly rapscallion that he rarely makes an enemy. He is a good friend of Garl Glittergold and Baervan Wildwanderer.

Avatar: In avatar form Brandobaris appears as a plump and jolly halfling. He's always very well-dressed and ready with a smart reply to any attempt at conversation.

## Chapter 2: Halfing Subraces

Three halfling subraces--the Hairfoot, the Stout, and the Tallfellow--are introduced in the *Player's Handbook* and detailed in MONSTROUS COMPENDIUM® Volume One; additional information on all three is included here. These three subraces exist almost everywhere halflings are found, frequently in mixed communities. Hairfeet are by far the most numerous of these three subraces, making up about 75% of most worlds' halfling population, with Stouts about 15% and Tallfellows only about 10%. Rumor persists that

the original stock from which these three derive still exists in remote deep forests, but no sighting has ever been reliably confirmed; if a few rare feral halfling clans do survive in odd corners, these "wild halflings" guard their privacy so carefully as to be virtually undetectable by members of any other race. In most cases, these so-called "wild halflings" are probably Hairfeet, Tallfellows, or Stouts whose homes have been destroyed by war or some other disaster and have reverted to a primitive ancestral lifestyle.

Three other subraces are less common; each originated on a single world and is found primarily only on its home planet. The Kender are native to Krynn and have been featured in numerous DRAGONLANCE® products, including *Tales of the Lance* and the DRAGONLANCE MC appendix (MC4). Originally found only on Krynn, their insatiable curiosity has led many to stow away aboard spelljamming ships, spreading individuals to many odd places. The information here is for those players and DMs rash enough to allow them into their nonDRAGONLANCE® campaigns--or unfortunate enough to do so before they have a full grasp of the consequences!

The Athasian halfling from the DARK SUN® campaign world is described in the original DARK SUN boxed set and the DARK SUN MC appendix (MC12); so far as is known, no member of this subrace has ever been encountered anywhere besides Athas itself.

Finally, the extremely rare Polar Halflings, or Furchin, have spread beyond their desolate homeworld by spelljamming ships, albeit not by choice, and can now be found on the Rock of Bral and in many other places where spelljammers congregate.

All halflings, whatever their subrace, are highly resistant to magic and poisons; for every 3 1/2 points of Constitution, a halfling gains +1 to his or her saving throws vs. spells, rods, staves, wands, and poisons. Halflings also enjoy exceptional agility, gaining +1 to all their attack rolls involving missile weapons. Surefooted and stealthy, they are able to move very, very silently, giving them an excellent chance to surprise opponents (wearing metal armor naturally negates this ability). Finally, halflings are quick to pick up languages; in addition to their own language and the common tongue, most halflings will know at least a few words of gnome, elf, dwarf, goblin, and orc (the actual number of additional languages known being determined by the character's Intelligence, as described in the *Player's Handbook*, page 16).

## The Wanderings of Littleman

*"Now, Littleman set to work, and gathered his people together, and showed them how to outsmart their enemies, frightening most away and banding together to defeat the rest. Soon there was a small village along the riverbank. True to her word, Yondalla showered her blessings upon them and gave them a comfort and contentment they had never known before. There was enough to eat, and safe places to sleep; friends to visit, and a fire in every home.*

*"That was the greatest of all her gifts, the greatest treasure to show her love for her new people: the hearth you'll find today, my sprouts, in every halfling home, no matter how humble, no matter how small. Its fire kept the halflings warm, and cooked their food, and brightened their burrows, a constant reminder of Yondalla's gifts.*

*"So great was their love of their new life that most of Littleman's people wanted to remain always beside their hearths, till the Bad Old Days faded to a distant memory, a*

*reminder to help them cherish their new way of life all the more."*

*The venerable ancestor coughed for a moment, and took another sip of her potent tea. Sighing contentedly, she leaned back in the soft chair. Kepli had climbed into her lap, and she patted the youngster's head absently.*

*"And what of Littleman, Grandmother? Did he settle down with the rest?" demanded Pedderee, sticking out her tongue at her privileged brother.*

*"Well, strange to say, all the changes that had come over his fellow halflings, changes he'd caused, didn't affect Littleman much. He was the same merry scamp he'd always been, and when he'd finished the task Yondalla had set him would have gone back to his old carefree ways, had she not had other plans for him.*

*"Yondalla was well pleased with her Littleman, and wanted him to do the same for halflings everywhere as he'd done for those of the Green Fields. And Littleman, he was full of wanderlust, and agreed, thinking it'd be a fine thing to travel the world and see all there was to see. So he set out on his travels, and for years he went from forest to forest, anywhere there were any of our people, and showed them how to put their fear aside and make places for themselves in the world alongside the Big Folk. And when he was done with that, Yondalla showed him how to travel the paths to other worlds, paths known only to the gods.*

*"So Littleman went on his way, traveling to all the worlds that were, looking for the scattered homes of our people. He noticed how people are more apt to like those who have a lot in common with them, so when he found some of our folk living nearby settlements of the Big People, he taught them how to adopt some of the Big People's ways. If he found some of the small people living in a deep forest ruled by elves, by the time he left a village of Tallfellows prospered in a nearby forest glen. Where a few families had been driven into the hills not far from a dwarven underground city, a homestead of Stouts sprang up.*

*"And everywhere he went, Littleman found humans. It seemed that humans could live anywhere. Even in those days their numbers were far greater than those of the dwarves or elves. He watched the humans carefully, for of all the Big Folk they seemed the closest to the small folk in nature. He saw them in many guises, in many places. Whereas the elves kept to their forests and the dwarves their mountains, humankind dwelt in temperate plains, amid lofty mountains and forbidding glaciers--even in steaming jungles and parched desert. Most of the places Littleman found any of our people dwelling, their nearest neighbors were human farmers or pioneers. Hence the Hairfeet came into being, and the long friendship between our folk and the Big Folk begun."*

*"And Littleman, Grandmother? Surely Yondalla rewarded him for all his work?" wondered Calkin.*

*"Aye, lad, that she did--but in her own way, and her own time. For a very long time Littleman traveled the worlds, meeting new people and seeing strange and wonderful sights, marvels beyond belief. Many of the folk in the villages he founded invited him to stay with them, but always he refused and set out again to see what lay beyond the next bend in the road.*

*"Then one day he climbed a hill and looked down into a valley, and it seemed to him that he'd never seen a fairer sight. A shady river wound its way along through well-tended fields surrounded by friendly forest. It was a small village of our folk, and just as Littleman was thinking how he'd like to sit along that riverbank and fish, he saw that it*

*was the very river he used to fish in all those years ago! He found his old burrow, kept clean and snug all the time he'd been away by his neighbors, and sat down contentedly by his own hearth once again. He'd come back to his own home at the end of all his wanderings, and if he's not gone away I 'spect he's there still."*

*Silence settled over the room, and the children wondered if the old halfling had fallen asleep--so comfortable did she seem, sunk in her chair by the fire. This time it was Pedderee who dared to ask the question.*

*"Grandmother . . . is it true that you yourself traveled the Wide Sea once . . . and even into the skies, and beyond?"*

*A twinkle of firelight reflected from a half-opened eye--an eye that gleamed with delightful memories.*

*"Aye, child . . . that I did. And a fine time I had of it, too! But that's a story that'll have to wait for another time."*

## Hairfoot

This most common of halflings is found throughout lands that have been settled by humans (with the notable exception of Krynn, where this role is filled by the Kender). They live much as humans do but prefer rural settings and villages to towns and cities. Their crafts tend toward the ordinary and practical--farmers, millers, innkeepers, weavers, brewers, tailors, bakers, and merchants are common in Hairfoot society.

Averaging about 3' in height, Hairfeet are slightly stockier in build than is typical for humankind. Their complexions run the gamut from pale to very dark, with hair color correspondingly blond to black and eyes that are brown or hazel. They rarely wear shoes (only in bad weather and bitter cold) and can be easily distinguished by the thick patches of hair growing atop each foot. They have no facial hair (besides eyebrows and eyelashes, of course). They wear brightly-colored, comfortable clothes, such as trousers and shirts or dresses, with a vest, jacket, hat, sash, or bonnet added as a flourish. Their faces are round and very expressive, often appearing child-like to humans.

Hairfeet are slightly longer-lived than humans, averaging 100 years--though a few patriarch and matriarchs have reached ages of 140 and beyond. Full adulthood is generally recognized at about 25 years of age.

Hairfeet are only moderately industrious, but they tend to make up in talent for what they lack in drive. A Hairfoot farmer may tend a small plot in the morning, for example, and spend the afternoon lying in the shade--yet his or her irrigation ditch will be so cleverly aligned that his or her field yields a crop equal to that of a much larger human-tended farm. A Hairfoot-woven tunic will have a finer weave and be less scratchy than a similar human product, thus fetching a considerably higher price.

Hairfeet are the halflings most closely integrated into human society. They will work for human employers or hire human laborers, and many a Hairfoot merchant has made his or her fortune by appealing to the human elite of a city's population. While they will dwell in buildings in human neighborhoods, Hairfeet do prefer to live among others of their own race (though not necessarily their own subrace) when this is possible.

A Hairfoot's preferred type of house is the combined above and below ground burrow. The upper portion is almost always wood-framed, with several doors and windows and a bright, airy feel--though the ceilings are typically no more than 5' above

the floors. The lower portion will contain the fireplace and several small, cozy rooms.

Lacking the time, property, or means to build a traditional home, however, a Hairfoot will cheerfully occupy a human house, a sheltered cave, or even a shack or tent. Wherever he or she lives, a Hairfoot will find a place to have a fire and gather for social conversation.

**Table 5: Hairfoot Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 17 |
| Dexterity | 8 | 19 |
| Constitution | 10 | 18 |
| Intelligence | 6 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 7 | 18 |

Ability Score Adjustments: -1 to Strength, +1 to Dexterity
Languages: Any one human language in addition to normal halfling tongues.
Infravision: No
Special Features: Hairfeet are very good at getting along with humans; this translates into a +2 bonus to all their Reaction Rolls involving human NPCs.

## Stout

Stouts are not as common as their cousins, the Hairfeet, but they are nonetheless a populous and widespread subrace. They are about the same height as Hairfeet, averaging an inch or two below 3', but much stockier--indeed, a typical Stout weighs half again as much as the average Hairfoot! This girth is not all fat, however--Stouts are more muscular than any other halfling and tend to regularly best their kin in the wrestling contest that are a favorite Stoutish entertainment.

Ruddier in complexion than the other subraces, Stouts tend to blush easily when pleased or embarrassed and flush bright red when angry. Their hair color tends to be on the light side, with blonds and sandy reds predominating; their eyes are blue, grey, and green. Unlike Hairfeet and Tallfellows, male Stouts can grow some facial hair, although not full beards; usually it takes the form of unusually thick sideburns or muttonchops. Moustaches are rare, and the few able to grow them are often inordinately proud of their accomplishment.

Stouts favor sturdy garb, commonly made of well-cured leather. They prefer practicality to appearance, and thus the members of a community tend to dress with an almost drab sameness. However, a Stout will try to make a point of having a brightly colored outfit of exotic material (such as cotton, wool, or, rarely, silk), for use on special occasions. They often wear boots, which are really more like thick moccasins that offer good protection from the rocky or marshy ground typically under Stoutish feet.

These halflings tend to segregate themselves from human society more than do Hairfeet, preferring the company of dwarves. Stouts and dwarves mix very readily, and their communities will often be located near to each other. Military and defensive alliances between the two races are common, and prosperous trading is also the norm.

Stoutish villages will generally be in hilly or rocky regions near good fishing waters

and well-watered fields. They are the only halflings with any affinity to mining, but they are quite good at it and will often develop a bustling business from the excavation of minerals. Stouts can also be skilled jewelers, stone-masons, builders, smiths, boatmen, and carvers. They are lackluster farmers at best, except where mushrooms are concerned, and as merchants they excel primarily at selling the products of the above trades.

Preferring underground habitation more than any other halfling subrace, a Stout will typically live in a fully-excavated burrow. He or she will have several round, shuttered windows placed in a few walls to let in light and air, but the overall place will be cooler, darker, and somewhat damper than a Hairfoot home.

The most industrious of halflings, a Stout can accomplish a great deal of work in a short time. They make doughty soldiers, and their infravision (60' range) gives them a great advantage in night-fighting. They are skilled swimmers and boatmen and have used small, slender canoes with great effect in night attacks against larger vessels.

With a typical life expectancy of more than 130 years, Stouts are not considered adults until they reach 30 years of age. The eldest of the race have been known to exceed two centuries in age.

### Table 6: Stout Ability Scores

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 5 | 17 |
| Dexterity | 8 | 19 |
| Constitution | 10 | 19 |
| Intelligence | 6 | 18 |
| Wisdom | 3 | 18 |
| Charisma | 5 | 18 |

Ability Score Adjustments: -1 to Strength; +1 to either Dexterity or Constitution
Languages: Any dwarven tongue in addition to the normal starting languages for halflings.
Infravision: Yes (60')
Special Features: Stouts have a 75% chance to detect sloping passageways and a 50% chance of determining direction when underground.

## Tallfellow

This subrace of halflings is not so common as the Stout or Hairfoot but exists in significant numbers in many areas of temperate woodland. Averaging a little over 4' in height, Tallfellows are slender and light-boned, weighing little more than the average Hairfoot. They wear their hair long, often topped by a small brightly-colored cap.

The longest-lived of all halfling subraces, Tallfellows have an average life expectancy of 180 years, with the eldest exceeding 250 years. Like Hairfeet, Tallfellows shun footwear. Their characteristic foot-fur is somewhat sparser and finer than that of their cousins.

Tallfellows favor woodland shades of brown, yellow, and green and have developed several vibrant shades of the latter color through unique dyes. They enjoy the company of elves, and most Tallfellow villages will be found nearby populations of that sylvan folk, with a flourishing trade between the two peoples.

Preferring to live above ground, Tallfellows often dwell in spacious houses of wood, with many windows. Indeed, the ceiling of a Tallfellow house will typically be nearly 6' above the floor! Though the house will often have a cellar, this will be used primarily for storage. However, during days of hot summer Tallfellows will often retire to their underground chambers for a long evening's conversation and sleep.

Tallfellows display the greatest affinity toward working with wood of any halfling. They make splendid carpenters (often building boats or wagons for human customers), as well as loggers, carvers, pipesmiths, musicians, shepherds, liverymen, dairymen, cheese-makers, hunters, and scouts. They are better farmers than Stouts (although not as good as Hairfeet) and more adept than any other subrace at harvesting natural bounties of berries, nuts, roots, and wild grains.

The only halflings who enjoy much proficiency at riding, Tallfellows favor small ponies. Indeed, many unique breeds of diminutive horse have been bred among Tallfellow clans: fast, shaggy-maned, nimble mounts with great endurance. In a charge, of course, they lack the impact of a human-mounted warhorse; nonetheless, Tallfellow companies have served admirably as light lancers and horsearchers during many a hard-fought campaign.

On foot, Tallfellows wield spears with rare skill. They are adept at forming bristling `porcupine' formations with these weapons, creating such a menacing array that horses and footmen alike are deterred from attacking. This is one of the few halfling formations capable of standing toe-to-toe with a larger opponent in the open field.

### Table 7: Tallfellow Ability Scores

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 17 |
| Dexterity | 8 | 19 |
| Constitution | 10 | 18 |
| Intelligence | 6 | 18 |
| Wisdom | 7 | 19 |
| Charisma | 5 | 18 |

Ability Score Adjustments: -1 to Strength; +1 to either Dexterity or Wisdom
Languages: Any one elven language in addition to the normal halfling starting languages.
Infravision: No
Special Features: Like elves, a Tallfellow can recognize a secret door on a roll of 1 on a d6. All Tallfellows receive a +2 bonus to surprise rolls when in forest or wooded terrain.

## Kender

The fabled Kender is a curious example of convergent evolution. Their native world of Krynn is one of the few with no true halflings of its own, yet this "ecological niche" is filled by another race which, though unrelated, is similar in size, appearance, and culture: the Kender. Hairfeet, Stouts, and Tallfellows who have been to Krynn or have met Kender wanderers on other worlds have adopted them as honorary cousins, despite misgivings about the Kender's complete lack of the prized halfling virtue of common sense.

An extensive description of the Kender is provided in the *DRAGONLANCE®*

*Adventures* hardcover rulebook and in the *Tales of the Lance* boxed set. The information given here focuses on playing Kender in a general AD&D® campaign--i.e., Kender who have strayed from the DRAGONLANCE® game setting into other worlds. It should be noted that it is entirely up to a DM whether he or she wishes to allow Kender into his or her own campaign--and he or she is encouraged to consider very carefully before agreeing!

Kender are somewhat taller than an average Hairfoot or Stout, averaging 3'7". They are much more slender than true halflings, and they tend to show their age more--a fifty year old Kender will look like a forty year old human, whereas a Hairfoot will probably retain his or her youthful looks even into old age. Kender complexions are light, but they tan easily. They tend to wear their hair very long, with a characteristic topknot and long, trailing tail. They wear shoes most of the time, since unlike true halflings, they completely lack foot-fur.

Kender are the most curious of all halfling-kin, the most willing to depart from their hearth and home to embark on a life of adventure. Most Kender are infused with wanderlust about the time they reach adulthood (in their early twenties) and are likely to spend several decades in an exploration of the world around them, only to feel an equally compelling urge to return home and settle down as they begin to age (mid-fifties to early sixties). Kender are absolutely and utterly fearless--even to the point of immunity to magically induced fear--and as a result are willing to travel literally anywhere and try almost anything.

The life expectancy of a Kender is similar to Hairfoot's (about a century) but it must be noted that, due to their curiosity and fearlessness, Kender are far more likely than any other halfling subrace to meet with a sudden and violent demise. They are not suicidal, but they do get carried away.

**Table 8: Kender Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 6 | 16 |
| Dexterity | 8 | 19 |
| Constitution | 10 | 18 |
| Intelligence | 6 | 18 |
| Wisdom | 3 | 16 |
| Charisma | 6 | 18 |

Ability Score Adjustments: +2 to Dexterity (to a maximum of 19); -1 to Strength.
Languages: Kender, Krynn Common, and any other(s) allowed by Intelligence.
Infravision: Yes (30')
Special Features: Kender who are not thieves have a base 5% chance to perform any thieving skill except Read Languages (no chance) and Climb Walls (40% chance). Dexterity modifiers do apply, but these abilities never increase as the Kender goes up in level.
Kender are totally immune to the effects of both magical and nonmagical *fear*, whether caused by monsters like the mummy or lich or by spells such as *scare* and *symbol of fear*.
The Taunt: Kender are adept at the art of taunting an enemy until that foe loses all ability for rational thought or restraint and is goaded into an uncontrolled attack. If the victim can understand the Kender's speech, he, she, or it must make a saving throw versus spells

(Wisdom bonuses apply). If it fails, the victim will attack the Kender wildly for 1d10 rounds, suffering a -2 penalty to all attack rolls and a +2 penalty to Armor Class.

### Athasian Halfling

This subrace of halflings is encountered only on the world of Athas, beneath the Dark Sun. Its members primarily inhabit the jungles along the ridgeline of the Ringing Mountains, the most well-watered terrain on all of Athas. They establish their villages in the dense tangle of the rain forest and jealously guard their territory against intrusion.

The Athasian halfling is by far the least social of all halfling subraces: clannish, suspicious, and distrustful of strangers. Their habit of eating intruders who venture into their territory makes them a danger to all unwary travelers. The Athasian halfling is unique among halfling cultures in this horrifying dietary trait (significantly, they do not consider themselves cannibals, since they don't eat each other, only members of other races).

The villages of these essentially nomadic folk are each centered around a great stone pyramid, with a scattering of small stone buildings around it. The village is the residence of a chief and a few of his or her followers. The rest of the halflings roam a well-defined patch of forest-land, though all the clans will gather at the village once every hundred days.

Athasian halflings average about 3'3" in height. Their skin color varies widely in tone, though even the paler shades tend to be well-bronzed by the sun--since this is a subrace that, as a rule, shuns clothing. Both males and females wear their hair in long, unkempt manes, aside from priests, who usually shave their heads; otherwise, their bodies are completely hairless.

Adept at negotiating all types of forested terrain, including dense swamps, thorny thickets, mangroves, and so on, Athasian halflings utilize this natural cover to screen their villages from larger folk. A network of pathways, each less than 4' high, will pass throughout the huge, densely verdant forest.

Athasian halflings thrive in terrain where other societies might have a hard time surviving. In part, this is because they are so self-sufficient, sharing many skills among the members of a single clan. Woodcarving, weaving, hunting and snaring, tanning, pottery, herbal medicine, alchemy (including the preparation of deadly or paralyzing poisons), farming and herding, jewelry, and feather-work are all common proficiencies among the Athasian halflings.

Though they will cautiously open trading arrangements with nearby cultures, whatever their race, these halflings tend to conduct all transactions in a neutral location or in the other party's community--foreign traders are not allowed into their villages. This arrangement is satisfactory to the other races as well, since these traders realize that they're taking their lives in their hands by venturing into the halflings' jungles--even large, well-armed parties are subject to raids and thievery by these halflings.

Halflings of Athas will treat members of their own subrace from other tribes with respect, generosity, and friendship--even if those halflings are accompanying enemies of the clan (a few renegade clans, however, refuse to recognize the common kinship, and traveling halflings are advised to avoid falling into their clutches).

As with all halfling subraces, a few Athasian halflings are very curious about the

customs and traits of other cultures outside the boundaries of their own jungles and will become wary wanderers. While they find it hard to overcome suspicions that the folk they meet on their travels are only waiting for their guard to drop before trying to kill and eat them, these bold wanderers will experiment with different types of behavior and show great openness in trying new forms of food, entertainment, and other experiences.

The only halfling subrace to show any inclination for climbing trees, some halflings of Athas even make their homes in the branches of particular types of forest giants. The homes of such a village are connected by hanging bridges, often leading down spiraling ladders to additional buildings on the forest floor. A more typical camp is located in a clearing beside a steady supply of clean water. A thorny barrier, grown like a hedge to a height of 10' or more, protects the entire village except for a single, endlessly-guarded gate.

In combat, halflings of Athas prefer short bows, slings, and daggers. Since there is little metal on Athas, most of their weaponry is made of wood and bone. The subrace is also adept at the use of a very accurate blowgun which can silently fire darts up to 60'. These darts are typically coated with one of the virulent toxins or fast-acting paralytics distilled by the tribe's alchemists.

### Table 9: Athasian Halfling Ability Scores

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 18 |
| Dexterity | 12 | 20 |
| Constitution | 5 | 20 |
| Intelligence | 5 | 20 |
| Wisdom | 7 | 20 |
| Charisma | 5 | 20 |

Ability Score Adjustments: +2 to Dexterity; +2 to Wisdom; -2 to Strength; -1 to Constitution; -1 to Charisma

Languages: The halflings of Athas have a language of their own based upon the sounds of forest animals (hoots, howls, chirps, whistles, and the like). Most halflings speak this language and no other. However, a tribe's chiefs will usually know the languages of their neighbors as well in order to handle trade. Wanderers can pick up any language allowed by the individual's Intelligence score.

Infravision: No

Special Features: In addition to the usual priest, fighter, and thief classes, Athasian halflings can be druids, gladiators, rangers, illusionists, and psionicists (all in their DARK SUN® setting variations).

Also, in keeping with the world of Athas campaign, these halflings begin play as 3rd (not 1st) level characters.

### Furchin (Polar Halfling)

This rarest subrace of halflings originated on Falakyr (which simply means "the World" in the Furchin tongue), a frigid world of ice, mountain, and glacier. The Furchin are the dominant intelligent race there, though dwarves also inhabit some of Falakyr's underground regions; humans, elves, and gnomes are not found on Falakyr.

The Furchin would probably still exist in blissful isolation, had not an evil spelljamming wizard come across their world in his travels and decided these bearded halflings would make good slaves. Consequently, many were captured and taken to different worlds by the wizard's ships. Some escaped in various ports and eluded recapture until their ship had departed; thus, while they are extremely rare, Furchin can conceivably be met with in any campaign setting.

The most distinguishing feature of this subrace is the full, long beard that sprouts from the chin of the mature males. These beards are a matter of great pride, and in older Furchin often extend as far as the waist. The race favors warm clothing, woven of animal hair or lined with fur. They regularly wear snowshoes and boots.

Furchin halflings resemble Stouts in both height and girth, though their average life expectancy (80 years) is considerably shorter, no doubt due to their harsher native environment. Hair and skin color vary widely, but tend to be pale, though eyes are usually dark. Those few Furchin born with green eyes are accorded much status--they are believed to be emissaries of the gods and are treated to a life of near-royal privilege.

In their own environment, the Polar Halflings are primarily nomadic, ranging across icy glaciers and barren tundra, following great herds of migrating animals. They have become adept at surviving in these very harshest of conditions.

The Furchin dwell in small clans, usually no more than thirty individuals in a community. In summer they live in tents of leather; in winter they make small, domed shelters of ice. Their clothing is made of fur, their equipment from leather, bone, and ivory; wood is almost unknown on Falakyr. Tribal leaders often wield metal weapons and tools acquired through trading with the dwarves inhabiting Falakyr's interior.

Having developed a number of specialized skills, the Furchin halflings are among the most adept demihumans in existence at surviving in their grueling environment--and seemingly having a good time while they're doing it! In general, the Furchin are a good-humored people who enjoy practical jokes, funny stories, and bawdy songs. Both parents care for the young with great tolerance and tenderness, teaching their children early on the secrets of surviving in their harsh clime.

Strangers--especially those who bring gifts, objects for trade, or interesting stories to tell--will be welcomed by the Furchin with warm hospitality. Although their lives are hard, they are an unselfish people and will treat visitors with kindness and generosity (unless given reason to do otherwise).

Members of this subrace are very proficient in specialized skills suited to their environment, some of which will carry over quite effectively into other locations. They are among the most patient trappers in the known worlds and skilled hunters, tanners, and leatherworkers as well. Their characteristic boat is a miniature kayak, a virtually water-tight shell of leather covering a sturdy bone frame. While only one of their skilled boatwrights can craft these vessels, virtually all adult Furchin are adept at piloting them.

When hunting, the Furchin use leather slings for small game and long, barbed spears for more formidable foes; a strong line can be attached to the spear to allow it (and whatever it has impaled) to be drawn back toward the launcher. In melee combat (which they avoid if at all possible), the Furchin use short handled axes and daggers. Because of their small numbers and an absence of potential foes, the members of this subrace are unused to war and have developed no tactics for fighting an organized formation of soldiers.

In the realm of hunting and stalking, however, the Furchin are second to none. Occasionally, a few Furchin led by an experienced warrior will embark on an mission to slay some dangerous threat to the tribe--such as a band of yetis or a frost giant. Through clever use of terrain and diversion, as well as patiently planned and executed ambush, these halflings have been known to vanquish foes many times their own size. In this respect, obviously, they are not so different from their cousins who live in warmer climes.

**Table 10: Furchin Ability Scores**

| Ability | Minimum | Maximum |
|---|---|---|
| Strength | 3 | 17 |
| Dexterity | 8 | 19 |
| Constitution | 10 | 19 |
| Intelligence | 6 | 18 |
| Wisdom | 3 | 17 |
| Charisma | 7 | 18 |

Ability Score Adjustments: +1 to Constitution; +1 to Dexterity; -1 to Strength; -1 to Wisdom
Languages: Furchin and Dwarven
Infravision: No
Special Features: All Furchin automatically receive a proficiency in Cold-Weather Survival. In addition, they enjoy a +4 bonus to all saving throws versus cold-based attacks, whether magical or nonmagical, in addition to any other bonuses due to Constitution.
Because of their nimbleness at evasion, all Furchin receive a -4 bonus to Armor Class when fighting giant-class creatures and a -2 bonus to Armor Class against attacks from man-sized creatures. The two bonuses are not cumulative.

# Chapter 3: Halfling Culture

A culture of harmony and peace, a warm emotional attachment to family and friends--including a willingness to look beyond physical differences to the common bond beneath--and an appreciation of the finer things in life... these are the hallmarks of halfling existence. Whereas Chapter 2 looked at the differences between the halfling subraces, this chapter focuses instead on the things all halflings have in common--their gregarious nature, trustworthy character, and delight in whatever physical comforts their surroundings provide.

No culture has displayed such a willingness, even enthusiasm, in mingling with members of other races. And halflings, with their generally cheerful demeanor, more or less honest approach to life, and helpful ingenuity, have been sincerely welcomed into communities of humans, elves, dwarves, gnomes, and even treants, giants, and (rarely) goblinoids.

But despite this willingness to diversify--or, perhaps, *because* of it--halflings of all cultures feel a strong identity with their extended families; the company of other halflings is important to members of this small race. Families remain close, however large they grow in size, and many adult halflings will consult with their brothers, sisters, grown

children, or parents concerning important decisions; if no kinfolk are about, they will turn to friends and even mere acquaintances, so long as they are fellow halflings. Even if advice is not taken, halflings feel a sense of comfort in knowing that other small folk have been privy to the decision.

## The Name "Halflings"

It should be noted that, so far as halflings themselves are concerned, the name "halfling" is a misnomer. They don't consider themselves half the size of anything; in their opinion, it's everybody else who's oversized. Their own name for their race translates simply as 'the folk' or 'the small folk' (a term which sometimes includes gnomes as well); humans, elves, and dwarves are collectively referred to as 'the Big Folk.' The halflings also have a slang term they use to refer to humans which translates as 'too-talls.'

## The Hearth and the Burrow

*"See the fire, there, sprouts . . . how he settles in his bed, snug and warm. He has no flame for us now--but we don't need it. If anything, his coals are even warmer."*

*"Warm enough for a story, Grandmother?" inquired Pedderee, quickly taking the coveted lap position while her sister Petrilly as well as Kepli, Calkin, and the others settled around the stone hearth, snuggling into thick fur rugs.*

*"You know me too well, Little Kitten. Tonight, you pick; what story do you want to hear?"*

*"Well . . . last time you told us about how Littleman came home again after all his wanderings. What was his burrow like?"*

*"Ah, but that's a question you could answer for yourself if you thought for a minute, Little One. You see, when Littleman returned to Green Fields, Yondalla was determined to see that he would never leave again. Before he'd left, his burrow had just been a place to sleep, or a refuge to hide from enemies in. She decided to make it a place that would draw him like the sun draws the dew from the grass, a home so perfect that no place in all the worlds could lure him away. Now, children... what things would she look for?"*

*"Water!" squeaked Kepli. "A flowing stream to chuckle in the night and soothe him with its song."*

*"Good, lad--very good. And water deep and clean enough for a cool bath, wide enough to shelter plump trout. Also, a small waterfall, beautiful to watch and hear."*

*"Flowers too?" asked Pedderee, tentatively. "Or a hillside of soft grass or clover to lie on in the sunny afternoons?"*

*"Both, lass--and bushes and trees as well. Littleman loved growing things, and wild things as well, so outside his windows Yondalla placed a perfect meadow. His burrow was on a hillside, facing the south so that it warmed to the sun in autumn and winter--with an overhanging fringe of grass to shade the doors and windows in summertime when the sun was high. Flowers blazed in the meadow from spring to fall, and tall trees surrounded it--hardwoods, with broad, shady boughs, and tall pines, green for all the year 'round."*

*"And the burrow, Grandmother--surely it had a fireplace?"*

*"Aye, Calkin, you've put your finger on it there. You see, sprouts, the hearth is the*

*heart of any burrow--it's the place where you should dream now of where you'll go and what you'll do when you grow up . . . and then, in later years, the place where you'll sit and savor your memories . . ."*

*The old halfling stared into the fire, a faraway look in her half-closed eyes. For a moment the children wondered if she was drifting off to sleep--but she merely took a brief stroll down the paths of her own memories.*

To the halfling the primary symbol of the importance of home, family, and community is the burrow and its ever-present hearth. No halfling dwelling will be without some sort of fireplace, and even halflings who live above-ground tend to refer to their dwelling as a 'burrow,' even if it's only a room in a inn.

While burrows will naturally vary somewhat depending on the climate and terrain--a Furchin's icehouse will, for example, differ significantly from an Athasian halfling's tree house--all halfling dwellings have some features in common. If at all possible, there will be windows, which will be open during all but the chilliest of days--halflings never confuse `snug' with `stuffy.' Tallfellows carry this fondness for fresh air the farthest, positioning their homes to take advantage of whatever gentle breezes waft through the area, while Stouts represent the opposite extreme and might well have only a few small port windows.

Although well-ventilated, the burrow will be shielded against drafts by shutters of wood or leather that can be tightly closed and sealed against gusts and storms. Unlike dwarves, halflings keep their homes brightly lit, with lamps in every room, yet shutters and doors will be so well-set in their frames that not a glimmer of illumination will show on the outside when the burrow is locked up tight.

The fireplace will be built with as much stone as possible, given materials at hand, and capped with a large wooden mantle. It will have a wide mouth and a well-designed chimney to draw smoke up and out of the room. In colder climates, elaborate fireplaces are sometimes constructed with their own air-inlet ducts connecting to the outside of the burrow, allowing the house can be snugly sealed without suffocating the fire, while other ducts channel the heated air away. Conversely, in very warm locales halflings enjoy gathering around communal outdoor fires for an evening's conversation and fellowship--yet even so, each individual burrow will always have its own homefire as well.

It is not uncommon in a halfling burrow for a single fire to last for years, even decades or generations, without a second kindling. Even in very warm climes where it is allowed to die down to coals during the daylight hours, the embers are coaxed back to life at nightfall. Well-seasoned hardwoods are a favorite fuel, but wherever they live, halflings will quickly learn the best fuels for producing a warm, steady heat. Halflings are adept at using different local firewoods (hickory, mesquite, applewood, etc.) to "sweeten the air" or season the food they cook.

A halfling fireplace usually has several racks beside it, so that a variety of cauldrons and kettles can be swung over the coals. In this way dinners are cooked, milk curdled into cheese, and clay pottery fired by the steady heat. Often a large oven nestles in one corner of the coal bed, for use in baking the bread that forms the centerpiece of the halfling diet.

*A lazy man sits in his old chair all day enjoying the sunshine, while an industrious man labors to earn the money to buy a fine new chair he may sit in someday. I ask you,*

*who is the fool?*

-- Hairfoot Philosophy

Halflings have been called connoisseurs of comfort, and the interior of a burrow will be furnished as cozily as the inhabitant(s) can afford. The floor will boast several rugs, mats, or carpets. Every halfling, however poor, has a table and a few stools, and at least one well-padded comfy chair. The bed will be small but snug, its mattress filled with clean straw or sometimes down, with several soft pillows.

The mantlepiece will feature a variety of decorations--most practical, like dishes and candlesticks, a few ornamental or exotic. The latter will often be among their owner's prized possessions, even if he or she hasn't a clue as to what the things are, provided they look interesting enough. Paintings and statuary are rare, as halflings generally prefer their treasures to be useful as well as pretty to look at.

## The Family

*"Pedderee, when your mother was a little girl she had those same curls dangling by her cheeks--she was my first granddaughter, you know, and I couldn't have been prouder! And you, Calkin--your dad was my second nephew on my brother Theadric's side. He had Theadric's stubborn jaw, and--if you don't mind me saying so--I see that same firm set of the chin in you!"*

A single burrow will be occupied by members of one family. Depending on the size of both burrow and family, the dwelling could have as many as twenty-five residents or as few as one. A populous burrow will have a patriarch or matriarch (occasionally both) who presides over the brood with genial authority. Four generations of a family living in a burrow is not at all uncommon, although sometimes a just-married couple will decide they want a burrow of their own. Occasionally an older halfling will decide that he or she would like a private burrow, but such individuals are viewed as eccentrics by their families and neighbors--it is hard for most of these gregarious folk to imagine anyone *wanting* to be alone.

Halflings respect experience and wisdom and defer to their elders out of affection and trust. Aside from the venerable head of a family, adult halflings of different generations (even parents and children) view each other as equals. Only the youngest halflings, not yet adults, are subject to rules and restraints imposed by authority; all grown halflings living in the burrow will be there because they want to be.

Parenting duties are shared by all the adult members of the family; fathers, mothers, aunts, uncles, grandparents, and older siblings all share in the upbringing of youngsters. It is a rare halfling who grows up as the only child in a household; it is more common to be one of a number of brothers and sisters and cousins who play and explore together.

Though family bonds are felt warmly, they are not a cause of exclusivity. Feuds between clans are rare, since most disputes are blamed on the disputers themselves, not their families. For example, a halfling who gets into a fight (a rare, but not unheard of, occurrence) is likely to be criticized soundly by his or her own family for his or her lack of self-control--there's no "Let's go and whup them guys what beat on my brudder!"

mentality.

Although disagreements are naturally inevitable in these crowded living conditions, halflings rarely engage in outright bickering or argument. For one thing, the presence of two people arguing in a burrow several dozen people call home is considered a major intrusion into the privacy of the others and hence a severe breach of etiquette by those engaged in the fracas.

Many of the traditional causes of such fights among humans are removed by the halfling's communal outlook on life. Supper is prepared by everyone who has a free hand, and those who didn't cook will pitch in the cleaning up or help entertain the youngsters after the meal. Only when all the chores are done is an individual member free to go about his or her own business. Because of their ready-to-help nature, tasks like cooking and cleaning up don't take very long, so this still leaves family members with plenty of time to get their feet up and their eyelids down.

In cases of deeper disputes, such as a couple's disagreement on whether to move out and find a place of their own, the discussion will generally be waged quietly, over a period of months or even years. One member might make a friendly remark, after a crowded dinner around a small table, how pleasant it would be to have enough room to stretch out his elbows at the table. A week later his spouse might reply, in an equally pleasant tone, how nice it is that there was such an interesting conversation—"so *many* points of view"--around that same table on a different evening. Naturally, it takes a long time to resolve an issue like this--but when it's resolved, the decision is far more likely to have been mutually arrived at than it would have been among a human couple.

## Growing Up

Offspring are a source of great pride and joy to their parents. Halflings enter the world as helpless as human infants, requiring similar care for the early part of their lives.

For the first ten years, a halfling's relative growth pretty well parallels a human's--i.e., a ten year old human and halfling will look much the same age, although not in size, and will have about the same level of maturity. Children of both sexes and many different ages commonly play together, following rules created by the older youths that still allow the youngest a measure of freedom and decision-making in the game.

It is during these formative years that young halflings practice those traits that will form some of their basic skills when they grow up. Hide and Seek is a favorite game among halflings and is almost always played out of doors. Thus the youngsters become adept at concealing themselves in all sorts of natural cover--in patches of brush, behind tree-trunks, and even amid beds of flowers. Young halfling quickly develop the calm patience that allows them to remain still for long periods of time, since they learn over and over that it is the one who moves that is seen first.

Another favorite game is called Knock the Block, in which a small object such as a block of wood, or perhaps a tin pot or iron kettle, is placed some distance away, and the young halflings take turns throwing things at it, recording points for hits. The game is sometimes played with slings and stones (among older youths). For special tournaments and important matches, clay targets are used, with the winner determined by whoever's shot strikes hard enough to shatter the object. This common game is presumably one reason why so many halflings grow up to be so adept with missile weapons.

From the age of eleven or so on to adulthood, halfling development slows in comparison with the Big Folk. A halfling's adolescence lasts for about a decade and a half (more in the case of the longer-lived subraces). However, the period is characterized by a lot less angst than is typically felt by a human--perhaps because of the warm, supportive, noncompeting environment provided by family, burrow, and community.

Halfling artisans and craftsmen do not follow a formal apprenticeship program--indeed, adolescents are encouraged to experiment with a wide variety of pursuits. The cheesemaker, for example, will be helped by virtually every village youth over the course of several years. Those who find that they enjoy the work will spend more and more time with the `master,' until by adulthood the youth has learned everything the cheesemaker can teach about the trade.

Another reason, perhaps, for the relaxed adolescence of the typical halfling is that male-female friendships are as common as friendships between members of the same sex, often lasting from childhood through adulthood. Many of these lifelong friendships culminate in marriage.

## Sustenance, and More

*In another moment the old matriarch's eyes flashed open, and she grinned at the eager faces around the hearth.*

*"What else, Grandmother?" inquired Kepli. "How did Yondalla keep Littleman home in his burrow?"*

*"She kept him there with the other things he loved . . . with bread hot from the oven, and fresh butter and cheese. With the tangy scent of meat cooked just right, and good drink to nourish the meal along--wines sweet and dry, and cold milk, and even colder beer. She made stout and mead for him, to help the fires of his hearth keep him warm."*

Halflings enjoy eating and drinking in plentiful quantities--indeed, despite the difference in size, the typical halfling will eat as much if not more than a human twice his or her size; this is because halflings have a very high metabolism. Most halflings eat three large meals a day, interspersed with three sizable snacks: breakfast, brunch, lunch, teatime, supper, and bedtime snack. Although they enjoy an occasional meal of meat, especially poultry or wildfowl (roast pheasant is considered a great delicacy), the short folk rely extensively on bread, fruit, and cheese.

Halfling bakers are famed for their abilities with dough, making all types of sweet or salty, light or heavy breads. Cheesemaking is another skill in which many halflings are proficient, and here, too, variety is a prime hallmark--each individual cheesemaker will typically specialize in one kind of cheese, no two of which will be alike, allowing a halfling community to offer a variety of sharp and mild, hard and soft cheeses.

Halflings are born gardeners, far exceeding any other race in their knack for growing foodstuffs. Any halfling with access to a plot of ground will usually maintain a garden, wherein he or she will carefully nurture fruits and vegetables of all types appropriate to the climate. Even in a small garden, a halfling will generally plant at many different times during the spring, assuring a continuing harvest from early summer through late autumn. Halflings do not favor a lot of spice in their foods, however, so few raise peppers or other strongly-flavored crops unless a nearby ready market for them exists. Onions are a

notable exception--many halflings love them and have even been known to munch them raw, much as a human might eat an apple.

Halfling brewers are well-known and their products popular with humans as well as other halflings. As with cheesemaking, a brewer will specialize in a single beverage. These can vary from heavy stout (halflings often jokingly hand a first-time human drinker a knife and fork with the glass) to light and creamy ales. Fruit wines are also popular, with halfling vintners specializing in using whatever fruit is near to hand.

It should be noted that, though halflings favor many sorts of wines and ales, they rarely get drunk, due no doubt to their high metabolism. Rather, the alcohol tends to make them pleasantly drowsy, and a group of halflings that share a bottle of potent stuff will typically become quite relaxed, quiet, and contented as the evening wears on.

## The Village

The key to the village is the halfling's desire for the maximum of comfort with the minimum of effort. These pragmatic folk long ago learned that, though one halfling might learn to grow and cook and sew and build and so forth, specialization in these tasks creates a much higher level of quality all around. Thus, we see the cooperative roots of the halfling's picture of community.

Indeed, this cooperation extends to all aspects of life. The breadmaker will give his or her loaves to the other villagers, as will the cheesemaker with his or her cheese and the brewer with his or her beverage. Perhaps the baker's family gets the best loaf from a particular batch, but everyone gets a fair share.

Burrow excavation and house-building operates under the same pattern--the most experienced builder in the town will supervise a legion of workers, so that the initial portions of the task can be accomplished in a few days. As to the furnishing of the burrow, the occupants see to that themselves.

Though halflings mingle well with human society, this does not mean they have departed from the concept of the village--rather, it is an indication of their broad vision, for nowhere is it written that the villagers must be fellow halflings. A halfling who dwells in a city will treat his or her neighbors as fellow villagers--this is what makes halflings such good neighbors. They are quick to recognize when their generosity is not reciprocated, however, and thus will soon narrow their circle of `villagers' to those who feel a similar sense of cooperation and friendship.

## Crafts, Labor, and Products

Halflings are adept at utilizing local resources in their labors. Although only the Stouts are very effective at mining, all subraces will be intimately familiar with the surface features of their surroundings. If they live in an area with a lot of trees, carvers will know everything about each variety of wood available. If the environment is rocky, experienced stone-masons will predominate. The most dramatic evidence, perhaps, of this adaptability is the fact that the Furchin have developed a high level of skill at working the raw materials in their nearly woodless and stoneless environment: they make everything from their homes to their tools, weapons and clothing out of leather, bone, and

ice. The specific skills likely to be found in a halfling community vary by subrace (see Chapter 2).

The quality of halfling work is very consistent. While rarely the equal of the greatest artisans in the world--dwarves make better axeblades, elves better wine--on the average it is better than the average available elsewhere.

Areas where halfling craftsmen truly excel include many tasks involving dexterity and great detail. The small folk make splendid jewelers, engravers, locksmiths, woodcarvers--indeed, artists of all types. They love colors, and once again the propensity for detail allows a halfling painter to bring a scene to bright and vivid life. If clocks are known to a world (e.g., if its technology is sufficiently advanced), then it is likely that the finest clockmakers will be halflings.

Also, because of their proclivity for entertaining gossip and news of all kinds, halflings make great storytellers. Some of them have a gift for music, and halfling musicians and storytellers are in great demand at any village feast or festival.

Halflings are ill-suited for jobs requiring size and strength, such as blacksmithing, ocean sailing, or cargo hauling. Though a halfling village will usually have a smith who makes nails and horseshoes, his or her work will not be up to the level of most human smiths and will probably be for local consumption only; the same is true of halfling teamsters.

## Trade

*"They cleaned me out! What's even more amazing, they made me feel like I was having a good time while they did it!*

*"Now, I've taken my wagon of goods into many a village before, and always I came away with a little more than I took in. This trip I had it all: bright copper kettles, some jeweled necklaces and bracelets--trinkets, really--and an assortment of good hammers and knives.*

*"I'd no sooner rolled into town than I smelled bread baking. I think that was the start of it--I didn't realize how hungry I was. The baker came out and gave me a piece--free! Best crust I ever tasted, too.*

*"Then there was the innkeeper, who brought me over a mug of sweet ale. Why, before I knew it they were givin' me a bit of this and a taste of that, and I just sort of started doing the same thing back.*

*"Fact is, though, you can't make it in this business if you trade a steel knife for a glass of beer, or a copper kettle for a loaf of bread. Why, the liveryman took such good care of my horses--they positively gleamed in the morning!--that I paid his bill with a smile.*

*"Gave him one gold for each horse, I did. You know, I can't even remember when I've forked over that much to put myself up for the night!"*

-- Grantancrous Jute, Human Tinker and Tradesman

Barter is a way of life to the halfling--though in more cases than not it is the unspoken, unrecorded barter of village life. However, halflings also trade among themselves on a more formal basis and are skilled at interacting with human suppliers and customers. They have a keen eye for detail and are generally quick to spot counterfeit or

low-quality goods, all the while proclaiming the good points of whatever they are offering in return.

Most trade between halfling villages, and between halflings and other folk, is carried on by professional halfling merchants called Traders (see Chapter 4: Character Kits). These halfling merchants transport surplus goods from one village to trade for the products of another. While halfling merchants will certainly take gold and other coinage as payment, they are also willing (more so than human or dwarven traders, certainly) to accept goods in return for goods. Pragmatic here as elsewhere, however, Traders generally don't take goods unless they feel that they will be able to sell or barter those same goods at one of their next few stops.

Since they enjoy the give-and-take of a good bartering session, a typical halfling merchant will offer far less for the goods he or she desires than they are actually worth, while at the same time asking an exorbitant price for his or her own. The small folk view bartering as something of a game and sometimes forget how much better they are at it than most of the Big Folk. However, a halfling who belatedly discovers that he or she has unwittingly talked a human into buying goods at considerably more than their value will often salve his or her conscience by throwing in a `bonus' once the deal is closed to compensate the poor bargainer.

## Society Norms and Taboos

*"As pleasant as his burrow was, Littleman often felt there was something missing as he sat alone by his hearth. It wasn't long before he realized that he was lonely, and it wasn't long after that till he knew he'd found the perfect person to cure his loneliness--Melindy, the fairest maiden among all his neighbors, she of the plump, red cheeks, bouncing curls, and smoothest downy fur on the tops of her feet. But, as luck would have it, she was already being courted by another--stolid Genrill, a farmer and herdsman of good wealth and solid standing in the community.*

*"Naturally, Genrill objected to his newfound rival but--alas for him--Melindy's heart was swept away by the dashing Littleman, with his tales of travel and adventure, his ready laugh, and his warm smile."*

*"But Grandmother--did Genrill not fight for his love? Didn't he bash Littleman over the head . . . or something?" wondered Kepli.*

*"Posh, child--you talk like a human! Of course he didn't. Melindy made known her choice, and she became Littleman's bride. Genrill himself provided the roast beast for the wedding feast!"*

Though they have no lack of courage, halflings shun violent or aggressive behavior in social settings. They are slow to anger and always ready to seek a negotiated solution to any dispute.

A halfling feels no sense of shame if he or she chooses to leave the presence of some obnoxious bully rather than getting involved in a fight--even a fight the halfling thinks he or she can win. Fortunately, because of their communal village upbringing, few halflings are this rude, and such situations mainly arise when the halfling mixes company with humans, dwarves, or goblinoids.

Personal insults delivered to a fellow villager are considered low class, reflecting

more poorly on the one who makes the insult than the target. Politeness is much admired, and one who shows tolerance to a neighbor who has wronged him is considered to be the epitome of a class act.

Parties among halflings are common and will be given for a variety of reasons. Birthdays are always cause for celebration, and with so many family members living together it's rare for a month to go by without several birthdays in it. Each community will also have many annual holidays. These vary by culture--there are no such holidays observed by halflings everywhere. Often the Small Folk will celebrate whatever festivals are popular among their human and demihuman neighbors, soon giving these observances a character all their own.

The hosts of a party are expected to provide food and drink--but much of this will be contributed by neighbors prior to the event. Thus, none of the guests show up with anything to contribute, but they've all provided a bottle, a wedge of cheese, loaf of bread, or the like beforehand. Indeed, this is one way halflings get invited to parties--if you find out that your neighbor is celebrating his birthday, for example, take over a small jug of ale in the morning and he can hardly turn you away when the festivities commence in the afternoon!

There is little sense of social status among the halflings in a village, aside from the amused tolerance shown by adults to children and the general respect for the elderly. Wealthy halflings are expected to throw bigger parties and to generally show generosity to those less fortunate--yet they are not accorded any 'upper class' standing because of this. The villagers may well elect a sheriff, mayor, or constable and give this individual nominal authority to arrest troublemakers. Rambunctious behavior is rare among halflings themselves, however, so the sheriff's main concern will be to control the behavior of humans, dwarves, and other possible troublemakers who come through the community.

### Joy and Humor

Halflings are a folk who can derive pleasure from many simple things and are not afraid to show it--a halfling who is happy laughs; one who feels affection or love will express himself or herself with words or deeds.

The small folk love to tell and hear stories and will generally be attentive and silent when anyone spins a tale. Not surprisingly, they especially love stories in which the small and clever triumph over those who are physically larger and stronger but clumsier and less quick-witted.

Halflings also have a frank appreciation for bawdy humor and practical jokes. They have the ability to laugh at themselves, though one prank often leads to another in retaliation, and so on. Such good-natured exchanges have been known to continue, reciprocated back and forth, for decade after decade.

### Sorrow and Anger

*"There came a time of troubles to the Green Fields. In the first year, bitter winds blasted from the highlands, drying out the fields and leaving no grain and no fruit to harvest in the fall.*

*"But Littleman turned to his bride, Melindy, and he said—'we've still got our sheep, and our pony, and our plow. We'll have a good crop next year!' And she smiled at him, and they waited.*

*"Then, when spring came, it brought the rains in a flood, and with them came a sickness of flies across the land. They bit the animals, and the sheep and the ponies all got the evil sickness. They wasted away and died, even before the crop got in the ground.*

*"So Littleman turned to Melindy and he said—'be happy, my wife. We still have our stream, and our flowers.' And again she smiled at him, and they waited for the flies to go.*

*"Which they did, but only when the frosts came to freeze everything across the land. The stream dried away, caught in the highlands in a grip of ice, and all the flowers and even the grass withered away and died.*

*"This time Littleman turned to his wife and he soothed her fears: 'Don't worry, my dear--we have our hearth, and our burrow to shelter us.'*

*"But next came the storms, with such wind, such power, that the very roof was torn from the burrow, and the stones of the hearth fell down into a great pile, nearly crushing the two of them before they could flee from the broken wreckage of their home. At last they stood outside, shivering and desolate, with no food, no animals, and not even a shelter over their heads."*

*"Then what, Grandmother?" asked Kepli, wide-eyed and sorrowful. "Then did Littleman know sorrow and grief?"*

*"You might think so, Sprout--but you'd be wrong. For even then, with all of his life in ruins around him, he turned to Melindy, and he said: 'Be happy, my love--all we have lost we shall regain, in years to come. And for now, we still have each other.'*

The small folk know the same griefs as humankind--death and illness, partings, natural disasters, and other tragedies. Though they, as a people, are deeply affected by such misfortune, halflings tend not to display their grief as openly as do humans. Halfling villagers who have just lost several neighbors and friends to marauding bandits will shuffle around as if they are in shock--there will be few tears, little wailing or crying.

Even more surprising, there will be few expressions of outright anger or hostility. Revenge is not a great drive to most halflings, though occasionally a wrong will be judged so heinous, so unforgivable, that retribution is required (deliberate murder is a prime example). Loss of possessions, however--whether due to accident or the malicious acts of others--tends to be greeted with a more relaxed attitude of 'easy come, easy go.'

In their day-to-day lives, halflings are remarkably impervious to frustration and depression. Members of the small folk show a remarkable ability to adapt to the circumstances of their surroundings. If the crops fail and food is short, they derive that much more pleasure from the meager fare that they eat. If the roof caves in and the family has no place to sleep, they will remark how fortunate they were that no one was seriously hurt--and they'll mean it!

## Riddles

*"Did you ever try to get a straight answer out o' one of the little maggots? I know I have, and I ain't succeeded yet! Why, they'll answer a question with another question sure as the sun goes down at night! Most irritatin' thing I ever done was ask a halfling for*

*directions!*

*"'Where can I find the mayor?' I said, straightforward-like.*

*"'Which mayor is that?' says the little runt.*

*"'The mayor o' this town, o' course,' I told the dummy, nice as you please.*

*"'Why, do you want to see her?"says the dang fool.*

*"'Course I do!' I said, trying to resist the urge to wring his scrawny neck. 'Why else would I be askin'?'*

*"'Don't you know?' he has the gall to ask me!*

*"I tell you friend, if the mayor hadn't come walkin' down the street that very moment, I think that scene might have ended in bloodshed!"*

-- Dwarven wayfarer, describing his unwitting participation in the Question Game.

A favorite form of contest among halflings of all subraces is the exchange of riddles. These can vary from simple questions and answers to complex puzzles involving clues vague and obtuse. It's not uncommon for a halfling to spend an hour or more pondering such a problem in silence punctuated only by his or her frequent admonitions: "don't tell me the answer!"

Even more baffling to nonhalflings is the Question Game, a contest in which each participant must answer a question with another question. Each response must be a complete sentence, relevant to the one that preceded it, and delivered within ten seconds, or the player loses a point. Experienced players can continue the game for hours; one legendary brother-and-sister team are rumored to have carried a game on every time they met for the last twenty years of their lives. Some halfling enthusiasts of the game will treat every question addressed to them as an invitation to play, with sometimes regrettable results

## Villages and Shires

Halfling settlements for the most part tend to remain small--they will live in towns and shires scattered throughout a human empire, for example, or they might occupy several small villages in a forest ruled by an elven king. In a few cases, halfling holdings have expanded to the size of a kingdom--both the Forgotten Realms and Krynn boast nations populated and ruled entirely by halflings. But even here, they have labored to maintain peaceable relations with the realms that share their borders.

## Warfare

Though they abhor war, halflings nevertheless have proven to be tenacious fighters in defense of their homes or in the service of an alliance. The following letter, written by General Krastarian of Keltar upon the event of his defeat at the hands of an outnumbered halfling militia, perhaps best describes their tactics:

*The little devils stayed out of the open country--undoubtably they knew that our horsemen would have trampled them like rabbits! They gave us their towns and farms in the plain, while they fell back to the accursed wood. And there I, the conqueror, would*

*follow with my footmen--though in truth I knew there to be ten of them to every one of my own men.*

*My companies vanished in the tangle, breaking ranks and thrashing blindly ahead. And then, across the length of the front, came a murderous shower--a thousand deadly arrows piercing the flesh of my men, while the vermin archers remained invisible.*

*I swear, Your Majesty, they swarmed through the brush like mosquitoes! Thousands of them, on all sides! Everywhere we turned, little figures skulked--arrows flew with uncanny accuracy, piercing eyes and necks, dropping even armored men in their tracks! We charged and they scattered, vanishing into the thicket as if they had never been--only the bodies of my men told otherwise.*

*At last I determined to fire the wood--the wind favored our advance--and gave orders to do so. The blazes took hold with great effect, but again that hellish place betrayed the logic of war. The brush exploded like tinder, and the blaze swept not only with the wind--but back into our faces!*

*Many fine men perished in that inferno--a blaze I believe to have been sorcerously altered by the enemy. Minutes after my own very narrow escape, my scouts reported the bulk of the enemy force slipping from the brush while we fled the blaze.*

*I request, Excellency, that we return to Lurien with sufficient forces to deal with this pestilent threat--perhaps two legions, and a full column of horse. I realize that this will stretch the defense of your borders in a tenuous manner, but I believe there to be no other way for the forces of Keltar to prevail against this pervasive foe.*

It makes an interesting historical footnote to add that the general commanded some eighteen hundred men, including companies of elite guards, longbowmen, and light lancers. Never did the halfling force opposing him number even a thousand! He was subsequently removed from command through the simple expedient of removing his head from his shoulders; the halflings of Lurien were left alone for many decades to follow.

Though this is an heroic incident in the annals of halfling military history (and admittedly, a more patient and imaginative commander may well have found the human force sufficient for the conquest), it is illustrative of the tactical finesse and courage displayed by the small folk when they are motivated for battle.

Another feature has also contributed to the halflings' fine reputation as allies: the small folk traditionally have demonstrated a willingness to honor the terms of a longstanding alliance. They will provide the troops they promised, when and where they are required--and those troops display almost as much determination in supporting an alliance as they would in defense of their own burrows. However, they must have some strong motivation before resorting to violence to solve a dispute. Almost always this motivation is defensive in nature--either the halflings or their friends are attacked by some aggressor. Occasionally the small folk might participate in an offensive campaign, but only when it is a preemptory strike against a foe who has already committed enough bloody acts to warrant retribution and is currently gathering forces for an attack on the halflings or their allies.

However, when the need is clear, halflings are speedy and resolute to answer the call to arms. Indeed, this trait is one that makes halfling/human treaties attractive to the rulers of the latter. Also, the deadly accuracy of halfling bowmen and slingers is known to all who have faced them--and few of those desire to do so again!

## Tactics

As already noted, halflings prefer to avoid war if at all possible. A community of the small folk will be willing to negotiate extensively, and even yield to a certain amount of extortion, in order to avoid bloodshed.

However, when pressed to the point of no return, halfling troops make determined fighters with a number of effective tactics at their command. In most cases, only about half the adults will fight, the remainder remaining behind to protect the elderly and children. In cases of dire need--where the very survival of the community is at stake--every able-bodied adult may well be drafted into the cause.

Halflings have a reputation for being easy-going and somewhat lazy, but this does not mean they cannot fight effectively if they need to--the legends of the Bad Old Days remind every halfling of what life was like before they had villages and lands of their own, and they will fight with surprising tenacity, even ferocity, to keep from slipping back into that fugitive existence. Thus each halfling has something that can be used as a weapon in his or her burrow, no matter how peaceful the area. If the village has had to fight in the recent past, then each resident might have a short sword and shield as well as a bow and arrows or a sling and bullets. Even if battle is rare or virtually nonexistant, villagers will be able to arm themselves with a missile weapon apiece (bow, sling, or perhaps darts) and at least a long knife or spear for melee combat--a fact invaders expecting to find them easy prey have discovered time and again, to their surprise and regret.

Halfling companies are almost always irregular--i.e., they don't fight in neat ranks and lines. They will be quite capable of firing volleys of missile fire upon command, and they will advance and withdraw on the orders of their captains--but they would have a hard time facing, for example, a tight rank of armored human infantry or orcish swords.

Instead, the halflings favor battles in wooded or otherwise obstructed terrain. Their scattered formation is ideal for each fighter finding his or her own source of cover, though they are far more adept than humans at holding their company's unity even in thickets where visibility and mobility are severely limited. The fabled ability of halflings to virtually disappear in underbrush is never more useful than at moments like this.

A favored tactic of a halfling force, when fighting in this type of concealing terrain, is to create a loud diversion. A few veteran warriors will thrash through the brush, firing many arrows, giving the impression that they number scores of times more than they actually do. Then, if the opponent's force turns to face this imaginary onslaught, the real halfling company screened by the woods attacks the enemy's flank.

If a halfling force is attacked in unfavorable (i.e., open) terrain by a force of large creatures, the small folk might try to stand off the attack if they feel they have a chance of success. If they are attacked by horsemen or are out-numbered by well-armored infantry, however, the entire formation will usually scatter, joining up again at a place offering more concealment and protection.

Halflings rarely fight mounted, though Tallfellows are a notable exception, occasionally riding into battle on small ponies or, very rarely, beasts such as dire wolves. When halflings fight as members of an alliance, they are often used as missile troops. Well-screened behind formations of human or dwarven foot-soldiers, halfling archers and

slingers can shower the enemy with a deadly rain of arrows and bullets.

Another common specialty of halfling troops is tunneling and underground operations. They are not particularly adept at digging such passages--that task is better left to dwarves--but halfling troops can negotiate much smaller passages than can most of their allies. Thus, if combat is expected in close quarters or beneath a low ceiling, halfling troops are often selected to lead the way.

## Magic

*"I could tell that they feared me when I came into their village and demanded a place to sleep for the night. Gave me a nice room, they did, too.*

*"But when I woke up, everything I had in my pockets, my pouches--even my wand and the rings from my fingers--all were gone! Only my spellbook was left--though how they knew about the runes I'd put on it to fry anyone who touched it besides me I'll never know.*

*"I spent the whole morning negotiating for most of my equipment back. Then, when I would have turned to whole nest of them into an anthill, something made me think the better of it. A couple of them might have stuck me with arrows before I could finish the spell--not a pleasant prospect.*

*"So I left, and brother, let me tell you it'll be a long time before I subject myself to halfling hospitality again!"*

--Parzemon the Mighty, Wizard of Thay

Sorcery is one area of power where halfling skills are lacking. Their inherent resistance to magic protects them against many of the power-crazed spellcasters in the world, but it also prevents them from mastering those forces for themselves: no halfling has learned much about the wielding of arcane power (although comic tales about bumbling but well-intentioned halfling apprentices are popular in many places). Unlike many humans and dwarves, they do not regard magic as particularly threatening; trust in their innate resistance enables halflings to extend to spellcasters the typically friendly greeting they give to all strangers--a fact which no doubt explains the fondness some wizards have for the race.

## Why Most Halflings Are Homebodies

Almost all halflings suffer to some degree from feelings which resembles the condition humans call agoraphobia--a fear of unknown or open places. It's not that halflings are literally *afraid*, merely that they become very uncomfortable whenever they're too far away from their villages and burrows or in unfamiliar places. Whether this is one of Yondalla's 'gifts,' designed to keep them close to home and hearth, or a holdover from the Bad Old Days when enemies lurked behind every tree and bush, none can say. But it has been observed that the symptoms increase with age--halfling children freely range far and wide, while the very old rarely step outside their burrows. Not that the halflings see this as a bad thing: to them, it's simply the way things are and ought to be--youth is the time to gadabout, age the time for rest and reflection.

### Why Some Halflings Pursue Adventure

If his or her burrow and its attendant company and comforts are the most important features of a halfling's life, why then would any halfling leave this perfection for a life of short rations, crude lodging, exposure to bad weather, danger, and possible violence?

That's the question asked by most of the rest of a village when a young halfling packs his or her tote bag and waves goodbye to his or her parents. His or her neighbors will often gather to see the would-be adventurer off, watching the already small form grow smaller in the distance, knowing there's a good chance that they'll never see their friend again.

There are nearly as many answers to this question as there are halflings who have walked down that road. Some do so reluctantly, out of a sense of duty. Others find the temptations of excitement, adventure, and treasure too great to ignore. One thing almost all of them share in common, however, is that they lack the characteristic halfling dread of faraway places.

For reasons which once again are unknown halflings call it 'the legacy of Littleman'--a few rare halflings are born entirely free of the condition which keeps their fellows tied to their homes. Instead, they are filled with an endless curiosity to see new places, new people, and new things. Usually this wanderlust fades later in life and the homing instinct reasserts itself, but a few halflings remain wanderers for the rest of their days (see the Traveler kit in the next chapter). These restless individuals are considered 'eccentric' by their fellow halflings, but their exploits are often admired just the same.

Some examples of the specific callings of halflings who leave their villages behind are discussed in the next chapter.

## Chapter 4: Halfling Character Kits

Despite the fact that halflings are defined by their subrace and their character class, many players enjoy a little more distinction in their PCs. The halfling kits present a variety of different frameworks for playing a character of the small folk, each with its own strengths and weaknesses--but more importantly, each with a specific niche in his or her society.

Kits are optional--no halfling must follow one. They can be incorporated into characters already existing in a campaign, as long as the PC's background is consistent with the character type of the kit. However, a character who is assigned one kit can never exchange that kit for another.

The kits in this chapter are designed for halfling characters and should not be employed with PCs of other races. It should be noted that halflings can use many of the kits introduced in other rulebooks, including the *Complete Fighter's Handbook*, the *Complete Thief's Handbook*, the *Complete Priest's Handbook*, the *Complete Psionics Handbook*, and *The Complete Spacefarer's Handbook*. Indeed, one kit usable only by halflings, the Whistler, appears in *The Complete Bard's Handbook*.

Each of the four character classes available to halflings (fighter, thief, fighter/thief, and cleric) is given several kits. A character may only take a kit suited to his or her character class. All characters are limited to a single kit. Halflings may become clerics of

up to 8th level, fighters of up to 9th level, thieves of up to 15th level, and fighter/thieves of up to 9th and 15th level, respectively. At the DM's option, exceptionally talented halflings (those with scores of 15 or above in their prime requisite) can exceed these maximums by up to 4 additional levels.

## The Structure of the Kits

Each kit begins with a general description of the character type, including any background requirements that might be necessary. Following this, additional information is organized into these categories:

Roads to Adventure: This category, unique to the halfling kits, suggests several reasons why the character might be motivated to do such a rash thing as leave his or her hearth and burrow for a life on the road.

Role: The specific functions of this character within halfling society and beyond.

Secondary Skills: In a campaign that uses the secondary skills rules from the AD&D-Second Edition game, taking a particular kit might require the character to take a specific secondary skill.

Weapon Proficiencies: The listed proficiencies must be among those taken by a halfling character at first level. Unless the entry specifically states otherwise, they do not increase the number of proficiencies available but must be taken out of the standard allotment of slots.

Bonus Nonweapon Proficiencies: A halfling character using a kit gains these proficiencies free--the PC is not required to spend a slot for any of them.

Recommended Nonweapon Proficiencies: These proficiencies are not required of the character, but they do match up well with the kit. They require normal nonweapon proficiency slots be expended for each one.

Thieving Skill Emphasis: (For thief and fighter/thief characters only.) The AD&D-Second Edition thief rules allow considerable flexibility in a character's selection of thieving abilities. A character may wish to specialize in the stealth-related skills such as Move Silently and Hide in Shadows if he or she is a spy or cat burglar. A thief who needs to survive on city streets might prefer improved scores in Pick Pockets and Open Locks. This entry lists appropriate skills for each kit. They are not mandatory, nor do they grant any bonuses or confer any penalties beyond what they would grant any thief character.

Equipment: Any special equipment needs of the character are detailed here.

Special Benefits: These are things a character can do (or protections he or she gains) because of the kit.

Special Hindrances: These are limitations placed upon the character by the kit.

## Fighter Kits

### The Archer

An Archer is a halfling warrior who devotes nearly all of his or her time and energy to the development of skill with a missile weapon. "Archer" is the generic name for this kit: a "slinger" version of the kit also exists and is nearly as popular as the Archer itself, while halflings who live in jungle regions (like the wild halflings of Athas) have developed a blowgun variant. In those rare campaigns where firearms are allowed, this

kit can be used to create a halfling sharpshooter (assuming the firearms are small enough for a halfling to wield; i.e., muskets rather than arquebuses).

An Archer must have a Dexterity score of at least 15.

Often an Archer comes from a background as a hunter, though membership in the local militia is another possible avenue into the kit.

Roads to Adventure: Archers are likely to be drawn into adventure for several reasons. The challenge of competition is strong--the best Archer in the village will naturally be tempted to test his or her skill against small folk, other demihumans, and human archers. Because their skill is so easily measurable, halfling Archers are particularly susceptible to this urge to go out and test their abilities against the toughest competition they can find. Alternately, a halfling Archer may be vigorously recruited by other adventurers who recognize the value of a skilled bowman.

Also, the Archer's skill helps to make him or her an accomplished hunter, and many an adventure can begin during a long stalk through the trackless forest. At the same time, his or her likely status as a prominent member of the village's defense militia makes the archer a likely candidate for any rescue party or guard duty that might develop.

Role: The Archer is a respected figure among a race where missile skill is the norm--he or she is the best of the best. In a small village he or she will be one of the primary hunters. Archers work well with Forestwalkers; it is often the Archer's task to bring down the game the Forestwalker has tracked.

The Archer also forms a staunch pillar of the community defense force--often, a skilled Archer will be placed in command of a company of halfling bowmen.

Secondary Skills: An Archer should have the Bowyer/Fletcher secondary skill.

Weapon Proficiencies: Three of the Archer's initial weapons proficiency slots must be used for missile weapons. If the weapons specialization optional rules are used, the Archer can specialize in one chosen missile weapon by expending two (not three, as is the norm) slots for the weapon of specialization.

Bonus Non-Weapon Proficiencies: All Archers automatically receive the Bowyer/Fletcher proficiency.

Recommended Non-Weapon Proficiencies: The character should consider taking Hunting, Firebuilding, Tracking, and Weather Sense.

Equipment: The Archer's most essential piece of equipment is his or her bow or sling. At the start of his or her career this is likely to be a non-magical (although well-made) weapon, but throughout his or her adventures the character will continually search for the perfect bow. All Archers carry a plentiful supply of ammunition--usually at least twice the usual quiverfull of arrows.

As often as not, halflings with this kit will collect a variety of special missile types for use in special situations. For example, an Archer might have a few blunt-headed arrows (for stunning, rather than killing, targets), barbed arrows with thin lines attached (enabling him or her to retrieve small game simply by reeling in the string after a hit) and fire arrows (extra-long arrows with rags wrapped around their heads; when soaked with oil and ignited, these missiles fly half the distance of regular arrows but have an excellent chance to ignite any flammable substance that they strike). A slinger will likewise have a selection of special sling bullets--some spiked, others hollow and filled with skunk oil, sleeping gas, or a number of other noxious substances.

Special Benefits: The Archer can choose to make a *called shot*, earning additional

bonuses on his or her missile attacks in certain circumstances. By electing to take careful aim, he or she gains a +2 bonus on his or her attack roll for that arrow. However, this requires that he or she forgo initiative (i.e., the shot must be the last act of a melee round). Also, the Archer must concentrate on the shot, meaning he or she can only make one shot that round. Finally, any successful attack against the Archer will naturally break his or her concentration and cause the benefit to be lost, although in this case the shot still has a normal chance to hit. The +2 bonus is in addition to any other attack bonuses the character might have due to Dexterity, weapon specialization, *bless* spells, or magical weaponry.

In outdoor melee, the same procedure (single shot; *last* act in the round) can be used to increase the range of the shot instead of gaining the attack bonus (i.e., the Archer can choose to make a called shot with increased accuracy or extended range, but not both at the same time). The extra range is equal to the weapon's medium range added to the long range; the attack is modified with the long range penalty to hit.

Special Hindrances: The Archer can gain normal proficiency in only one melee weapon. He or she can spend proficiency slots on others but will always wield them with a -1 penalty on all attack rolls. For example, suppose Willem the Archer learns to use a short sword as well as his bow, sling, and throwing knives. If he later decides to use a proficiency for hand-to-hand knife-fighting, he can do so (assuming he has the proficiency slot to spare) but he will suffer a -1 penalty on his melee attack rolls with the knife.

## Forestwalker

The Forestwalker is the halfling version of the Scout, adept at moving through the woodlands, tracking prey and trespassers. Forest-walkers are very protective of their woods and tend to be loners, although they are far from being hermits. Indeed, a Forest-walker is happy to share his or her campfire with guests and will often come to the aid of travelers who treat the woods with due respect; many are the tales of adventuring parties lost in the woods rescued by a friendly Forestwalker.

Whereas most halflings consider a single burrow or building their home, for the Forestwalker the whole forest in which he or she lives is "home." The Forestwalker is likely to maintain several shelters in the particular woods he or she has claimed for his or her own. These might range from cramped niches in hollow tree stumps, providing little more than bare shelter from the elements, to elaborate burrows in small caves or earthen holes excavated beneath a sheltered bank. Though the halfling cannot be said to live in any single one of these, he or she is likely to keep them all well-stocked with food, fuel, candles, blankets or furs, and perhaps a jug or two. If at all possible, each shelter will have some kind of fireplace--in some cases, a simple circle of stones; in others, a well-built hearth complete with chimney or vent to carry the smoke away. Where no fireplace is possible, the Forestwalker will seek consolation in a pipe of tobacco.

The Forestwalker must have a Wisdom score of at least 13. Most, but not all, Forestwalkers are Tallfellows.

Roads to Adventure: The Forestwalker is extremely protective of his or her woods and will seek retribution against any force that hurts the forest; he or she will be willing to go to great lengths (and travel great distances) to see justice done in such a case. This

retribution might be seen as exceeding the typical halfling nonchalance regarding revenge. It's not, though--the Forestwalker thinks of his or her wood as a living being, not a thing. Consequently, any affront against the forest is treated like an attack on a friend, not like the theft of a possession.

The curiosity that lies latent in so many halflings bubbles near the surface of the Forestwalker--a simple love of exploring will often draw him or her away on long expeditions. He or she delights in following the course of streams and rivers and in analyzing the various drainage patterns in a watershed. The opportunity to encounter new types of trees and map out hitherto unknown regions of forest and woodland is often enough to tempt a Forestwalker into joining an adventuring party on a short-term basis, but he or she will always return to his or her home forest eventually.

Role: The Forestwalker is the protector of the woods: the guardian of game, fire marshal, and an important scout against enemy incursion into a halfling realm. He or she is a respected figure in the village and is more likely than not to have a family and comfortable burrow amid the dwellings of his or her neighbors. However, between a sense of duty and sheer wanderlust, a typical Forestwalker will rarely spend more than one day in ten with spouse and offspring, a situation his or her family respect and accept.

The Forestwalker also tends to be one of the more skillful hunters of a halfling community. Thus, when he or she does come in to town, it is often with a large cache of fresh meat--a trait which further endears him or her to these feast-loving folk. Often the Forestwalker can barter for all the other essentials of life, simply through knowing how to gain the bounty of the woods.

Besides hunting, Forestwalkers are also adept at finding nuts, edible berries and other fruits, herbs, roots, and--best of all, from a halfling's point of view--mushrooms. Many are fine cooks, able to serve up savory soups and rich stews that would be the envy of any fine restaurant.

Secondary Skills: The Hunter and either the Trapper/Furrier or Fisher secondary skills fit in well with this character's lifestyle.

Weapon Proficiencies: The Forestwalker must spend an initial proficiency slot on a missile weapon, and another on a weapon that can be made from wood, such as a club or a small quarterstaff.

Bonus Nonweapon Proficiencies: The Forestwalker gains Survival (Woodland) and Tracking (the latter with a +2 to all proficiency checks made in woodland settings), plus any one of the following (player's choice): Firebuilding, Fishing, and Hunting.

Recommended Nonweapon Proficiencies: Whichever of the above not taken as bonus proficiencies are recommended; the Animal Lore, Set Snares, and Bowyer/Fletcher proficiencies can also be of daily use to the Forest-walker. Artistic Ability is also popular, as whittling and woodcarving are common pastimes among Forestwalkers.

Equipment: In addition to his or her weapons, the Forestwalker will rarely be found without flint and tinder for firemaking, a large waterskin, and a heavy cloak or blanket that can double as a bedroll. He or she will always have a knife, even if it is too small to properly be considered a weapon, for marking trails, skinning small game, and whittling.

Special Benefits: In addition to the normal halfling benefit of being hard to spot in natural terrain, the Forestwalker can move at his or her full movement rate through tangled undergrowth ("born and bred in the briar patch, Brer Fox!"). If he or she chooses to slow down to the normal movement rate, however, he or she can Move Silently

through such terrain (no ability check necessary).

Forestwalkers are also adept at hiding tracks. By slowing his or her movement rate to half that allowed for the terrain type, a Forestwalker can conceal all trace of his or her passage and, if he or she is walking in the rear of a party, a number of companions as well. To determine if the trail of a large party is effectively concealed, the player must make a successful Tracking proficiency check with a -1 penalty for each non-Forestwalker in the party ( -2 for each horse, mule, or other four-footed animals accompanying the party). If the proficiency check is successful, the track will be invisible even to a skilled tracker. Note that even though some characters may be riding instead of walking, this does not improve the Forestwalker's chances to cover their tracks, as the added weight makes the mount's trail more difficult to conceal. The halfling will know whether or not his or her efforts have met with success.

Special Hindrances: Forestwalkers may only wear leather armor, and many eschew armor altogether. Since metal makes so much noise in the woods, they will avoid carrying much of it on their person and will not use any metal weapon larger than an arrowhead, hatchet, or knife.

The Forestwalker is a bit of a loner and consequently may be a little slow to learn of big news that sweeps through the community and the realm. Also, Forestwalkers tend not to be terribly skilled in the social graces and suffer a -2 penalty to NPC Reaction rolls from non-halflings ( -4 when the setting calls for good manners and/or elegant dress).

## Homesteader

This is a doughty brand of halfling that, by his or her very nature, represents a departure from the halfling norm. Often a young and unattached individual, either male or female, the Homesteader is a halfling who sets out to found a new farmstead in a region of wilderness or abandoned land. Another common homesteading situation involves a young couple, recently married and previously living in a very crowded burrow. Such small folk, if adventurous enough in spirit, can find immediate rewards to homesteading.

Rarely will a Homesteader challenge an established authority over an area--if humans or orcs have laid claim to a fertile valley, for example, the Homesteader will probably look elsewhere for his or her plot.

Many halfling villages have grown around the individual plot of a brave Homesteader--and indeed, unlike many human frontiersmen, the halfling Homesteader welcomes the company of his or her fellows and will actively recruit other halflings to live nearby.

The Homesteader is a hardy halfling, willing to work harder than the average farmer and to accept a certain reduction in the comforts of his or her life--at least, temporarily. His or her ideal, however, is to have a comfortable burrow and cheerful batch of neighbors by the time he or she reaches old age.

The halfling Homesteader must have a Strength of at least 12 and an Intelligence or Wisdom of at least 12.

Roads to Adventure: The Homesteader's most common route to adventure is in the enacting of his or her goal: seeking out free land, clearing it, and defending it against any who might care to take it away. However, once the farm is established, the Homesteader

is likely to embark on a long journey, visiting many farflung halfling communities in the attempt to recruit other settlers to come and join him or her. Indeed, this journey can involve several years of travel and often forms the seeds of an epic tale that becomes the cornerstone of the community's history--if the community survives, that is.

Also, the very trek involved in reaching the homestead can form a grand adventure for the brave halflings who seek unsettled land. By nature curious, the Homesteader might pass through a lot of different locales in the search for the perfect steading. The adventures and obstacles of such an epic journey can easily create the foundation of a great character history.

Role: Homesteaders are responsible for much of the expansion of the race across the known worlds. Most halfling villages can trace their history back to a hardy Homesteader couple, and these individuals tend to be revered by the generations who have followed in their footsteps. This matriarch or patriarch will be honored and feted in his or her old age and regarded as a prime source of interesting stories. This is regarded as nothing less than a just reward for one who took such risks and endured such hardships in order to bring another halfling community into being.

Commonly, a halfling that sets out on a homesteading adventure will take at least one stone from his or her family fireplace along on the journey. Then, when he or she finally builds his or her own place, this stone will be used as a key part of the new hearth.

Secondary Skills: Farming is the secondary skill most necessary to the homesteader.

Weapon Proficiencies: The Homesteader should be proficient in either the short bow or the sling and should also have a melee weapon proficiency with the knife or short sword.

Bonus Nonweapon Proficiencies: Agriculture or Animal Handling is a bonus proficiency to all characters who select the Homesteader kit. In addition, the character can select either Hunting or Fishing as an additional bonus proficiency.

Recommended Nonweapon Proficiencies: This character has need of a wide variety of skills; some of the more useful include Carpentry, Rope Use, Weather Sense, and Survival. Others can be tied to the type of farming the Homesteader intends to do: a shepherd can benefit from Weaving, a dairyman from Cheesemaking, any herdsman has a use for Leatherworking, and a grain-grower can profit from a knowledge of Baking or Brewing, for example.

Equipment: There is no specific item of equipment universal to halfling Homesteaders. Many of them will have a handcart or small wagon, however, to carry their belongings on the quest for the perfect plot of land. Additionally, a beast of burden such as a pony or mule or animals that produce something useful (a few ducks, chickens, or geese; a dairy cow or goat; a few sheep) can be worth their weight in gold. Animals large and steady enough to pull the cart can prove of double value when the homestead is finally reached.

Special Benefits: The Homesteader who carefully selects his or her land, works hard at tending it, and then travels far and wide to recruit settlers is likely to end up a very wealthy halfling, having earned the respect of the new community and a place in the local histories. In effect, he or she exchanges a lot of hard work and difficulties at a young age for the chance to be treated very well when he or she grows old. Other intangible benefits can include such grandiose attainments as having a town named after you, or the simple satisfaction of seeing well-plowed fields and a thriving village where there was none

before.

Special Hindrances: The primary hindrance to the hardy Homesteader is that he or she has to do just about everything on his or her own--he or she does not have a community of skilled neighbors to draw upon for help, barter, and advice.

## Mercenary

The halfling Mercenary is a bit of a rare bird--one of the small folk proficient enough as a fighter to earn a place alongside warriors of larger and more aggressive races, and one who doesn't mind the difficulties of campaign life or the terror and confusion of battle.

Note that this stops well short of saying:

"A Mercenary loves to fight and kill."

A halfling Mercenary must have ability scores of at least 13 in two of these categories: Strength, Dexterity, and Constitution.

Roads to Adventure: It would be a rare halfling who would adopt the Mercenary lifestyle by choice. Mercenaries are almost always outcasts who for some reason or another have been disowned by their families and driven from their villages, forced into a life of violence and danger. Many of them are, not surprisingly, quite bitter about this involuntary exile. Whether or not the individual was actually guilty of the crime of which he or she is accused is irrelevant; the effect is the same in either case. Whatever misdeed or misfortune drove the halfling to become a Mercenary, it tends to be a private matter, jealously guarded.

Role: The Mercenary is an outcast from halfling society who is forced to mingle with humans, elves, dwarves, even goblinoids--and consequently, over time he or she will begin to acquire some of the characteristics of those races. Now and then in his or her wanderings, a Mercenary might enjoy an opportunity to visit a friendly burrow and sit by the hearth of a fellow halfling for the night or two, but soon he or she will be wanting to move on, perhaps propelled by the frowning looks of neighbors less open-minded than his or her host.

Secondary Skills: Since no halfling plans to grow up and become a Mercenary, he or she could have almost any secondary skill to represent his or her former profession.

Weapon Proficiencies: The halfling Mercenary must be proficient with at least one melee and one missile weapon. If the optional weapon specialization rules are used, the character must have a weapon specialization by the time he or she reaches second level of ability (see Special Benefits, below).

Bonus Nonweapon Proficiencies: None.

Recommended Nonweapon Proficiencies: Halfling Mercenaries have been known to find the following proficiencies useful: Carpentry, Riding, Armorer, Blindfighting, Bowyer/ Fletcher, Tracking, and Weaponsmithing.

Equipment: The Mercenary will typically be offered decent weapons and armor by his or her employer--nothing special, but equal to the equipment of the rest of the company. Anything superior to this has to be provided by the Mercenary himself or herself.

Special Benefits: Due to his or her continual exposure to warriors--and typical Small Folk quick-wittedness--the halfling Mercenary receives two extra weapon proficiency

slots upon reaching second level. The slots must be used to purchase a weapon specialization, if he or she does not already have one. Like the Archer, the halfling Mercenary can specialize in the bow or other missile weapon at a cost of only two proficiency slots (not three).

Special Hindrances: This is not generally considered a socially acceptable career for a halfling. Thus, a halfling Mercenary is likely to be given quite the hairy eyeball by others of his or her race--at least, those who know what the character does for a living. This translates into a -2 penalty on Reaction Rolls.

## Sheriff

The halfling Sheriff is really more of a benign constable than a tough enforcer, but he or she does represent the long arm of the law (so to speak) among the villagers and visitors in his or her community. The position is, for the most part, an honorary one--since halflings don't have a lot of troublemakers among their own ranks and don't run the kind of establishments that tend to draw humans ruffians. Still, the post represents the faith and confidence of a good number of villagers, and the responsibility tends to be taken very seriously by the halfling who holds it.

A halfling Sheriff must have a Charisma of at least 13 (most have Charismas which are much higher) and a Strength of at least 11.

Roads to Adventure: The solving of a complex crime can serve admirably to draw a halfling Sheriff into an adventure. Though his or her primary duty always lies with the halflings of his or her village or shire, the Sheriff is willing to range far and wide in pursuit of those who have wronged those neighbors. In keeping with halfling values, however, this dogged pursuit extends only to those who have caused bodily harm--the Sheriff is not likely to make a vigorous pursuit merely to recover lost property. Thus a Sheriff may turn a blind eye on the doings of Bandits and Smugglers in the area, but ruffians who beat up an elderly farmer will soon find the same Sheriff leading an angry posse in hot pursuit.

Role: Within the village, the halfling Sheriff has a small office--often a corner of his or her own burrow--where he or she can usually be found when not out "keeping an eye on things." Jails are not common in halfling villages, but if there is a lockup it will be nearby. It will, however, have its own separate entrance, secured by a stout door and lock.

Most of the Sheriff's time is spent in seeing that all goes as it should and in looking out for signs of trouble ("Odd that Old Mistress Elderberry didn't come to market this morning; she hardly ever misses a day"). Although he or she doesn't maintain a regular 'beat,' the Sheriff does spend a lot of time ambling through the village and will try to find an excuse to visit outlying farms and isolated families at least once a week to see that all is well with their inhabitants.

Often he or she is politely nosy, asking questions about things that have changed, displaying interest in everything going on in the community or canton. A Sheriff knows all the local citizens by name and is familiar enough with their normal habits to take note of any break in routine--such as the baker not firing up her oven in the morning, or the farmer leaving his irrigation gate closed. In these instances, the Sheriff would make a friendly check to make sure nothing is amiss.

Among halflings there are not a lot of laws that require the attention of law

enforcement. Thievery is one, and so is violent assault and of course murder. None of these crimes are likely to be committed by one villager against another--in the rare case where this occurs and can be proven, a thief is forced to make restitution, while a halfling guilty of deliberately harming another is banished from the community for life (many of these become Mercenaries; see the preceding kit). More common are boundary disputes, complaints from halfling fathers about overzealous suitors who pursue their daughters, or charges of unfair trading. The Sheriff usually resolves all of these with calm diplomacy, and it is not uncommon for even the loser to come away from a settlement feeling that he or she has received very fair treatment.

The Sheriff also typically has the authority to call up the Small Folk in times of crisis, crying for a muster of all who can bear arms. The post does *not* necessarily entitle him or her to command of the company when it assembles; such leadership is more often a matter of past experience and age.

Being Sheriff of a halfling village, especially if it's a smaller community, is not necessarily a full time job, so it is quite likely that this character will run a small farm or practice some sort of trade as well. Running a small store is a common practice among Sheriffs, since it allows them to remain at their post most of the time and also provides interaction with the village citizenry.

Secondary Skills: Any.

Weapon Proficiencies: The Sheriff should be proficient in the use of the short sword, the club, and the knife.

Bonus Nonweapon Proficiencies: None.

Recommended Nonweapon Proficiencies: Tracking skill and knowledge of an extra language or two are proficiencies that can make a Sheriff's job a lot easier.

Equipment: A Sheriff's arms and armor usually come with the job, so the character doesn't have to purchase these. It is not unlikely that he or she will also have access to a pony, should the need for a mount arise.

Special Benefits: The authority of respectable halfling society is the primary benefit of the Sheriff. He or she receives a +2 bonus on all NPC Reaction Rolls made for halfling NPCs (as long as the other character knows of the Sheriff's rank).

Special Hindrances: All Sheriffs have a strong sense of duty and will respond at once when called upon--i.e., whenever anyone in the village has a need for his or her services. This can often entail long hours and rude interruptions in the Sheriff's enjoyment of life.

## Squire

Halfling fighters have been known to form strong friendships with fighters, rangers, and paladins of other races--most notably human, but not disallowing dwarven, elven, and other more exotic folk (one chaotic evil halfling is said to have formed a partnership with a red dragon!). Since such adventuring pairs typically encounter most of their excitement in nonhalfling societies, the halfling partner is often regarded (by the members of that other society) as an apprentice, squire, or sidekick to the warrior of local origin. Such an assumption, naturally, is very far from the truth; the two are in fact full partners.

However, the halfling warrior does serve a number of useful functions that would prove difficult for the larger partner to accomplish on his or her own. Squires make

marvelous scouts and spies, since they specialize in acting dumb and nonthreatening.

The size of the halfling, together with the ability to hide in bushes and undergrowth, makes him or her an exceptionally valuable companion when it comes to gathering information. It's even possible for a Squire to disguise himself or herself as a human child to gain access to places where adult adventurers fear to tread.

The Squire needs two minimum attribute score: a 10 for Strength and a 12 for Charisma.

Roads to Adventure: For the Squire, friendship is a strong enough inducement to draw him or her away from the typical halfling comforts. In this case, anything that compels the first member of the pair will draw the halfling character along as well.

The Squire is often motivated by genuine friendship for his or her partner, sometimes coupled with a sense of gratitude for something that has happened in the past, or a mutual goal (perhaps even a quest) that the pair have embarked upon together.

Role: When among strangers, the halfling Squire often plays the role of simpleminded servant; this increases his or her chances to eavesdrop and usually causes potential enemies to underestimate the danger he or she poses. All Squires are adept at observing nearly everything that goes on around them and often act as ambassadors to other races--particularly those who might be hostile to the Squire's partner.

It is important to realize that, in reality, the Squire and his partner are full equals--the halfling is not a squire in the traditional sense of apprentice or servant. Even if the two act out a false relationship for appearances' sake, the Squire and his partner remain together because of trust and affection; there is no room for one or the other to be the boss.

Secondary Skills: A Squire should have the Groom secondary skill.

Weapon Proficiencies: This character should have a proficiency in at least one melee and one missile weapon. A proficiency that matches his or her partner's can provide extra benefits (see Special Benefits, below).

Bonus Nonweapon Proficiencies: The Squire character receives either the Animal Handling or the Riding (Landbased) proficiency as a bonus. In addition, the halfling can gain proficiencies known to his or her partners, simply through the progress of their cooperative adventures, as follows:

When the halfling goes up in level and at least half the necessary experience points to gain the new level were earned from tasks that the Squire performed with his or her partner, the halfling can add one proficiency slot, filling it with a proficiency that his or her partner holds and used during the course of the previous adventures.

Recommended Nonweapon Proficiencies: Heraldry and Foreign Languages are proficiencies that often prove useful in a Squire; also, the Armorer, Bowyer/Fletcher, and Weaponsmithing skills can be helpful.

Equipment: A Squire's companion will try to provide a suitable steed for his or her partner, as well as weapons and armor for the halfling, if he or she has the means.

Special Benefits: The Squire becomes very familiar with the habits and characteristics of his or her partner's race; thus, he or she gains a +2 bonus to NPC Reaction Rolls made for members of that race.

In addition, the Squire can advance to slightly higher levels than can other halfling warriors. The Squire can reach a total of two levels higher than he or she would otherwise be allowed (see page 92); however, he or she cannot pass the level of his or her partner by this means.

Special Hindrances: The loss is mostly intangible, but the halfling Squire is forced to do without the comforts of hearth and burrow that are so fundamental to his or her kind. In effect, he or she chooses to replace his or her family with the partner; a Squire who loses that partner to death or other mischance is a lonely halfling indeed.

### Tunnelrat

This is a dirty-under-the fingernails halfling with an unusual amount of courage and a scrappy attitude toward dangerous and powerful foes. The cheerful, matter-of-fact, bloodthirsty attitude of these professionals usually comes as a great surprise to humans and others who think of all halflings as jolly farmer-types. The Tunnelrat specializes in underground search-and-destroy missions, especially in areas where constricted space or low ceilings would put larger warriors at a significant disadvantage.

The Tunnelrat must have a Strength score of at least 13 and a Constitution score of 11 or greater.

Roads to Adventure: Most Tunnelrats are drawn to this deadly calling by some dire event in the past--usually nothing less than a life-shattering trauma will suffice to drive a normally peaceful halfling into such gritty and dangerous work, as when a halfling who has lost loved ones to the depredations of goblins or kobolds becomes an implacable enemy to those evil creatures. Occasionally, of course, the drive is not due to such dark causes--the lure of easy money, simple talent, or mental instability might propel a sturdy halfling into a career as a Tunnelrat. After all, this is one of the few areas (perhaps the only one) where small size is not only not a liability but a basic prerequisite.

Role: The Tunnelrat specializes in rooting out smallish humanoid monsters who make their lairs underground. Goblins, Duergar and kobolds are the most common of these enemies, though many other types are possible--including lycanthropes, undead, and animal monsters like giant rats, giant weasels, and carrion crawlers.

Tunnelrats generally seek out the dens of their enemies, attacking them for whatever profit they can find there--and, more importantly, for the satisfaction of eliminating an enemy of their people. Tunnelrats sometimes work together as a team and will sometimes band together with gnomish Goblinstickers on a joint mission, especially if the two groups share the same foe. In the latter case, the gnomish presence provides a very useful complement to the halflings--without any increase in size. Tunnelrats will sometimes join forces with dwarves as well, but since a typical dwarf is significantly larger than a gnome or halfling, this severely restricts the size of tunnels that the party can investigate.

Secondary Skills: No particular secondary skill is required for the Tunnelrat.

Weapon Proficiencies: The Tunnelrat should be proficient in the use of the short sword, hand axe, or war hammer, as well as either the crossbow, short bow, blowgun, or darts. If weapon specialization is used in the campaign, the Tunnelrat must have a melee weapon specialization by the time he or she reaches third level.

Bonus Nonweapon Proficiencies: The Tunnelrat automatically receives Blindfighting in addition to any other proficiency. Also, he or she can select one of the following languages in addition to any the character would normally know: goblin, orc, kobold, and Duergar.

Recommended Nonweapon Proficiencies: Rope Use, Swimming, and Mountaineering (for scaling underground cliffs) are all useful to the Tunnelrat.

Equipment: The Tunnelrat is typically equipped with a generous coil of thin but strong rope, flasks of oil, flint and steel, at least one lantern, and metal climbing spikes. His or her weapons will be slung from belts and straps, readily reachable with either hand. Also, he or she will be sure to carry a plentiful supply of ammunition for his or her missile weapon.

Special Benefits: Tunnelrats who are not Stoutish will gradually develop an infravision-like ability to see in the dark. The range of this sight (which works exactly like infravision) is equal to 10' per level of the Tunnelrat (to a maximum of 60').

Special Hindrances: Tunnelrats are considered shockingly crude and more than a little mad by most other halflings--why would anyone *choose* to root around in dirty holes after dangerous monsters? Therefore, the Tunnelrat suffers a -2 penalty on Reaction Checks made for NPC halflings.

## Thief Kits

### Bandit

The halfling Bandit is a far cry from his or her human or orcish counterpart. While the basic approach to thievery is the same, he or she pulls off robberies with more panache. The target is confronted with a choice: hand over your goods or suffer bodily harm--yet the halfling Bandit always retains a certain amount of sympathy for his or her victims and will never bully someone simply for the pleasure of it.

Bandits tend to work in small groups, though not all thieves in the band need be members of this kit--or even halflings. They will have a headquarters in some remote location, almost always screened by forest (including forested swampland). Trails to the lair are well hidden, and if the entire band is composed of halflings it's likely that in many places these access paths will pass under low-hanging branches, through close and thorny thickets, and even under stone arches only 2' to 3' tall. Depending on the size of the Bandit band, one or two lookouts will probably be on duty at all times along the most-traveled of these obscure paths.

A Bandit PC should have a Charisma of at least 12 and a Strength or Constitution of at least 13.

Roads to Adventure: Some halflings become bandits because they want to put a healthy distance between themselves and the nearest authorities; others choose this profession for the fun of the thing. For example, a halfling who stands up to a local duke's rapacious tax collector and drives him out of the village will probably want to consider a very long vacation as soon as she calms down. Once she has fled to the woods, established a hideout, and made a reputation for herself by harassing more of the human lord's agents, other halflings may flock to her banner--some because they believe in her cause, some because the lifestyle appeals to them.

The Bandit has a curious standing in halfling society--officially he or she is disapproved of, and the local Sheriff will often send the area's ruler long reports lamenting his or her inability to stop the holdups. Privately, the same Sheriff might be a friend of the Bandit leader--indeed, he or she may have relatives belonging to the band--and remain content to leave them alone so long as they avoid violence and don't rob members of their own race. Most of their fellow halflings will regard them with amused tolerance, shading to frank envy and hero-worship by the young and young-at-heart. A

local Bandit gang might trade occasionally with halfling villagers in the surrounding area. In this way, the Bandits can maintain most of the comforts of the hearth and burrow and also have the benefit of a job where they don't have to work too hard.

Consequently, young halflings from these neighboring villages become acquainted with the Bandits, and at least a few of them are drawn to that apparently idyllic forest life--and thus the ranks of the band are replenished. Others who have become fugitives through the same causes as the original Bandit can find safe haven and join the cause; many of them may choose to remain even after the original injustice is eventually rectified.

Sometimes an entire halfling community is driven to banditry--as when a human lord forces halflings from their homes to make way for human setters, or when wars and invasion sweep across the land. In such cases, Bandits have been known to become the backbone of the halfling defense, harassing enemies and supporting friends until the crisis passes. It's memories of times like these that explain the forgiving attitude of the typical halfling toward these carefree rogues.

Role: Bandits consider themselves equalizers of wealth. After all, a quick look around will show that some folks have just too much money--and the Bandit takes it upon himself or herself to correct this inequity.

Halfling Bandits will avoid violence, in so far as they can while still accomplishing their objectives. They will not use violent ambush (such as an arrow barrage) to halt a merchant party, for example--though nets and pit traps are popular tactics. Utilizing the halfling ability to conceal themselves in underbrush, Bandits delight in suddenly appearing around a daydreaming trader and his or her bodyguards. By the time the victims can react, it's usually too late. Often, one or more halflings skilled in Rope Use will lurk ahead and behind the ambush, ready to lasso any of the intended victims who might make an aggressive move or a break for freedom.

Those victims who have the good sense to quietly surrender will be politely relieved of the better part of their wealth and allowed to go their way. Those who put up a fight will be subjected to a certain amount of indignity--the better to teach them to behave next time, according to the Bandit's admittedly convoluted version of justice. For example, Bandits traditionally will leave a victim his or her horses and wagons (if any) and enough of his or her goods or money to get started again in the next town. Indeed, a very believable tale of hardship ("What! *All* of you are orphans? Poor fellows!") might possibly succeed in causing the Bandit to let the poor unfortunate(s) pass unmolested!

However, a target who chooses to be "difficult" and is nonetheless captured will be treated much more severely. His or her mount will be taken, along with all his or her goods; the unfortunate victim will be left to make his or her way back to town on foot, probably having been relieved of even his or her outer garments!

Secondary Skills: Forester is a useful secondary skill to the Bandit; however, any secondary skill is acceptable.

Weapon Proficiencies: The Bandit should be proficient in the short bow or hand crossbow, as well as at least one melee weapon.

Bonus Nonweapon Proficiencies: The Bandit can claim one of the following as a bonus nonweapon proficiency: Direction Sense, Fishing, Rope Use, or Disguise.

Recommended Nonweapon Proficiencies: In addition to those listed above, Swimming, Weather Sense, Forgery, Set Snares, and Tightrope Walking can all prove

useful to a bandit.

Thieving Skill Emphasis: Any.

Equipment: Bandits can equip themselves in whatever fashion they choose (within reason).

Special Benefits: The Bandit usually enjoys a considerable amount of support from the halflings in the local population ("local" being within about three or four days' travel of the bandit lair). This typically translates into advance warning of any attempt to seek out and destroy the lair by militia, men-at-arms, or hired parties of adventurers.

Special Hindrances: There's always the chance that the Bandits will pick on the wrong victim--a powerful wizard who only looks like a plump merchant, or an arrogant young lord or lady who determines to have revenge at all costs. In the latter case, the full weight of the local ruler, whether king, duchess, or baron, could well be thrown into an effort to root out the Bandit lair.

## Bilker

The Bilker is a clever halfling thief who entertains his or her victims even as he or she steals from them--and, as often as not, the target of the crime doesn't even realize he or she has been robbed until the Bilker has traveled on to the next town. Bilkers are unusually larcenous for halflings, although it is only fair to point out that the Bilker tends to regard his or her activities as a grand game, and the profits thereof as a just fee for the entertainment he or she has provided. He or she is a diminutive con artist who likes to leave 'em laughing--but also to leave 'em far behind, and quickly.

A Bilker must have Charisma and Dexterity scores of 13 or higher.

Roads to Adventure: The Bilker is forced onto the road, you might say, because he or she tends to outlast his or her welcome rather quickly simply by practicing his or her trade. Like other halfling thieves, he or she will generally avoid victimizing fellow halflings. Unfortunately for all concerned, the Bilker's definition of "victimize" doesn't always match up with the victim's. For example, a Bilker will not consider it theft to gamble with the innkeeper for free drinks every night--the innkeeper, after losing for seven straight nights, may beg to differ.

Naturally, a fresh supply of targets is essential to the Bilker's activities. A Bilker who works smaller towns and villages must of necessity be prepared to stay on the move to keep one step ahead of his or her former customers. A Bilker who decides to exercise his or her talents in a large city might be able thrive for a considerable while, but eventually a gradual increase in the number of victims will inevitably pressure the halfling to move on. Obviously, a fine sense of timing is important for any Bilker who does not wish to end his or her career at the hands of an angry mob. Ever optimistic, he or she often tells friends about a wonderful opportunity that has just arisen to sample the life in some far distant locale--immediately before decamping with the goods!

Role: The Bilker is a curious fellow--undeniably a scoundrel, scallywag, and all-around rascal, yet also a thoroughly likeable person whose powers of persuasion can make him or her a valuable asset to any adventuring party. Many a Bilker has used his or her silver tongue to get friends out of a sticky situation, only to cheat them out of their pocket money the next night. Fellow halflings can almost always see through a Bilker's schemes and view the gullibility of Big Folk with amused disbelief.

A Bilker travels from town to town--usually by himself or herself, sometimes in the company of a group of companions. His or her tricks can range from simple gambling games intended to earn enough to pay for his or her room and board to complex schemes involving the exchange of valuable treasures. Sometimes these are even legitimate transactions in which the Bilker has somehow gotten involved and out of which he or she has engineered a percentage of the profits--perhaps from each party!--in return for his or her services. On other occasions, the transaction might be an out-and-out fraud, where the purchasers acquire something that has been counterfeited. Such complex schemes can involve property deeds, rare objects of art, bogus treasure maps, or beautiful and valuable jewelry that will be recognized as stolen the first time the unwary buyer wears it in public.

Secondary Skills: Gambling is the secondary skill most appropriate to the bilker.

Weapon Proficiencies: The Bilker should be adept at the use of the knife. The hand crossbow, often concealed under a cloak or inside a hat, is a favored missile weapon of Bilkers everywhere.

Bonus Nonweapon Proficiencies: Gaming.

Recommended Nonweapon Proficiencies: A knowledge of Disguise, Local History, Appraising, and Ventriloquism can all prove useful to the enterprising Bilker.

Thieving Skill Emphasis: Manual dexterity is essential to the Bilker's sleight of hand games; hence, Pick Pockets is a favorite. Hear Noise also often comes in handy.

Equipment: The Bilker is a cautious soul; he or she usually appears unarmed in order to disarm suspicion, while carrying a weapon or two concealed somewhere on his or her person. Also, he or she will never be found without the tools of his or her trade--a pack of cards, some dice, a few shells, and knucklebones. After all, you never know when you might be able to get a friendly game together!

Special Benefits: The Bilker is adept at presenting an acquaintance (the "sucker" or "mark") with an interesting gaming opportunity. The game involves the acquaintance guessing about some apparently random chance--which shell is the pebble under, or what number will come up on the knucklebone? The sucker is usually allowed to win a round or two, but by the time the game is over, the Bilker ends up holding the coins.

Use the following procedure to resolve these attempts, once the Bilker has found an appropriate NPC mark:

The bet usually centers around a single coin--silver or gold, most likely, but varying by the standards of the surrounding establishment. The Bilker can automatically lose any round he or she chooses. A fair game can be played by rolling 1d10 for the Bilker and another for the NPC, with a tie going to the mark.

If the Bilker wants to rig the game, his or her Dexterity score is subtracted from the mark's Wisdom score (to a minimum Wisdom of 0). The victim must then roll that number or less on 1d20. If the check fails, the Bilker wins the bet. If it succeeds, the mark realizes he or she is being hoodwinked, and an intriguing roleplaying encounter may occur.

The Bilker can repeat the attempt as many times as he or she wants--however, for each attempt, the victim gains a +1 bonus to his or her roll. Thus, a wise Bilker knows when to call it a night.

Bilkers also have the additional ability which helps them sometimes talk their way out of trouble. When confronted by a potentially hostile person or persons, a Bilker may

attempt to *smoothtalk* the other party (naturally, the attempt is only possible if both parties speak a common language, and the ability will not work if combat has already been joined). The Bilker's Charisma score is subtracted from the victim's Wisdom score, and the victim must then roll under the resulting number or he or she (or it) will find himself-herself-itself nodding in agreement with whatever the Bilker is proposing. Naturally, truly outrageous proposals will give the victim a hefty bonus (+1 to +5, depending on the nature of the suggestion). The victim also gains a cumulative +1 bonus for each previous time the Bilker has used this ability on him or her. Still, this ability is very useful to help get a Bilker and his or her friends out of a tight spot. Alas, the effect is temporary, lasting only a minute or two, so a Bilker soon learns to get while the getting is good.

A Bilker's larger schemes and scams should be are left to the player character to create and enact. The DM should take appropriate precautions for whatever NPC faces bilking.

Special Hindrances: The Bilker is a fun character to have around, but he or she usually leaves bad tempers behind when he or she departs. His or her opportunistic behavior makes it difficult for the halfling to make longterm friendships or keep allies, eventually leaving the character to face the woes of his or her own making alone. The longer a Bilker plies his or her trade, the more numerous his or her former victims become, making it almost inevitable that one day, when the Bilker least expects it, his or her path will cross that of an "old friend." Often, the previous victim is very glad to find the halfling thief who made him or her feel like a fool and walked off with a goodly amount of his or her money. The Bilker, naturally, might not be so delighted with the reunion.

### Burglar

The halfling Burglar is a benign specialist at retrieving objects of value from those who have come by them wrongly--at least, that's the way the Burglar sees it (admittedly, the one who has been burgled tends to disagree). Adept at stealthy movement, lockpicking, recognizing traps, and removing them, the Burglar aspires to a life of comfort simply by virtue of his or her talents--the ultimate in halfling accomplishment.

A Burglar must have a Dexterity score of at least 15.

Roads To Adventure: Burgling involves skills that most halflings learn at a young age--children are forever sneaking into each other's rooms, borrowing each other's toys, and spying on their siblings. As the youngsters mature, a few of them begin to consider the potential profitability of their skills, turning their attention toward more lucrative and dangerous targets. As with many kinds of thievery, burglaring has a built-in inducement to travel--if the local authorities begin to grow suspicious, the life of a simple Burglar can become very complicated indeed.

Other motivations can include the recovery of property that has been wrongfully taken from the Burglar or his or her friends. Naturally, the Burglar won't face certain death simply to recover stolen goods, but if the character thinks he or she can get away with it, he or she might derive a certain amount of satisfaction from setting matters right. Sometimes the simple challenge of slipping into a great fortress or burglaring a well-defended treasure is enough to draw a Burglar's interest--not so much for the value of the

goods as for the test of skills involved.

Like the Archer, the Burglar is the best of the best, a halfling who has developed to perfection skills all halflings possess to some degree--stealth, nimbleness, and unobtrusive movement. As such, he or she is highly respected by the halfling community for his or her expertise. Whereas an accomplished human thief usually tries to hide his or her profession, a Burglar's trade will be well-known by his or her halfling neighbors and his or her accomplishments highly-regarded--indeed, it is a source of civic pride for a village to be home to a really first-class Burglar, something for the town as a whole to boast about. This acceptance works to the community's benefit, since most Burglars will be willing to help out in times of crisis by using their talents for spying or gathering information that might prove useful to the village as a whole.

Role: The burglar is the master of several thiefly arts, most notably Move Silently and Open Locks, though skill at finding and removing traps can be another lifesaving talent. Burglars can be found in all areas of halfling society, including the comfortably wealthy as well as the most destitute.

Most Burglars congregate in areas of larger communities, where they can mingle with members of other races. Like most halfling thieves, the Burglar tends to avoid halfling victims, preferring the treasures of humanoid monsters and humans above all others. Occasionally a Burglar will choose to use his or her skills to aid fellow halflings who have suffered injustices; such Burglars can rise to the status of folk hero.

Secondary Skills: Many Burglars have skills at Trading and Bartering.

Weapon Proficiencies: Burglars prefer weapons that can be wielded quickly and in relative silence. Daggers and short swords are preferred for melee, though some specialize in other weapons. The sling is a popular missile weapon for a Burglar, as are darts and, in areas where they are known or used, the blowgun and hand crossbow.

Bonus Nonweapon Proficiencies: The Burglar gains a nonweapon proficiency for Appraisal.

Recommended Nonweapon Proficiencies: Rope Use, Disguise, and Tightrope Walking are all useful to a Burglar.

Thieving Skill Emphasis: Move Silently; Hide in Shadows; Open Locks; Find and Remove Traps.

Equipment: A rope and a set of lockpicks are the standard tools of the Burglar. He or she will often scorn the use of armor altogether, and in any case will wear nothing heavier than leather, delighting in dark, silent clothing.

Special Benefits: At first level the Burglar gains an additional 10% to Open Locks or Move Silently. Each time he or she gains a new level, the Burglar receives a +5% bonus that can be applied to either of the above two talents or to Find and Remove Traps.

Special Hindrances: The Burglar devotes so much of his or her time to developing the skills of stealth that he or she is at something of a disadvantage in face-to-face combat, suffering a -1 penalty on all attack rolls in melee. However, attacks made as a *backstab* are not affected by this penalty.

### Smuggler

The Smuggler is a halfling thief who gives every appearance of being an honest trader. In fact, he or she would *prefer* to be a straight-forward and upright merchant, but

(generally speaking) the impossible situation created by taxes and tolls of intrusive humans, dwarves, and elves drives him or her to more underhanded dealings. Thus, he or she imports and exports many things from many places--most of which are not supposed to be leaving or arriving at these specific locations.

The reasons for smuggling goods vary considerably; the following are the most common among them:

**Excessive Taxation.** A local government may wish to retain a monopoly on a local product (wine from the duke's vineyard, for example) and so seizes or stamps a high tariff on any competing goods brought into the duchy.

**Belligerent Status.** Two rival states involved in a border dispute will often prohibit trade with the enemy. Local farmers and tradesmen, however, don't always grasp the wisdom of a policy that cuts them off from their customers--thus, the aid of a Smuggler can keep the economy alive.

**Contraband.** A particular commodity might be banned outright, with penalties of varying severity for those who violate the prohibition. If a rival religious sect, for example, values bloodstones in its rituals, the entrenched state religion might bar that stone from the realm, decreeing that anyone caught with a bloodstone be put to death. Whatever the nature of the contraband, chances are that it is very valuable to someone--and consequently, there's a great deal of profit incentive for the bold Smuggler.

A Smuggler must have a Charisma or Intelligence score of at least 13.

Roads to Adventure: Smugglers almost always begin as traders, transporting goods from one location to another, turning a small profit, and bringing something new back to the point of origin. Sooner or later, as he or she expands his or her routes and the world changes, such a trader runs afoul of one of the above prohibitions--and the pragmatic halfling doesn't see why such a minor detail should change the way he or she conducts business. Thus, the merchant continues to do what he or she has always done--but with a little more risk, and a little more profit.

Tied into the Smuggler's normal way of life can be any number of special missions--tasks which allow the Smuggler to employ his or her skills in the name of a higher cause. Rescue of a prisoner is one, or the delivery of a message or item of great importance. A Smuggler can function as a very effective spy, reporting back on the mood of the local people as well as more typical information on land features and defensive preparations.

Role: The Smuggler is a vital cog in the unofficial economy of virtually any region in a civilized world--for without him or her, a far greater proportion of the wealth would remain in the hands of those who hold the reins of power. Many goods that would otherwise have no outlet find their way to customers thanks to the intrepid Smuggler. Whether he or she carts it down rural highways or barges it along placid streams, the Smuggler will, quietly and reliably, see that his or her cargo reaches its destination.

Smugglers build a network of loyal friends and companions (which is why high Charisma is such an asset) and treat these accomplices well in return for protection and help.

The value of the goods smuggled is dependent on two factors: the market for those goods at their destination (supply and demand) and the difficulties and dangers endured by the smuggler in transporting them. Something which is valuable to begin with that now carries the threat of death will bring many times its normal worth to the Smuggler.

Secondary Skills: Either the Trader/Barterer or Teamster/Freighter secondary skills

are appropriate for the Smuggler.

Weapon Proficiencies: Any.

Bonus Nonweapon Proficiencies: All Smugglers gain the Local History proficiency for areas on their regular routes. Also, Smugglers pick up languages during their travels, gaining the ability to speak and understand an additional language every other level, starting at second level. Naturally, the new language must be one he or she has had contact with during the course of the previous two levels of experience.

Recommended Nonweapon Proficiencies: Riding, Appraising, Disguise, and Forgery can all help a Smuggler in his or her work.

Thieving Skill Emphasis: Move Silently helps a Smuggler avoid attracting unwanted attention, while Hear Noise often alerts him or her to unwanted company.

Equipment: Unless he or she transports very small quantities, the Smuggler needs some way to haul cargo. Wagons and carts are easy to trace, so Smugglers prefer either some form of boat (e.g., canoe, river raft, or small sailboat) or a pack animal (such as a mule, pony, donkey, or large hound). In general, a Smuggler will only use a wheeled vehicle when he or she has a very good road to follow and is certain his or her smuggling activities have gone unsuspected.

Special Benefits: A Smuggler who possesses the Local History proficiency for an area gains a +4 bonus to NPC reaction checks in that area. He or she will also have full knowledge of any hidden pathways or secret trails along his or her regular route.

Special Hindrances: The inherent risks of challenging authority, including threat of imprisonment or worse, are the primary drawbacks to the Smuggler's career.

### Urchin

The Urchin is a specialized halfling thief who attempts to pass as a human child. Many an unsuspecting victim has tried to collar the annoying brat, only to learn that the apparently feeble child who robbed him or her is in fact an adult with all the skills of an accomplished thief.

Urchins are encountered almost exclusively in cities and large towns, where people don't know all their neighbors. Roaming the chaotic network of a city's streets and alleys, the Urchin blends in to the local population, keeping several escape routes and hiding holes ready to hand at all times. Living mostly on the street, the Urchin takes shelter where he or she can find it--as often as not among the poor and destitute of the community.

The Urchin must have a Charisma score of at least 11.

Roads to Adventure: The Urchin character is typically a kit chosen by necessity--a halfling comes to a city alone and finds no market for his or her skills. At the same time, he or she grows tired of sneering bullies, some of whom pick on the halfling merely because of his or her size. Finding it easier to escape unwanted attention by blending in than by flight, he or she finds welcome anonymity in a life of disguise.

Role: The Urchin typically works alone, though he or she may well be a member of a small group; urban thieves' guilds made up entirely of halflings have been known to exist, most of whose members will be either Urchins or Burglars. Sometimes a halfling Urchin becomes the leader of a gang of children, both human and demihuman. In this case the Urchin will take a very protective, almost parental care with his or her young charges.

Dressing in juvenile clothes, with a haircut similar to those of local children, the Urchin will wander about the city like any child with a free day. However, he or she is adept at picking pockets and always has several escape routes memorized, ready at any moment for a quick getaway.

Diversions and distractions are a part of the Urchin's typical routine. If he or she can topple--or better yet, get someone else to topple--a fruit vendor's cart, for example, the resulting confusion will result in a situation ripe with possibilities for profit.

Secondary Skills: Any or none.

Weapon Proficiencies: The Urchin's double life prevents the character from openly wearing weapons children would normally not carry ("Say--what's that kid over there doing with that crossbow?"). Hence Urchins tend toward easily-concealed or disguised weapons (dagger, darts, sling, quarterstaff).

Bonus Nonweapon Proficiencies: Because his or her very existence depends upon playing a role, the Urchin quickly develops a knack for disguise. At first level, the Urchin can effectively disguise himself or herself as a human. Upon reaching second level, the Urchin gains the Disguise proficiency in full.

Recommended Nonweapon Proficiencies: Forgery, Blindfighting, Tumbling, and Ventriloquism can all have their uses to the Urchin.

Thieving Skill Emphasis: Urchins are consummate pickpockets (see Special Benefits, below); Climb Walls and Hide in Shadows are helpful when it comes to getaways.

Equipment: Aside from weapons and perhaps a set of lockpicks, the Urchin needs no special equipment.

Special Benefits: With Urchins, picking pockets is both a hobby and a way of life. Because of constant practice, Urchins develop unusual skill in this particular aspect of thievery. This translates into a +5% bonus **per level** to their Pick Pockets rolls, starting at second level (i.e., +5% at 2nd level, +10% at 3rd level,  c.).

Special Hindrances: The local guardsmen and city officials can take a real dislike to the activities of an Urchin, causing no end of trouble for the poor player character.

## Fighter/Thief Kits

### Cartographer

This character is an explorer and mapmaker who sets out to see the world and wants to return with a good account of his or her adventures. Although such a calling is unusual among halflings (except among Kender, many of whom believe themselves to have great talent along these lines), the Cartographer exists among all halfling subraces, however rare he or she may be. Indeed, his or her exploits form the great part of many popular legends among the small folk.

Cartographers are, by their nature, very interested in the land and its features. They are inclined to take little note of the occupants of those lands, unless forced to do so. To a Cartographer, a city's setting on a high riverside bluff will seem far more profound than the fact that the guards of that same community have just arrested him or her under suspicion of being a spy or just generally being a stranger.

A Cartographer must have an Intelligence score of at least 13.

Roads to Adventure: The Cartographer is drawn to the road for no other purpose than curiosity of what lies over the next hill--though many a Cartographer has become

entangled in events along the way that resulted in fame and fortune.

If the Cartographer enjoys exploring and adventuring for its own sake, he or she also enjoys keeping records of his or her experiences (to reminisce over in his or her old age, assuming the character survives to have one)--primarily by mapping out everywhere he or she goes. He or she has a great interest in new places and will often journey far out of his or her way simply to investigate some unique feature he or she has heard about. Cartographers tend to ignore obstacles created by an area's inhabitants (hence, Cartographers have a high mortality rate) but will be well aware of the difficulties involved in crossing certain geographic challenges, such as deserts, mountain ranges, seas, and swamps.

Role: The Cartographer is a happy wanderer, as comfortable under the encircling limbs of a thick pine as in a goosedown bed. The weariness of the trail may weigh down his or her feet, but curiosity will still propel the traveler over one more hill, around another bend.

The Cartographer doesn't go looking for trouble (i.e., adventure), but it seems to have a way of finding him or her, due no doubt to his or her inexhaustible curiosity. Often a halfling Cartographer will be found mapping a trade route through a war zone or tracing the path followed by an ancient expedition through a forgotten dungeon, oblivious to the arrows flying around him or her!

Cartographer rarely hold any sort of official positions as court mapmakers, with the ironic result that many a trackless land lies virtually unknown to its human or dwarven overlord while some retired halfling Cartographer has a perfectly good map of the place tacked up above his or her hearth. Fortunately Cartographers are often willing--even eager--to show others their maps; adventurers willing to listen patiently to the halfling tell at length of his or her journeys will often gain much valuable information for their trouble.

Unfortunately, it must also be noted that just because a map was drawn by a halfling Cartographer, there's no reason to assume that a map is entirely accurate. Any feature the Cartographer has seen for his or her self will be just as it is drawn; however, some Cartographers are trusting souls and will incorporate features into their maps that they have only heard about second- hand. In such cases, the second-hand information is only as reliable as the source. Kender maps are notoriously unreliable, because a Kender Cartographer will exaggerate what he or she sees in order to make a more interesting map: mountains become taller, rivers wider, distances farther apart, and the like. Thus Kender maps are entertaining but relatively useless; a grain of truth will lie behind them, but it may be somewhat difficult to extract.

Secondary Skills: Any (player's choice).

Weapon Proficiencies: The Cartographer is a well-rounded character, proficient in at least one missile and one melee weapon. Short bows and short swords are the most popular, though the sling-staff is another favorite. Kender Cartographers will of course specialize in their national weapon, the hoopak.

Bonus Nonweapon Proficiencies: Cartographers gain Direction Sense as a bonus proficiency when the character is created.

Upon reaching second level, halflings using this kit gain a unique proficiency: Cartography. The Cartography proficiency allows a character to accurately render on paper or parchment the distances and directions of features that he or she has personally

seen. If a Cartographer sails along a coastline, for example, he or she will be able to chart its bays, points, reefs, and inlets, as well as give a general impression of the shoreline--is it forest or meadow, mountain or plain? However, he or she will not know the shape of inland features such as valleys or the course of rivers and streams.

Cartographers who spend time chatting with local folk will be able to learn about more than the places they see themselves. Such second-hand maps, however, are only as accurate as their source--and even then they will lack a level of detail that the Cartographer can add from the scenery before his or her own eyes. Thus, secondhand maps tend to have more imaginary or inaccurately-described features.

Recommended Nonweapon Proficiencies: A character desiring to be a Cartographer must take the Navigation proficiency. In addition, Modern Language can prove very useful in asking directions, while Weather Sense and Survival can help keep the Cartographer alive in the wild.

Thieving Skill Emphasis: Read Languages skills enable a Cartographer to research old maps and help plan his or her journeys; Climb Walls can help overcome obstacles on the way.

Equipment: The Cartographer feels lost without his or her mapmaking kit: paper or parchment, quills, and ink. He or she will improvise in a pinch, using virtually any material that comes to hand (leather, bark, driftwood, etc.), but will transfer such crude maps to more permanent form as soon as the chance presents itself.

Special Benefits: Cartographers almost never get lost, even in places they have never been before, above ground or below. If confronted with a question like "Which way back to town?"or
"Which of these corridors leads toward the surface?" a Cartographer can make an Intelligence check; success means that he or she know the answer and failure means that he or she doesn't know and realizes the fact. Optionally, the DM can rule that on a fumble (a result of 20 on 1d20) the Cartographer *thinks* he or she knows the way but starts out in the wrong direction.

Special Hindrances: None to speak of.

### Trader

The halfling Trader is a legitimate version of the Smuggler--an honest merchant who spends more time in legal activities and has a little more fighting ability with which to protect his or her cargo (and, incidentally, his or her self as well). Traders generally stake out a territory and a regular route and don't range too far afield; only a chance to dramatically increase his or her profits will tempt a typical Trader into deviating from the established routine. A Trader is very likely to have a burrow in a local community, and though he or she may be absent for several days at a time he or she is always glad to return home again.

A Trader must have a Charisma score of at least 11.

Roads to Adventure: The Trader is a natural target for thieves; fortunately, his or her combination of character classes makes this hard-working halfling merchant well equipped to vigorously defend his or her cargo.

By the nature of his or her business, the Trader has the chance to make many friends and become acquainted with the problems in many different areas. Motivated by a strong

sense of right and wrong, together with the strength of his or her influence, the Trader will often take a leadership role in situations that call for dramatic and decisive action.

Role: Trading among halflings begins as a very simple, need-based process. The Trader finds some high quality commodity, usually from his or her own village, which is in large supply. Typical goods, especially for starting Traders, include cheese, produce, wine and beer, pottery or cloth, shellwork, unique spices or flavorings, and woodcarvings. Often, in fact, the local source of these goods will 'front' the Trader for his or her first cargo, in anticipation of much increased business. This is only done, however, if the young Trader is a local lad or lass known to be a sober and responsible individual.

Next the Trader determines another area, where he or she anticipates a demand for those goods and decides what he or she will trade for in return. The Trader typically starts small, with a limited and regular route upon which he or she tries to establish a professional reputation. If the enterprise prospers, he or she might show a (generally conservative) tendency to expand business; since he or she is a halfling, any new stops along the route usually means the Trader will be making new friends there as well.

Secondary Skills: The Trader/Barterer is the typical secondary skill of this kit.

Weapon Proficiencies: Any.

Bonus Nonweapon Proficiencies: The Trader can select either Appraising or Local History as a bonus proficiency at the onset of his or her career.

Recommended Nonweapon Proficiencies: Direction Sense, Animal Handling, and Weather Sense are all useful proficiencies for anyone who spends a lot of time on the road.

Thieving Skill Emphasis: Detect Noise helps the Trader anticipate ambushes, while Read Languages is useful for bookkeeping.

Equipment: The Trader will typically have a cart or wagon to haul his or her goods and some beast of burden--a pony, donkey, draft horse, or ox. River-based Traders will have a small, easily-managed boat with plenty of cargo space. Unlike Smugglers, Traders keep to well-traveled (and well-guarded) highways and hence prefer wagons to pack animals.

Special Benefits: The Trader is a well-known and popular character, privy to the local news all along his or her trade routes, often the first to bring news and gossip from village to village. He or she is quick to learn of new and interesting discoveries and to determine what goods and commodities are in demand in various locales. Additionally, he or she has a marvelous opportunity to get rich.

Special Hindrances: In a word, thieves.

## Traveler

This popular character is the halfling equivalent of the bard, a musician and storyteller traveling about out of curiosity and a general love of life. His or her wanderings give the character grist for the tales and legends by which he or she earns a living. Like the Cartographer, he or she is curious about the wide world, but it is people, not places, that draw a Traveler's attention. Nothing makes a Traveler happier than meeting people from a wide variety of cultures, and this enthusiasm translates into a remarkable ability to understand and adapt to local customs.

A Traveler must have a Charisma score of at least 15.

Roads to Adventure: The Traveler is another of those rare (some would say 'mad') halflings for whom the comforts of hearth and burrow are simply not enough. It begins almost always in childhood with the feeling that the fair in the next village must be just a little grander than the one at home. Accomplished Travelers can become the confidants of kings and queens, the emissaries of earls, the entertainers of nobles and sages.

Role: The Traveler does much the same work as a bard but takes himself or herself far less seriously. He or she is an accomplished wordsmith, capable of spinning a yarn on the spur of the moment that can reduce an audience to tears or helpless laughter. All Travelers play a musical instrument, but it will always be a simple, homey instrument like a banjo, harmonica, or fiddle rather than one of the more sophisticated instruments favored by bards. Travelers are also fond of entertaining children with simple sleight-of-hand tricks, and one will often put on a special show just for children when he or she comes to town.

A Traveler's performances are almost always informal, homespun affairs--swapping stories and sharing a jug with the old folks around a hearthfire, playing the fiddler and being the caller for courting couples at the local hoedown and square dance, thrilling youngsters with monster stories enlivened by special sound effects. Travelers are masters of the Question Game and enjoy matching their skill against that of the local champs. Because of their genuine enjoyment of people, Travelers are quick to make friends. As a rule, they are welcomed nearly everywhere they go and remembered fondly when they depart.

Secondary Skills: Most Travelers will avoid secondary skills on principle.

Weapon Proficiencies: The Traveler can use any weapon; usually he or she will try to select something unique. Travelers are particularly fond of weapons that don't look like weapons--for example, a walking stick which is actually a swordstick, or wooden juggling balls that can be used as missile weapons.

Bonus Nonweapon Proficiencies: The Traveler receives Musical Instrument as a bonus proficiency.

Recommended Nonweapon Proficiencies: Dance, Disguise, Etiquette, Juggling, Tumbling, and Ventriloquism are all useful proficiencies for a Traveler.

Thieving Skill Emphasis: Travelers do very little actual stealing, as a rule, but the Pick Pockets skill comes in handy in their sleight-of-hand shows.

Equipment: Aside from his or her musical instrument, weapons, and the clothes he or she wears, a Traveler will have few possessions, no more than he or she can easily carry. Gold has a tendency to tie a body down, in his or her opinion, and the character is likely to leave any excess wealth that comes his or her way on the door of some worthy widow or orphan as he or she leaves town, light of heart and empty of pocket.

Special Benefits: The Traveler has several bard-like abilities: he or she receives a +2 to all Reaction Rolls due to the character's innate goodwill to all and friendly demeanor. A Traveler who has time to tell friends and allies an inspiring story before they enter a combat gives them the same attack and saving throw bonuses as a *bless* spell. Finally, his or her music offers immunity to song-based *charm* attacks (for example, a harpy's singing) to all within earshot, but only so long as the Traveler can keep playing non-stop.

Special Hindrances: As noted above, all Travelers are poor, by choice. It has been said that a Traveler has a million friends and no home, and this is true; while his or her folksy manner and homespun ways win the character a welcome everywhere he or she

goes, he or she has no family or burrow to return to. Travelers are essentially sociable loners who dread the day when old age will force them to stop their wandering at last.

## Cleric Kits

### Healer

The Healer is the community physician, counselor, and spiritual adviser for his or her fellow halflings (though not every village or town is fortunate enough to have one). Healers must have an alignment of good or neutral and specialize in the benign arts of tending injuries, curing diseases, midwifery, and general public health.

The Healer must have a Wisdom score of at least 12.

Roads to Adventure: Typically, the Healer gets drawn into adventure not because of any all-consuming drive to see the world or to gain fame and fortune, but because he or she feels that he or she will genuinely be able to help his or her friends--who for some reason the healer cannot fathom *are* seeking fame, fortune, and excitement.

Healers are very confident in their abilities and those of their friends and are thus comforting to have around. They tend to be righteous, even a tad stodgy, in their beliefs, but loyal to a fault (even to those who might not feel a similar loyalty in return) and very determined when in pursuit of a worthy goal.

Role: The Healer is fond of reminding his or her companions that he or she is "just a simple country doctor," a phrase which rarely does this highly competent cleric justice. He or she has very little aptitude for combat, preferring instead to let more vigorous allies handle the tasks of violence. Naturally enough, the Healer specializes at repairing the damage inflicted by such battles after they are over--or, sometimes, while they rage around him or her.

Healers also often function as "the voice of reason" in a party; they give advice freely, whether it is asked for or not, and are not afraid of speaking their minds--whether to defend an underdog, praise an unpopular decision, or criticize an evil warlord to his or her face.

Secondary Skills: The Healer's calling is a full-time job in itself, leaving no time for any secondary occupation.

Weapon Proficiencies: The Healer only receives *one* weapon proficiency slot at first level; he or she can select any weapon eligible for a cleric.

Bonus Nonweapon Proficiencies: The Healer automatically receives the Healing proficiency, without any penalty to his or her proficiency checks.

Recommended Nonweapon Proficiencies: The Healer can benefit from a knowledge of Agriculture, Herbalism, and Reading/Writing.

Equipment: A Healer will never be without his or her bag, which contains scalpels, bandages, ah-sticks, and various herbs, barks, and roots useful in the event he or she needs to whip up a quick poultice or ointment.

Special Benefits: The Healer gains a +1 hit point bonus per die rolled to all *cure wounds* spells he or she casts.

Special Hindrances: Healers refuse to wear armor in all but the most dire circumstances. A Healer's famed lack of tact can also cause problems in some situations.

### Leaftender

The Leaftender is similar in many ways to the druid--he or she is a priest who lives in and watches over the wild places that are so important to the halfling race. Despite the fact that his or her home and burrow is located deep in the woods, the Leaftender is not antisocial--halfling visitors will always find a warm welcome and be invited in to share a cup of a tea, a bit of conversation, and a warm fire. Nonhalflings will meet with a similar reception once the Leaftender has ascertained that they offer no threat to his or her treasured domain.

Unlike the Forestwalker, who is devoted to keeping the forest the way it is, and the Homesteader, who wishes to turn it into farmland or pasture, the Leaftender works to slowly tame a forest without destroying it. He or she will plant nut trees and berry bushes to provide more food for the local wildlife, tend sick trees, and generally make the woods he or she dwells in a healthier, friendlier place.

Roads to Adventure: The Leaftender is like a wilderness gardener. Anything that threatens to undo his or her work by endangering the peace or health of the trees, water, or animal life in his or her woods will draw the ire of the Leaftender--and compel him or her to take steps to counter that threat.

Role: The Leaftender is more integrated into his or her society than is the druid--he or she is not a hermit, even though he or she may live some distance away from the community. Since the wild and beautiful places are so important to halflings as a whole, the community tends to be very supportive of this cleric's activities.

When a Leaftender visits nearby halfling communities (which he or she will do far more often than would, say, a druid) he or she will bring gifts of the woods' bounty--berries, mushrooms, and herbs--to add variety and spice to the village menus. Alone of all halflings, Leaftenders are vegetarians and eat no animal products.

Secondary Skills: Agriculture is a possible, though not a necessary, secondary skill for a Leaftender.

Weapon Proficiencies: The Leaftender is limited to the following weapon types (listed in order of preference): sling, sickle, spear, scythe, dagger, staff, club, and dart.

Bonus Nonweapon Proficiencies: The Leaftender receives Herbalism and Survival (Woodlands) as bonus proficiencies.

Recommended Nonweapon Proficiencies: Weather Sense and Direction Sense can prove very useful, as well as Animal Lore, Swimming, and Firebuilding.

Equipment: The Leaftender will assemble whatever materials he or she needs to carry out his or her work of tending the forest.

Special Benefits: As they advance in level, Leaftenders become increasingly attuned to their environment, granting them the following abilities:

At 2nd level, the Leaftender can pass through overgrown areas at his or her normal movement rate without leaving a trail.

At 3rd level, he or she can identify plants, animals, and pure water with perfect accuracy.

At 5th level, he or she becomes immune to *charm* spells cast by woodland creatures such as dryads and nixies.

Special Hindrances: Leaftenders cannot use metal armor and will not use leather armor. They may, however, use wooden shields.

### Oracle

The Oracle is the halfling cleric who deals with spiritual matters, the will of the gods, auguries and prophecies, and the like. Whereas the Healer's emphasis is on spells that affect his or her people directly, the Oracle is more concerned with interpreting the gods' will to the people.

Roads to Adventure: The Oracle can be drawn into a quest by a prophecy that he or she interprets as the will of the gods; alternately, like the Healer, he or she will accompany his or her companions on their own adventures out of a sincere belief that, without his or her help, they are doomed.

More than any other halfling type, the Oracle is driven by a consuming desire to learn, to answer great questions, to complete some great quest. The drive for such activities originates as a spiritual calling, but the Oracle with typical halfling common sense will follow up such motivations with very practical determination and drive.

Role: The Oracle seeks to be an interpreter who looks for signs of the gods' will and then teaches his or her people what they should do. As part of that role, he or she casts spells designed to communicate with those deities. He or she will usually be chosen to preside over the community's occasional religious ceremonies and festivities.

Secondary Skills: The Scribe secondary skill is useful to the Oracle.

Weapon Proficiencies: An Oracle can use any weapon allowed for the standard cleric.

Bonus Nonweapon Proficiencies: The Oracle receives Astrology as a bonus proficiency.

Recommended Nonweapon Proficiencies: Heraldry, Ancient History, Religion, and Spellcraft are recommended for the Oracle.

Equipment: Any he or she desires.

Special Benefits: When the Oracle performs any spell of the sphere of divination, he or she will receive (from the DM) unusually reliable and accurate information. The specifics of this benefit vary by spell, of course.

Oracles also occasionally receive visions directly from their deities; however, these visions are usually cryptic, requiring time and thought to unravel their significance.

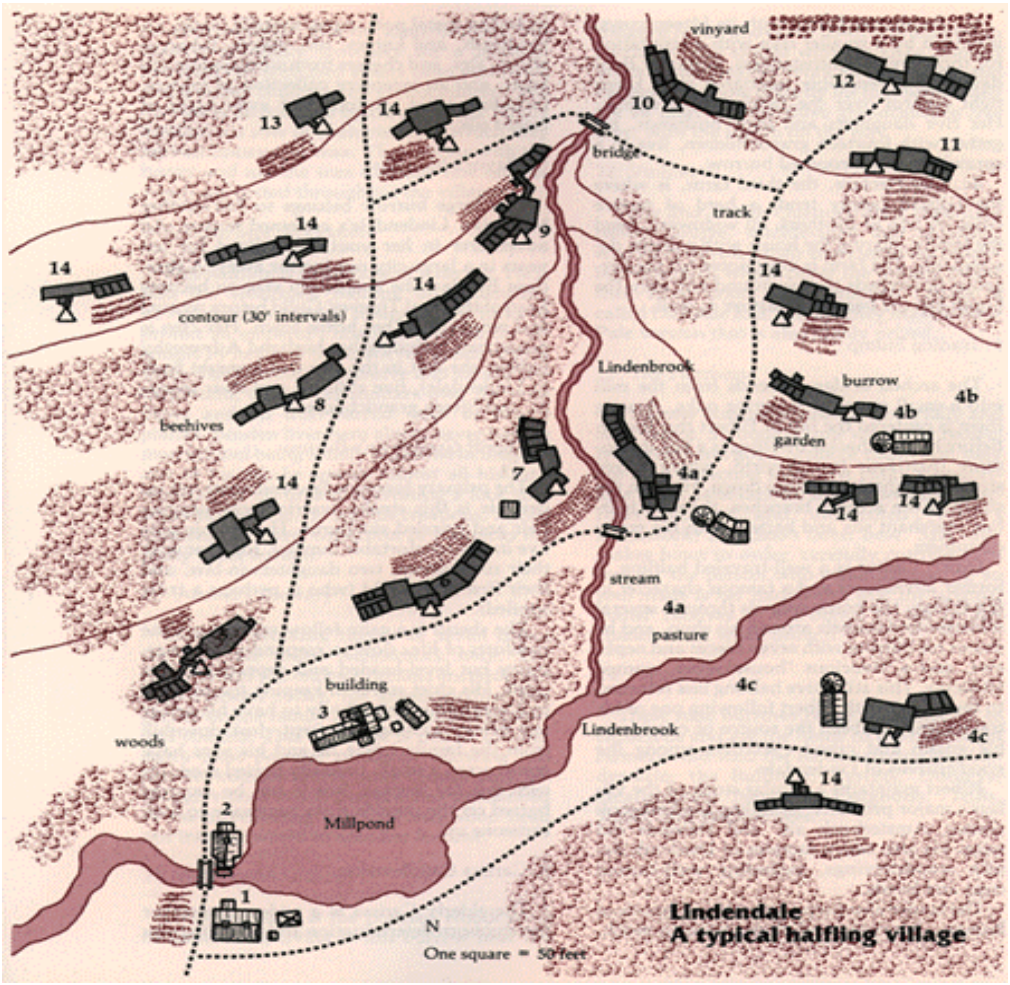
Special Hindrances: The Oracle is very unwilling to compromise--he or she is more stubborn than the typical halfling. He or she treats every mission as a quest and will never abandon a task no matter how many difficulties stand in the way.

## Chapter 5: Lindendale-- A Typical Halfling Village

Lindendale is a small community, a town of halflings that could exist in almost any campaign world. It is presented here for two reasons: (1) it provides a look at a typical halfling village, with examples of households and the various trades and skills represented there, and (2) it can be used as a home base for launching an all-halfling campaign, as it can easily be dropped into any ongoing campaign.

The village is mapped on page 123. It lies in a sheltered valley on the south side of a long, forested ridge. About a mile to the south of the map, a major road runs from east to west. A small dirt track leads from this highway to the village.

A placid stream, the Lindenbrook, winds along the base of the ridge. While no more than three or four feet deep, the creek's silty bottom makes fording difficult.



## 1. Inn of the Brass Tankard

This homey place is the first building a visiter sees upon approaching Lindendale. It is a two-story structure of whitewashed wood with brown shutters and a round, oversized door. The common room is large enough for humans but still cozy to halflings. The guest rooms come in two sizes, for Big Folk (upper level) or small folk (lower level), with appropriately-sized furniture in each.

The innkeeper, Gwiston Shortwick, lives here with his wife Lucretia, their four daughters, and Lucretia's elderly mother; the family quarters are in a burrow at the south end of the inn. Several other halflings work here as stablehands and waitresses, but they live in the village with their families.

## 2. Mill and Bakery

Dottery Dale is a bawdy halfling wench who runs the village mill and also bakes fabulous bread and cakes. She has two brothers and a sister who live here as well, each of them married with several children--but the unmarried Dottery is unquestioned head of the household.

The Millbridge is attached to the great wooden building and is the only dry means of crossing the Lindenbrook for more than a mile in either direction.

### 3. Cheese Factory

Hofflik Kaese is the master cheesemaker here. He takes all the milk that the local dairies can provide and turns it into a sharp, white cheese (called "Lindenbrook") that is highly prized within the local area and beyond. It is the village's major export.

Hofflik, a bachelor, lives in a small set of rooms beside his factory. Two small compartments within the shop itself provide quarters for the one to four full-time apprentices (both male and female) he's likely to have working with him at any one time.

### 4. Dairies

These three prosperous concerns each own a dozen or more cows and graze them in these distinct pastures. The animals are sheltered in neat, low-ceilinged barns. Each herd includes a half-dozen calves; a great bull occupies his own pen on the Kalliwart farm north of the stream.

The clans that run these dairies are friendly rivals, striving to outdo each other in milk production--most of which is bartered or sold to the cheese factory.

4a. Kalliwart Farm, the largest of the three, is managed by Glenvius and Blythi Kalliwart, who recently celebrated a complete century of marriage. Ten children and their spouses, twenty-two grandchildren, and five great-grandchildren make up the rest of the household. The family is known for its slightly rambunctious youngsters--they are charismatic and popular, but prone to be troublemakers. The farm boasts twenty-two milk cows and the village's only bull.

4b. Bandawax Farm, with its fifteen cows, is tended by a smaller clan with a reputation for thrift, even tightfistedness. Gammer Bandawax is a venerable matriarch who keeps tight control over the family purse strings. Her five daughters and their husbands, together with fourteen grandchildren, live in a sprawling, multi-roomed burrow.

4c. Lily Hectare, the third farm, is where the Jallisall family tends a herd of twelve cows. A trio of brothers, all widowers, head the family, sharing the house with a dozen descendants. The farm is most noted for the gorgeous flowerbeds that surround not only the house but the barn and pasture as well.

### 5. Trading Stump

The arched bridge descends from the mill into a small grove of towering oaks. Among them is centered the hut of Filbert the Trader. Before his ramshackle dwelling is a flat stump, more than four feet in girth, where a tree struck by lightning was cut down. Here, in the shade of the arching branches, the wily halfling merchant sits and barters with his many customers.

Filbert Oldfur is a well-traveled halfling, a former adventurer and a famous character in the village. His home sprawls through several underground tunnels around his shop, and he shares his burrow with seven nieces and nephews, and a vivacious "housekeeper"

named Milliciny. This attractive halfling lass returned to the village with Filbert following one of his travels and has been the source of considerable gossip and raised eyebrows among the good citizens of Lindendale.

Filbert maintains a regular stock of the village's major products, including Lindenbrook cheese, Amsterbock ale, and Daleside red wine. He also offers samples of Dwilcath Batel's woodcarvings, including well-turned cups and bowls.

The trader also keeps a number of goods of human, dwarven, and elven make in stock, including metal pots, pans, utensils, tools, arrowheads, and knives; salt, spices, tobacco; wines, ales, and cheeses from surrounding villages; and an extensive collection of fabrics, including wool, cotton, and even bolts of bright silk.

### 6. Mayor's Mansion

This large burrow belongs to Fairweather Montajay, Lindendale's esteemed mayor. An adventurer in her youth, she lived for ten years in a large city not too far away. A first-class Burglar, she eventually rose to become head of the local Thieves' Guild before retiring and returning to her home town. Her clan is numerous, including her husband Ashworthy (whom she met in the city and brought back to Lindendale), five children and their spouses, and fifteen grandchildren.

### 7. Sheriff Greenspan's Burrow

The primary force for law and order in Lindendale is this stocky warrior with graying hair and grizzled sideburns. He and his wife live in this comfortable burrow, together with their six children, two daughters-in-law, and their first grandchild (who is perhaps a trifle spoiled).

The sheriff is a calm fellow who enjoys the comforts of life, slow to respond in an emergency but level-headed and dependable in a crisis. His chief secret in keeping the peace is to always allow everybody to have his or her say before passing judgment. Just downhill from the family home he and his sons have constructed a small, partially buried shed. He uses this for storage, but it can be securely barred on the outside if it's necessary to lock someone up.

### 8. Carissa Candlemaker

The elderly Carissa is a widow famed for her stubborn determination and unwillingness to compromise. She is kind-hearted but cranky, unusually crotchety for a halfling. She lives her with two sisters (also widowed) and a dozen children and grandchildren. The burrow is surrounded by clover, as the family maintains a row of beehives from which they harvest honey and wax. They barter with the honey and use the wax to make fine candles which are prized throughout the village.

### 9. Benden Sire, Locksmith

This halfling is something of a hermit. He is also the wealthiest halfling in Lindendale, having made a fortune designing the locks to protect an emperor's hoard that

foiled the attempts by heads of three thieves' guilds to pick them. His burrow is extensive and mostly underground, with stout shutters over the windows and an iron-barred door of heavy planks. Benden lives here alone, never having married and being totally absorbed in the pursuit of his art; he spends almost all his time working on his dream of creating a lock that cannot be picked. To test his creations, he has amassed the finest collection of lockpicks for many miles around.

### 10. Amster's Brewery

This hardworking family of seven brews the dark ale called Amsterbock here. The business was started by a famous ancestor, Alberti Amster; today, his granddaughter Jess carries on the family tradition, added by several cousins. This beverage is one of Lindendale's most popular products, allowing Jess and her cousins to live quite comfortably, although rumor has it that she has succumbed to the adventuring bug and may soon head out into the world to seek her fortune.

### 11. Woodcarver's shop

Dwilcath Batel is the premier woodcarver of Lindendale, living in this burrow near the fringe of forest above the town. He is a benign patriarch, still skilled with his knife, though much of the heavier work (woodcutting and carpentry) is now done by his four sons. They are all married, and three grandchildren live here, with the fourth on the way.

### 12. Vintners

Pally and Dorith Quettory are a cheerfully robust couple, middle-aged and childless, who have devoted their energies to the sweeping vineyards which cover the hillside below their front door. Their primary vintage is called Daleside Red, though they make a rarer Pale version that is also highly prized.

### 13. The Fletchery

This new burrow is inhabited by Wally and Sass Talbot, a young couple who only recently married and got a home of their own; they are now expecting their first child. Comfortable if not ostentatious, it is crowded with arrows finished and unfinished (Wally's handiwork) and Sass's latest bow. Sass only makes bows to order, carefully crafting each one for the person who commissioned it; so well made is her handiwork that the original owner receives a +1 bonus to his or her chance to hit when using it.

### 14. Farms

These nine burrows range from modest to capacious and are the home to the families of farmers who tend the fields surrounding Lindendale: the Baldorfs, Byttnis, Dudleys, Heathertoes, Newters, Ostgoods, Trills, Tucks, and Weatherbees.

## Appendix Adventure Suggestions for Gnome and Halfling

## Campaigns

It is important to remember when playing a gnome or halfling character that halflings are not short humans, nor are gnomes scrawny dwarves: each is an entirely different race, with different perspectives on the world and different motivations.

Opportunities that might bring human or dwarven characters bounding to their feet, eyes gleaming in anticipation, can bring quite a different response from a halfling--e.g., "So what if the old castle's full of treasure? I've got a warm fire, a jug half-full of ale, and my bread's almost done rising!" However, the same halfling might change his or her tune upon learning that the only known copy of a legendary chef's cookbook was rumored to be in the castle as well. Likewise, whereas the Big Folk would avoid a tomb if at all possible once they learned it was heavily-trapped, a gnome might well want to explore it for the same reason in order to see how the traps work and employ the same principles in his or her next practical jokes.

In any adventure involving a gnome or halfling character, the player must ask himself or herself "Why is my character here?" Gnomes love gems like halflings love good food, and most gnomequests will involve searching for fabled gems and lost mines. A halfling will be more likely to join an adventure out of a sense of duty (e.g., an old friend is in trouble) or pure curiosity than from greed for treasure or a desire to go out and fight monsters.

The following outlines are kernels for adventures specifically designed for an all-gnomish or all-halfling campaign. They can easily be adapted to almost any AD&D® campaign world and level of experience.

### Gnome Adventures

**Goblin Infestation:** This begins as isolated and mysterious attacks against lone gnomes, who are either killed or otherwise unable to describe their assailants. During these raids the goblins capture something very valuable, whether it's the community's prized gemstone artifact or a well-liked gnome NPC.

The characters must anticipate where the attackers will strike next, lay illusionary bait for them, and then follow the raiders back to their lair. Once they've located the attacker's home base, they must infiltrate it, rescue the missing treasure or hostages, find a way to disrupt the goblins so badly that it will put an end to the ambushes, and escape.

**Festival of the Starmelt:** The clans are scheduled to gather for an important, once-in-a-decade observation. An old and evil dragon gets wind of the plans and decides to make an attack against the assemblage with the aid of a tribe of kobolds. Gnomish adventurers must discern the plan from captive kobolds and then take steps to confuse or divert the dragon before the festival begins.

**City of Illusions:** Gnome illusionists begin to find that sometimes their spells don't work, while at other times they behave in unexpected ways. Investigation will eventually trace the source of the problem to a strange village peopled entirely by intelligent illusions created for company by a since-deceased master Imagemaker. They resent the "involuntary servitude" of their fellow illusions and are trying to nudge them into rebellious sentience, with some success. The PCs must find a way to placate the angry illusion-people; with luck and tact, they may gain some unusual allies in the process.

**Gemquest:** A strange gnome comes to the village, badly wounded by some bizarre

and magical force. He collapses and dies, but not before he drops a huge and stunningly beautiful gem of a type none of the gnomes have ever seen before, together with a gasped-out description of a "Mount Crystal" that lies somewhere in the distance. In truth, the gemstone is an intelligent parasitic quartzite creature from the elemental plane of earth that sapped his strength with its baneful magic, but not before he served as the bait to lure more gnomes into its trap.

Gnomes who make the journey will find Mount Crystal, a shining hill of white quartz. Inside, they find abandoned mines holding an incredible wealth of gems of all types--unknown to them, more of the creatures. Each creature forms a bond with a single gnome and drains 1d4 points of his or her Constitution per day. The characters must realize what is going on, find a way to break the charm which prevents each gnome from throwing away his or her own stone, and make a desperate break for freedom.

## Halfling Adventures

**Meddlesome Officialdom:** A nearby human lord decides to charge the small folk a toll for using a road, bridge, or river passing through their town, as well as a tax on all transactions, sending guards and tax collectors to make sure that his commands are followed. The halflings must find a way to avoid paying the tariffs and eventually rid themselves of the pestering presence without resorting to violence.

**The Bully:** A tough human knight, or perhaps even an ogre, troll, or giant, takes up residence nearby. He or she appoints himself or herself the village's "protector" and demands food and drink, and eventually treasure, from the small folk in return. He or she is too strong for the villagers to defeat in combat, forcing the halflings to use their wits to come up with a clever plan to chase the brute away.

**Kidnapped:** All the human children from a nearby community are captured by goblins or kobolds and taken to the humanoid's lair--a lair with ceilings too low and passages too narrow for adult humans to enter. The humans approach the halflings and beg them to rescue the children, offering whatever inducements they can to gain the aid of a brave band of small folk.

**A Tinker Comes to Town:** A strange peddler rolls into the village with a wagon full of wondrous gew-gaws and trinkets. He or she sells many of these and gives others away. Shortly after the stranger leaves, the villagers start to change their lifelong patterns of behavior--some become short-tempered or depressed; others frivolous and irresponsible.

The trinkets are *not* the cause of the changes, however. There's an evil wizard at work, and the tinker's gifts are charms against her enchantments. The halflings must first find out what's going on, and then find a means to drive the wizard away.

**Monster Depredation:** A tribe of monsters, such as gnolls or orcs, begins to ravage the area. Only if halflings and their human and demihuman neighbors unite do they stand a chance to defeat the menace. The halflings must convince rival groups of humans, dwarves, and elves to work together in a common cause. When it comes to actually facing the foe, the halflings should try to defeat them through cleverness and deception rather than an outright attack.

**The Forest Plague:** A mysterious malady begins to affect the surrounding woods, causing trees to wither and die, crops to fail, and a general blight to settle across the land.

After some investigation (which can be an adventure in itself), the halflings determine that the plague results from losses suffered by local treants and dryads due to

indiscriminate logging. The small folk must then find a way to deter the woodcutters until the people of the trees have a chance to recover, while at the same time avoid causing the woodcutters from losing their livelihood.

## Introduction

The ADVANCED DUNGEONS & DRAGONS® 2nd Edition *Player's Handbook* and *Dungeon Master's Guide* told you all you needed to know about playing warriors in the game. But it could be that you want to know more than the bare minimum it takes to play the warrior classes.

That's where *The Complete Fighter's Handbook* comes in. In these pages, we're going to show you lots of interesting things you can do with the warrior classes . . . things that the *Player's Handbook* and *DMG* didn't have room to show you.

Do you want to play fighter characters other than Fighter, Paladin, and Ranger? Here we'll give you rules for characters like barbarians, samurai, gladiators, amazons--they're all subsets of the three main warrior classes, but they're here.

Do you want new combat rules? We have them. You'll find rules for different weapon styles, combat tactics, combat maneuvers, jousting, combat results, and many other fighter-oriented abilities within these pages.

Is it new equipment you're after? That, too, is present in copious quantities, from new armor and weapons to new magic items.

Or perhaps you want some role-playing and campaigning tips for your fighter characters—or your campaign in general. In these pages you'll find role-playing advice for fighter characters, and discussion of the role of the fighter in regular campaigns and in all-fighter campaigns.

Whether you're a player or DM, an intent rules lawyer or just someone wishing to add a little depth to your campaign or character, you'll find something here for you. Have fun.

* * *

Incidentally, *The Complete Fighter's Handbook* presumes that you're using the *AD&D® 2nd Edition* game rules for Weapon Proficiencies and Nonweapon Proficiencies. Many of the rules presented in this book depend on use of the proficiencies. So if you haven't been using them so far in your campaign, we highly recommend that you familiarize yourself with them and introduce them into your playing.

Here's a special note for those of you who are using this *Complete Fighter's Handbook* with your first edition *AD&D®* game instead of the new second edition: This supplement mentions a lot of page numbers from the *Player's Handbook* and the *Dungeon Master's Guide*. The page numbers cited are for the *second edition*, not the first; you'll have to ignore the page numbers given.

# Character Creation

In this chapter, we'll briefly present notes on character creation in the **AD&D®** game. This is material you already know, but we'll be talking about character creation as it specifically applies to warrior player-characters (Fighters, Paladins, and Rangers).

## Ability Scores

For a normal campaign, any of the six dice-rolling methods from the *Player's Handbook* is acceptable.

If you decide to run an all-warriors campaign (see the *Role-Playing* chapter of this book for details on such a thing), we recommend that you use one of the five Alternate Dice-Rolling Methods presented.

Whether or not you run an all-warriors campaign, if you utilize the *Warrior Kits* chapter of this rule book, we recommend that you use Method VI to create the ability scores for your characters. Because characters using the Warrior Kits are so specialized, you'll find it helpful to be able to custom-design your character ability scores, which Method VI allows you to do.

## Races

Much of *The Complete Fighter's Handbook* is written with the human character in mind. However, most of the text is equally applicable to all the other player-character races as well, and can be used by them without any sort of adaptation necessary.

All the normal rules for racial ability adjustments, class restrictions, level limits, languages, and miscellaneous bonuses and penalties will be used, and all the material in this book can be used for all the demihuman races *except where specifically noted in the text*.

## Classes

The three warrior character classes (Fighter, Paladin, and Ranger) are still the *only* warrior character classes. However, those players who would like to have more specialized warrior classes will probably find what they want in the *Warrior Kits* chapter.

When you're creating single-class warrior characters, we recommend that you start all first-level warriors with the maximum number of hit points they can have at that level—don't even bother to roll the dice. In other words, if you have a first-level Fighter with a Constitution of 16, he'd start with 12 hit points instead of rolling his 1d10 and adding +2 for his Constitution adjustment.

This is for a couple of important reasons. First, it gives the warrior a slightly better chance for survival at lower experience levels. Second, it reflects the fact that warriors are simply tougher and hardier than other player-character classes.

But remember: This is for *first level single-class warriors only*. Starting with second level, these Fighters, Paladins, and Rangers have to roll their hit points like everyone else. No other class gets this benefit, and multi-class warriors (such as warrior/thieves, warrior/mages, and the like) don't get to do this.

## Alignment

*The Complete Fighter's Handbook* follows all normal game rules for character alignments. Once the player has chosen an alignment for his character, he needs to have his choice approved by the DM; it may be that his choice will clash excessively with the alignments of other characters in the party, so the DM is within his rights to disapprove any alignment choice. (The chaotic evil fighter who wants to play with the troupe of wandering paladins *will* be a problem.)

## Warrior Kits

Once you've worked up your character's ability scores, and then chosen his class and alignment, you can choose a *Warrior Kit* for the character. Warrior Kits are discussed in the *Warrior Kits* chapter of this book.

## Proficiencies

As the *Introduction* notes, use of the Proficiencies section of the AD&D *2nd Edition Player's Handbook* is *not* optional with *The Complete Fighter's Handbook*. The

Proficiencies are necessary for you to customize and fine-tune your character, and for the use of the *Warrior Kits* chapter of this book.

Use of the Weapon Proficiencies are pretty much self-evident after you read the *Player's Handbook*. Later in this book, though, in the *Combat* chapter, you'll learn some interesting new things which you can do with weapon proficiencies.

Don't forget that high Intelligence scores grant extra proficiencies (equal to the number of extra languages the character receives for the same score).

Here, let's talk about three nonweapon proficiencies (Armorer, Bowyer/Fletcher, and Weaponsmithing) which are of particular use to the warrior player-character.

## Armorer

With the Armorer proficiency, a character knows how to build all varieties of armor. Armorer overlaps a couple of other proficiencies:

The Armorer knows enough Blacksmithing to forge metal armor and craft scale and chain mail (though he cannot forge horseshoes, wrought iron gates, hardened metal tools, or any other useful items unless he also knows Blacksmithing);

The Armorer knows enough Leatherworking to cut and shape boiled leather into leather armor, shield coverings, and the under-layers of scale mail and banded mail (though he cannot make dress jerkins, saddles, elaborate pouches or rucksacks, or any other useful leather items). The Armorer knows enough of the Tailor's art to manufacture padded armor and armor padding (but not enough to cut and sew any sort of good-looking garment).

Naturally, the ordinary Blacksmith cannot forge metal armor, the Leatherworker is not experienced with making leather armors, and the Tailor isn't conversant with the making of padded armor, unless they also take the Armorer proficiency.

The Armorer can repair existing armor that has taken damage (if you're using that optional rule), and can also craft barding (horse armor) through use of his proficiency.

But what does all of this mean in a campaign?

## The Workshop

To craft armor, the character must first have a *workshop* (a place to work and tools with which to do work).

### *Metal Armor*

If he intends to make any sort of all-metal armor (chain mail, field mail, full plate, plate mail, and helmets), the workshop is a *smithy*, complete with tools, bellows, a furnace, an anvil, tongs, cauldrons, casting molds, and all the other materials necessary to process unrefined metal into armor.

Such a workshop costs 200 gp, plus the cost of the shelter where it is set up: An additional 100 gp for a pavilion tent, an additional 300 gp for a well-crafted hut/workshop, or more as part of a larger dwelling, such as a mansion, villa or castle (these sorts of dwellings are priced at whatever sort of price scheme the DM prefers).

(Included in the price of the *smithy* is the cost of the tools necessary to make leather

hilt-wrappings, padded armor, armor linings and padding, and the simple leather straps used to hold all-metal armors together.)

This workshop is large enough to accommodate the character and up to two apprentices working full-time. (The apprentices, too, must have the Armorer proficiency; the character can always take in an apprentice without the proficiency and train him, but until he acquires the Armorer proficiency he doesn't count as a productive element of the workshop.)

In theory, the character could hire another three-man crew to work a second shift in the same workshop; thus the workshop would be occupied nearly 24 hours a day. (This presumes eight- to ten-hour shifts and a certain amount of necessary nonproductive time each day: Time for furnaces to cool and be cleaned, tools to be repaired and sharpened, etc.) No more than three people can work in this workshop effectively; with more than three people, the workshop suffers a loss of efficiency so that it produces goods just as though it were only manned by three armorers.

To expand the workshop costs an additional 50% for each +three workers. If the smithy costs 200 gp and is set up in a 300-gp hut, thus costing 500 gp, the builder could pay +250 gp. Then, the workshop would accommodate three more armorers at the same time. For another +250 gp, now totalling 1,000 gp, the shop can accommodate nine armorers at the same time.

*Leather Armor*

If he intends to make any sort of all-leather armor (hide armor, leather armor, and armored leather caps), the workshop is a *leatherworker's shop*, including apparatus for leather soaking, scraping, tanning, boiling, boiling in wax, shaping, hole-punching, sewing, and all the other processes by which leather is transformed into armor.

Such a workshop costs 25 gp, plus the cost of the shelter where it is set up: An additional 25 gp for a large tent, an additional 75 gp for a well-crafted hut/workshop, or more as part of a larger dwelling (at whatever price scheme the DM prefers).

(Included in the price of the *leatherworker's shop* is the cost of the tools necessary to make padded armor and armor linings and padding.)

As with the smithy above, this price presumes one principal leatherworker and up to two apprentices may work together at the same time. Above that number costs 50% of the workshop and housing costs per additional three leatherworkers.

*Metal and Leather Armor*

If he intends to make both sorts of armor, or armor which combines both metal and leather elements (banded mail, brigandine, bronze plate mail, ring mail, scale mail, shields, splint mail, and studded leather), a combined workshop is needed.

Such a workshop costs 250 gp, plus the cost of the shelter where it is set up: An additional 100 gp for a pavilion tent, an additional 300 gp for a well-crafted hut/workshop, or more as part of a larger dwelling (again, at whatever pricing the DM prefers).

(Included in the cost of the *armorer's shop* is the cost of the tools necessary to make wooden shield blanks and shield frames, padded armor, and all armor linings and padding

necessary to the armored goods.)

As with the smithy above, this price presumes one principal armorer and up to two apprentices; above that number costs +50% of the workshop and housing costs per additional three armorers.

## Apprentices and Overseers

The cost of the workshop constitutes only the set-up cost for the armoring operation. Maintenance of the workshop, pay for the employees, and cost of materials also come into play. Of course, so do the profits from the sale of manufactured goods.

Each apprentice costs 2gp/week for food, upkeep, and training. And once an apprentices has reached young adulthood (age 16) and has achieved an Armorer ability check of 12 or better, he'll demand to be promoted to Overseer status (described immediately below) or will find better pickings elsewhere.

Apprentices cannot run a workshop unsupervised. Supervision comes in the form of an Overseer, an adult with an Armorer ability check of 12 or better. Each Overseer costs 15 gp/week (the DM may wish to have the cost relate to the Overseer's Armorer ability check: 15 gp/week at a check of 12, +15 gp/week per +1 to his ability check; thus, if his ability check is 16, he costs 75 gp/week).

## Time to Craft Armor

To determine the *time* it takes to make a piece of armor, take the armor's AC. The number that the AC is under 10, multiplied by two weeks, is the time it takes an apprentice (supervised and aided by an Overseer) to craft the item.

Thus, a set of chain mail (AC 5) is calculated this way: 10 – 5 = 5; 5 x two weeks = ten weeks. It takes 10 weeks to make a suit of chain mail.

### Standard Costs to Manufacture Armor

| Armor Piece | Retail Value | Materials Cost (gp) | Time Taken | Apprentice & Overseer | Total Cost |
|---|---|---|---|---|---|
| Banded Mail | 200 | 100 | 12 wk | 48 * | 148 |
| Brigandine | 120 | 60 | 8 wk | 32 * | 92 |
| Bronze plate | 400 | 200 | 12 wk | 114 ** | 314 |
| Chain mail | 75 | 38 | 10 wk | 20 *** | 58 |
| Field Plate | 2000 | 1000 | 16 wk | 304 + | 1304 |
| Full plate | 7000 | 3500 | 18 wk | 342 + | 3842 |
| Helm/great | 30 | 15 | 4 wk | 8 *** | 23 |
| Helm/basinet | 8 | 4 | 1 wk | 2 *** | 6 |
| Hide armor | 15 | 7 | 8 wk | 8 ++ | 15 |
| Leather armor | 5 | 1 +++ | 4 wk | 4 ++ | 5 |
| Padded armor | 4 | 0 +++ | 4 wk | 4 ++ | 4 |
| Plate mail | 600 | 300 | 14 wk | 133 ** | 433 |
| Ring mail | 100 | 50 | 6 wk | 24 * | 74 |
| Scale mail | 120 | 60 | 8 wk | 32 * | 92 |
| Shield/body | 10 | 5 | 2 wk | 4 *** | 9 |

| | | | | | |
|---|---|---|---|---|---|
| Shield/buckler | 1 | 0+++ | 2 wk | 1 ++ | 1 |
| Shield/medium | 7 | 3 | 2 wk | 4 *** | 7 |
| Shield/small | 3 | 1 | 2 wk | 2 *** | 3 |
| Splint mail | 80 | 40 | 12 wk | 24 *** | 64 |
| Studded lthr | 20 | 10 | 6 wk | 6 ++ | 16 |
| Barding: | | | | | |
| Chain | 500 | 250 | 10 wk | 190 + | 440 |
| Full plate | 2000 | 1000 | 16 wk | 304 + | 1304 |
| Full scale | 1000 | 500 | 8 wk | 152 + | 652 |
| Half brig. | 500 | 250 | 6 wk | 114 + | 364 |
| Half padded | 100 | 50 | 2 wk | 38 + | 88 |
| Half scale | 500 | 250 | 8 wk | 152 + | 402 |
| Lthr/Padded | 150 | 75 | 4 wk | 75 + | 150 |

* Two apprentices, no overseer
** One apprentice, ½ overseer
*** One apprentice, no overseer
+ Two apprentices, one overseer
++ ½ apprentice, no overseer
+++ Cost reduced because of easy availability of materials; cost of "0 gp" means cost is a negligible

For pieces of armor which don't grant specific AC benefits (like helmets), figure the time at 1 week per 7.5 gp value. Thus, a great helm would take four weeks to make (it costs 30 gp); a basinet, one week and a few hours of the eighth day (it costs 8 gp).

## Cost to Craft Armor

And it does cost money to craft armor. The cost is:

(a) About half the "retail value" of the armor piece for materials; plus

(b) The cost of maintaining one or two apprentices during the time it takes to make the piece; plus

(c) Additional cost based on how much of the overseer's time and attention the project takes. (The project may take one or two overseers full-time on the project, may take only *half* one overseer's time on the project, or may take none of the overseer's time—the latter constitute projects that the apprentices can do all by themselves, mostly unsupervised.)

The previous table shows standard costs to manufacture armor.

In usual circumstances, the difference between the Total Cost and the Retail Value is the shop's profit when it sells a piece of armor.

As you can see from the table, hide armor, leather armor, padded armor, medium shields and small shields are little-to-no-profit propositions. However, they keep the apprentices paid and keep work in the shop.

## Playing With These Numbers

Now, the costs given above are not the final word on how much it costs to make armor. With your DM's permission, you can skew these numbers around (both up and

down) through the following means.

First, you can put extra men on a job. (Important Note: If overseers are drafted to do apprentice-level work, one overseer counts as two apprentices.) You can only put extra men on a job in increments of the original number of men required for the job: In other words, if the job required two apprentices, you don't see an improvement in speed until you assign two *more* apprentices to the job. At that point, you cut the speed of the job in half.

*Example: From the chart, you see it takes one apprentice with no overseer ten weeks to work up a set of chain mail. That's a standard in the armorer's industry; they'll always tell you it takes ten weeks to work up a chain mail hauberk. But in an emergency situation, they could put an extra apprentice on the job (either have two working on it at once, or have one on the "day shift" and one on the "night shift"). With twice the available manpower, it would only take half the time, or five weeks, to create the chain mail.*

Second, if the Overseer is a player-character, he doesn't have to pay himself as much. This is usually the case with armorers when they first go into business for themselves: They pay the cost for materials and the cost for their apprentices, and whatever they have left over is their own salary, even if it is much less than the 15 gp/week standard mentioned above. (That number, 15 gp/week, represents a firm lower-middle-class standard of living; an armorer who earns less will be living at a lower-class standard of living.)

With that in mind, we can re-interpret some of the numbers above. Let's say that we have one player-character armorer who wants to work up a set of hide armor.

Hide armor normally takes up half the work-day of one apprentice for eight weeks. It costs 7 gp in materials, and he can sell it on the usual market for 15 gp. If just the chief armorer, who counts as an Overseer if his Armorer ability check is 12 or better, works on this item alone, it will take him only two weeks to make the hide armor (remember, an Overseer counts as two apprentices; therefore, he's putting four times the manpower on the task as it customarily requires, thus cutting the time required to one-fourth, or two weeks). If he can sell it for 15 gp, he's made 8 gp. He's earning a meager 4 gp a week, which is better than a poverty-level wage, but less than middle-class.

## Chance of Failure

It would seem that the thing to do would be to set up an armorer's shop and just build field plate and full plate, which are the most profitable items of armor. However, that isn't necessarily so.

This is because, for every item of armor you make, you have to make an Armorer Ability Check. At the end of the armor-making period, the most experienced (highest ability check) character who worked continuously on the project makes his Armorer ability check. If he passes the check, the armor is just fine. If he fails it, it's flawed.

If the character missed his roll by 1, 2, 3, or 4, the armor looks just fine. The maker knows it's flawed, but this will not be obvious to anyone on casual inspection, and only another armorer will be able to detect that it's flawed . . . and only with careful inspection. This type of flawed armor functions at 1 AC higher than it should (thus flawed full plate would be AC 2 instead of 1). If the flawed armor is ever struck in real combat with a

natural to-hit roll of 19 or 20, it "breaks" (caves in, splits open, etc.). Its AC goes up 4 (thus our flawed full plate would shoot from AC 2 to AC 6). And because it's broken and hanging wrong, it hinders the player; until he can take it off (this takes 1d4 rounds), he moves at half his normal rate and suffers a –4 penalty to all of his attack rolls.

Obviously, most reputable armorers would never sell a piece of flawed armor. They have their reputations to protect, so they throw it away. They take a loss in money equal to the Total Cost of the armor from the chart above.

If the character misses his roll by 5 or more, it's obvious to anyone, with casual inspection, that the armor is flawed. No one will buy it at the normal retail value. The armorer might be able to sell it at half the Total Cost value to someone desperate for cheap armor, someone who's willing to take the risk of wearing flawed armor. If he can't sell it, this too is a total loss.

Finally, not all armor is the same in the level of difficulty it requires to manufacture. Some armor is simple enough that apprentices can work on it alone. Some is so complicated that only master armorers should oversee this work. And hiring a master armorer costs more than just hiring a normal overseer.

The chart below shows the relative difficulty of manufacturing these different types of armor.

| **Armor Type** | **Modifier to Armorer Proficiency Check** |
|---|---|
| Banded Mail | +1 |
| Brigandine | +1 |
| Bronze plate | 0 |
| Chain mail | +3 |
| Field Plate | –3 |
| Full plate | –3 |
| Helm/great | +3 |
| Helm/basinet | +3 |
| Hide armor | +3 |
| Leather armor | +3 |
| Padded armor | +3 |
| Plate mail | 0 |
| Ring mail | +1 |
| Scale mail | +1 |
| Shield/body | +3 |
| Shield/buckler | +3 |
| Shield/medium | +3 |
| Shield/small | +3 |
| Splint mail | +3 |
| Studded leather | +3 |
| Barding | |
| Chain | 0 |
| Full plate | –3 |
| Full scale | 0 |
| Half brig. | 0 |
| Half padded | 0 |

| | |
|---|---|
| Half scale | 0 |
| Lthr/Padded | 0 |

As you can see, making field plate and full plate is a risky proposition. Only the best of independent armorers will undertake such a task because the potential losses are so great. (On the other hand, a hireling armorer will do it whenever his employer says, because all the financial risk is his employer's.) And player-character armorers run these same financial risks when they try to make field plate and full plate for themselves or their friends.

## Added Expenses

If the DM wishes, he can add to the grief of a player-character armorer by confronting him with a lot of the hidden expenses of any such operation:

**Bribery:** In many places, local officials will expect a little graft in order for them to process the necessary permits efficiently and regularly. If the PC doesn't pay up, those permits take a long, long time (months) to be processed, and during that time the PC can't operate a retail armorer's shop.

**Theft:** Armorer's shops can be burglarized just like any other operation. Thieves are quite willing to steal some high-quality armor goods and fence them elsewhere in the city. Depending on the quality of the merchandise lying around in the shop, this can be a serious financial blow for the shop.

**Unclaimed Goods:** Sometimes a patron who custom-orders a piece of armor never shows up to buy it. Maybe he's been killed in the meantime; maybe he ran low on funds and decided not even to tell the armorer of his misfortune. And if the custom piece of armor was decorated or fine-tuned to that specific customer (for example, if it bears his coat of arms or unusual decoration), it could be that no one else is willing to buy it . . . except at heavily discounted prices.

**Unsold Stock:** Armorers don't just work up pieces of armor to order. The armorer fabricates numerous examples of the most common sorts of armor (leather and padded armor, shields) for the casual customer and as practice for the apprentices. Not all of this gets sold, and a piece that is never sold is a few gold pieces out of the shop's coffers.

All in all, it may be safer, financially, for a player-character to be a full-time adventurer and only a part-time armorer.

## Player-Character Workshops

Often, a PC Armorer who is also an adventurer will set up an armorer's shop and crew it with a single overseer and two apprentices. This shop's duty will be to keep the PC supplied in armor; also, whenever the PC returns home, he can, if he wishes, operate the shop, especially in the "off-shift" (whichever shift the regular crew is not operating it).

If he does hire an overseer, he'll have to pay the rates according to the overseer's ability, as described above.

Note that a PC Armorer can make armor for his friends. He can't avoid paying the minimum cost for the materials, of course. The character can carry a tent and

leatherworker's shop on the back of a horse, so he can work on any sort of all-leather or padding armor while on the road. But on the road, he can only get in a couple of hours' work per day, so multiply all armor-making times by four to determine how long they take.

The character who does all this extra work will be a little more tired than his fellows; reduce his Intelligence ability check to spot upcoming dangers.

## Repairing Armor

If you use the optional rules for damaging armor found in this rule book's *Combat* chapter, you can also use the Armorer proficiency to repair damaged armor.

It costs the armorer 1/100th the armor's retail value for each Damage Point that he repairs. Again, that's the cost to the *armorer*, which assumes that apprentices are doing the work, and unsupervised; apprentices can perform all armor-repair functions. The cost to the armorer, compared to the apprentice's wage, shows you how long it takes to repair (2 gp/week for one apprentice, remember).

*Example: A set of chain mail has taken 10 points of damage in combat. The owner brings it in to be repaired. Retail value of chain mail is 75 gp, so the cost to repair each point of damage will be .75 gp, or 75 cp. The armorer repairs the 10 points of damage, which costs him 750 cp (75 sp). This is less than 1 gp, so the apprentice doing the repairs takes about two days to fix the chain maul hauberk.*

Armorers typically charge a 50% profit on repair jobs. In the example above, the armorer's cost was 75 sp; therefore, he'd charge the customer about 115 sp for the repair job.

## Repairing Magical Armor

Magical armor is repaired in exactly the same way. Base the cost for repairs on the normal retail value of the armor *as if it were not magical*.

When magical armor is damaged, holes may be driven into it, but the basic enchantment is unchanged. Therefore, the armorer doesn't have to have repair materials enchanted to "match" the original armor; all he has to do is patch up the holes and the armor will be fixed. Typically, the armorer will not even know that he's working on magical armor.

Of course, as we discuss in the *Combat* chapter, if a set of magical armor is damaged so severely that the enchantment is ruined, nothing a normal armorer can do will repair it. Armor that seriously damaged is ruined even as normal armor; an armorer won't be able to fix it.

## Bowyer/Fletcher

The material on the Bowyer/Fletcher proficiency from the *Player's Handbook*, page 58, is all correct for use with this supplement.

A set of bowyer/fletcher's tools, which can be used at maximum efficiency by one character, costs 10 gp. (It's 15 gp for a set which can be used simultaneously by three workers, and +7.5 gp per +3 workers which can work simultaneously.) The

bowyer/fletcher is not required to set up a workshop; he can work by himself in the field, if he chooses. If he chooses to set up a permanent shop, tents and huts cost the same as what's listed for the leatherworker's shop (above, under "Armorer").

Note that the construction times listed in the *Player's Handbook* presume that he's working a full week. If he's traveling or adventuring and working on bows and arrows in his spare time, multiply all crafting times by four. Thus, a long or short bow takes four weeks.

Cost of materials for arrows and normal bows is negligible. If the character is trying to make a weapon of truly fine quality, he must either pay 50% of the weapon's normal retail value for exceptionally fine woods, or add an extra 100% to the time it takes to craft the weapon; the extra time constitutes him having to look for the perfect wood and materials in the wild.

## Weaponsmithing

The text on Weaponsmithing proficiency from the *Player's Handbook* is basically correct, but let's elaborate on it.

As mentioned, a weaponsmith does need to have a *smithy*. The costs for having a smithy are given above in this section, under "Armorer." In fact, the same smithy can be used for armoring and weaponsmithing.

The Weapon Construction numbers on Weapon Construction table on page 65 of the *Player's Handbook* are correct. It constitutes one Overseer-level weaponsmith working by himself and crafting weapons of average quality. An Overseer weaponsmith working with two apprentices cuts the time in half. The time indicated on the chart should be converted to weeks so that you can compare the weaponsmith's times with the armorer's; consider 5 days on the chart to constitute one week.

## Weaponsmithing Failure

When constructing a weapon, at the end of the weapon-making process, the weaponsmith makes his Weaponsmithing proficiency ability check. He'll use the Proficiency Modifier based on the weapon and the weapon quality he's trying to achieve; see the chart below, under "Weapon Quality," for that modifier.

If he successfully makes his check, he's created the weapon he wanted to create.

If he fails by 1, 2, 3, or 4, he's created a weapon that looks like what he intended to make. . . but he knows it has a serious structural flaw. In a real combat, if the wielder rolls a natural 5 or less on his attack roll, the weapon breaks and is useless. (For some reason, it just won't break in practice combats. . . only in the real thing.) He can still sell the weapon, of course, but eventually, after he's done this sort of thing a few times, his reputation as a craftsman will be utterly ruined. It's better just to break the item, sell it as a wall-hanger, etc.

If he fails by 5 or more, the weapon breaks and is ruined during the last stages of the creation process (for example, when it's being cooled after heat-tempering).

## Weapon Quality

It is possible to construct weapons of different quality than just average.

*Poor* quality weapons are shabbily made. They look bad, and like the flawed weapons described above, they break on a natural attack roll of 1 to 5. They don't hit as well (this is a penalty to the attack roll) or do as much damage (penalty to the damage) as their average-quality equivalents.

*Average* quality weapons are not especially notable; they get the job done, they're reliable, and they're inexpensive. Unless otherwise noted, all (non-magical) weapons listed on charts in the *AD&D*® game are of average quality.

*Fine* quality weapons are very well-made. Each will have one specific bonus: Either a +1 to attack rolls or a +1 to damage. This bonus is not magical; it comes from improved balance, sharpness, etc. (The weaponsmith determines, when he's making the weapon, whether he's trying to make it more accurate or make it hit harder.) They also cost a lot more than average weapons. Enchantments are typically made on weapons of at least Fine quality.

*Exceptional* quality weapons are like fine weapons, but have *both* bonuses: They're +1 to attack rolls and +1 to damage. They're also very expensive.

The following list, adapted from the list on page 65 of the *Player's Handbook*, shows the differences in cost and time to create weapons of these different levels of quality.

| | Time to Construct | | | |
|---|---|---|---|---|
| **Weapon Type** | **Poor** | **Average** | **Fine** | **Exceptional** |
| Arrowhead | 20/day | 10/day | 5/day | 1/day |
| Battle Axe | 5 days | 10 days | 20 days | 45 days |
| Hand Axe | 2 days | 5 days | 10 days | 20 days |
| Dagger | 3 days | 5 days | 10 days | 20 days |
| H. Crossbow | 10 days | 20 days | 45 days | 90 days |
| L. Crossbow | 8 days | 15 days | 30 days | 60 days |
| Fork, Trident | 10 days | 20 days | 45 days | 90 days |
| Spear, Lance | 2 days | 4 days | 10 days | 20 days |
| Short Sword | 10 days | 20 days | 45 days | 90 days |
| Long Sword | 15 days | 30 days | 60 days | 120 days |
| Sword | 20 days | 45 days | 90 days | 180 days |

| | Effects On Performance | | | Mod. to Prof Check to |
|---|---|---|---|---|
| **Weapon Quality** | **Attack** | **Damage** | **Breaks** | **Craft** |
| Poor | –1 | –1 | 1–5 on d20 | +2 |
| Average | 0 | 0 | 1 on d20* | 0 |
| Fine | +1 | +1 | ** | –2 |
| Exceptional | +1 | +1 | ** | –4 |

* This isn't an automatic break; it breaks only if the DM feels like it.

** Fine weapons get either a +1 to attack rolls or +1 to damage, not both. Fine and Exceptional weapons break only in remarkable circumstances, as dictated by the DM (for example, a powerful enemy rolling a natural 20 when hitting the weapon, or the character rolling a natural 1 when striking at an artifact).

## Weapons Not Shown

If you're trying to construct a weapon not shown on this chart, compare it to the most similar weapon that *is* on the chart and use those values. (The DM has the final say on what is most similar.) For instance, if you're trying to create a halberd, that's closest to a fork or trident. If you're trying to create a bastard sword, that's closest to a long sword.

## Money and Equipment

*The Complete Fighter's Handbook* follows all the normal *Player's Handbook* guidelines for the character's initial money and equipment . . . usually. Use of some of the Warrior Kits will dictate differences in the way some characters spend their beginning money.

## Magic

Some warrior characters (Paladins, Rangers, and multi-class Fighter/Mages and Fighter/Priests) do have spells. At this point in the character creation process, for the multi-class characters, you and the DM will have to determine the character's spells. (Paladins and Rangers wait until 9th and 8th levels, respectively, to get their spells, so you don't have to worry about them for a while.)

## Experience

Here's an option you ought to think about if you're planning to run especially heroic, combat-heavy adventures or campaigns.

You might wish to start all beginning player-characters out at 3rd experience level instead of 1st. This makes them a bit tougher, a bit more heroic, and a lot less fearful about dying with the first blow of their first fight.

However, if you prefer to have your beginning characters a bit more nervous and defensive, then it's certainly more appropriate for you to start beginning characters at 1st level.

## Character Sheet

At the back of the book is a character sheet especially suited for use with *The Complete Fighter's Handbook*. Take a look at it, and then we'll discuss it in greater detail.

## Front of the Sheet

In the top box of the character sheet's front, you put all the vital statistics of the character: His name, physical and racial characteristics, his character class, his Warrior Kit (if he uses one—see the *Warrior Kits* chapter), alignment, current experience level, his current experience earned, and the amount of experience it'll take him to reach the next level.

In the second box, you put all the information relating to the character's six ability

scores (Strength, Dexterity, Constitution, Intelligence, Wisdom, and Charisma). All this information comes from the charts in the *Player's Handbook*, pages 14-18.

In the third, narrow, box, you write down any bonuses and abilities the character receives based on his race; for instance, if he's an elf, you'd put something like "90% resistant to *sleep* and *charm;* +1 to attack rolls with bow, short sword, long sword; can surprise opponents; infravision; 1 on d6 to detect secret doors (1–2 on d6 when looking, 1–3 for portals)."

In the fourth box, you write down many of the character's game-mechanic notes: How many hit points he has, how his hit dice are calculated (with Fighters, you'd write "d10"), what his AC is, what his THAC0 is, what his saving throws are, notes on his followers and any special abilities or restrictions from his character class choice (especially appropriate with paladins and rangers), and his Spell Progression (if any; this, too, is especially appropriate for paladins and rangers).

In the fifth box, you note down any modifications made to the character by the Warrior Kit he chooses (again, see the Warrior Kits chapter for details).

In the sixth (bottom) box, you record any of the character's skill-type abilities: His languages, his weapon proficiencies (and specializations!), and his nonweapon proficiencies.

### Back of the Sheet

The back of the sheet is used mostly for equipment lists.

The top box is used to record his weapons; here, you can put all the information found on the Weapons Table (*Player's Handbook*, page 68).

The second box is used for short descriptions of important equipment, especially magical items.

The third box allows the player to indicate where all his character's important possessions are normally kept. The DM should insist that the players use these blanks; it helps prevents mistakes from being made in an adventure. ("Of course I have my *Staff of the Magi* along! I always have it taped to my *Staff of Power!* No, really!")

And in the bottom box you can make any other notes pertinent to the character.

### The Next Step In Character Creation

For the next step in our warrior-oriented character creation process, turn to the *Warrior Kits* chapter, which follows immediately.

## Warrior Kits

Sometimes it's just not enough to be a Fighter, Paladin or Ranger. Each of those classes is a lot of fun, but there's nothing which says you want to be restricted only to three types of fun.

So, here, we're going to show you how to create and play other sorts of warrior characters.

## Kits and Warriors

Each special warrior described in this chapter is defined as a *Kit* of different characteristics. The *Kit* consists of the following elements:

**Description:** This paragraph talks about what the warrior is. It's a general description of the appearance, manner, cultural background and use of the character in a campaign. It also lists any *requirements* necessary for the character to take the Kit; for instance, to be an Amazon, a character must be female. (Surprise!)

**Role:** This paragraph describes the role of this warrior in the society that spawned him and in an ongoing campaign. A Samurai has a different cultural role from a Wilderness Warrior, even if both, say, are Paladins.

**Secondary Skills:** If you're using the Secondary Skills rules from *AD&D® 2nd Edition*, then your Kit may require your warrior to take a specific skill; the character may not be able to choose or random-roll his Secondary Skill.

**Weapon Proficiencies:** You must use the *AD&D® 2nd Edition* game rules for Weapon Proficiencies in order to use these Warrior Kits. Most of these Kits will require your warrior to take specific weapon proficiencies. A Samurai wouldn't be the same without his katana, or a Noble Warrior without his lance, for example.

When required to take a specific Weapon Proficiency, the warrior must take that from the number of slots he has available to "spend."

**Nonweapon Proficiencies:** You also must use the Nonweapon Proficiencies rules from *AD&D® 2nd Edition*, as many Warrior Kits require your character to take specific nonweapon proficiencies. (For instance, it's foolish to be a Pirate without Seamanship, or a Wasteland Rider without Riding.)

But these required Nonweapon Proficiencies are bonuses—given in addition to the nonweapon proficiency choices you normally choose. Sometimes a bonus proficiency will come from a group other than the General or Warrior groups, but, since it's a bonus, it doesn't matter how many extra slots it would otherwise be required to occupy.

Some proficiencies will merely be recommended, not required. When a choice is recommended, it is not *given* to the character; if the character decides to take this nonweapon proficiency, he takes it from the number of choices he has.

If you wish, you can use both Secondary Skills and Nonweapon Proficiencies in your campaign, but you'll find that character creation is simpler and more consistent if you use only the Proficiencies rules.

**Equipment:** Some Warrior Kits gravitate toward certain types of equipment. Noble Warriors tend toward heavy armor and weapons such as swords and lances; Pirates lean toward cutlasses, throwing knives, light or no armor, and the like.

These equipment listings aren't really restrictions or hard-and-fast rules. A Pirate on shore may wish to deck himself out in full plate, for instance. But in normal circumstances, a character should gravitate toward the types of equipment appropriate for him, and the DM must steer him toward such equipment types.

For example, the pirate who keeps his full plate on while aboard ship will be knocked overboard time and time again as a reminder of why pirates don't usually wear such cumbersome stuff. As he's being dragged to the ocean bottom, he can reflect on his mistake. A noble warrior who wears leathers when jousting will almost certainly get what

*he* deserves for his folly.

**Special Benefits:** Most Warrior Kits have some special benefits that others don't. Often, they're defined as special reaction bonuses among certain classes of society, special rights in certain cultures, and so forth. Other benefits are more unusual or dramatic: The Berserker can call on hidden resources of strength and vitality when in combat, for instances.

**Special Hindrances:** Likewise, each Warrior Kit has certain disadvantages which hinder him. Pirates are sought by the authorities; Amazons face discrimination in male-dominated societies.

**Wealth Options:** Some Warrior Kits have special rules regarding their wealth. The Noble Warrior, for instance, will begin play with more starting gold than some other Warrior Kits. However, he's also required to maintain a higher standard of living than the others. If he fails to do so, he temporarily loses some of his Special Benefits.

**Races:** Each of these Kits is written with the human character in mind, and this paragraph describes what happens when you have a demihuman character instead. The DM will have to ask himself if he wants certain race/Warrior Kit combinations (Savage Elves? Dwarf Amazons? Noble Halfling-Warriors?). If he does allow them, this paragraph will make notes on recommended racial modifications. For instance, the Noble Dwarf-Warrior will be required to be proficient with axe and hammer rather than sword and lance, and won't be required to be a rider.

### An Important Note

In the following sections, several Warrior Kits get reaction bonuses and penalties as part of their Special Benefits and Special Hindrances. A word of caution needs to accompany them.

In the *AD&D*® game, when a character is very charismatic, he gets what is called a "reaction adjustment." (See the *Player's Handbook*, page 18.) When the character has a high Charisma and receives a bonus, it's expressed as a plus: +2, for instance. When he has a low Charisma and receives a penalty, it's expressed as a minus: –3, for example.

However, when you roll the 2d10 for encounter reactions (see the Encounter Reactions Table, *Dungeon Master's Guide*) p. 103, *don't add the bonus (+) or subtract the penalty (–) from the die roll.* Do it the other way around. If the character has a Charisma of 16, and thus gets a +5 reaction adjustment, you *subtract* that number from the 2d10 die roll. (Otherwise the NPCs would be reacting even more badly because the character was charismatic!)

## Kits and the Warrior Classes

In general, each Kit can be used with each of the three warrior classes. Your character can, for instance, be a Barbarian Fighter, an Amazon Paladin, or a Samurai Ranger.

Some choices may be a little questionable. For example, it's not likely that you'll be playing a Pirate Paladin. However, it *is* possible. If your band of pirates, in happy-go-lucky movie tradition, attacks only the wicked, frees all innocents, and performs in an otherwise mostly-honorable fashion, they're obviously not an evil group and a paladin could adventure among them. If that's the sort of pirate campaign you and your DM agree

to play, then that's fine.

When one warrior class cannot choose a specific Warrior Kit, the exceptions will be noted.

## Kits and Character Creation

You can only take one Warrior Kit for your character.

You can only take a Warrior Kit for your character when that character is first created.

There's an exception to that second rule: If you and your DM both want to integrate these rules into an existing campaign, and both DM and players can agree upon what Warrior Kit each existing player-character most closely resembles, then you can use these rules for existing characters, adding a Warrior Kit to each existing character.

Once you've taken a Warrior Kit, you cannot change it. Later in the character's life, he can possibly *abandon* his Kit; see "Abandoning A Kit," later in this chapter.

## The Warrior Kits

Following are several sorts of warriors represented by Warrior Kits. Before allowing his players to choose Kits for their characters, the DM should review these and make notes for himself about them.

For each Warrior Kit, the DM has to choose:

(1) If he will even allow this Kit in his campaign.

(2) What additional information he needs to give the players about each Kit.

(3) What changes he might wish to make to each Kit.

Let's take the Amazon Kit as an example. This Kit was loosely derived from the Amazons of Greek myth. But this DM's Amazons may be substantially different from those.

So, first, he has to decide if he will allow this Kit in his campaign. If he has any sort of Amazons on his world, he probably will allow this. If he has no Amazons, then he won't. Let's presume that he does.

Second, he has to decide what additional information he needs to give the players about the Amazons. In his world, let's say, the Amazons live on Lunyrra, a heavily forested island surrounded by almost unscaleable cliffs, and make war on the surrounding islands; when players are interested in playing Amazons, he gives them that information in addition to the Kit.

Third, he has to decide what changes he wishes to make to the Kit. Since his Amazons are sailors instead of famous equestrians, he changes the required/bonus Nonweapon Proficiencies from Riding and Animal Training to Seamanship and Navigation.

By these means, he has adapted the generic Warrior Kit below to his own campaign world and made it fit in just as he likes.

## Amazon

**Description:** Amazons are women warriors in a male-dominated world. Their

civilization might have been created by a deity who likes women warriors; or they might have been women who rebelled from male dominations and decided to rule themselves; or they might simply have been matriarchal societies from long before recorded history.

Whatever their origin, they now live in civilizations or communities where women occupy the positions and roles traditionally held by men—and, in the campaign, that means especially the role of warriors and adventurers.

An Amazon culture may be small (a single town or island) or large (an entire country or continent), very advanced or very primitive. Some Amazon cultures keep men as servants and slaves, a stern reversal of the former status; others have no men in their communities, and take long holidays in order to visit friendly neighboring tribes of men; others perpetuate their kind by being very hospitable to adventurers passing through their territory. (In this last instance, some Amazon cultures, afterwards, may decide to kill the adventurers; others don't.) For details of exactly how the Amazon communities work in your campaign world, consult your DM. (And give him plenty of time to come up with the answers if it's not something he's thought about before.)

Traditionally, Amazons are famous riders and breeders of horses. In their own countries, they wear light armor and carry shields, spears, swords and bows. In other countries, if they are disadvantaged by their cultural weapons and armor, they quickly adapt to local weapons and armor.

Here's an important point to remember: In most campaigns, you don't *have* to be an Amazon to be a female warrior; check with your DM for other ways to play a female warrior. The Amazons are merely a very colorful and distinctive *type* of female warrior. If a player wants to have a female warrior character, the DM should try to accommodate the player whenever possible, and shouldn't have to resort to making the character an Amazon in order to allow her to be a warrior. In just about every real-world history and mythology, you'll find female warriors in male-dominated societies; otherwise there would be no Joan of Arc or Atalanta of Calydon.

There are no special ability-score requirements to be an Amazon.

**Role:** In her own society, regardless of the level of civilization, the Amazon warrior is very highly regarded. She is the defender of the whole civilization's way of life, and every Amazon girl aspires to grow up to be a warrior. But in the outer world, and in the campaign in general, the Amazon is a curiosity, often regarded as a barbarian (no matter how cultured her civilization might be), stared at, whispered about. The people of other cultures will be suspicious of her, and she will probably start out being uncomfortable around men who appear to be her social equal—in her eyes, *they* are the ones who are unnatural.

The DM will have to guide this situation carefully. Once the Amazon character has proven herself in combat to her outer-world allies, and once they have proven themselves in combat to her, there's no reason why they cannot be staunch allies. NPCs may continue to trouble her, but *player-characters should not*; and the other PCs should rise to her defense when NPCs make trouble for her; only the most obnoxious of PCs would continue to give her trouble, and the other PCs certainly shouldn't support *his* attitude.

**Secondary Skills:** Required: Groom.

**Weapon Proficiencies:** Required: Spear, Long Bow. (Amazon fighters can Specialize *only* in Spear or Long Bow.) Recommended: Various axes, swords.

**Nonweapon Proficiencies:** Bonus Proficiencies: Riding (Land-Based), Animal

Training. Recommended: General—Animal Handling, (Warrior) Animal Lore, Armorer, Bowyer/Fletcher, Hunting, Running, Survival, Tracking.

**Equipment:** When an Amazon character is first created, she must buy her weapons and armor from among the following choices only: Weapons—Battle Axe, Bow (Any), Club, Dagger/Dirk, Hand or Throwing Axe, Javelin, Knife, Lance, Spear, Sword (any); Armor—Shield, Leather, Padded, Studded Leather, Brigandine, Scale Mail, Hide, Banded Mail, Bronze Plate Mail. Once she has adventured elsewhere in the world, she may purchase weapons and armor from those regions.

**Special Benefits:** Male warriors in a civilization where female warriors are rare tend to underestimate the Amazon. Therefore, in any fight where the Amazon confronts a male who is not familiar with her personally or female warriors in general, she gets a +3 to attack rolls and +3 damage on her *first blow only*. This is because her opponent's guard is down.

This doesn't work on player-characters unless the player is role-playing honestly enough to declare that he, too, would underestimate her.

This ability doesn't work on some other types of characters:

An NPC who is wary enough not to underestimate the Amazon might, with a successful Intelligence check, see the attack coming and deny her the bonus;

A seasoned veteran (any Warrior of 5th level or higher, or any other character of 8th level or higher), in spite of his prejudice, will realize that she is moving like a trained warrior and keep his guard up, denying her the bonus.

If the Amazon hits an NPC with this attack, he'll never again be prey to it; if an NPC even *sees* an Amazon hit someone with it, he'll never fall for it himself. But if she misses that first strike, then the target will continue to underestimate her and she can use those bonuses again on her next strike.

**Special Hindrances:** The Amazon suffers a –3 reaction roll adjustment from NPCs who are from male-dominated societies. This reaction adjustment goes away for characters who come to respect her, such as (presumably) her PC allies.

**Wealth Options:** The Amazon gets the ordinary 5d4x10 gp as starting money.

**Races:** The Amazons from folklore and myth were humans. It's not difficult to envision elvish or half-elvish clans of Amazons, either; they'd follow the rules above for human Amazons.

It's a little harder to envision dwarvish, gnomish, or halfling Amazons. But if you do use such civilizations:

Dwarf Amazons will have Axe and Hammer as their required weapon proficiencies; they are still Riders, but substitute swine for their mount of choice (swine are very dangerous, and the prospect of a ferocious she-dwarf on the back of a biting boar is a daunting one).

Gnome Amazons will have Throwing Axe and Short Sword as their required weapon proficiencies; their Bonus Nonweapon Proficiencies are Tracking and Survival.

Halfling Amazons will have Javelin and Sling as their required weapon proficiencies; their Bonus Nonweapon Proficiencies are Endurance and Set Snares; and you will have to presume that *these* halflings aren't as fond of ease and leisure as the more common sorts of halflings.

## Barbarian

**Description:** This is not the barbarian of history, but the barbarian of fantasy fiction. He's a powerful warrior from a culture on the fringes of civilization. He's left his home to sell his skills and adventure in the civilized world—perhaps to amass a fortune with which to return home, perhaps to become an important figure in this so-called civilization. He's known for strength, cunning, contempt for the outer world's decadence, and for adhering to his own code of honor.

The barbarian is usually very strong; therefore, the barbarian *must have a Strength ability score of 15 or more.* A character can come from a barbarian tribe and have a lower Strength than that—but he cannot have the Barbarian Kit.

**Role:** The typical RPG barbarian is a powerful, dangerous figure, as though he were an animal totem in human skin. In a campaign, he's a front-line fighter with some special skills and a very different outlook than the rest of the characters; his player should always play him as someone from a different land, someone whose likes and dislikes and perceptions are based on a different culture. (If you play him as just another warrior from down the street, you lose a lot of the mystique the character has.)

If the PC party has no real leader, he may gravitate to that role; if it has a good enough leader, he'll probably stick to being a specialist in the things he does well.

**Secondary Skills:** The DM will decide, based on the character's background, what sort of secondary skill would be required. Most barbarian tribes have a required skill; a tribe that makes its living by fishing would have Fisher as its required secondary skill.

**Weapon Proficiencies:** Required: Battle Axe, Bastard Sword. (These are the classical fiction-barbarian weapons; the DM may decide to substitute others more appropriate to his own world.) Barbarian fighters may specialize in any weapon, but are not likely to encounter unusual weapons (like lances, quarterstaves, flails, peculiar polearms) until they reach the outer world. Recommended: Bow (any), Sling, Sword (any), War Hammer.

**Nonweapon Proficiencies:** Bonus Proficiency: Endurance. Recommended: General—Animal Handling, Animal Training, Direction Sense, Fire-Building, Riding (Land-Based), Weather Sense, (Warrior) Blind-Fighting, Hunting, Mountaineering, Running, Set Snares, Survival, Tracking, (Priest—costs twice the listed number of slots if Fighter or Ranger, or just the listed number if Paladin) Herbalism, (Rogue—costs double slots) Jumping. The DM is within his rights to insist that the Barbarian character take a proficiency in the tribal specialty (Fishing, Agriculture, whatever) if the DM so wishes.

**Equipment:** The character, when he spends his starting gold, may not buy armor heavier than splint mail, banded mail, or bronze plate mail. Outside his tribe, once he has adventured in the outer world, he can use any type of armor without penalty. When he spends his starting gold, he must limit himself to weapons the DM says are appropriate for his tribe—the usual group of weapons includes battle axe, bows (any), club, dagger or dirk, footman's flail, mace, or pick, hand or throwing axe, sling, spear, or sword (any).

**Special Benefits:** Barbarians are impressive because of sheer strength, intensity, and animal magnetism; this gives them a +3 reaction adjustment bonus in certain situations.

Whenever the barbarian character achieves a reaction roll of 8 or less (including Charisma and racial bonuses), you subtract the modifier. That is, if the reaction is positive at all, it will be even more positive than it otherwise would have been.

*Example: Torath the Toranaran is a Barbarian with a Charisma of 15. Encountering*

*a knight who could be friend or foe to him, he speaks with the knight in a friendly fashion. The DM rolls his Encounter Reaction and achieves an 11 on 2d10. On the "Friendly" column of the Encounter Reactions chart from the Dungeon Master Guide, this is a "Cautious" reaction.*

*But wait—his charisma gives him a +3 bonus. The 11 becomes an 8, still an indifferent reaction. But because he's reached an 8, his Barbarian bonus comes into play, making the final reaction roll a 5: A friendly reaction.*

**Special Hindrances:** All that impressiveness can work against the Barbarian, too. Whenever the barbarian character achieves a reaction roll of 14 or more, he takes an additional –3 modifier. That is, if the reaction is negative at all, it will be even more negative than it otherwise would have been—the barbarian is scary, and the other person overreacts.

*Example: Torath next meets a suspicious witch, and is indifferent toward her. On the "Indifferent" column of the Encounter Reactions chart, the DM rolls a 17. Torath's Charisma bonus of 3 reduces the roll to a 14, but it's still enough that his Barbarian penalty just shoots it right back up to a 17 again. The witch becomes Threatening.*

**Wealth Options:** The Barbarian gets the starting gold for a Warrior (5d4x10 gp), but he must spend it all (before starting play) except three gp or less; he can have some pocket change when he reaches civilization, but must be close to penniless.

**Races:** Demihuman Barbarians follow the same rules. Dwarves are perhaps the most admirably suited to being Barbarians. The DM will have to decide whether his elves, half-elves and gnomes are brooding and menacing enough to be Barbarians; the question is even harder with the leisure-loving halflings. But if the DM wishes to allow any or all of these demihuman races to have Barbarians among them, he may.

**Final Note:** Most classic fantasy-fiction barbarians are male, but this Warrior Kit can certainly be taken by female characters, with all the Kit's requirements, benefits, and hindrances in effect.

## Beast-Rider

**Description:** The Beast-Rider is a warrior in a tribe or clan (usually a barbarian tribe) which has a strong affinity for one type of animal. The animal is the totem of the tribe, and the Beast-Rider makes friends very easily with that type of animal and can train it into a riding-beast. . . even if it's a type of animal not normally considered a riding-beast.

In a campaign, the Beast-Rider is an exotic warrior who is notable for his kinship with his animal; like the Barbarian, he brings a wild, outsider's attitude into the adventuring party. His animal also has abilities which can benefit the adventuring party. However, the more unusual the animal is, the harder it is to accommodate in all situations: It's no problem to stable a horse at the inn, but just try stabling a great white wolf, a wild boar, or a dolphin!

To be a Beast-Rider, the character must have a Charisma of at least 13. (Naturally, there are members of the Beast-Rider's tribe who are not themselves Beast-Riders; the Beast-Riders are the tribe's elite warriors.)

**Role:** As mentioned, in his own society, the Beast-Rider is the elite warrior, and he commands a lot of respect among his own kind. Outside his tribal grounds, however, he's very definitely an outsider. His barbarian mannerisms and his obvious and very unusual

friendship with his animal set him apart from most societies. Because of this, the Beast-Rider may become especially attached to the other player-characters (if they treat him as an equal and not a freak), even if he'd never admit it to them.

The DM needs to reinforce this social role by having NPCs react to the Beast-Rider's strangeness. For instance, NPCs will be leery of speaking to or negotiating with the Beast-Rider if there's a more "civilized" character on hand to perform those functions. The DM needs constantly to use the Beast-Rider's reaction modifiers, listed below under "hindrances."

**Secondary Skills:** If you're using the Secondary Skills rules, the character must take the Groom (Animal Handling) secondary skill.

**Weapon Proficiencies:** Required: None. Recommended: All the weapons commonly associated with mounted warriors—Bow (composite short, and short), Horseman's flail, Horseman's mace, Horseman's pick, Lance (any, according to the size of the animal), Spear, Bastard Sword, Long Sword.

**Nonweapon Proficiencies:** Bonus Proficiencies: Animal Training, Riding (Land-based). The character must declare which one sort of animal both these proficiencies pertain to. Recommended: General—Animal Handling, Direction Sense, Fire-building, (Priest) Healing (specifically veterinary), (Warrior) Animal Lore, Hunting, Mountaineering, Set Snares, Survival, Tracking.

**Equipment:** When he is first created, the Beast-Rider may only have Hide, Leather, or Padded armor (plus shield and helm). Later in the campaign, he may switch to more advanced forms of armor. . . as long as his mount can carry him and the armor both, of course. When first created, he may have only weapons from the list above under "Weapon Proficiencies." (The DM may change or add to this list to reflect specific cultural details of the Beast-Rider's tribe.)

**Special Benefits:** The Beast-Rider has an amazing rapport with one type of animal. The animal must be of a species normally strong enough to carry the Beast-Rider and act as a mount. With the DM's permission, the Beast-Rider character gets to decide what sort of animal this is; the DM is encouraged to disallow any sort of animal that will give the Beast-Rider a great advantage in the campaign (for example, a pegasus or griffon).

The Beast-Rider gets a +5 positive reaction adjustment whenever dealing with these animals. He finds it easy to make friends with them; on a die-roll result of 9 or less (on the "Hostile" column of the Encounter Reactions Table, *Dungeon Master's Guide* page 103), he can even persuade attacking animals of this sort to leave him and his allies alone.

Additionally, the Beast-Rider begins play in the campaign with one of these animals as his personal friend and mount. This animal is devoted to him and will risk (or even sacrifice) its own life to save the character; and the character is expected to behave the same way toward his mount. (If he doesn't role-play this attachment to his animal, the DM should decide that the character has abandoned this Warrior Kit, as per the guidelines given later in this chapter.)

The Beast-Rider has a telepathic rapport with his animal. When in contact or visual line of sight with his animal, he can tell what the beast is feeling, even thinking if it has some intelligence; he and the animal can communicate with one another without appearing to. When the two are not within line of sight with one another, each will know the other's emotional state and whether or not the other is hurt; each will know the direction to travel to find his friend, and the approximate distance (a hundred yards, an

hour's travel, several days' travel, for instance).

If the animal ever dies, the Beast-Rider can choose another animal of the same type as his companion. However, the DM must include this situation as part of the campaign story: The character must seek out another such animal, and may only be satisfied with the healthiest, strongest, greatest examples of this animal (in other words, if the character appears to be content to settle with less, the DM tells him, "You sense you won't be able to bond with this animal . . . "); then there must be some sort of bonding ritual between beast and man (for example, a physical combat where the human must be able to saddle and ride the animal in spite of its spirited attempts to throw him). Only then can the character have his new animal.

Following is a list of many animals which are appropriate mounts for the Beast-Rider. Note that not all of them are included in the *Monstrous Compendium*® series; if a player chooses one not included there, and the DM approves the choice, the DM will have to work up the animal's abilities.

Bat, Huge *+ (mobat) (gnomes and halflings only may ride)
Bear
Boar
Buffalo
Camel
Dolphin &
Dragon *+ (only allowable in very high-powered heroic campaigns) Elephant
Griffon *
Hippogriff *
Horse
Hyaenodon
Lizard (Fire, Giant, or Minotaur)
Lobster, Giant &
Pegasus *
Ray, Manta &
Sea-Horse, Giant&
Smilodon
Tiger, Wild
Unicorn (traditionally, only virgin lawful-good females may ride)
Wolf, Dire (evil characters could bond with a Winter Wolf)

* Flying animals do tend to change the nature of a campaign, especially a low-level campaign, by making it easy for characters to go long distances quickly, to avoid difficult terrain, etc. The DM should disallow any such choice if it will cause problems in his campaign.

+ Since many of these creatures are evil, the DM may have to introduce into his campaign a nearly-identical race with neutral or good tendencies.

& This species only works if most of the campaign takes place in watery domains.

To calculate the weight-bearing abilities of these animals, compare them to the list on page 78 of the *Player's Handbook*. Choose the animal from that list most resembling your animal in size and mass, and then use the values for that animal.

**Special Hindrances:** As mentioned earlier, the Beast-Rider is out of place in most societies. He takes a –3 negative reaction adjustment when meeting NPCs from any culture but his own. (The player-characters do not have to be hostile to the Beast-Rider if they do not wish, however.)

Also, should the Beast-Rider's animal ever die, whether it's in the Beast-Rider's presence or far away, the Beast-Rider immediately takes 2d6 points of damage and must make a saving throw vs. spells. If he fails the saving throw, he behaves as if he were a magic-user hit with *feeblemind* for the next 2d6 hours. Even if he makes the saving throw, the player should role-play the character's reactions—he's just felt, through their telepathic link, the death of his beloved friend, after all.

**Wealth Options:** The Beast-Rider gets the ordinary 5d4x10 gp for starting gold. Like the Barbarian, however, he must spend it all (before starting play) except 3 gp or less.

**Races:** This is a kit that is especially appropriate for demihuman characters. It's easy to envision dwarves on boars, elves on dire wolves, sea-elves on giant sea-horses, and so on.

**Notes:** It adds a lot of detail and color to a campaign if the DM does a certain amount of work creating the society of each Beast-Rider tribe. The tribe's behavior and activities would be dictated by the type of animal it was tied to: Horse-Riders would live on the plains, riding far and wide, while Boar-Riders would live in forests and moist bottom-land, few ever travelling more than five miles from their home village.

## Berserker

**Description:** The Berserker is a warrior who has special attributes and abilities when he's in combat. In combat, he can achieve an ecstatic state of mind that will enable him to fight longer, harder, and more savagely than any human being has a right to. This makes him a deadly warrior . . . who can be as much a menace to himself as to his enemies. In a campaign, he's nearly identical to the Barbarian—except it's obvious from the outset that he has a truly savage and inhuman element in his personality, and he tends to disturb and unsettle other people.

Like the Barbarian, the Berserker *must have a Strength ability score of 15 or more.*

**Role:** In his tribe, the Berserker has a special role. He's been touched by supernatural forces, and accepted that touch so that he might better defend his people.

The idea of a Berserker Paladin is a little strange, and some Dms will prefer not to allow it. That's fine. It's not always inappropriate, though. If the character's tribe is deeply involved with an appropriate animal totem, such as a bear or wolverine, a paladin might even be *required* to be a Berserker, since the DM may reason that it's only the supernatural touch of the totem animal spirit that gives the paladin his other powers. But, again, that's up to the individual DM.

**Secondary Skills:** As with the Barbarian, the DM will decide what sort of secondary skill is most appropriate for that specific barbarian/berserker tribe.

**Weapon Proficiencies:** No specific weapon proficiencies are required of the Berserker—but he may not start out play having a proficiency in a ranged weapon (no

thrown axes or knives, no bows or crossbows, etc.). The Berserker lives to destroy things in hand-to-hand combat, so he cannot start play with any sort of ranged weapon proficiency. He can learn others during the course of the campaign, if he and his DM wish to allow it—but it's a little out of character for the Berserker.

**Nonweapon Proficiencies:** Bonus Proficiency: Endurance. Recommended: General—Animal Handling, Animal Training, Direction Sense, Fire-Building, Riding (Land-Based), Weather Sense, (Warrior) Blind-Fighting, Hunting, Mountaineering, Running, Set Snares, Survival, Tracking, (Priest—costs twice the listed number of slots if Fighter or Ranger) Herbalism, (Rogue—costs double slots) Jumping. As with the Barbarian, the DM may choose to insist that the Berserker character take a proficiency in the tribal specialty (Trapping, Agriculture, etc.).

**Equipment:** As with the Barbarian, the Berserker may not use his starting gold to buy armor heavier than splint mail, banded mail, or bronze plate mail. Once he has adventured in the outer world, he can use any type of armor without penalty. When he spends his starting gold, he must limit himself to weapons known to his tribe, and may not choose missile weapons. Good choices include battle axe, club, dagger or dirk, footman's flail, mace, or pick, hand axe, spear, or sword (any).

**Special Benefits:** Berserkers receive a +3 reaction adjustment bonus from NPCs belonging to any tribe that also has Berserkers—they recognize the Berserker instinctively and respect him, even if he is an enemy.

The other benefit the Berserker receives is his Berserk.

At any time, the Berserker may choose to Go Berserk. This isn't an instantaneous process—he must spend a little time to "psych himself up." It takes a full *turn* (ten combat rounds) to Go Berserk. In that time, the character is growling, moaning, uttering imprecations . . . it's impossible to be quiet when trying to Go Berserk. He may also be fighting during that time, meaning that he can start to Go Berserk on the round the fight begins, fight for ten full rounds, and then be Berserk on the eleventh round.

Of course, when the Berserker knows a fight is coming, he can begin to Go Berserk, even if there is no fight currently going on. At the end of a full turn of preparation, he can become Berserk instantaneously. If there's no enemy in sight yet, he can hold the Berserk until combat is engaged. But if no combat takes place within five more full turns, he automatically reverts to "normal" and suffers the ordinary consequences for coming out of a Berserk (described below). The character can come out of his Berserk once the last enemy is down (he must literally be down on the ground, even if still alive and surrendering; the Berserker will stay berserk and continue fighting so long as there are enemies still on their feet). Once the fight ends, the Berserker must come out of his Berserk state.

For these reasons, Berserking is a more appropriate reaction when the characters are about to attack or be attacked by a foe they know about. If the characters are, instead, jumped by a small party of orcs, it's usually not worth the effort to Go Berserk; the consequences and effort outweigh the benefits.

When Berserk, the character has phenomenal endurance and resistance to pain and some forms of magic. Only while Berserk, he gains the following benefits:

(1) He is immune (no Saving Throw is necessary) to the wizard spells *charm person, friends, hypnotism, sleep, irritation, ray of enfeeblement, scare, geas,* and the clerical spells *command, charm person* or *mammal, enthrall, cloak of bravery,* and *symbol.*

(2) He gets a +4 to save against the wizard spells *blindness, Tasha's uncontrollable hideous laughter, hold person, charm monster,* and *confusion,* and the clerical spells *hold person* and *hold animal.*

(3) The *emotion* spell has no effect on the Berserker, unless the caster chose the *fear* result. If *fear* was chosen, the Berserker gets a normal Saving Throw; if he makes it, he continues on as before, but if he fails it, he is prematurely snapped out of his Berserk, with all the normal effects of coming out of the Berserk (but he doesn't suffer other fear effect). The *fear* spell has exactly the same effect: If he saves, there is no effect, and if he doesn't save, he's snapped out of the Berserk. If he fails a saving throw against *charm monster,* he simply counts the caster as one of his allies; he doesn't come out of the Berserk or obey the caster's commands.

(4) Being Berserk offers no real protection from *finger of death,* except that the spell effects do not take place until the character has come out of his Berserk. If the Berserker saves, he doesn't suffer the 2d8+1 damage until immediately after he snaps out of the Berserk. If he fails to save, he doesn't die until he snaps out of the Berserk.

(5) The Berserker, while Berserk, is immune to KO results from the Punching and Wrestling rules, and takes only half damage from bare-handed attacks from these rules.

(6) While Berserk, the character gets +1 to attack, +3 to damage, and +5 hp.

**Special Hindrances:** The Berserker has hindrances as severe as all those benefits he receives.

(1) The Berserker character receives a –3 reaction from all NPCs (except, that is, characters from tribes which have berserkers in them, as described above).

(2) When the Berserker goes Berserk, the DM should immediately say to him, "Tell me how many hit points you currently have." From that point until the fight is done and the Berserker has returned to normal, the DM keeps track of his hit points. The player is not told how many hp he has left, nor how many points of damage he is taking with each attack. (After all, the character can feel no pain . . . so he cannot keep track of how close he is to death.) The DM simply tells him something like: "The orc-captain hits you with his axe, a mighty blow which you barely feel . . ." It is therefore very possible for a Berserker to be nickled and dimed to death and not know it until he drops dead. The DM can also, if he so chooses, roll all Saving Throws for the Berserker, not telling the player whether they were failures or successes.

(3) While Berserk, the character can use no ranged weapons. He kills only in hand-to-hand or melee-weapon combat.

(4) While Berserk, he must fight each opponent until that opponent is down. Once an opponent is felled, the Berserker must move to the nearest enemy and attack *him*. He can't, for instance, choose to attack the enemy leader if that leader is behind seven ranks of spearmen. The Berserker must keep fighting until all enemies are down, as described earlier.

(5) While Berserk, the character cannot take cover against missile fire.

(6) If, while the character is Berserk, another character tries something he can interpret as attack (for instance, hits him to move him out of the way of an incoming attack,) the Berserker must roll 1d20 vs. his Intelligence. If he succeeds (that is, rolls his Intelligence score or less), he's dimly aware that his friend is not attacking him. If he fails (rolls higher than his Intelligence), he now thinks his friend is an enemy, and continues to think so until the fight is done and he is no longer Berserk.

(7) While Berserk, the character is temporarily unaffected by the clerical spells *bless, cure light wounds, aid, cure serious wounds, cure critical wounds, heal, regenerate* (and *wither*). He will gain the benefits of those spells only *after* he has come out of his Berserk and suffered any and all damages which occurred then.

(8) The *taunt* spell is automatically successful, and will cause the Berserker to abandon his current enemy and rush to attack the taunter.

(9) Finally, when the character comes out of his Berserk, bad things happen to him. He loses the 5 hp he gained when he became Berserk. (This could drop him to or below 0 hp and kill him, of course.) He collapses in exhaustion (exactly as if hit by a *ray of enfeeblement*, no saving throw possible, for one round for every round he was Berserk. He suffers the effects of any spells which wait until he's returned to normal before affecting him (*finger of death*, for instance). And only then can healing spells affect him.

**Wealth Options:** The Berserker gets the ordinary 5d4x10 gp for starting gold. Like the Barbarian, however, he must spend it all (before starting play) except three gp or less.

**Races:** It's the DM's choice as to whether his demihuman characters can have Berserkers among them. It's entirely appropriate for dwarves, and not inappropriate for elves, gnomes and half-elves. Halfling Berserkers are not very likely. In any case, demihuman Berserkers would not advertise the fact that they were such; until the first time they Berserked in combat, their companions would probably be unaware that they were Berserkers. (The DM can help preserve the secret by not publicizing the fact that all NPCs are taking a –3 to reaction rolls concerning the Berserker characters.)

## Cavalier

**Description:** The Cavalier is the ultimate mounted warrior of civilized cultures, especially those of Middle Ages technology and outlook. In a campaign, he's the shining knight who leads his fellows on an eternal quest for truth, justice, and the elimination of evil. To the world at large, he's a mighty hero. To his friends and allies, he's a staunch friend, a tireless cheerleader, and often an overenthusiastic pain in the neck.

This is a good Warrior Kit for paladins to take. It can be argued that paladins look something like this already, but that isn't necessarily so: Only paladins of cultures resembling medieval Europe would look like this (a paladin of a Japanese-type culture, a paladin of a Polynesian-like culture, and a paladin of a culture resembling later Renaissance Europe would all be very different from the Cavalier). Therefore, a paladin who wants to look every inch the shining knight should take the Cavalier Warrior Kit.

The Cavalier kit resembles the Noble Warrior kit (q.v.) in that both are noblemen warriors, but the Noble Warrior is primarily interested in defending the rights and maintaining the status quo of his social class, while the Cavalier pursues loftier goals.

To be a cavalier, the character must be of any good alignment (chaotic good, neutral good, lawful good) and have at least the following minimum ability scores: Strength 15, Dexterity 15, Constitution 15, Intelligence 10, Wisdom 10.

Also, the character must belong to the noble social class in the campaign. It's up to the DM to determine whether this is possible. If his campaign uses a random die-roll to determine who's nobility and who isn't, then the character must first successfully roll to be noble in order to be a Cavalier. If it's more of a role-playing exercise in the campaign, then any character who takes the Cavalier Warrior Kit will be presumed to be of the

nobility. (This doesn't mean that he has a lot of money; it's quite likely that he belongs to an impoverished noble family, one with a lot of honorable tradition but no money to speak of.)

Fighters and Paladins may be Cavaliers; Rangers may not. Only humans, elves, and half-elves may be Cavaliers.

**Role:** In his own and similar cultures, the Cavalier is a mighty hero who has the respect of the majority of the population (the criminal classes and evil characters excepted). He has the good-will of the people (reflected as bonuses to his reaction rolls), but the people also make many demands of him: When there's danger, when someone is in trouble, the people turn to the Cavalier for help. This character does not get much time for rest and relaxation.

**Secondary Skills:** If you're using the Secondary Skills rules, the Cavalier must take Groom.

**Weapon Proficiencies:** Required: Lance (any; player choice) and Sword (any; player choice). Recommended: All other Lances, all other Swords, all Horsemen's weapons, Dagger, Spear, Javelin.

**Nonweapon Proficiencies:** Bonus Proficiencies: Riding, (Land-based, horse), Etiquette. Recommended: Animal Handling, Animal Training, Dancing, Heraldry, (Priest, double slots unless Paladin) Musical Instrument, Reading/Writing, (Warrior) Blind-Fighting, Endurance.

**Equipment:** The Cavalier must start play with (i.e., spend his initial gold on) at least two weapons, including one lance and one sword, and must then buy the most expensive set of armor he can still afford. After those expenditures, whatever remains of his gold can be spent on items of his choice.

**Special Benefits:** The Cavalier enjoys many special benefits, including:

At 1st level, he gets a +1 to attack rolls with any lance for which he has proficiency, when using the lance from horseback. This goes up +1 every six experience levels (so he'll be +2 at 7th level, +3 at 13th, etc.).

At 3rd level, he gets a +1 to attack rolls with any one type of sword (his choice from among those he has proficiency with; most common are broad sword, long sword, bastard sword, and scimitar). This goes up +1 every six experience levels (so he'll be +2 at 9th level, +3 at 15th, etc.).

At 5th level, he gets a +1 to attack rolls with either horseman's mace, horseman's flail, or horseman's pick (his choice from among those he has proficiency with). This goes up +1 every six experience levels (so he'll be +2 at 11th level, +3 at 17th level, etc.).

These pluses to attack rolls do *not* add to damage, and don't allow the Cavalier to hit a monster that can only be hit by magical weapons.

The Cavalier is completely immune to the *fear* spell. Because he is so brave, he inspires others to courage, and so, while he is fighting, he actually radiates an *emotion* spell in a 10' radius. This *emotion* spell radiates courage (see the writeup for the 4th-level wizard spell emotion), but only to the extent that it negates *fear*; it does not bestow the berserk fury that the actual wizard spell provides.

The Cavalier is +4 to save vs. all magic which would affect his mind, such as the wizard spells *charm person, friends, hypnotism, sleep, irritation, ray of enfeeblement, scare,* and *geas*, and the clerical spells *command, charm person or mammal, enthrall, cloak of bravery,* and *symbol*.

The Cavalier starts play with a horse which he does not have to pay for. This will be either a heavy war horse, medium war horse, or light war horse (see the *Monstrous Manual Volume One* entry on Horses). The player may choose what sort of horse it is, subject to the DM's approval. It will automatically be a Charger (see the section on Horse Quality in the *Dungeon Master Guide,* page 36); the DM may roll for its personality traits according to those rules. If this horse dies, the Cavalier has to acquire himself another one through the usual campaign means (buy one, be given one for noble deeds, etc.), but will not be content with any horse which is not a war horse of Charger quality.

The Cavalier receives a +3 reaction from anyone of his own culture (except criminals and characters of evil alignment, from whom he receives a –3).

And finally, the Cavalier has the right to demand shelter. When he travels, he can demand shelter from anyone in his own nation who is of status lower than nobility. And most people of his own status or higher will be happy to offer him shelter when he is travelling.

**Special Hindrances:** For all these benefits, the Cavalier has some pretty hefty hindrances as well.

The Cavalier cannot attack an opponent at range if he can instead charge ahead and attack him in melee or jousting combat. Therefore, he cannot snipe on enemies with a bow or crossbow; he cannot use a polearm from behind a shield wall. He has to be on the front line, meeting his foes face-to-face. (A Cavalier could conceivably shoot an opponent with an arrow to stop that opponent from killing an innocent person; that doesn't constitute a violation of his code. But he couldn't shoot the enemy to protect a friend if his friend is fighting that enemy honorably . . . even if his friend is losing.)

In any combat, the Cavalier must attack the enemy who is the biggest and most powerful-looking. If he's held up by lesser troops, he must dispatch them as quickly as possible and then get to his "real" opponent.

He must always have the highest-quality armor he can afford. As he goes through his early experience levels, if he has the money, he'll constantly be selling his old armor and buying the next most protective set of armor. His goal is to have a set of full plate armor; the next step down from that is field plate, then plate mail, then bronze plate mail, then banded or splint, then chain, then scale or brigandine, then ring or studded. And to him, magic bonuses don't mean as much as the type of armor: He prefers a suit of ordinary field plate to a set of *banded mail +5*. The DM must rigorously enforce this limitation on the character if the player is inclined to ignore it.

The Cavalier must also follow the very strict Code of Chivalry. In most *AD&D*® game campaigns, his code includes these rules: He must cheerfully perform any noble service or quest asked of him; he must defend, to the death, any person or item placed in his charge; he must show courage and enterprise when obeying his rulers; he must show respect for all peers and equals; he must honor all those above his station (his social class); he must *demand* respect and obedience from those below his station; he must scorn those who are lowly and ignoble (he will not help the ill-mannered, the coarse, the crude; he will not use equipment which is badly-made or inferior; he will fight on foot before riding a nag; etc.); he must perform military service to his lord whenever asked; he must show courtesy to all ladies (if the Cavalier is male); he must regard war as the flowering of chivalry, and a noble enterprise; he must regard battle as the test of manhood, and combat as glory; he must achieve personal glory in battle; he must slay all

those who oppose his cause; and he must choose death before dishonor.

If a Cavalier chooses not to follow this code, bad things happen. The first time he breaks his vows, the DM will warn the player that the Cavalier feels bad about violating his code. The second time he breaks his vows, the Cavalier loses *all* his special benefits until such time as he repents and undertakes a dangerous task to redeem himself. When performing this task, he must behave according to his code and his hindrances. Only when the task is successfully accomplished does he regain his benefits.

If the Cavalier breaks his vow a third time without repenting and undertaking that task, he has abandoned his Cavalier Warrior Kit. He permanently loses all the special benefits of the Kit. He no longer has to obey his knightly code. He receives a permanent –3 reaction adjustment from all members of his own culture (even those who do not know of his past will be put off by the air of treachery and faithlessness that now haunts the man). His horse, even if it is not the one he began play with, leaves him—either rides off into the sunset without him, or attacks him. He may never ride it again, even if he kills it trying to do so. See "Abandoning a Kit" later in this chapter.

**Wealth Options:** The Cavalier gets the standard 5d4x10 gp in starting gold.

**Races:** Of the demihuman races, only elves and half-elves may be Cavaliers.

## Gladiator

**Description:** The gladiator is a showman-warrior from a society where public combat competitions are a popular sport. The gladiator is a professional warrior in this high-profile arena; for the delight (and bloodlust) of the crowds, for his own personal wealth and aggrandizement (or, if he is a slave, for the profits of his owner), he fights organized matches against human, demihuman, and even monstrous opponents.

There are no special ability-score requirements to be a Gladiator.

**Role:** For the Gladiator to appear in a campaign, the DM must establish that at least one culture has gladiatorial combats, and the Gladiator character must come from such a culture. (He need not have been born there . . . but he will either have been a slave there or, if he was a freeman, will feel like a naturalized citizen there.) A Gladiator player-character can be an active gladiator in the arena, one who adventures in his free time (or within some other context of the current adventure), or can have formerly been a gladiator now living the life of the adventurer.

In the campaign, the Gladiator is going to be a showy, high-profile warrior. He performs dangerous stunts in combat. He attracts the attention of crowds of admirers. He receives a lot of credit for brave deeds whether he deserves the credit or not. A Gladiator can be a callous brute, a dirty arena fighter with no interests other than killing his enemy as quickly as possible and making off with his prize; or he can be a clean-limbed, heroic figure, a hero who always fights honorably in the arena and never kills when he does not have to.

DMs take note: a Gladiator character is not likely to be a Ranger. You can permit it if you wish, but Rangers are very wilderness-oriented characters, and Gladiators are very urban. A Ranger could have been captured, enslaved, trained as a Gladiator, and then escaped—but still, the Ranger and Gladiator personalities don't seem to work together very well. Allow this only if you really wish to.

It's up to the DM to decide whether there are female gladiators on his world. Unless

his campaign is already rigidly set up to prevent it, he might as well allow it; a she-gladiator character could be a very interesting one.

**Secondary Skills:** The Gladiator character receives his secondary skill through whatever means is usual for the campaign—by choice or random die-roll. This skill probably represents the trade he learned before becoming a Gladiator.

**Weapon Proficiencies:** Required: short sword (gladius), trident, net. Gladiators should learn an even mix of normal and unusual weapons; the DM is within his rights to insist that the Gladiator learn one strange weapon proficiency (such as whip) for every "normal" proficiency (like sword, spear, etc.). (Also, see the *Equipment* chapter, under "New Arms" and "New Armor," for weapons and armor especially appropriate to Gladiator characters.)

**Nonweapon Proficiencies:** Bonus Proficiencies: (Warrior) Charioteering, (Rogue) Tumbling (for the combat showmanship that characterizes arena fighting). Recommended: (General) Animal Handling, Animal Training, Etiquette, Riding (Land-Based), (Warrior) Armorer, Blind-Fighting, Endurance, Gaming, Weapon-smithing, (Priest) Healing (double slots unless Paladin).

**Equipment:** The Gladiator may buy any sort of non-magical weapon or combination of weapons before beginning play. However, he must choose his armor from the listing of Gladiator Armor in the *Equipment* chapter, under "New Armors."

**Special Benefits:** Gladiators, because of their intensive training, get a *free* Weapon Specialization (see under "Weapon Specialization" in the 2nd Edition *Player's Handbook*). This doesn't cost any of their beginning weapon proficiencies: They still get all four of those, *and* get this Specialization free. It must be chosen from one of the following weapons: bow (choice), cestus*, dagger, drusus*, lasso*, net*, scimitar, short sword, spear, trident, and whip. (The "*" indicates a new weapon found in the *Equipment* chapter.)

**Special Hindrances:** Gladiators tend to be recognized—as Gladiators, at least, if not by their own names—wherever they go. This makes it more difficult for them to do things in secret; some troublesome NPC is always remembering "the tall, fair-haired gladiator" who was at the scene of the action, which makes it very easy for the authorities to follow the heroes' trail. (This is something the DM will have to enforce scrupulously if the Gladiator is to have hindrances offsetting his benefits.)

Also, and this is strictly a role-playing consideration, promoters and managers are always interfering in the Gladiator's life: Trying to hire him to participate in certain-death events, to fight people the Gladiator doesn't want to fight, to force him to participate in events taking place at the exact time the Gladiator needs to be somewhere else, etc. These promoters will go to any length to get their way; they may blackmail the character, kidnap his followers, use the time-honored bait of a gorgeous romantic interest (whom the Gladiator doesn't immediately realize is an employee of the promoter), and so forth.

To make sure this is regarded as a hindrance, the DM should make it clear that these promoters are mostly of the sleazy variety who will cheat, rob and betray him at the drop of a hat.

**Wealth Options:** The Gladiator gets the standard 5d4x10 gp to spend, and may spend it any way he chooses (subject to the restrictions listed in "Equipment," immediately above) or have it all unspent at the beginning of play.

**Races:** *Any* demihuman warrior can be a Gladiator. Operators of the arenas try to

acquire as many different, unusual fighters as they can, by hiring or enslaving them, and demihumans (when they can be acquired) are major attractions.

## Myrmidon

**Description:** The Myrmidon is the ultimate soldier. Soldiering is his life. He may be a high-ranking officer or a career sergeant; he may belong to one nation's armed forces or may be a mercenary. To the campaign and the adventuring party, he brings discipline and a useful understanding of military tactics; he's often rigid and contemptuous of rugged individualists or characters who don't like to take orders, so he can cause a lot of friction in an adventuring party, too.

When first created, the Myrmidon's player must decide whether his character is part of a standing army or a mercenary unit. If he's part of a standing army, he's employed as a soldier or officer in the army of a nation, large region, city guard, or even palace/castle guard. If he's part of a mercenary unit, he belongs to a group of freelance soldiers who hire themselves to just about anyone who can pay; or may be a personal bodyguard. The DM will have the deciding vote in what sort of force the Myrmidon belongs to; if, for instance, the DM doesn't want to have an all-military campaign, he'll probably insist that the Myrmidon be a mercenary, currently employed by a player-character or NPC important to the current story.

However, in the course of the campaign, the Myrmidon's employment can change, once or several times. He may start out as a mercenary bodyguard; later in the campaign, he may find himself commanding a small mercenary force in a border war; later still, he may accept a commission in the king's army and find himself a regular officer.

The choice of whether the character is of a non-commissioned rank (such as recruit, private, or sergeant) or an officer's rank (such as captain) is entirely up to the DM, who'll make his choice based on what works best in his campaign's current storyline.

To be a Myrmidon, the character must have scores of at least 12 in Strength and Constitution.

**Role:** In the campaign's culture, the Myrmidon is a career soldier. In times of war, they're heroes to the nation. In times of peace, the common folk often look on them as parasites, living off taxes but providing no useful service. Mercenaries are often looked on as bandits and predators. Regardless of the public's opinion, though, the Myrmidon and the standing army are necessary to the defense of the nation, and so there are always Myrmidons to be found.

**Secondary Skills:** If you're using the Secondary Skills rules, the Myrmidon may choose his Secondary Skill, but must choose it from the following list: Armorer, Bowyer/Fletcher, Forester, Groom, Hunter, Leather worker, Navigator, Sailor, Scribe, Teamster/Freighter, Weaponsmith.

**Weapon Proficiencies:** The Myrmidon may spend his Weapon Proficiency slots any way he chooses.

**Nonweapon Proficiencies:** Bonus Proficiencies: Ancient History (specifically Military History), Fire-Building. Recommended: (General) Animal Handling, Cooking, Heraldry, Riding (Land-based), Seamanship, Swimming, Weather Sense, (Priest, double slots unless Paladin) Reading/Writing, (Rogue, double slots) Disguise, (Warrior) Armorer, Blind-Fighting, Bowyer/Fletcher, Charioteering, Endurance, Navigation, Set

Snares, Survival, Tracking, Weaponsmithing, (Wizard, double slots unless Ranger) Reading/Writing.

**Equipment:** The Myrmidon may spend his starting gold on whatever sort of arms, armor, and equipment he chooses. If, when he's first created, it is agreed that he'll be part of a specific military force with specific equipment requirements, he's required to buy that equipment, but the DM must give him extra gold in the amount of half that cost.

**Special Benefits:** The Myrmidon has two advantages of note:

First, he gets a *free* Weapon Specialization. He must choose it from the following group: Battle axe, Bow (composite long bow, composite short bow, or long bow), Crossbow (heavy crossbow or light crossbow), Lance (choice), Polearm (choice), Spear, Sword (choice).

Second, the Myrmidon is usually in the employ of some powerful patron. The DM will have to decide what immediate benefits this grants him; they vary with the type of employer he is working for.

For instance, if he's working for a wealthy nobleman, he won't have to spend any money for room and board and will enjoy an upper-class existence.

Or, if he's part of a standing army, he may be immune to prosecution by the civilian authorities (though he can certainly face court martial for misdeeds).

**Special Hindrances:** The Myrmidon is instantly recognizable by his military demeanor, erect posture, disciplined mannerisms, etc. (There are plenty of soldiers and mercenaries who *aren't* Myrmidons who aren't so distinctive.) Because he is distinctive, the Myrmidon is easily remembered and described by witnesses to his adventures; this makes it easier for the enemy to identify him and follow his trail if he's trying to escape or travel through dangerous territory.

A second hindrance is his employer. Naturally, his employer makes many demands on the Myrmidon. If the Myrmidon is a bodyguard, he must accompany his employer just about everywhere, regardless of any personal goals or interests the Myrmidon has. If the Myrmidon is a common soldier, he's subject to the orders of his officers. If the Myrmidon is a military officer, he's subject to the orders of his superiors or the local ruler, and bears the added stress of having to look out for his men whenever they're engaged in military action.

**Wealth Options:** The Myrmidon receives the standard 5d4x10 gp starting gold.

**Races:** Depending on the way the DM has set the campaign up, any demihuman race can have Myrmidons. Mercenary Myrmidon demihumans will be travelling mostly in human-occupied lands, while Myrmidon demihumans in standing armies will usually stick to their own race's territories . . . although some special ones (i.e., the player-characters) will often find themselves sent out on special quests and adventures all over the campaign world.

## Noble Warrior

**Description:** This character is of the nobility, and theoretically represents everything the ruling class stands for. In classic medieval fantasy, this means chivalry, the protection of women (those who want to be protected, that is—it's a bad idea to try to protect a woman warrior anxious to prove herself in combat), and (especially) upholding the rights of the ruling class to rule (and upholding the rights of the other classes to serve . . . ).

Noble Warriors in most campaigns are called Knights or Squires, though specific campaigns may have different designations and be based on different sources than medieval European history.

To be a Noble Warrior, a character must have Strength and Constitution scores of 13 or better—it's what comes of being forced to train in heavy plate armor for so many years.

**Role:** In a campaign, the Noble Warrior is a romantic ideal which most of society looks up to. The Noble Warrior is supposed to be courageous, gallant, protective of the defenseless, dedicated to honorable ideals.

But that's just what society *expects* of the Noble Warrior. Some theoretically Noble Warriors are mere brutes in shiny armor, warriors who take what they want, murder the innocent, and continually betray the oaths they took when they first won their spurs. So it's up to an individual player to decide what alignment his Noble Warrior takes and how well he lives up to the pertinent ideals.

Whether the Noble Warrior character is a Knight or a Squire (or some other designation) depends on the campaign and its DM. From the viewpoint of convenience, it's best for Noble Warrior characters to begin play as young knights who have just won their spurs; this will account for the fact that they have little money (they're just starting out as free-lancers) or followers, and for the fact that they're wandering around adventuring; they're anxious to prove their mettle. If the DM prefers, the starting Noble Warrior could be the squire for an NPC knight, one who is aging and needs the stout sword-arm of a young squire; but here, the DM has to run the NPC knight until it's time for the squire character to leave his knight.

**Secondary Skills:** All Noble Warrior characters must take the Groom skill. Squires are expected to care for their knights' horses, and don't forget this skill when they themselves become knights.

**Weapon Proficiencies:** Unless the campaign deals with a culture unlike medieval Europe, all Noble Warriors must take the following proficiencies: long sword *or* bastard sword (player choice), lance (player choice of type, usually jousting lance), and horseman's flail *or* horseman's mace (player choice). The last proficiency may be used for a weapon of the warrior's choice or to specialize in one of the required choices.

**Nonweapon Proficiencies:** Bonus Proficiencies: (General) Etiquette, Heraldry, Riding (Land-Based). Recommended: (General) Animal Training, Dancing, (Warrior) Blind-Fighting, Gaming, Hunting, Tracking, (Priest, cost double slots unless Paladin) Local History, Musical Instrument, Reading/Writing.

**Equipment:** The Noble Warrior may spend his gold pretty much as he chooses—but there are certain minimum standards he cannot violate. He cannot buy armor less protective than brigandine or scale mail. Before starting play, he *must* buy a suit of armor, a shield, at least one weapon larger than a dagger, a horse (at least a riding horse), riding saddle, bit & bridle, horseshoes and shoeing, halter and saddle blanket.

**Special Benefits:** The Noble Warrior starts with more gold than other Warrior Kits; see below under *Wealth Options*. The Noble Warrior receives a +3 reaction from anyone of his own culture. When travelling, he can demand shelter from anyone in his own nation who is of lower social status than he. Most people of his own status or higher will offer him shelter when he is travelling—up to two persons times the Noble Warrior's experience level. (That is, if the Noble Warrior is fifth level, the patron will offer shelter

for the Noble Warrior and up to nine of his companions). In his own land, the Noble Warrior can administer low justice upon commoners—act as judge, jury and executioner for minor crimes he comes across (the definition of "minor crimes" is necessarily up to the DM of the campaign, but in general should include things like assault, petty theft, etc.).

**Special Hindrances:** In order to become a Noble Warrior, the character has sworn an oath of loyalty to some greater noble. If he's squire to a knight, he has an oath to his knight. If he's a knight himself, he's sworn an oath to his king or some other noble—or perhaps to both. He'll be expected to live up to that oath from time to time: Accompany his lord into combat, provide troops to his lord, even beggar his own household in order to support his lord's needs.

Additionally, the Noble Warrior is expected to live well. After he is created, he must add +10% to the base cost of goods, equipment, and services he is buying—*for each experience level he has*—to reflect his noble tastes and requirements.

This extra cost is *not* just a tip. The character is buying higher-quality goods. Here's how it works.

*Example: Sir Amstard rides into town. He's in need of a new sword, a night's lodging at the inn for himself and his squire, and meals and baths for both. He's a 5th-level Noble Warrior.*

*He stops by a weaponmaker. The basic cost for a long sword is 15 gp. Amstard must choose a better weapon than the "basic long sword," and so chooses a more decorative one having the exact same combat characteristics, but costing 22 gp and 5 sp.*

*He goes to the inn. The basic rate at that specific inn is 2 gp per night per person. Amstard won't settle for the basic room, though, and so pays 3 gp per night per person, all for better quality rooms. He pays 6 gp, one night's stay for himself and his squire.*

*The two baths would be 3 cp each, or 6 total. Amstard, though, must have soap and a brush and the water heated especially for him (and for his squire, too); total cost is 9 cp.*

*And so on . . .*

If the Noble Warrior is unable to spend this extra money because of lack of funds, he can settle for lesser goods . . . but his bonus to Reaction rolls will be reduced, at –1 per such incident, until it reaches +0, to reflect the fact that people are seeing that he is settling for shabbier goods and otherwise not living up to their expectations of how a noble warrior should live. At the DM's discretion, other problems may follow this: Nobles fail to offer him shelter or help because he's such a shabby specimen, he gets a reputation as a penny-pincher, etc.

To retain his bonus, when the Noble Warrior is once again in the money he must do whatever it takes to upgrade his situation (buy new clothes, go on a buying spree, etc., at the DM's discretion) and his +3 reaction will return.

If a Noble Warrior gets a bad reputation, deservedly or undeservedly, his +3 reaction becomes a *–6* reaction from everybody who knows of the reputation.

And just as other nobles are expected to extend shelter to the Noble Warrior, he is expected to offer other nobles shelter when they are travelling through his territory—or when they meet on the road while he is encamped and they are not, etc. Whenever a Noble Warrior character is getting too cocky, the DM can have him visited by a nice, large crowd of nobles to whom he is expected to offer shelter and food . . . and who proceed to eat him out of house and home.

**Wealth Options:** The Noble Warrior begins play with more gold than other Warrior Kits; he receives 225 gp *plus* the standard 5d4x10 gp. But do not forget that he is required to spend a large portion of that on specific items described above . . .

**Races:** It's appropriate for any sort of demihuman race to have a class of Noble Warriors.

## Peasant Hero

**Description:** The Peasant Hero is the "local boy done good," the home-town warrior who fights and adventures to the delight of the people in his home area. The Peasant Hero is the most common sort of fighter found wandering the land and adventuring; every village has one or has had one within living memory.

There are no ability-score requirements to be a Peasant Hero.

**Role:** In the campaign, the Peasant Hero is the fellow who won't forget that his roots are in the country and in the soil. He can be a rebel against the crown in lands where the peasants are especially oppressed; he can be the farmboy who becomes a mighty general; he can be the noble's child (secretly raised by peasants) who grows up to fulfill an ancient prophecy; but in every case, he remembers his origins and strives to make things better for his family and home community.

**Secondary Skills:** The player may choose his character's secondary skill.

**Weapon Proficiencies:** The player may choose his character's weapon proficiencies, but may not choose any that the DM feels would be unusual for his campaign-world's peasants. Short sword, spear, bow, footman's weapons and the like are all very appropriate; horseman's weapons, exotic polearms, lances, long swords, tridents and the like are not. This is only a restriction *when the character is first created;* afterwards, of course, he can learn any weapon he receives training with.

**Nonweapon Proficiencies:** Bonus Proficiencies: Agriculture *or* Fishing (player choice), Weather Sense *or* Animal Lore (player choice). Recommended: Any of the General proficiencies.

**Equipment:** The Peasant Hero may spend his starting gold any way he sees fit, but may have no more than 3 gp left when he begins play.

**Special Benefits:** No matter what he's done or what anyone thinks of him, the Peasant Hero always has shelter and often has other help when he's in his own community. Unless it is known that the Peasant Hero has hurt people from his own community, he'll always find people to put him up, hide him and companions from the law, supply them with food and drink and what little weaponry can be scraped together (usually daggers), and even provide them with helpers—earnest 0-level youths who want to grow up to be like their hero.

**Special Hindrances:** Since the Peasant Hero is looked upon as a patron and hero by the people from his home, they will frequently come to him for help. Whenever the village is losing people to nocturnal predators, whenever a village overlord turns out to be a dangerous tyrant, whenever a local citizen is jailed and tried for something he didn't do, the citizens turn to the Peasant Hero for help. And if he turns them away, he loses their respect and earns a –2 reaction from all of the peasants in the land until he is once again in his home community's good graces.

**Wealth Options:** The Peasant Hero gets the standard 5d4x10 gp starting money.

**Races:** The Peasant Hero is a distinctly human sort of character; it's also appropriate to halflings, and to half-elves living among humans. But no other demihumans should have Peasant Hero characters unless the DM decides that their cultures are very much like rural human society.

## Pirate/Outlaw

**Description:** This character is the heroic scofflaw, the warrior who defies the laws and rulers of the land and steers his own course. Usually in the company of other pirates or outlaws, he fights the minions of the rulers he defies, and comes to be regarded as a hero by others who suffer at those rulers' hands. The Pirate, of course, is the adventurer of the high seas, who makes his living raiding other ships and seacoast communities; the Outlaw makes his home in the wilderness (often deep forest) and preys on the traffic moving through that wilderness.

There are no special ability-score requirements to be a Pirate or Outlaw.

**Role:** In a campaign, the pirate or outlaw can belong to one of two orientations. Either he's a "good guy," and it is the law and the rulers who are evil, or he is a "bad guy" and simply takes what he wants from those who have it. The player, therefore, gets to decide on his character's alignment and (mis)deeds.

Note, though, that good guy pirates and outlaws tend to live by a very strict code of conduct—for example, the classic cinema code of Robin Hood and his Merry Men, where the outlaws robbed from the rich and gave to the poor, and protected the defenseless with more honor and zeal than England's supposedly Noble Warriors did.

Naturally, if a player chooses to be a good guy in a company of bad guys, or vice-versa, when his companions find out his true colors, they'll probably try to kill him or to turn him in to the law for the reward on his head.

**Secondary Skills:** If the character is a Pirate, roll d100 for his Secondary Skill. On a 01–70, his Secondary Skill is Sailor; on a 71–80, it's Shipwright; on 81–00, it's Navigator. If the character is an Outlaw, the character may choose between Bowyer/Fletcher, Forester, Hunter, and Trapper/Furrier.

**Weapon Proficiencies:** If the character is a Pirate, he must take the following proficiencies: Cutlass*, and Belaying Pin* or Gaff/Hook* (player choice). If the character is an Outlaw, he can take any weapon proficiencies he chooses . . . but the DM, if he's created this campaign so that the outlaws have a special motif weapon (such as Robin Hood's Merry Men and their longbows) may insist that all Outlaw characters take a specific weapon proficiency. Recommended to classic Merry Man-type outlaws are longbow, long sword and quarterstaff. (The ``*" symbol indicates a new weapon found in the *Equipment* chapter.)

**Nonweapon Proficiencies:** Pirate's Bonus Proficiencies: (General) Rope Use, Seamanship. Pirate's Recommended Proficiencies: (General) Swimming, Weather Sense, (Warrior) Navigation, (Priest, double slots unless Paladin) Engineering (for shipbuilding), Reading/Writing (for mapmaking), (Rogue, double slots) Appraising, Set Snares (in association with Rope Use skill), Tightrope Walking, Tumbling, (Wizard, double slots unless Ranger) Engineering (for shipbuilding), Reading/Writing (for mapmaking). Outlaw's Bonus Proficiencies: Direction Sense, Fire-Building. Outlaw's Recommended Proficiencies: (General) Riding (Land-Based), (Warrior) Animal Lore, Bowyer/Fletcher,

Endurance, Hunting, Running, Set Snares, Survival, Tracking, (Priest, double slots unless Paladin) Healing, Herbalism, Local History, (Rogue, double slots) Disguise. *Special Note*: Your DM may be a fan of the very acrobatic pirate or outlaw movies of the past, and prefer that Tumbling be one of your Bonus Proficiencies instead of one of the ones listed; check with him to see if this is so.

**Equipment:** Pirates and Outlaws come from widely diverse backgrounds, so there's no real restriction on what they can buy with their starting money. However, it would be foolish for either type of character to buy metal armor of any kind (banded, brigandine, bronze plate, chain, field plate, full plate, plate mail, and ring mail). Pirates wearing such armor in naval combat will inevitably fall overboard and sink (they can't swim with such stuff on); if they're lucky enough to get it off so they *can* swim, they've lost the armor. Outlaws living out in the wild have their belongings exposed to the elements, and metal armor quickly corrodes. Therefore, it's up to the DM to keep things in balance. If a Pirate or Outlaw buys metal armor and keeps it stowed away for special occasions (major land engagements, climactic battles, etc.), that's fine. But if they wear such stuff all the time, the DM should continually take it away from them through accidents, rust and corrosion, etc.

**Special Benefits:** Pirates and Outlaws do not have any intrinsic special benefits, although the DM can bestow some campaign-based benefits on them if he chooses. For instance, in many Pirate settings, there is a powerful pirate city where the PCs can go to trade their ill-gotten gains, a place where the law dares not enter; this makes it easier for them to dispose of their goods and enjoy the benefits of a home city when otherwise they wouldn't have one. As another example, in a "Merry Men" type outlaw campaign, the heroes have the dubious benefit of knowing that they're on the right side and if they can just oust the current rulers (probably restoring the proper rulers in the process), they'll have their fortunes restored or enhanced, the land will once again be bright and shiny, and everyone will live happily ever after.

**Special Hindrances:** The major problem with being an outlaw or pirate is that the law is always after the characters. Though the authorities do not have to put in an appearance in every single play-session, they're always out there, plotting against the heroes. Many of them are quite clever, they probably have more money, ships and men than the heroes, and they'll continue to plague the heroes until the campaign is done.

**Wealth Options:** Pirate and Outlaw characters get the standard 5d4x10 gp for starting gold.

**Races:** Outlaws and Pirates, unless your campaign is very human-oriented, will take just about anyone they can get, so it's perfectly appropriate for there to be Outlaws and Pirates of the demihuman races.

**Note:** In a Pirate campaign, it could be that the player-characters will eventually come to terms with the authorities and "go straight." This doesn't mean they have to abandon the Pirate Warrior Kit, however. They could instead become Privateers—who are basically pirates sailing under the papers of (permission of) their ruler, and preying on the nation's enemies. At that point, they can still behave just as they did previously, and the other nation's authorities become their specific enemy.

## Samurai

**Description:** The samurai is a warrior from cultures based on the medieval Japanese civilization. He lives by a very strict code of honor and behavior, a code demanding: absolute obedience to his lord; readiness to die for honor or for his lord at any time; eagerness to avenge any dishonor to his lord, his family, or himself; willingness to repay all debts honorably; and unwillingness to demonstrate the most dishonorable trait of cowardice.

Samurai must have minimum scores of 13 in Strength, Wisdom, and Constitution, and of 14 in Intelligence. They may be of lawful alignment only (but still may be good, evil, or neutral).

**Role:** In a campaign, unless the campaign itself is set in an eastern culture, the Samurai is present to provide a touch of the exotic (culture clashes are always very interesting in a campaign); it also allows for a variety of warrior who can be tremendously deadly.

A samurai can fall from his noble position within a greater lord's household. It may be that the house has perished in a war or other calamity, or that the samurai's lord has rejected him, or ordered him to commit suicide and the samurai has refused, or that the samurai has left his lord for some other point of honor. Regardless, the samurai is now masterless; he is called *ronin*. The ronin has all of the abilities of the samurai, but operates under slightly different rules, as you will see below. With your DM's permission, you can create your character as a ronin instead of a samurai. A samurai can become a ronin at any time in a campaign; likewise, by swearing allegiance to a lord who will have him, a ronin can become a samurai again.

Before you create a samurai or ronin character, ask your DM if such things exist on his world and if you may play one. It could be that the DM does not wish to allow samurai and ronin in his campaign (because the campaign world has no oriental setting to act as their origin, for instance).

**Secondary Skills:** A samurai or ronin must have the Scribe secondary skill.

**Weapon Proficiencies:** The samurai and ronin start play with two free extra weapon proficiency slots—that's the good news. The bad news is that, of his *six* initial weapon proficiencies, *five* are chosen for him. The samurai and ronin must specialize in katana* (samurai sword, two proficiency slots) and daikyu* (samurai great bow, three proficiency slots). The samurai or ronin may spend his last proficiency slot as he chooses—but only from among the samurai weapons listed in the *Equipment* chapter of this book. (The "*" symbol indicates a new weapon to be found in the *Equipment* chapter.) After the character is in play in another culture, he may become proficient in weapons of that other culture.

**Nonweapon Proficiencies:** Bonus Proficiencies: Etiquette, Riding (Land-Based). Required (samurai/ronin must purchase these, but gets no extra slots to pay for them): (Priest and Wizard, costs double slots unless Paladin or Ranger) Reading/Writing. Recommended: General—Artistic Ability/Calligraphy, Artistic Ability/Painting, (Warrior) Blind-Fighting, Running.

**Equipment:** The samurai and ronin must buy all their starting equipment from the samurai weapons, armor and equipment listed in the *Equipment* chapter. They may have no more than 10 gp left when they have purchased their equipment. Samurai and ronin *do not* have to buy their katana; that is free to the character.

**Special Benefits:** The samurai and ronin are able to focus their vital energies to

increase their Strength score—temporarily. Once per day per experience level, the samurai or ronin can increase his Strength to 18/00. This lasts for one full round, and must be preceded by a loud *kiai* shout (making it impossible for him to summon this strength silently or stealthily). For that one round, all his hit probability, damage adjustment, weight allowance, maximum press, open doors, and bend bars/lift gates rolls and functions are calculated as if his Strength were 18/00.

**Special Hindrances:** The samurai and ronin have different special hindrances. The *samurai* is (supposed to be) absolutely devoted to his lord. He is expected instantly to obey every one of his lord's orders, up to and including killing himself or those he loves. If he refuses to obey an order, he is dishonored and is expected to kill himself. (If he does not, he becomes ronin.) The DM should make sure that the samurai is acutely aware of this by having his lord occasionally issue orders which are difficult for him to keep. This doesn't always have to be "Kill all of your allies," but the lord can issue orders which interfere with the samurai's personal goals and remind him that he is subservient to his lord. The *ronin* has his own great difficulty: He earns experience points at half the normal rate. When the DM awards the characters their experience, the ronin receives only half what he would if he were still a samurai. This particular hindrance goes away when the character once again swears allegiance to a lord and becomes a samurai. (Of course, once he's a samurai again, he is subject to the hindrances of the samurai.)

**Wealth Options:** The samurai and ronin start with the normal 5d4x10 gp beginning money.

**Races:** The historical precedent for the samurai is strictly human, so it's up to the individual DM if he wants to have an oriental-based demihuman culture with a samurai warrior class. Such a thing is perhaps most visually appropriate to elves and half-elves, but a DM could allow it to any demihuman race in his campaign.

Note: Players and Dms wishing to have more game-oriented information on the samurai should read *Oriental Adventures*, an *AD&D*® game supplement dealing exclusively with the topic of eastern campaigns. Your DM may adapt anything he chooses to use from that supplement to *AD&D® 2nd Edition* game rules and statistics. The samurai presented here is a simplified version of the *OA* samurai.

## Savage

**Description:** The Savage is a tribesman, technologically and culturally far more primitive than even the Barbarian and Berserker, who is very much in tune with the natural world.

A Savage can be an honorable jungle vine-swinger raised by animals, a very dirty and primitive warrior who lives in mud-wattle huts and fights with bone weapons, a breathtakingly beautiful native princess from a culture which the characters consider impossibly primitive and yet uncorrupted and very noble . . . and so on. In short, the tribal culture from which the Savage character comes can be as crude or civil, coarse or noble, nasty or admirable as the players and DM want it to be.

To be a Savage, a character must have a minimum Strength score of 11 and a minimum Constitution score of 15.

**Role:** In a campaign, the savage character has a couple of roles. His particular skills and benefits are of use to the average adventuring party. If he comes from a particularly

noble tribe, he may choose to act as the "voice of conscience" for the adventuring party, asking why, if the other characters are supposed to be so much more civilized than his own people, their honor and ethics seem to drag so far behind? But for the most part, he's a role-playing challenge, and should be chosen only by players willing to devote the extra effort to portraying someone from such a different culture . . . and how that character reacts with the other PCs' culture. This is an opportunity for a lot of humor and not a little tragedy in a campaign . . . but only if the player is willing to go to that effort.

**Secondary Skills:** The Savage character should have Fisher, Forester, Hunter, or Trapper/Furrier as his Secondary Skill (player choice).

**Weapon Proficiencies:** The DM should define a set of weapons which the PC can choose his beginning weapon proficiencies from. A typical set, for classic "noble savages": blowgun, long bow, short bow, club, dagger, javelin, knife, sling, spear. The character must make his first-level weapon proficiencies selections from these choices. Once he begins play and begins adventuring in the outer world, he may learn any other weapon, of course . . . but it's better role-playing if he prefers to stick to the weapons of his tribe.

**Nonweapon Proficiencies:** Bonus Proficiencies: (General) Direction Sense, Weather Sense, (Warrior) Endurance, Survival. Recommended: (General) Animal Handling, Animal Training, Fire-Building, Fishing, Riding (Land-based), Rope Use, Swimming, (Warrior) Animal Lore, Bowyer/Fletcher, Hunting, Mountaineering, Running, Set Snares, Tracking, (Priest, double slots unless Paladin) Healing, Herbalism, Local History, Religion, (Rogue, double slots) Jumping, Tightrope Walking, Tumbling, (Wizard, double slots unless Ranger) Herbalism, Religion.

**Equipment:** The Savage gets no gold (0 gp) with which to purchase his weapons and equipment. Instead, he may take up to four of the weapons listed under "New Savage Weapons" in the *Equipment* chapter. He may assemble an equipment list of up to ten additional items, subject to the DM's approval, which he will have accumulated during his years with the tribe; they must be items which members of a savage tribe could have made (things such as pouches, clothing, food, rope, fishing gear, sheathes for weapons, and so forth—no mirrors, lanterns, iron cooking pots, and the like.) With the DM's permission, if the tribe is a river-tribe or a riding tribe, he may have either a riding horse (with saddle-blanket, halter, bit and bridle) or a small canoe.

**Special Benefits:** One of the Savage's special benefits is that he receives more bonus nonweapon proficiencies than any other type of warrior—testimony to the fact that the Savage must know more skills just to stay alive than other characters. Another, substantial, benefit the Savage receives is this: He has a special ability, resembling a spell, which he may use once per day per experience level he has (i.e., a 5th-level savage could use his ability five times per day).

The special ability must be chosen from the list below, must be chosen when the character is first created, and may never be changed. The special ability is not truly magic, and Detect magic will not detect it; it is an ability natural to the Savage. It does not require verbal, somatic, or material components, even if such are required from the normal spell.

The list:

(1) *Alarm (Wizard 1st Level).* Special effects: This is only usable by the Savage when he is resting or sleeping in a quiet place. The ability does not sound an alarm like the

spell; it merely alerts the Savage to intrusion (if he is already awake) or awakens him (if he is asleep). It is not cast upon a particular place; it alerts him to activity within 10 feet of the place where he lies (as if he were at the center of the 20-foot cube of effect of the actual spell).

(2) *Detect Magic (Wizard 1st Level).* Special effects: This reflects the fact that the Savage is in tune with nature and can feel when there is something unnatural (i.e., magical) in the air. Unless the Savage is also a Ranger, he cannot determine the type of magic present (i.e., alteration, conjuration, etc.).

(3) *Animal Friendship (Priest 1st Level).* Special effects: This ability can only make friends of an animal which is not angry or threatened. It can be used to make an angry or threatened animal calm. To make friends with an angry or threatened animal, therefore, the Savage must be able to use the ability twice that day (i.e., he must be of 2nd level or higher) and must have two uses left. To use the ability, the Savage must confront the animal, face to face, at no further away than the limits of the animal's attack range. As with the spell, the Savage must actually have no ulterior motives, for such will be detected by the animal, and the ability will fail.

(4) *Detect Evil (Priest 1st Level).* Special effects: this is like the *Detect Magic* ability, above. Like the Priest spell, this Detect Evil cannot detect evil in a PC—only in a monster, place, or magical item.

The DM can disallow any of the four abilities given above, or introduce new ones—though he can't add anything that resembles a magical spell above 1st level.

**Special Hindrances:** The Savage has some drawbacks, too. He is uncomfortable in civilized clothes and armor—When wearing any sort of clothing more cumbersome and concealing than his normal tribal dress, he suffers a –1 to all attack, damage and nonweapon proficiency rolls; he's uncomfortable, and it's affecting his actions and reactions.

Likewise, he can wear any type of armor, but is so uncomfortable in it that he will suffer a –3 to all attack, damage, and nonweapon proficiency rolls while wearing any sort of armor at all. If a player blatantly decides not to role-play his character's dislike of armor and simply wears armor continually, accepting that negative modifier, the DM should gradually increase the modifier: –3 in one play–session, –4 in the next, –5 in the next, and so on . . . with no limit. If the player asks why this is happening, the DM need merely reply that the character is growing more and more uncomfortable in his unnatural trappings and finding it harder and harder to concentrate on the job at hand.

**Wealth Options:** The Savage starts out with no gold. He gets his starting weapons as described above, under *Equipment*. After the campaign starts, the character will inevitably come across the concepts of money; it's up to the player how he reacts to them (he could either like the idea and try to accumulate the stuff as his allies do, or put it down to civilized corruption and stay away from it).

**Races:** Most role-playing campaigns tend to think of the demihumans as being more civilized and cultured than humans, but it's perfectly all right to have Savage dwarves, elves, gnomes, half-elves, and even halflings in your campaign if the DM wishes them to be there.

**Note:** "But," you say, "what if my character grew up in a Savage tribe and was later enslaved and trained as a Gladiator and then escaped? What is he, a Savage or a Gladiator?"

That's up to you to answer. If he still considers himself a member of his tribe and has not been distanced from it by his capture and training, take the Savage Warrior Kit; perhaps your DM will allow you to use some of your proficiencies to learn weapons and skills appropriate to Gladiators. Likewise, if the character is now more urban than savage, build him with the Gladiator Warrior Kit . . . but have him use some of his proficiencies on Savage skills and weapons.

The same sort of theory applies if you're creating any character with a complicated background: A Barbarian youth brought up in the traditions of a Samurai, an Amazon lass who has grown up to be a Knight (Noble Warrior), a Pirate boy who gave up the seas and took to being a big-city Swashbuckler. Decide which Warrior Kit the character considers himself to belong to, create him with that Kit, and use some of your proficiencies to buy weapons-knowledge and skills pertaining to the other Kit.

## Swashbuckler

**Description:** The Swashbuckler is the sophisticated, witty, lightly armed and armored hero in a sophisticated city-based campaign—a la *The Three Musketeers*. He's fully capable of putting on heavy armor, picking up a bastard sword, and soldiering alongside other tank warriors—but he shines in comparison when the heroes are adventuring in the city, in light armor and with light weapons.

To be a Swashbuckler, a character must have an Intelligence and Dexterity of 13 or better.

**Role:** In a campaign, the Swashbuckler is the happy-go-lucky hero with the ready wit and the flashing rapier. He's happiest when he's in the big city, but can be an imposing warrior anywhere—enemies often underestimate him because of his charming manners and don't realize that he can plate on armor and wield heavy weapons as well as anyone else. The Swashbuckler, because he's bright and well-spoken, often becomes party leader . . . or at least the leader's spokesman.

**Secondary Skills:** The Swashbuckler can choose his own Secondary Skill. Good choices include: Navigator (if he's in with a band of pirates, especially), Gambler, Jeweler, Scribe, and Weaponsmith.

**Weapon Proficiencies:** The Swashbuckler receives two extra weapon proficiency slots which must be devoted to weapon proficiency with one of the following weapons: stiletto*, main-gauche*, rapier*, and sabre*. (The "*" symbol denotes new weapons to be found in the *Equipment* chapter.) Throughout his career, he must devote half of his weapon proficiency slots to those four weapons. Once he has achieved proficiency in all four of those weapons, he may freely choose where the rest of his weapon proficiency slots go.

**Nonweapon Proficiencies:** Bonus Proficiencies: (General) Etiquette, (Rogue) Tumbling. Recommended: (General) Artistic Ability, Dancing, Heraldry, Languages (Modern), Riding (Land-Based), Seamanship, (Warrior) Blind-Fighting, Gaming, (Priest, double slots unless Paladin) Musical Instrument, Reading/Writing, (Rogue) Appraising, Disguise, Forgery, Juggling, Musical Instrument, Tightrope Walking, (Wizard, double slots unless Ranger) Reading/Writing.

**Equipment:** The Swashbuckler must buy the weapon in which he has specialized, but except for that limitation may spend his gold precisely as he pleases.

**Special Benefits:** The Swashbuckler has three special benefits. First, when using up his Nonweapon Proficiency slots, he doesn't have to devote double the normal number of slots when choosing Rogue proficiencies. Second, when he's wearing light or no armor (i.e., no armor, leather armor, or padded armor), he receives a –2 bonus to his AC (that is, an AC of 7 would become a 5); he's so nimble that he's very hard to hit. Third, the Swashbuckler is such a romantic figure that he always receives a +2 adjustment on his reaction roll from NPC members of the opposite sex.

**Special Hindrances:** Trouble seeks out the Swashbuckler. This is something that the DM will have to play very carefully if the Swashbuckler is to be as hindered as all the other Warrior Kits. When there's another Swashbuckler around, intent on proving that he's the best swordsman in the world, it's the PC Swashbuckler he settles upon and challenges. When a certain young lady is being pursued by the king's guards, who are intent on stopping her from revealing secrets in her possession, it is the Swashbuckler she stumbles across when fleeing. When a prince is too drunk to attend his own coronation, miraculously he looks just like the Swashbuckler. Life conspires to make things difficult for the Swashbuckler, and the DM should always throw just a little more good-natured bad luck at that Warrior Kit than at any other.

**Wealth Options:** The Swashbuckler receives the standard 5d4x10 gp starting money allotment.

**Races:** Any demihuman who'd look elegant in foppish dress, wielding a narrow blade, will work fine as a Swashbuckler, especially elves, half-elves and halflings. Dwarves and gnomes are not entirely inappropriate, but are likely to have to defend themselves from plenty of jokes at the expense of their curious looks.

## Wilderness Warrior

**Description:** This hero represents some tribe (either civilized or barbarian) living in a dangerous, threatening, or unusual wilderness environment—such as the desert, deep in swamp territory, in the frozen North, tucked away in the jungle or tropical rain forest, or in distant mountains.

The Wilderness Warrior is different from the Barbarian. He's not automatically a menacing figure when travelling around in the campaign's normal society; he's just exotic and unusual. He can be very cultured and civilized, but, coming as he does from a different culture, will have different attitudes from the other player-characters on many subjects.

For example, a desert nomad character may be merely offended at the theft of his property but be outraged by (and demand the death penalty for) theft of his water; he may believe that women should stay in camp and leave fighting to the men (an opinion he will find himself quickly disabused from when in the outer world); he may feel the need to prostrate himself whenever he passes the church or temple of the deity he worships; and so on.

The player decides (with DM's permission) what sort of tribe and environment the Wilderness Warrior comes from. Then, working with the DM, he must determine what sort of unusual beliefs and customs the character and his tribe possess. He may later abandon a few of these beliefs in the outer world, but should not abandon most of them; they are part of what makes him unique in the campaign.

To be a Wilderness Warrior, the character must have a Constitution score of at least 13.

**Role:** In a campaign, like the Barbarian and Savage, the Wilderness Warrior is the "outsider's voice" who questions all the strange quirks and discrepancies in the player-characters' culture. He's also an opportunity for some comic-relief adventures, when he misinterprets some aspect of the society and it leads him into confusion and trouble. More importantly, the DM should arrange for the occasional adventure to take place in lands like those of his birth, so that he can demonstrate his skills in that environment.

**Secondary Skills:** If you're using the Secondary Skills rules, the Wilderness Warrior may choose his skill from the following list: Fisher, Forester, Hunter, Sailor, Trapper/Furrier.

**Weapon Proficiencies:** The Wilderness Warrior may spend his Weapon Proficiencies any way he pleases. The DM may insist that he spend one or two on weapons appropriate to his culture: A desert nomad should have Scimitar and Short Composite Bow, while an arctic warrior should have Harpoon and Spear, for instance.

**Nonweapon Proficiencies:** Bonus Proficiencies: Survival (in his native environment), Endurance. Recommended: Any relating to the land of his birth, such as Animal Handling, Animal Training, Dancing (his cultural dances), Fire-building, Fishing, Riding (Land-based), Swimming, (Warrior) Mountaineering, Tracking.

**Equipment:** The Wilderness Warrior may only spend his starting gold on items appropriate to his culture. For example, the desert nomad couldn't buy any armor at all with his starting gold, while the arctic warrior could only have leather or hide armor. (Of course, if the DM determines that his is a trading culture, he could have access to goods from all over the world.) The Wilderness Warrior *doesn't* have to spend all his starting gold before entering play. Once he begins play, there are no restrictions on what sorts of equipment he may buy.

**Special Benefits:** The Wilderness Warrior gets a special bonus of +5 to his Survival proficiency roll. This only applies to the Survival proficiency pertaining to environments like that of his origin; if he later takes a second Survival proficiency for another type of territory, the bonus doesn't count toward it.

**Special Hindrances:** The Wilderness Warrior, in his early years, is occasionally hindered by his unfamiliarity with the player-characters' society, but this is a role-playing consideration; the DM must occasionally enforce it until he believes the character is sufficiently familiar with the usual culture.

**Wealth Options:** The Wilderness Warrior gets the usual 5d4 x 10 gp in starting gold.

**Races:** This is a very appropriate Warrior Kit for demihuman warriors, and the DM may wish to create some unusual demihuman tribes to showcase it. For example, everyone would expect Dwarven Wilderness Warriors from the mountains, Elf and Gnome Wilderness Warriors from the tropical rain forest, etc. But what about Desert Dwarves? Arctic Elves? Swamp Gnomes? Mountain Halflings? Such unusual choices can add some color to a campaign.

## Recording Kits on the Character Sheet

The character record sheet presented in the *Character Creation* chapter has blanks for all of the benefits, hindrances, and other notes generated when a character takes a Warrior

kit.

## Warrior Kits and Multi-Class Characters

These Warrior Kits are designed to add depth to a warrior-class character. But if the character is already multi-class (for example, an elf fighter-mage), he doesn't *need* any more depth. Therefore, only single-class warriors can take one of the Warrior Kits described above.

However, with your DM's permission, there's no reason why a multi-class warrior can't use his weapon and nonweapon proficiency choices to simulate one of the Kits . . . and, again with DM permission, the characters possessing that Warrior Kit can consider him "one of their own" within the context of the campaign.

For example, let us say that your campaign features an elvish Amazon tribe and you want to play an elf fighter/thief who belongs to that Amazon tribe.

Build her this way: Have her take Spear and Long Bow Weapon Proficiencies. For her Nonweapon Proficiencies, have her take Riding (Land-Based) and Animal Training (she *doesn't* get either of these for free, like the "real" Amazon, but she can still choose them). For her Equipment, limit her to the equipment choices of the Amazon.

If you do all this, and have your DM's permission, within the context of the campaign, your character will be considered an Amazon. That is, she comes from the Amazon tribe and the other Amazons consider her to be a shield-sister and one of their own. *You* know, and the DM knows, that she doesn't have all the special benefits of the Amazon Warrior Kit. And the DM is within his rights to assign the character the special hindrances of the Amazon—after all, you've chosen for her to be identified with a race of people with those hindrances. But to all outward eyes, she is indistinguishable from any other elvish Amazon.

## Warrior Kits and Dual-Class Characters

The same is not true of dual-class characters.

If a character starts off as a warrior, he may take any of the Warrior Kits above. If, later, he decides to change classes according to the normal Dual-Class Benefits and Restrictions rules, he doesn't lose any of the benefits or hindrances of the Kit he chose; he is still that sort of fighter. If that second character class also has a range of Kits available to it, he *may not choose a new, additional Kit.*

If a character starts off as some other character class, does not take on a Kit appropriate to that class, and then later switches to one of the warrior classes, he can choose a Warrior Kit at that time . . . though the DM may insist that certain campaign events be accomplished in order to allow him to do this.

For instance, let's say that a human mage decides, later in life, to become a Fighter, and he wants to be a Gladiator. Well, there's nothing wrong with that. But the DM should insist that the next several adventures deal with that transformation. The character must be hired by (or, alternatively, captured and enslaved by) an arena or fighting-stable owner, trained, and pitted against other Gladiators. The other characters in the campaign could also be entering the gladiatorial arena, or the DM could contrive things so that the current adventure involves gladiatorial elements and still get all the PCs involved.

To better simulate the wait involved for the character to learn his new trade, the DM is within his rights to insist that the character not receive his Warrior Kit until he's reached second experience level in his new class.

## Abandoning A Kit

Sometimes it happens that a character is created with a Warrior Kit and circumstances later force him to reconsider his character's role. For example, a Noble Warrior could become disgusted with the corruption and excesses of his class and decide to renounce his ties to the nobility. Or, a Savage could become increasingly comfortable with the civilized world and increasingly uncomfortable with his savage kin. In such a case, the player should think about *abandoning* the Warrior Kit.

To abandon the kit, the player should privately tell the DM his intentions. If the DM has no objections to the abandonment, then it will take place. Unless the choice for abandonment were brought on by a sudden, traumatic event, the DM may have to have some time to work the abandonment into the storyline. Often, in the story, the character doing the abandoning will have to role-play out the situation: Publicly renounce his ties with the others of his Warrior Kit, and then suffer any consequences that might arise. (In Greek mythology, for instance, the Amazon queen Antiope abandoned her former life to stay with King Theseus of Athens . . . and she later died fighting her former countrywomen when they came after her.)

Once the character abandons his kit, he also abandons all the special benefits and hindrances it provides. Often, those benefits included free Nonweapon Proficiencies or Weapon Proficiencies. The character doesn't *lose* those, but he *must* pay for them from the next free slots he has available to him.

The character may not take another Warrior Kit to replace the one he's abandoned. Once he gives up his Warrior Kit, he's an ordinary Fighter, Paladin, or Ranger for the rest of his playing life.

## Modifying The Kits

The DM can, and should, modify the Kits presented above to represent his own campaign setting more accurately.

For example, if there are no Amazons in his world, he should disallow the Amazon Kit. If Gladiators are all chosen from the ranks of savages despised in the civilized land, he should modify the Gladiator hindrances to reflect the fact that they have no respect in the campaign setting.

## Creating New Kits

Similarly, if there's a special sort of warrior that the DM would like to have in his world, he can design a new Warrior Kit for that warrior.

To design a Warrior Kit, you must answer the following questions about the warrior and his role in your campaign.

**Description:** What is this warrior? What literary, mythological, or historical source is he drawn from? What special requirements are there if a character wishes to be one?

**Role:** What is this warrior to be in the campaign? How does his culture look at him? How do other cultures look at him? Is there a special sort of outlook he needs to have to belong to this Warrior Kit? And what does this warrior tend to do in a campaign—lead mighty nations? brutalize and betray his allies? upset the delicate balance of political strategies? have a good time without making waves?

**Secondary Skills:** If you're using the Secondary Skills rules, you need to determine if this Warrior Kit requires such a skill. If no one secondary skill should be common to all warriors of this type, then don't require a secondary skill. But, if all members of a Warrior Kit seem to have this skill, then you *should* require it of all who take this Kit.

**Weapon Proficiencies:** Many Warrior Kits seem to gravitate toward specific weapon types. Knights lean to swords and lances; Merry Men of the forest prefer the longbow. If the warrior you're simulating seems to prefer one or two weapons above all others, then, in this Kit, you require them to take the proficiencies for those weapons.

**Nonweapon Proficiencies:** Most Warrior Kits, again, seem to have certain skills in common. It would be silly to have a Noble Warrior without Etiquette, for instance. So you may assign up to two proficiency slots to be given *free* to the character. If it's appropriate, the proficiencies may come from listings not appropriate to warriors—the Priest, Rogue, and Wizard listings. (Though normally the cost in slots for such proficiencies doubles, since they are here being given free to the character, that doesn't matter.)

**Equipment:** If a Warrior Kit is best-known for having specific types of equipment, require that the warrior have such equipment when the campaign begins. If many examples, but not an overwhelming majority, of this sort of Warrior seem to prefer a specific type of equipment, simply list it among the types of equipment the Warrior Kit *recommends*.

**Special Benefits:** Every Warrior Kit should have some special benefit. It's up to you to choose what that benefit is, but it should fit in with the way this warrior appears to function in fiction, mythlore or wherever he comes from. Types of benefits include:

Bonuses to reaction rolls, especially from certain categories of people;

Bonuses to attack rolls and/or damage, especially against certain categories of enemies, or in special circumstances;

A free weapon specialization;

Resistance (immunity or a bonus to saving throws) against specific types of magic;

Special rights in the culture in which the characters normally travel (for example, immunity from prosecution for certain alleged crimes, or the right to demand shelter); and so on.

**Special Hindrances:** You should also provide a special hindrance (or hindrances) which limit the character as much as his benefits help him.

Such hindrances can include:

Minuses to reaction rolls, especially from certain types of people;

Minuses to attack rolls and/or damage, especially against certain categories of enemies;

Inability to learn specific weapon or nonweapon proficiencies;

Vulnerability to specific sorts of magic (either a minus to saving throws, or the magic is automatically successful); and

Special restrictions in the culture in which the characters travel (for example, not

being able to own property or get married, or excessive punishments for specific crimes).

**Wealth Options:** If the Warrior Kit has any restrictions or benefits in the awarding of his starting gold, or in the ways he can spend it, note them here.

**Races:** If there are variations to the Kit based on the character's race, note them here. Some races can't take a specific Kit; some will have different proficiencies, benefits and hindrances attached to them.

**Notes:** If you have any additional notes about the Warrior Kit pertinent to your campaign (such as which players you'd prefer for specific Kits, for example), put them here.

Additionally, you could create Kits for other classes than Warrior, or adapt the existing Kits to the other through tinkering with the skills, proficiencies, benefits, and hindrances. There could easily be Rouge Swashbucklers or Barbarian Priests, for example.

### The Warrior Kit Creation Sheet

On page 124 is the Warrior Kit Design Sheet. If you wish to design a new Warrior Kit, just photocopy the sheet and design your new Kit upon it. When you're showing the Warrior Kits above to your players, also include the new Warrior Kits you've designed.

## Role-Playing

The *AD&D*® game isn't all combat and magic, and so a warrior doesn't have to be just a collection of numbers which responds to situations by killing everything in sight and collecting coins. No, there's much more to role-playing than that, and this chapter is devoted to role-playing the warrior character.

## Warrior Personalities

There's a misconception that warriors are just square, solid guys who do the physical work in a fight; that rogues are the clever ones who do all the conniving and tricking; that wizards are awesome, impersonal intelligence dedicated solely to their magical studies; that priests are only interested in the advancement of one's spiritual learning.

While that's a simplification convenient for first-time players of the game, more experienced players may desire to add depth to their characters by providing more detail to their characters' personalities: Deciding how they react in certain situations, how they relate to other characters, and so forth.

Experienced role-players, those who already do this, should skip down to the headline reading "The Warrior Campaign." Beginning role-players should continue from here.

In the first part of this chapter, we'll be talking about Warrior Personalities, describing a few types of heroes common to fiction and mythology. Read each description, think about whether the description comes close to matching your conception about your character's personality, and if it does, try to utilize that description's advice when role-playing and making decisions for your character.

Each personality in this chapter will be described in the following way:

**Character Description:** These paragraphs talk about the character's attitudes and motivations, and how the character tends to act and interact in a normal campaign.

**Best Suited For:** These paragraphs talk about the alignments for which this personality type is best suited, and about the Warrior Kits (from the last chapter) for which the personality is best suited. It's possible to come up with a good rationale for why a character of a specific personality type should have an alignment that doesn't (at first glance) seem appropriate for that personality type, so there is *absolutely no firm alignment restriction when you're choosing personalities.* However, the recommendations made for appropriate choices are good enough for most characters, so keep them in mind.

**In Combat Situations:** These paragraphs talk about how the character reacts in combat situations. Not all warriors unstrap their swords and wade in swinging; some approach battle situations more slowly, more cleverly, or more aggressively.

**In Role-Playing Situations:** These paragraphs talk about the character's general reactions to NPCs in role-playing situations; you can use them as general guidelines for your character's role-playing conversations and other such encounters.

## The Brash Youth

**Character Description:** This character has just recently become an adventurer, and he doesn't have much experience or common sense . . . meaning that he gets in trouble, and leads his companions into trouble, quite often. Therefore, *you should only choose a Brash Youth personality when you're willing to role-play this attitude.* The Brash Youth is easy prey for fast-talkers and con men, suggests straightforward and foolish plans sure to get the party captured or killed, admires more experienced warriors without questioning their motives, and can be quite a menace to himself unless taken in hand by a more experienced adventurer.

Inevitably, a Brash Youth character has to "wise up"—to lose some of his preconceptions and naivete. If this doesn't happen naturally in the course of a campaign, the DM should design an adventure around the Brash Youth, an adventure where he's confronted with the consequences of his brashness. For instance, a confidence man could trick the Youth into accidentally betraying his allies; or, a Youth's plan could go horribly awry and seriously or critically endanger his friends; or, a hero particularly admired by the Youth could turn out to be far less admirable than the Youth has always thought.

When this happens, the character must stop being a Brash Youth and choose some other personality type. By now, he should have been playing long enough that the player will know what sort of personality that is; alternatively, the events that shock him out of being a Brash Youth could affect him seriously enough that this event chooses his new personality for him (this results in such personalities as a disillusioned Crude Crusher or a hostile Dangerous Antagonist).

**Best Suited For:** In terms of alignment, the Brash Youth is best suited to the full range of Good and Neutral alignments (L/G, L/N, N/G, N, C/G C/N). Evil characters aren't suited to being naive and trusting. In terms of Warrior Kits, the Brash Youth is admirably suited to all of them! The only kit that might give you a problem is that of the Samurai, but it's possible to play an inexperienced and eager Samurai struggling to keep

his enthusiasm from showing beneath the veneer of eastern detachment; this is an especially good choice in an all-samurai campaign, where one character is the brash young warrior interacting with more experienced and settled samurai.

**In Combat Situations:** The Brash Youth is likely just to charge up to a foe and begin pounding away, unless that foe is so big and scary that even the most foolish youth will be afraid of it. He's very likely to take combat orders from his friends, however, so it's easy for one wiser warrior to keep him from killing himself through bad tactics. It's often a good idea for the party to make the Brash Youth one of their designated archers, because it usually keeps him out of direct hand-to-hand combat until he has wised up.

The Brash Youth *can* learn from his experiences, on a case-by-case basis. After he's been hammered by a troll, he can be more cautious with the next troll or troll-like monster he encounters. But he'll be just as brash with a monster unlike the others he's encountered . . .

**In Role-Playing Situations:** The Brash Youth gets along with everybody until such time as the other person insults one of his friends, challenges one of his preconceptions, or betrays him. Even then, he'll simply be furious and willing to fight or oppose the other fellow; to be truly *vengeful* requires that the Youth go through his personality change and take on a new personality.

The Brash Youth should be played as either hesitant and nervous in new situations, or eager to throw himself into such situations—he's never bored or indifferent. Other characters find his youthfulness charming, but may also find him exasperating because he's always getting into trouble.

### The Crude Crusher

**Character Description:** The Crude Crusher is a rude, boisterous, belching, physical sort of character. He may be very clever, but he prefers force to trickery or persuasion—it feels good to pound people. He doesn't like proper manners, court etiquette, literature and poetry, or haughtiness. He has very coarse and common customs . . . although he could be of high birth (nothing says a high-born warrior *must* be clean, virtuous, and polite, after all). Put him in a tavern with a crowd of noisy table-banging drinkers, where the drinks pour freely and the occasional brawl grinds furniture into sawdust, and he's happy.

**Best Suited For:** In terms of alignment, the Crude Crusher can belong to any of them. If he's Lawful, he's still operates by a code of behavior that others can observe and count upon (even if he is a social misfit); and if he's Good, he's not going to take the things he wants (by force) from those who own them. For these reasons, a Lawful/Good Crude Crusher isn't likely to have a lot of fun. In terms of Warrior Kits, the Crude Crusher is well-suited to the Barbarian, Beast-Rider, Berserker, Gladiator, Peasant Hero, Pirate/Outlaw, Savage, and Wilderness Warrior. A Crude Crusher Noble Warrior will always suffer the reaction penalties given to Noble Warriors who don't live according to their social stations (see the description of the Noble Warrior from the last chapter for more on this). Amazons are usually too uptight in male societies to be as comfortably coarse as the Crude Crusher is. The Samurai and Swashbuckler tend to be too cultured for this personality type. The Cavalier *can't* take the Crude Crusher personality.

**In Combat Situations:** The Crude Crusher is a brawler. He prefers one-on-one combats and fights dirty, doing whatever it takes to win a fight. He fights exactly as he

chooses, and may or may not follow the team plan. In combat, he's single-minded and effective.

**In Role-Playing Situations:** The Crude Crusher can be a lot of fun to play, because he says whatever he wants whenever he wants. His crude remarks scandalize more refined characters. He's likely to antagonize his ``betters" in conversation, either accidentally or (more probably) deliberately, and this can spoil party negotiations and muck up the party's plans. However, none of this means that the Crude Crusher can't be loyal, courageous, competent and powerful, so adventuring parties aren't likely to kick him out because of his mouth; but they're usually exasperated by his attitudes.

## The Dangerous Antagonist

**Character Description:** This character is a hero with an attitude problem. He's grim and humorless, and never fights just to give someone a drubbing—he fights to kill. He's driven by some powerful, unsympathetic motivation: A desire for revenge, overwhelming desire for a possession, or even a near-psychotic desire just to be left alone. He must be carefully played so that there actually *is* a reason for him to accompany the other player-characters, and the DM may need to remind his player occasionally that he *can* have friends and loyalties, even if he prefers to conceal that fact behind hard-bitten mannerisms and an evil temper. Naturally, this personality type has few or no romantic inclinations or relationships.

**Best Suited For:** In terms of alignment, the Dangerous Antagonist is appropriate for all of them. Different alignments result in different motivations: A Lawful/Good Dangerous Antagonist has been embittered by events in his life, while a Chaotic/Evil character is a sociopath. In terms of Warrior Kits, most are appropriate; the usual exceptions are the Cavalier and Swashbuckler, who tend to be better-tempered characters.

**In Combat Situations:** The Dangerous Antagonist fights in a smart and deadly fashion (unless he's a Berserker). He prefers a "Take no prisoners!" attitude, but can allow himself to be overruled by his friends, especially if they can persuade him that there's a practical reason for it (just being merciful and humane isn't good enough). He can be a good combat tactician for the team, directing his allies to fight in the most deadly and efficient manner possible; or, he could be a wade-right-in fighter who vents his hatred on his enemies.

**In Role-Playing Situations:** This character generally doesn't do role-playing negotiations with NPCs, unless the PCs are attempting to intimidate or frighten the NPCs. The Dangerous Antagonist must be played carefully; many Dangerous Antagonist characters are merely kill-crazy fighters with overinflated opinions of themselves, and so it's very easy when playing such a character to aggravate the other players with his pretentiousness. In other words: Be menacing, but concentrate that menace more on NPCs than your PC allies.

## The Doomed Champion

**Character Description:** This hero has been afflicted with a curse or a prophecy that haunts him throughout his life. He may have lost his One True Love and been fated never to find her. He may be doomed to bring misfortune on anyone he cares about. He might

be prophesied to die whenever certain campaign-related goals are achieved. He might be the last survivor of his race, doomed to die without issue, so that the race dies with him. When he's not fighting for his goals, this character is suffering. For this reason, you shouldn't play such a character unless you *enjoy* portraying that suffering. If you choose such a character type, you must consult with your DM to determine just what sort of curse afflicts the character—it's absolutely pointless to play a Doomed Champion unless there actually is a doom or curse at work.

**Best Suited For:** Any alignment is appropriate for the Doomed Champion. In terms of Warrior Kits, most are appropriate, except for the essentially cheery Swashbuckler.

**In Combat Situations:** The Doomed Champion tends to fight in an all-out, desperate-strength manner. He throws himself fully into a fight and seeks out the most dangerous opponents. Either he's simply desperate to achieve his ends and elude his curse, or he's unconsciously seeking his own death. He's therefore not good as a team tactician. On the other hand, his bravery is inspirational to other heroes and followers, so he's often made the leader of war parties. He can be merciful in combat, or kill all who face him (all the while regretting the grim necessity of it).

**In Role-Playing Situations:** The Doomed Champion tends to be sympathetic to others' needs and pains . . . but is himself very depressive, because he knows that some grim fate awaits him. This means he's often easy to persuade to aid in others' quests (not quests for money: quests for more personal goals).

### The Fated Philosopher

**Character Description:** This character is both similar to and very different from the Doomed Champion. Like the Champion, he knows that a particular grim fate awaits him: Death. But he's very philosophical about it and does not torture himself about it. He's likely to be an old campaigner with very few illusions left, but with a keen appreciation of all life has to offer.

**Best Suited For:** In terms of alignment, Lawful and Neutral characters are most suited to be Fated Philosophers; Chaotic characters are seldom that introspective. The Philosopher is equally suited to Good, Neutral, and Evil characters. In terms of Warrior Kits, the Philosopher is most admirably suited to the Samurai. He's appropriate to most of the other kits as well, except the Berserker, which isn't a very introspective sort of hero.

**In Combat Situations:** Different Fated Philosophers face combat in different fashions. Some are as thoughtful in combat as elsewhere, and take a very analytical approach to combat: Striking where the need is greatest, evaluating the enemy's strategy, and so forth. Others, knowing that they cannot forestall their fate, jump into the thick of things and fight with unrestrained battle-fury (and, perhaps, joy). The player is left to decide how his Fated Philosopher character fights. Basically, he should simply choose the method of combat he prefers for this character, and then rationalize it according to the character's philosophy of life.

**In Role-Playing Situations:** The Fated Philosopher is often a sort of fatherly-advisor character. He thinks about everything, he's full of sage advice. Though he may be driven by goals as strong as any other character's, in person he is seldom very intense.

### The Merry Showoff

**Character Description:** This character lives for style or entertainment. He may be a clown who delights in entertaining people and shooting barbs into the egos of the self-important. He may be an elegant fighter who loves to show the world what fighting is like in the hands of a master. He may simply love attracting the eyes of ladies. Whichever, he's always in motion; he never merely gestures when he can instead make a flourish, never walks when he can stride, never talks when he can orate.

**Best Suited For:** Chaotic characters are a little better suited to be Merry Showoffs, as they're more spontaneous than the reasoned Lawful or cautious Neutral characters. However, there's no restriction on this. Good, Neutral, and Evil characters can all be Merry Showoffs: The elegant, dramatic, self-centered, villainous lieutenant is a classic example of an Evil Merry Showoff. In terms of Warrior Kits, the Swashbuckler, Gladiator, and Pirate/Outlaw are best suited to this personality; the Amazon, Barbarian, Berserker, and Samurai are least suited; the other kits are appropriate.

**In Combat Situations:** The Merry Showoff must fight in the most dramatic fashion possible, even when it isn't as efficient or safe as another tactic. He leaps, he bounds, he shouts, he gestures, he taunts the enemies, he makes challenges for single combat . . . he *can* be a right nuisance, for allies as well as enemies, and so the player should be careful not to aggravate his friends *too* much with his antics.

**In Role-Playing Situations**: Likewise, this character should be as charming and theatrical as possible in role-playing situations. He doesn't necessarily have to be witty; that might put too much of a strain on a player who isn't able to wisecrack with ease. But he should be debonair and gracious at all times, even when talking to the leader of his enemies or the rudest and coarsest boor.

## The Natural Leader

**Character Description:** This character is the all-around man in charge. He's the responsible hero who, even if he isn't party leader, thinks like one: He's always thinking about the team's goals and how to implement them, the safety of his friends, the strategy of the bad guys, and so forth. He may be happy to be the leader-type, or may be a reluctant leader; either way, his friends look to him for direction. Naturally, you should only choose this personality type for your character if you're to make the effort to do all that thinking and planning, and are willing for your character to be responsible for others.

**Best Suited For:** In terms of alignment, Lawful and Neutral characters are most appropriate; Chaotic characters tend to be more spontaneous than the Natural Leader. However, if you have a good rationale for a Chaotic Natural Leader, your DM may choose to allow you to play it that way. Most Warrior Kits are appropriate to this personality type, especially the Cavalier and Noble Warrior. In a party representing several different Warrior Kits, though, the Berserker and Savage shouldn't be Natural Leaders: Other character types don't tend to trust them as leaders.

**In Combat Situations:** The Natural Leader, whether he wants to or not, is always thinking in combat and trying to direct his allies' activities. He makes sure that there's a good mix of ranged to melee combat, that shield walls don't have big holes in them, that when a friend falls there's someone to drag him behind the lines and another to take his place. If a player with a Natural Leader character doesn't do this, and simply jumps right

into combat without any intent to think about or direct things, the DM should assign him temporary minuses to attack rolls and damage: This reflects the fact that the *character* is troubled by his failure to lead, even if the *player* isn't.

**In Role-Playing Situations:** The Natural Leader is a very responsible character, but beyond that, there is no limitation on the way he should be played in role-playing situations. He may be grim or humorous, straightforward or deceitful, arrogant or modest, as the player decides. He will often be the negotiator for the party, but this isn't required of him.

## The Sneaky Thinker

**Character Description:** This character lives and loves to outwit other characters. He loves tricking money out of people, outwitting opponents in combat, persuading people to help him against their better sensibilities, and so forth. It's best for a campaign when the Sneaky Thinker is a good friend of the rest of the PCs and so mostly turns his talents on NPCs; the DM needs to make sure that the campaign doesn't turn into an endless succession of incidents of the Sneaky Thinker tricking members of his own party.

**Best Suited For:** In terms of alignment, Neutral and Chaotic characters are best suited to be Sneaky Thinkers, as Lawful characters often have more respect for the rights of others; but, again, with a good enough rationale provided, the DM may allow himself to be convinced that a Lawful character should be a Sneaky Thinker. Most Warrior Kits are equally suited to the Sneaky Thinker character; the Berserker, however, is an inappropriate choice and should not be taken.

**In Combat Situations:** The Sneaky Thinker hates to engage enemies in melee. He doesn't mind being a ranged fighter, but he'd really prefer to be doing something clever or spectacular: Sneaking around the fight to come up on the enemy's unguarded rear, loosening rocks on the hillside above to drop down on the enemy, persuading one of the enemy's allies to turn on the enemy, anything that will demonstrate his mental superiority over the enemy (and maybe over his allies as well). It's up to the player whether the character is actually cowardly or not: Sneaky Thinkers can be as brave as the bravest warrior in a pinch, if that's the player's conception of the character.

**In Role-Playing Situations:** The Sneaky Thinker is often the party's negotiator, as he loves talking with other characters and getting the best possible deal for himself and his friends. In most role-playing situations, the Sneaky Thinker will, chameleon-like, adapt himself to the personality of the person he's talking to, concealing his true thoughts and emotions behind the mask he thinks is most appealing to the other character. It's very hard to find out what the Sneaky Thinker is actually thinking or feeling. Note that it's a dangerous temptation to trick your friends and allies; in a campaign where the PCs' party is founded on trust and allegiance, such a Sneaky Thinker will probably find himself cast out or killed for betraying his erstwhile friends.

## Changing Personality Types

The above advice is for players who don't yet have a firm handle on role-playing different personalities from their own. And the personalities presented here aren't firm, formal rules which any character has to follow; they're guidelines with no real restrictions

placed upon them.

Naturally, then, it's very appropriate for you to write up more Personality Types appropriate to your campaign . . . if, indeed, you need to formalize them to that extent.

It's also very appropriate for a character to change his Personality Type in the course of a campaign. Here are some ways it can happen:

The **Brash Youth** wises up and loses his naivete and inexperience. This has to happen eventually (unless he gets killed before he ever gets wise). His experiences in the campaign so far will probably have a strong influence on the next type of personality he chooses. Here's a note for the other personalities: Nothing short of amnesia ever changes a character *to* the Brash Youth personality.

The **Crude Crusher** isn't likely to change, but a couple of things could bring about such a change. He could fall in love with a more refined partner, and, feeling gross and coarse in comparison, train himself to become more sophisticated. (The Merry Showoff and Fated Philosopher become good options at this point.) He could have heavy responsibility laid upon him (such as a military officer's commission) and be changed by it (at which point the Natural Leader is a good choice).

The **Dangerous Antagonist** is only likely to change when whatever made him a Dangerous Antagonist originally is resolved. For instance, if he ever avenges himself on whomever hurt him in the first place, he could change to a Fated Philosopher or Natural Leader.

The **Doomed Champion** isn't likely ever to change. He's doomed, after all. But if, in the course of the campaign, the DM allows him to un-doom or un-curse himself, he could suffer a change of personality. He could become a Fated Philosopher or Natural Leader. He might enjoy life so much that he becomes a Merry Showoff or Sneaky Thinker. He's not likely to become a Dangerous Antagonist unless the events which freed him from his curse were so nasty that they still scarred his personality forever.

The **Fated Philosopher** isn't likely to change. This personality type comes at the *end* of a process of personality development, not in the middle.

The **Merry Showoff** could sober up under the weight of responsibility, like the Crude Crusher, and become a Natural Leader. Or he could naturally evolve into a Sneaky Thinker when it became less and less fulfilling merely to entertain people and more fun to manipulate them.

The **Natural Leader** could easily change if dramatic events made him sick and disgusted with always being so responsible and dependable. At that point, any personality except Doomed Champion is appropriate. However, unless he's become totally amoral, even in his new personality he'll probably still have leadership impulses and do a lot of tactical thinking.

The **Sneaky Thinker** isn't ever likely to change: His way of life is too much fun to him. If he were to change, to become a little less secretive, he'd probably become a Merry Showoff.

For any character, some horrible event (such as the brutal murder of a loved one) could change the character, at least temporarily, to a Dangerous Antagonist or Crude Crusher.

## The Warrior Campaign

So far, we've mostly talked about the warrior character and his role in normal *AD&D*® game campaigns.

However, it's possible to run a good campaign whose characters are *mostly warriors . . . or all warriors.*

There are a couple of reasons to think about having an all-warrior campaign. First, in many campaigns, after the first few experience levels, the fighters increasingly take a back seat to the magic-using classes, whose power increases faster than the fighters'. Second, many movies, novels, myths and legends just feature fighter characters, and if one of those settings particularly appeals to you, and you want to simulate it in your campaign, you'll want to limit your campaign to fighters.

There are several ways to run such a campaign. Some sample arrangements include:

Mixed Warrior-Types in a Magical World
Mixed Warrior-Types in a Mostly Non-Magical World
Mixed Warrior-Types in a Strictly Non-Magical World
One Warrior-Type in a Magical World
One Warrior-Type in a Mostly Non-Magical World
One Warrior-Type in a Strictly Non-Magical World

In the second part of this chapter, we'll be talking about all those arrangements, how they can be set up and what they mean to a campaign.

## Magical World vs. Non-Magical World

The DM, when setting up his campaign, must decide how much magic there is in the world—not just magical items, but magical monsters, spells, and effects of any sort.

### Magical World

In a warrior-oriented campaign where magic exists at the normal *AD&D*® game limits, magic is considered a scary thing which normal people don't appreciate at all. Most wizards encountered in the campaign will be villains. The ones who are friends of the PCs are mostly low-powered (low-level).

This follows the pattern of many sword-and-sorcery fiction series, where each story's resolution comes down to a contest between the hero and his fighting prowess vs. a dastardly wizard or magical creature and his spells.

In such a campaign, the DM will have to decide whether any player-character can be a multi-class or dual-class hero with Wizard or Priest spells. It's all right to have Ranger and Paladin characters, as they only acquire their spells slowly, and after many experience levels . . . but the more magically potent wizards and priests pose a bigger problem. Their magic is too handy and too dependable; the DM has to make his magical villains even more powerful in order to cope. In a campaign where PCs can't be priests or wizards, a much lower-level magical villain will be much more effective against them.

For these reasons, if you're going to try running a warrior-oriented campaign for the first time, we recommend that you not allow PCs to be priests or wizards. You can always choose to add the option later on . . . but if you find that you like the non-magical

warrior arrangement, it's not so easy to remove the PCs' magical abilities from a campaign where you've already allowed them.

## Mostly Non-Magical World

In a world where there's very little magic, *no PC can learn spells*. This means that no player-character can take a Priest or Wizard class as his character profession, or even as one of a dual-class or multi-class character's professions.

In such a campaign, characters can still be Rangers and Paladins. Even they can't learn spells . . . but they still get their other special abilities.

Paladins still have the abilities of detecting evil, +2 to saving throws, immunity to disease, healing by laying on hands, aura of protection, turn undead, devils, and demons, and calling of war horse; he can use the special abilities of a *holy sword* in the unlikely event he can find one. All the Paladin limitations still apply.

Rangers still have their abilities of bonuses vs. a chosen enemy, dealing with creatures, building castles, forts, and strongholds, and attracting followers. All the Ranger limitations still apply.

In this type of campaign, magical items and treasure of any sort are very, very rare. They may even be nonexistent, as the DM decides.

Magical monsters, equally rare, are especially nasty and fearsome. For example, a dragon encountered in a warriors-only campaign is more like the ferocious, unstoppable engine of death it appears in the myths, and it takes an especially brave St. George to confront one.

And wizards—if wizards are found, they are evil beings who have made pacts and allegiances with nether powers and received their spells from those powers. They're particularly nasty, powerful, and frightening because they have access to powers which the heroes can't even approximate. The heroes must use all their brains and brawn to confront such powerful beings, and will often have to prepare for such a confrontation by finding artifacts, researching the history of the wizard to discover his motives and weaknesses, and so forth.

## Strictly Non-Magical World

In worlds where there is no magic at all, there can be no genuine Mage characters. (Of course, there can be characters pretending to have magical powers, but they're probably Rogues running some sort of scam operation.) Priests, Rangers, Paladins and Bards exist but have no spells or magical abilities whatsoever; they have only whatever special status their society places on their professions.

Warrior-oriented campaigns set on strictly non-magical worlds are good for a lot of things. By taking the emphasis off magic, you put it on such things as combat, battling the elements, and pure adventure. In such a campaign, only one's wits, physical abilities and skills make the difference between success and failure, life and death. Magic, with all its mystery and all its complications, doesn't ever enter the picture.

This also means that things which would be unimpressive in a magical world can be awesome and mysterious in a non-magical one. A "dragon" may just be a giant dinosaurian beast with no intelligence, no magic spells, and no breath weapon, but it will

be terrifying anyway, as the characters have no magic with which to help destroy or defeat it.

Without magic present, characters are never raised from the dead. They must be played more carefully than in games where resurrection is a commonplace event. It might be advisable to start characters out at 3rd level, as described in the *Character Creation* chapter, so that they'll be a little tougher to compensate for this situation.

Such a campaign is ideal for settings based on historical periods. You could base your *AD&D*® game campaign on the Crusades, on the era of piracy, on the wars of imperial Rome or ancient Greece, on the conquest of the New World. These are all settings rich in action and mystery, but for which there's little evidence of monsters or magic.

### The Mixed-Warrior-Type Campaign

In this type of campaign, the characters are mostly single-class warriors, and each may have a different Warrior Kit. With the DM's permission, multi-class and dual-class characters (so long as one of the class choices is Fighter), priests and rogues may also be played, but the majority of player-characters (over half) *must* be single-class warriors. And the DM, if he wants a fighters-only campaign, never has to give permission for those other character classes to be played.

In a campaign devoted to Warriors, the DM should foster an attitude that it's more desirable to be a fighter than another class of character. Other classes may be allowed, but are usually represented by only one character each.

One way to foster this attitude is for the warrior-characters to get the lion's share of admiration from the people. Characters belonging to other classes will get from the public the minimum amount of admiration they deserve for their deeds, but such acclaim shouldn't be their main motivation; these characters must have other goals if they're to be satisfied in such a campaign.

### The One-Warrior-Type Campaign

In this type of campaign, most or all of the player-characters have the same Warrior Kit. They don't all have to be of an identical class: In a Swashbucklers campaign, one character could be a Fighter/Swashbuckler, another a Ranger/Swashbuckler, and another a Paladin/Swashbuckler.

The DM may require that all characters in such a campaign be Warriors, or may allow a mix of character classes appropriate to the campaign's subject . . . but the majority of characters must still be Warriors, and other classes can be represented only by one player-character. For example, in a campaign based on the legends of Robin Hood, most of the characters will be Warriors with the Pirate/Outlaw kit; the DM could permit just one or a few to be Thieves; there's only one Priest (Friar Tuck) and only one Bard (Allen a'Dale).

The purposes of this campaign (other than the normal Having Fun and Going on Adventures, of course) are to showcase the lives of characters with this Warrior Kit, and to pursue the goals common to characters who share this Warrior Kit. So, below, you'll find descriptions of campaigns centered around all the specific Warrior Kits and their specific goals.

## Amazons

In an Amazons campaign, obviously, most or all the characters are Amazons—reclusive women warriors.

The most interesting purpose for such a campaign would be to showcase a clash of cultures: Have a party of Amazon player-characters go adventuring in the outside world (the mysterious, dangerous, treacherous, woefully male-dominated outside world). A lot of the role-playing opportunity provided by such a campaign would involve the characters doing the following: Running up against, and battering down, prejudices against women warriors; and fighting their own prejudices, which dictate either that men are inferior and must be downtrodden, or are all treacherous and must always be viewed with distrust and suspicion. They can also have encouraging, amusing or even tragic encounters with the women of the outside world, whom they try to convince that the Amazon way of life is the One True Way.

Here's a sample adventure idea, drawn from mythlore about the Amazons:

Before the adventure begins, a ship from the world of men (or a group of horsemen, if your Amazons are landbound) arrives in the Amazon community, claiming to wish to conduct peaceful trade or negotiations with the Amazon peoples. They are graciously received by the Amazon court and negotiations are held.

But something goes wrong. The next morning the negotiators are gone, all fled—and the Queen is missing, too, obviously kidnapped by the men. The queen's sister assembles and sends forth a team of crack warriors, the player-characters, to retrieve the kidnapped queen or die trying.

The PCs must equip themselves, then head into the outer world. In the course of their pursuit of the kidnappers, they'll meet a lot of NPCs. Some will be callous and stupid, intending only to oppress or enslave the PCs, and must be dealt with by cunning or violence. Others will be admiring of the characters' independence and ability, and will challenge the Amazon notion that all men in the outer world are their enemies.

Finally, when the PCs reach the city where their queen is being held, the DM has to decide what her true status is. She might have indeed been kidnapped by the negotiators and needs to be rescued; the Amazon PCs may need to break into her prison and sneak her out, or may need to ally themselves with an outer-world army and sack the city. Or, she might not have been kidnapped at all, but might instead have been struck by a sudden love for one of the negotiators, and fled with him—especially fleeing her responsibilities as queen. If that's the case, the PCs might choose to turn around and go home, or might have to sack the city anyway, to avenge the affront done them by their thoughtless ex-queen.

Since not many playing groups will want to switch over to the eccentric all-Amazon format, you ought to read the text below on "Campaign vs. Mini-Series" for a way to play such a thing without disrupting your usual campaign.

## Barbarians and Berserkers

In the Barbarians and Berserkers campaign, most or all characters belong to a single barbarian tribe.

The Barbarians and Berserkers campaign has a couple of purposes. First, it's an opportunity for a campaign with a *lot* of combat, especially if the campaign revolves around clashes between two or more competing tribes. Second, it's an opportunity to showcase how decadent and corrupt the "civilized" world is, contrasted with the simple strength and rude honor of the barbarian tribes.

There are several common types of Barbarians and Berserkers campaigns.

One type is the *Tribal Campaign*: The PCs live with their tribe and act as its defenders and heroes. They repel invasions, hunt mighty and monstrous animals for their meat, attack rival tribes, and do whatever they can to ensure their own tribe's survival. Here's one sample adventure idea: In wastelands distant from civilization, two tribes do battle. One is an NPC tribe, and the other is represented by the player-characters and some NPCs. The two tribes can be enemies because they compete for hunting lands, because of some old grudge, for any reason or none.

Adventures involving battles between them might be simple fights to the death between small squads (made particularly interesting by rough terrain and weather), but you can complicate things, too. What if the two tribes, in the course of their mobile combat, stumble across some silent, time-lost city populated by monsters? The tribes may continue their running battle through the city, awakening the ancient, sleeping monsters, who will eventually come after the barbarians, forcing them to combine their efforts or die . . .

Another type is the *Barbarians in a Civilized World Campaign*: The player-character barbarians and berserkers travel through the so-called civilized world. They may be seeking a new place to settle their tribe, the old site being untenable for one reason or another; they may be mercenaries who hire themselves out to anyone with enough gold; they may be pursuing some villain who insulted them, or who sacked their village while the warriors were away adventuring.

The player-characters travel through a world where civilization equals decadence, where all men are weaker than our barbarian heroes. They encounter terrifying black magic in jungle ruins, battle enemy armies which stand in their way, stumble across hidden evil wizards and the bizarre monsters they create, and so forth.

Yet another type is the *Barbarians for the Crown Campaign*: This is much like the Barbarians in a Civilized World campaign, but here the barbarian heroes have a purpose. One or more of them intends to rule a civilized nation. He and his friends must gather enough power to be able to accomplish this, usually by joining the army of some great nation, rising quickly through its ranks (all the while going on many dangerous army-oriented adventures), and winning enough popular support in the army and elsewhere that they can overthrow the current despotic royal family.

A last choice for a campaign combines all three of the campaign styles above. In the early stages of the campaign, all the characters are great tribal defenders; many adventures can be run with this theme. Later, some great calamity forces the heroes to leave their native tribe. As described earlier, this could be a mission of vengeance which forces them to leave for the outer world; it could be the destruction of their entire tribe by powerful, evil forces; it could be a prophecy which says that one of the PCs will bring doom on the tribe if he stays, but glory to himself and his companions if he leaves. So for many game-years the heroes will adventure in the outer world, until something (another prophecy, their own desires, the desires or manipulations of an NPC involved with the

group) point them at the crumbling throne of a great nation.

In the Barbarians and Berserkers campaign, by the way, magic use is almost always scorned. Magic is considered unclean and almost all wizards are evil enemies of the heroes. Though it would not be inappropriate for one character to be some sort of shamanistic hero (for example, a dual-class Fighter/Mage), this sort of campaign is best suited to worlds with little or no magic.

## Beast-Riders

The Beast-Riders campaign is very similar to the Barbarians and Berserkers campaign. But there are significant differences in the player-characters' goals and motivations.

In the Beast-Riders campaign, it's the tribe's association with its totem animal that provides much of the flavor of the campaign. The villains and threats of the campaign don't just menace the humans; they also endanger the animals on whom the tribe is so dependent.

For example, in such a campaign, an evil wizard deeper in the wilderness has allied himself with an animal that is a natural (or unnatural) enemy of the tribe's totem. Now, he's sending his own warriors after the tribe's animals, trying to destroy them and conquer the tribe. If the player-character tribesmen ride dire wolves, the sorcerer's minions, fewer in number than the tribesmen, will be ogres riding smilodons (sabre-tooth tigers). If the PCs ride pegasi, the more-numerous enemies might be goblins riding giant bats.

Perhaps this evil sorcerer wants the tribe's land; perhaps he wants the tribe's princess; perhaps his god is an enemy of the god representing the tribe's animal totem. Whatever the cause, he's evil and must be dealt with.

In the early stages of the campaign, the ordinarily-happy tribesmen suddenly begin suffering attacks at the hands of these enemies. They must defend their village from the first, murderous assault, then set up patrols and reconnaissance missions to probe into enemy territory and find out what's going on. Ultimately, they will have to assemble a crack team of tribesmen (the player-characters and their immediate friends) to penetrate enemy territory, sneak into the citadel of the enemy, and destroy him.

Additionally, all the campaign types appropriate for the Barbarians and Berserkers campaign work just as well with the Beast-Riders campaign.

In this sort of campaign, since everyone has the same Warrior Kit and might seem very similar, each warrior should choose a very different Personality in order to distinguish himself from his fellows.

This campaign may have no interaction at all with the world's civilized nations; or, the tribe's enemy might be a powerful lord from the civilized lands, and the heroes' mission to destroy him will be doubly perilous because they don't know what they'll be facing in those strange lands.

## Cavaliers

In the Cavaliers campaign, the player-characters are all noble knights questing for goodness and glory.

This can be one of the great weaknesses of such a campaign. Who wants to be clean-

scrubbed, dedicated to goodness, and holier than thou all the time?

So when running such a campaign, the DM and players must be careful to distinguish the Cavaliers from one another in personality, motivations, dress and style. Yes, they'll all be devoted to good; but they can have different alignments, outlooks, and personalities. One Cavalier can be a heavy-hearted Fated Philosopher; another, though still devoted to doing good, may have been sufficiently embittered by his pre-campaign experiences to be a Dangerous Antagonist; still another may have been cursed and is now a Doomed Champion.

Cavalier Campaigns are usually run to showcase epic struggles between pure good (the player-characters) and pure evil. The fate of the nation or the entire world may be at stake. For example, at some time in the past, the world's greatest king has discovered that a great menace threatens to overwhelm all the world, so he has assembled his bravest new knights to find out what it is and deal with it. In their early adventures, these Cavaliers are gaining experience, rising up from the lowest levels, and assembling clues as to what sort of menace the world faces. As they learn more, and begin to have more and more direct confrontations with the minions of the menace, they realize that the threat is indeed real . . . and that they're not yet adequate to save the day. They must continually quest to become better warriors, to find specific magical items which are supposed to be useful against the menace, and to gather allies and raise armies . . . until the final hour is upon them, and it's time for these much more experienced heroes to face the battle of their lives.

Since all Cavaliers are good-aligned, the campaign attitude is not going to promote rude PC behavior: Theft, robbery, assault, insults, and betrayals are all actions that will get the PCs in trouble with each other (and with the DM).

## Gladiators

There are two interesting approaches to having a gladiator-based campaign.

You could have a campaign centered around the gladiatorial arena. Each character is a different type of gladiator: One novice, one square-jawed hero adept at everything, several gladiators each specializing in one interesting weapons combination. The campaign deals with the hero-gladiators in their efforts to survive not only the arena but the plotting and trickery of gladiators belonging to a rival patron.

In one adventure, the enemies might drug our heroes' food before the heroes are due to fight some particularly fierce monster on the sands; if the heroes fight, they are in extra danger because of the drug's effects, and if they do not fight, they lose considerable audience popularity and political clout.

In another adventure, a popular slave-gladiator leads a rebellion; do our heroes, if they're free gladiators, help the rebellion or help repress it?

In another adventure, the enemy patron manages to frame one or more of the heroes for an insult they did not perform, and they are challenged to arena-battle to the death by a group of noble heroes they do not wish to fight . . . and so on.

However, though many adventures can be generated around the coliseum life, such a campaign is inherently limited, and will either end fairly soon or branch out into other adventures.

If you're familiar with Italian sword-and-sandal movies, you know of one way such a

campaign could branch out. In such films, you often have groups of gladiators and ex-gladiators going out into the world and righting wrongs. When a city is being bled dry by a tyrannical ruler, the gladiators show up and cast him down. When the Emperor's daughter is kidnapped and ransomed, the Emperor doesn't call on his crack guardsmen; he asks the gladiators to rescue the princess.

Such adventures often have a lot of broad comedy in them. Gladiators usually have fierce unarmed-combat abilities so that they don't have to kill common-grunt guardsmen in every tavern brawl.

## Myrmidons

In the Myrmidons campaign, the player-characters are all heroes with the Myrmidon Warrior Kit. They're either part of an elite unit in a regular army or guard, or they're a small, efficient mercenary team who've worked together for years (before the campaign began, that is).

This campaign is best suited to providing the characters with interesting military and tactical situations.

For example, in one adventure, their superiors/employers instruct them to rescue a kidnapped ambassador from an old, abandoned fort that is now occupied by bandit/kidnappers. The heroes are given a map of the place, a certain amount of gold for equipment, and a deadline (never more than a few days). They have to work out all the plans of the assault and rescue, then go in, retrieve the kidnapee, and escape with him unharmed if they're to get their money or the commendation of their superiors.

In other adventures, the characters' unit might be part of a much larger military force fighting a long-standing war; some adventures will be stand-up combats with enemy troops, some will be reconnaissance missions behind enemy lines, some will be rest and recreation binges in nearby civilian towns.

In most cases, the players should have the opportunity to plan out their own military operations. This gives them a greater sense of satisfaction when the plans succeed . . .and a better understanding of how things work in the game-world when the plans fail.

Obviously, this is a very pro-military campaign setting, and the PCs and their NPC friends won't tolerate differing outlooks. Minor villains in this campaign include officers who know less about military operations than the PCs, or officers who deliberately sacrifice subordinates in order to gain success and promotions; so are civilians who rabidly oppose the ongoing conflict, those who are disrespectful of soldiers, etc.

## Noble Warriors

This is a campaign of knights and chivalric doings. Some of the characters are traditional medieval knights, some are their squires; others may be warriors or mercenaries accompanying their party, or other types of characters being escorted by them (noblemen and noblewomen, priests, etc.).

This type of campaign differs greatly from the Cavaliers campaign in that the Noble Warriors don't have to be staunch supporters of goodness and light. Some will be true heroes; some will be self-centered boors. But they share the common ties of knighthood and nobility, so they *usually* get along with one another.

For an idea of what sorts of adventures are appropriate to a Noble Warriors campaign, you need only read the books and see the movies, available in the hundreds or thousands, appropriate to such characters. In particular, the novels of Sir Walter Scott and the chronicles of the doings of Camelot are very appropriate source material (and, no, *not* all the knights of Camelot were Cavaliers; some were brutes).

In Noble Warriors campaigns, the heroes wander the land righting wrongs by sword or lance; they fight dragons which lair in menacing caverns in the deepest woods; they defend the land against infidels and invaders; they compete with one another in friendly tournaments and unfriendly clashes between rival kings or barons; and they raise and lead great armies on overseas crusades.

They also defend the prerogatives of their class. For instance, in a Cavaliers campaign, the PC heroes might join a peasant's rebellion against the land's rightful (but greedy and abusive) rulers, and even completely overthrow that land's system of rulership. In a Noble Warriors campaign, the PCs will instead help put down the rebellion . . . and then the good ones among them will investigate the cause of the rebellion, and perhaps depose the evil lords on their own. At that point, they'd elevate the next person in line for the throne or lordship—as long as he was a noble enough character.

In Noble Warrior campaigns, if the PCs all agree to it, they can all be unchivalric boors. Perhaps they all prefer to be robber-barons and ill-tempered knights. If that's the case, and the DM has no problem with it, that's fine.

## Peasant Heroes

In a campaign dedicated to Peasant Heroes, you have much the same situation as with Barbarians and Berserkers. Three good approaches for campaigns are the Town Defenders, Peasant Heroes Out in the World, and Peasant Heroes Aiming for the Crown, much as the Barbarian campaigns were structured.

There are differences between the Peasant Heroes and Barbarians campaigns, though. In the Barbarians campaign, the player-characters are outsiders in this civilization, and civilization itself is bad—decadent, crumbling, not at all admirable. In a Peasant Heroes campaign, the player-characters belong to this civilization; they are, in fact, small-town folk who are much admired. Civilization is not bad or ruinous, though the nation may be ruled by dissipated nobles who have to be overthrown or eliminated (leaving the throne open, of course, for one of the Peasant Heroes to take).

One very appropriate Peasant Heroes mini-series to play would involve a Foreign Invasion. Troops from the neighboring enemy nation pour over the border and swarm through the PCs' country, slaughtering or enslaving everyone in their path. One large unit of enemy soldiers approaches the PCs' village. The PCs and their allies must fight and keep the enemy at bay to give the villagers time to escape. Afterward, hopefully, the PCs themselves can escape into the nearby wilderness to figure out what to do next.

Their nation has been caught by surprise and overwhelmed by this sudden attack; the capital is taken, the king imprisoned or executed. The heroes have the option of fleeing their land for some nation not yet taken by the invaders . . . or arranging a resistance and revolt movement to take the nation back from the invaders. From episode to episode, the heroes can make and then execute their plans: Harrying the enemy troops, building the resistance army up to greater strength, going on sabotage missions into dangerous

invader-held territory, raiding armories, kidnapping important invaders, anticipating and thwarting invader repercussions, and eventually throwing off the yoke of the enemy altogether.

Such a campaign could go on for years, and when it was done, and the enemy was in retreat, could change into an altogether different sort of campaign. The surviving PC heroes could be knighted, and commence a Noble Warriors campaign; or, now that their work is done, they could find themselves unable to return to their normal, workaday lives and decide to become raiders of the high seas (i.e., pirates).

## Pirates and Outlaws

It's quite enjoyable to have a whole campaign where everyone is a pirate or outlaw. In pirate campaigns, all the characters are raiders of the seas; in outlaw campaigns, everyone is a lawless warrior. In both campaigns, the bands of characters prey on the weak (but wealthy) and may have important goals to achieve other than just taking money away from people who have too much of it.

The DM should determine and then make it clear from the outset whether this is a "good guy" or "bad guy" campaign.

## Good-Guy Outlaws and Pirates

If it's a "good guy" campaign, the player-characters are heroes . . . but misunderstood.

They may have been framed for crimes they did not commit, and were forced to flee the authorities (it's hard to prove your innocence when you're swinging from a gibbet). They may be enemies of the new ruling power (if a wise old ruler dies and is replaced by an oppressive and unfair new ruler, that's ample justification to embark on a life of outlawry . . . in the game and the movies, anyway).

In such a campaign, the characters are wanted by the law, but it's the law that's wrong, and the heroes treat their captives and victims with golden-rule ethics.

In other words, they'll capture innocents and take their money and goods . . . but they'll offer no insult to victims who deserve none, will tend to release such prisoners unharmed. Inevitably, some of these former prisoners will be re-introduced in the story in an upper-hand position, and may be able or willing to help the unlawful heroes when they're in a bad position.

On the other hand, victims who are their true enemies (wicked representatives of the evil rulers, personal enemies, tax collectors, competing pirates and outlaws with no scruples, and self-centered money-grubbers of any sort) tend to be humiliated and embarrassed while they are prisoners of the PCs. Unless they behave very stupidly and attack the PCs, they, too, are likely to be released unharmed; if they do attack, they tend to be battled in single combat, and usually are killed. Enemy prisoners, if released, also tend to reappear in the story down the line . . . usually at a time when they can do a lot of harm to the player-characters.

The main goal of this sort of campaign is restoring the old status quo. If the characters used to be law-abiding citizens and are now wanted by the law for the wrong reasons, their eventual goal is to prove their innocence. If the land used to be ruled by a wise ruler

who is now imprisoned or dead, the characters' goal is to release him from prison or find and crown his wise true heir.

Often, the heroes' force of men (pirate ship or outlaw band) will prove useful to someone in a position of power (like the rescued ruler or another powerful noble), and that personage will issue them pardons and commissions into his army or navy just before the slam-bang climax of the campaign or mini-series.

## Bad-Guy Outlaws and Pirates

If it's a "bad guy" campaign, the DM and players will have to define the campaign goal. It may be nothing more than the acquisition of treasure over years of outlawry. It may be considerably more specific, such as the finding of a treasure buried by a famous long-dead pirate, or the execution of a brilliant robbery plan.

The bad-guy campaign is mostly suitable to characters of neutral or evil orientation, and to players who just want to play in a nasty fashion for a while. Their characters don't have the dainty ethics of the good-guy pirates and outlaws. No, they rob everyone, from other villains to virtuous maidens to pious clergymen. Prisoners in their hands won't know what to expect; they may get not-too-uncomfortable imprisonment for ransoming purposes, or brutal mistreatment, or death, or worse than death, however the player-characters feel. Further, the PCs' feelings, and their treatment of prisoners, may change from day to day.

This is a dangerous environment and campaign. Since the PCs are as scummy as their worst enemies, there probably won't be any DM sympathy to help keep them alive in bad situations. The PCs will be competing on equal terms with the nastiest of villains, and you can expect a high body count among PCs and NPCs alike.

On the other hand, when you're in a destructive mood, it can be a lot of fun.

## Samurai

In the samurai campaign, obviously enough, the characters are samurai or ronin, and here you have the same sort of division as you had in the pirates/outlaws campaign.

If the characters are samurai, their usual adventures are likely to be missions for their lord. An ongoing campaign might deal with the lord's campaign to become ruler of all the land (while the PCs maneuver for power beneath him, possibly with the intention of removing and replacing him later on); the campaign might instead deal with expeditions into unknown lands (such as the usual player-character setting, which creates, just like in the Amazons description above, the opportunity for a "clash of cultures" mini-series).

If the characters are ronin, their usual adventures could be mercenary actions as they play a part in warfare in their land; or the campaign could be an exercise in outlawry, as with the pirates and outlaws description above. These ronin character could be noble samurai driven into a lawless and lordless state, or could be honorless bad-guy ronin with no interests beyond survival, wealth, and killing people.

Either way, if you intend to run a samurai campaign, you ought to buy the *Oriental Adventures* game supplement, an extensive *AD&D*® game treatment of the world of oriental role-playing. You won't have to adapt everything in it to your *AD&D 2nd Edition* campaign, but you'll find useful material there anyway.

## Savages

There are a *lot* of ways to run a Savages campaign. Here are only a few of them:

*Just Like Barbarians and Berserkers:* A campaign featuring savages as the player-characters could be run practically identically to the campaigns given for the Barbarians and Berserkers descriptions above. The main difference is that Savage characters are considerably more distanced from civilization than barbarians are. They don't understand it nearly as well and are likely to be alarmed, scared, offended or put off by many more features of the civilized world than the barbarian character. They're not as likely to want to become rulers in the outside world, because they don't like it as much.

*Jungle Kings:* You could have the campaign revolve around a Jungle King: A powerful savage warrior who may have been reared by or spirit-bonded with some sort of noble animal (apes, wolves, lions, etc.). The Jungle King character is often the friend of one savage tribe (including the other player-characters), and can lead them on all sorts of fantastic adventures. Treasure-hunting trips into eerie valleys (populated by lost tribes, monsters out of ancient legend, or dangerous and alien wizards), and elaborate raiding missions against the encroachments of civilization, are two good examples. Also, the Jungle King seems always to fall in love with a woman from the outer-world civilization, and she, in turn, has a tendency to be kidnapped out of her new jungle haven; other adventures can involve missions to rescue her. (Naturally, a Jungle Queen character could find herself a civilized mate with the same inclinations toward being kidnapped.)

*Savages In the Big City:* If you're interested in playing a comedy adventure, try running a scenario where a group of savage player-characters must enter a huge civilized city (for any of the noble reasons discussed earlier, such as a rescue), but play the adventure for laughs. The savages will probably be as sneaky and clever as ever at creeping across rooftops in the moonlight, but try confronting them with objects and situations more likely to get a laugh than a combat response. Savages from the unspoiled wilderness will not know how to cope with elemental-powered self-driving chariots, bureaucracy, distilled liquors, wizards, familiars, parades, magically-animated street-sweeper machinery, dancing brooms cleaning out the mage's tower, talking swords, dance-halls for the undead, or any such thing.

## Swashbucklers

The Swashbucklers campaign is for players who want characters with a lot of style adventuring in a sophisticated setting. The Musketeers novels of Alexandre Dumas are a perfect source for character types, adventure ideas, and settings for such a campaign.

In the Swashbucklers campaign, the player-characters are elegant heroes, experts with the rapier, making their way in a huge city. They tend to live hand-to-mouth, gaining large treasures one day and spending through them in a very short time, so they may be rich and generous one day and stealing their food the next. This is not a campaign devoted to honest and hard-working heroes. The PCs may be as honorable as their players want, but they're still charming rakes who like to get by on as little effort as necessary.

However, when danger looms, they'll gladly throw themselves into an adventure, one

which may lead them on a desperate horseback race across the land or into the dark catacombs under the city, where monsters dwell. Adventures may lead them from the court of their king, to the barracks of the nation's army (as they briefly become soldiers or commissioned officers), to the front lines of the ongoing war with a neighboring power, to desperate missions behind enemy lines, to secret forays into the capital city's prison (so that they might rescue the king's secret twin or their friend who's been imprisoned for knowing too much).

The heroes are in a constant competition to out-style the other. In combat, each tries to be the flashiest. In romance, each tries to be the most witty, most courteous, most gallant. Also, they're in similar competition with rival NPC swashbucklers, who are often members of a competing military force or fencing academy.

In all, it's a campaign of great style and showmanship.

## Wilderness Warriors

In the Wilderness Warriors campaign, the player-characters are members of tribes or clans living in harsh wilderness environments. Such campaigns are, again, very similar to the choices for Barbarians and Berserkers campaigns, but one of the differences and attractions of the Wilderness Warriors campaign is the *setting*.

In such a campaign, the DM must go out of his way to spotlight the wonder and danger of the setting. These are true wilderness adventures, where nature and monsters are the characters' enemies much more frequently than enemy men or demihumans.

And because wildernesses are so big and unexplored, the characters, in their wanderings, may encounter many unusual cities and societies, ruins and treasures.

For example, in a Desert Nomads campaign, the characters might be fighting a rival nomad tribe when a vast sandstorm, lasting hours or days, forces them all to seek shelter. When the storm blows over, it has uncovered a long-buried city. The two forces continue their war through the streets, buildings, and catacombs of the city . . . while the ancient evil that was buried with the city slowly awakens . . .

In an Arctic Warriors campaign, the local seal or whale population might have disappeared—been hunted to extinction, or just left for mysterious reasons. In the campaign, the PC heroes have to wander over unexplored regions to find a new place capable of sustaining the tribe; they'll encounter yeti, ice golems controlled by frozen liches, avalanches, frost giants, and other arctic perils before they find their promised land.

## The Military Campaign

Finally, you can run an all-military campaign without it necessarily being an all-Myrmidons campaign.

Possibly the most interesting way to do this is to gradually move the campaign setting toward a major war. Early in the regular campaign, establish that the player characters' country often has problems and frictions with a neighboring country; showcase the disputes between the nations by having NPCs from the other nation be rude or abusive to the PCs (and, to be fair, have NPCs from the player-characters' country be equally vulgar to foreign NPCs who don't deserve such treatment; the PCs may find themselves in the

uncomfortable position of being honor-bound to defend the "enemy" from their own dishonorable countrymen!).

As the campaign progresses and the player-characters gain experience levels, increase the friction between the nations. Occasionally, the PCs will run into foreign spy-nests and spy-plans.

Ultimately, when the PCs have achieved high experience levels and are important characters in the nation, they should be in on the events that spark the eventual war. For example, their king may ask them to accompany him to the peace conference where he and his old enemy are supposed to patch up their differences, marry their children to one another, and sign mutual nonaggression pacts. But when they're there, something goes drastically wrong: Perhaps dopplegangers pretending to be the PCs assassinate the foreign king, while dopplegangers pretending to be the greatest heroes of the other nation assassinate the PCs' king. (The dopplegangers, of course, are under the control of the evil king of a third nation, who intends to move in, pick up the pieces, and conquer everyone when these two nations have beaten each other to pieces.)
